The following example of an antiphonal Babylonian psalm illustrates still more strikingly the Divine pardoning power:

The Singer: 'I am thy servant full of guilt. I call to thee, O God.

The priest prays of a transgressor thou wilt receive.
Thou wilt give him a gracious look, that he may live.
O thou, who raisest all things and restorest mankind,
Now graciously to thy mercy which deepeth not the sighing of sinners.'

The Priest: 'The sinner's goddess and god are wrath; therefore he collect upon thee.

Turn thy face to him and graciously take his hand.'
The Singer: 'Thou hastest me in the right way, O God, like some other.'

Give me of grace a firm look and accept my sighing.
Do thou only say: "When shall I get peace from his crying?"
and let thy word be mild.

Rejoice no more, O goddess. Turn thy countenance unto me.
Bear my sighing like the dove's coo; I am weary of lamentation.'

The Priest: 'With oh! and oh! and piteous plaint his heart is full.

He weepeth bitter tears and lamenteth death to lament.'

Any one of these productions reads like a Biblical Psalm. In this last example the priest plays the part of intermediary between God and man.

To sum up, then, with regard to the decidedly henotheistic-monolatrist tendency of the Assyro-Babylonian religion: it is evident that the apparent confusion of their system of religion arose from the fact that these people were able to regard each and every god as the highest deity, without conflicting with the claims of any other god. The real reason for this phenomenon was that every god-name implied for them the true and all-embracing Godhead. In other words, they never lost sight of the fact—although it is probable that this was an innate feeling rather than a clearly enunciated principle—that beneath all the varied Divine appearances, there was in reality only one possible conception of the Divine. The student of this interesting system is forced to wonder why the religion of the Euphratean region never attained the highest ideal of all; to make for themselves a godhead out of Nature as a whole; to conceive of a Being with qualities like those attributed to the Hebrew JHWH, whose name is most appropri-

ately vowelled Jehovah, with the vowels of the Hebrew word *Adonai*, and equivalent in use to the word *Elohim*, literally 'gods.' Neither the Babylonians nor the Assyrians ever seem to have attained this goal, although the Assyrians came nearest to it of any Semitic people save the Hebrews. Nor do we learn anything in any source of an ecstatic priestly belief in such an idea. Perhaps their minds were not sufficiently synthetic to reach this grand conception. Some scholars have thought, not without cause, that the chief reason why a pure monotheism never developed in Babylonia and Assyria was that the people had too deep-rooted a conception of a male and female principle in all their speculations regarding their deities. The Hebrews were able to go far beyond such anthropomorphism, and thus to throw off the yoke of that polytheistic henotheism which remained for thousands of years the established principle of the religions of Babylonia and Assyria.

Friedrich Delitzsch (*Babel und Bibel*, III. 20 f.) says of the Babylonian as compared with other Semitic religions: 'Just as it is impossible for the Arab to think that his Allah, the one Almighty Creator of heaven and earth, whom Muhammad revealed, is any other than Jhvh, the one Almighty Creator of heaven and earth, whose worship Moses kept alive among his people, so the Israelites from the days of their forefathers worshipped the One God under the name Jhvh, the Moabites adored Him under the name Chemosh, the Ammonites under the name Milkom, the Decider; but all these nations mutually recognized the individual tribal gods as real and existing beings.' The fact is, of course, that a tribal god represented the popular unity, as was the case with Ašur in Assyria, and the doctrine of a 'Chosen People,' common to the Babylonians, Assyrians, and Hebrews, then arose most naturally from this general Semitic conception. The Israelitish prophets crystallized this thought into the idea of a God for all the world, but their own writings show how little success they had among the common people, who clung to the tribal henotheistic idea long after the last Israelitish prophet had spoken. But the seed of the doctrine of the Universal Godhead was sown, and this seed has borne fruit in that loftier spirit of truth which our Lord developed during His brief ministry on earth, and gave to the world to live throughout the ages.

J. DYNELLY PRINCE.

GOD (Biblical and Christian).—The Christian conception of God, as it is held to-day, is the product of a long history, which it is the object of this article to trace in barest outline. It is the result of a gradual, but continuous, revelation on the part of God, together with a broken, fitful, and uncertain response on the part of man. The centre and pivot of the whole history is the body of writings known as the NT, or rather the events recorded in the NT and the interpretation there given to them. But the God of whom Jesus spoke, who is worshipped and believed on in the Gospels, is a Being who had previously made Himself known, and who had been the object of faith for generations in Israel. Some knowledge of the previous revelation is necessary in order to under-

stand the meaning of the phrase 'the God and Father of our Lord Jesus Christ,' while it is matter of frequent comment that the doctrine of God implied in the Sermon on the Mount seems to be removed by a wide interval from that of the Triune Deity worshipped and defined at Nicea and Chalcedon. For a thousand years after the Fourth Ecumenical Council the Christian doctrine concerning God was practically a fixed quantity, though it was from time to time developed by the elaborate analyses, or overlaid by the ingenious hypotheses, of scholastic philosophers. The modern period has left upon the Christian idea of God a mark of its own. The almost incredible enlargement of knowledge concerning the universe which has characterized modern thought, especially in the 19th cent., has profoundly influenced men's conceptions of the Divine, so that the traditional form of Christian doctrine has been enriched by a new and various content, as yet but partially assimilated and imperfectly incorporated with the old.

It has been denied that true and legitimate continuity has been preserved amidst all these changes. But, if the Christian view of God and the world be true, then, under the actual conditions of human life, revelation must be progressive on the Divine side; and the apprehension of God on the part of man will be gradual, various, and uncertain, according to the capacity and fidelity of those to whom the revelation has been given. It is the standpoint of this article that unity and continuity of conception have been sufficiently preserved, whilst growth and progress are throughout discernible. Elements in that conception may be traced back to Israel, ideas and forms of expression are due to the influence of Greek thought, the experiences of the Church throughout the ages has indescribably enriched its theology, and the influence of modern sciences has done much to enlarge the conception of the Divine nature and operations. Still, throughout the history of Christian doctrine, the 'light of the knowledge of the glory of God in the face of Jesus Christ' has shone supreme. Christianity—a spiritual and ethical monotheism of the highest type, a religion of redemption of which Christ is both the centre and the sum—presents a consistent and ever developing doctrine of God, one that at the same time forms the true consummation of Judaism, and has proved itself to be the most potent and influential factor in the history of religion in the world.

I. THE OLD TESTAMENT.—The existence of a God is always presupposed by writers in the OT, never explained, still less argued out. But what was meant by the word, what connotation was given to the name, what attributes were implied by it, are quite other questions. The writings which record the earliest traditions on this subject range from the 9th to the 5th cent. B.C., and it is not easy to summarize the various ideas of the Divine Being which find a place in them. The documentary writings recognized by criticism doubtless embody much earlier material, and may furnish evidence of the existence of primitive beliefs, not sanctioned by the religion of Israel, but influencing to a considerable extent the thought and practice of successive generations. It may not lightly be taken for granted that the God of Noah, of Abraham, of Moses, was identical in all respects with the God of the Jahwistic writer of 800 B.C., or of the Priestly Code after the Exile. Yet the utterance of Dt 6, 'Jahweh our God, Jahweh is one,' is the watchword of the religion of Israel in no artificial or perfunctory sense throughout the national history; and the Deity worshipped and proclaimed by Israel for centuries is the God of whom Jesus said that the first great command-

ment in the Law was to love Him with heart and mind and soul and strength.

For the present purpose all traces of primitive beliefs in pre-Mosaic religion may be disregarded. The Semitic tribes akin to the 'Hebrews' were generally polytheistic. Jos 24² recognizes 'the gods whom your fathers served' in the days of Terah, beyond the River. The revelation made to Abraham marked a clear stage in advance, and similar steps forward in the knowledge of God were made in the time of Moses. The God who spoke to Moses from the bush was not an unknown Deity; He was the 'God of thy father' and 'the God of your fathers'; even His name was previously known—'Jahweh the God of the Hebrews' (Ex 3¹⁵). In exactly what sense, and to what extent, this God was recognized by the people at large before the time of Samuel is a moot question. Materials for an answer are scanty, and some points are still in debate. Many superstitions and some idolatrous practices were retained amongst the people, while a long, steady warfare was maintained against them, with a strenuous assertion of the supremacy of Jahweh and His claim to sole allegiance and undivided service. The beliefs and practices thus indicated may be classified as (1) those which were avowedly polytheistic; (2) those which acknowledged the existence of demons, or inferior divinities; and (3) those which turned on the veneration of places, sacred stones, and sacred trees, consistent with the worship of Jahweh, though often indulged in in a spirit of disobedience and revolt.

What is, however, beyond question is the rise of a distinctive religion of Israel from amongst tribes in which polytheism, often of a cruel and licentious type, prevailed; and the attainment, by whatever exact stages, of a pure ethical monotheism of a uniquely lofty kind. The distinction between monotheism and monolatry is often a narrow one. A nation which wholeheartedly worships one God alone may change in its mode of regarding the gods worshipped by other nations. These may be viewed as inferior deities, whom it was sometimes a temptation to acknowledge and try to propitiate; or as spirits, more or less evil, that were not really 'gods'; or as 'abominations,' banned and denounced by true religion; or as empty figments of the imagination, the 'nothings' and nonentities which some Hebrew names for idols brand them as being. Indications of what are now called 'totemism' and 'tabu' may be found in the Levitical law; the divination and ancestor-worship forbidden in successive codes of legislation may have been relics of dying out. The precise character and religious value of *idolatry*, *divination*, *magical arts*, and the religious history before the Exile do not belong to the present inquiry.

The lesson of the OT is the establishment of the worship of one God, unique, incomparable—the one God that matters. The main light shines clear, whatever vague forms sit and glimmer in the twilight around it. The history of revelation in the OT is a history of the way in which this light was seen to shine more purely and more powerfully till all the shadows of lesser deities fled away.

1. NAMES.—The names used for God were significant. *Elohim* was the generic term for Deity, *Jahweh* the personal name of the God of Israel. The term *El* was common to Semitic tribes; its etymology is doubtful. Other early names were *Shaddai* (Gn 17, Ex 6), probably the Almighty or All-Sufficient One, perhaps an appellative of *El*; and *Elyon* (Gn 14, Ps 7), mainly a poetical name for God Most High. The plural name *Elohim* is not to be understood as a remnant of polytheism, of which the form *Eloah* is the singular. The

plural number indicates either eminence and supremacy, or fullness and abundance of powers and resources. The origin of the sacred and characteristic name Jahweh (g.w.)¹ is still obscure. The attempt to show that it was a West Semitic name for the storm-god rests on conjecture only. The idea that it was gained from the Kenites is more than dubious. It should be understood as distinctly a personal name, going back to pre-historic times, but made the vehicle, or the channel, of special revelations, till it acquired a sacred character and significance, incommunicable otherwise. The interpretations of it given in Ex 3¹⁴ (EV 'I am that I am,' RVm 'I will be that I will be') are not strictly etymological in the modern sense, but are descriptive of the nature of God as then making Himself known—the one, true God, self-existent and self-sufficient, the cause and ground of all being, faithful to His promise, and constant in all His relations with His people. It would be an anachronism to draw out into a list of 'attributes' in modern fashion what none the less lies implicit in the simple sublime appellation—I AM. The content of the name was filled up in the course of history, as successive acts and manifestations showed Israel what kind of a Supreme Being it was whom they were hidden alone to worship. Jahweh remained the name for the covenant God of Israel, where the term 'covenant' indicates a special relation between God and His people, one on which the whole national history is a running commentary.

Stages of progress in the idea of God are more or less clearly traceable. But from the outset the conception was simple and concrete, not metaphysical, not an abstraction from the powers of Nature. The God of Israel was essentially (1) personal, (2) spiritual, (3) sole and supreme, (4) of an unapproachably lofty ethical character. The personality of God was pressed to the verge of extreme anthropomorphism, the language employed to describe it being popular, not scholastic; but it is not easy to determine how far the ascription to Jahweh of human limbs and organs—face, finger, arm, heart, and voice—was understood literally or symbolically. Dt 4¹⁵⁻¹⁸ shows at once the error into which the multitude were in danger of falling, and the corrective which, in the 7th cent., was supplied. Personality, implying a living Being, who thought, felt, and willed, and who possessed all the characteristics of personal life, is a distinctive feature of the God of the OT throughout. But this Being was spiritual, in the sense of being invisible to mortal eye and beyond all sensuous apprehension; while His power and operations were such as only a spirit could manifest, the living Will behind all being specially emphasized. Jahweh is proclaimed from the outset as sole and supreme; the ground of all other commandments is, 'Thou shalt have none other gods before me.' Other gods had but a relative existence, if they were thought of as existing at all; they possessed neither might nor right in comparison with Him who was the Creator and Sustainer of all that is.

The distinctive feature, however, of the OT doctrine of God is the emphasis that is laid on the moral character of Jahweh, who is unique, not in power only, but in wisdom, righteousness, goodness, and truth. An influential school of critics hold that the 'ethical monotheism' of the OT originated in the prophetic period which formed the golden age of Israel, from the 8th to the 6th cent. a.c. It would, however, probably be correct to say that the work of the prophets from Amos onwards was to define more clearly, and to enforce

more stressfully, a doctrine concerning God which was not then entirely new, though the current coin needed to be minted afresh, and distinct advances in conception were made in the prophetic period. The work of the prophets consisted mainly in two things: (1) they taught the unity and supremacy of Jahweh in relation to the whole world as well as to Israel; and (2) they proclaimed and pressed home the doctrine of His 'holiness,' in its full meaning and implications, as this had never been done before. Two names of God may be mentioned as more or less representative of these ideas—*Jahweh Šdō'āh* and 'the Holy One of Israel.' The first of these (= 'Lord of hosts') was not new, and difference of opinion exists as to its original meaning. But, whether earthly battalions or heavenly auxiliaries were intended, whether Jahweh was Lord of stars, or of angels, or of cosmic forces generally, the title in the time of the prophets certainly connotes world-wide supremacy. The name 'Holy One of Israel' emphasized the fact that the Lord of all power and might was Himself incomparably pure, and was prepared to sanctify from all evil His people who trusted and obeyed Him. 'This new name,' says Ewald, 'was the first kindling spark which showed that now the age of the Hagiocracy was beginning in Israel, in a sense altogether unexceptionable' (*Die Lehre der Bibel von Gott*, Leipzig, 1871-76, Eng. tr., *Old and New Testament Theology*, Edinburgh, 1880, p. 94).

2. *Holiness*.—It is not possible to consider in detail the moral qualities of which the word 'holiness' (g.w.) came to constitute the sum. No formal list of Divine 'attributes' is anywhere given; the qualities enumerated are not always the same, and the emphasis laid on each varied at different epochs. But substantially the same moral excellencies distinguish Jahweh from the first; compare Ex 34⁶ with the latest Psalms. Almightyness is taken for granted; but stress is not laid on mere power, as was largely the case with the *š'dām* (see BAAL). Wisdom, foresight, and purpose are distinctive features of the God of Israel throughout, though omniscience in the more complete sense of the term is not dwelt upon in earlier times, as it is, e.g., in Ps 139. The righteousness of Jahweh is a favourite theme with Amos and Micah and Isaiah, the attribute being explained throughout by its concrete bearing upon national life (cf. Is 5). In Deuteronomy, Jahweh is characterized by blended righteousness and love for His people, and the psalmists re-echo the description in verse. Mercy and tenderness are predominant Divine qualities in Hosea, as in Ps 103; lovingkindness and pity are not understood as contrasted with righteousness and justice, as the promise in Hos 2¹⁹ plainly shows. 'Jealousy' is a word used by writers of different periods to describe, not cruelty or harshness, but the uncompromising claims upon the allegiance of God's people made by His holy love. 'Faithfulness' and 'truth' are companion names, which indicate that God's words correspond with His nature, and His deeds with His words; that His present action is one with His past, and that He may be trusted as constant and unchanging in all that is to come. Finally, the word 'holy'—which in the first instance probably meant only 'divine,' that which belongs to God as such—came to stand for the whole sum of ethical excellency characteristic of Jahweh; righteousness, flawless purity, and utter antipathy to all evil being in the foreground of its significance.

3. *Self-manifestation*.—There is in the OT no indication of interior distinctions in the Godhead; it is an anachronism to find either the doctrine of Incarnation or that of the Trinity in its pages.

¹ See also that art. for the occurrence of the name in Heb. documents.

But the God of the OT is emphatically a self-communicating God, as opposed to a metaphysical abstraction, or a solitary, remote Deity. The forms of manifestation described, the various modes of self-revelation which mark off the God of Israel from the gods of the nations around, prepare the way for a clearer and more intimate revelation to come. The 'angel of Jahweh' or 'angel of God' spoken of in Gn 22, Ex 2, and many other passages, is not a mere messenger from God, a created being, neither is he strictly Jahweh, but Jahweh in a particular form of self-manifestation, a special revelation of the Divine presence. The 'Spirit of God,' whose name is found so constantly, and whose operations are so various and so vital in the religion of Israel, is not distinct from God, nor does the phrase imply a distinction in the Godhead. The Spirit of God is God Himself, breathing, living, active, energizing in the world—'God at work.' The Spirit is personal because God is personal; personal distinctions within the Deity find no place in the Old Covenant. As breath is the principle of human life and the source of human energy, so God possesses life in Himself, and is the spring of all life in the universe; and, when the fullness of His vital power as in any way communicating itself is dwelt upon, the Spirit of God is expressly named. There are a few passages in the later books—of which Is 63rd, 'they vexed his Holy Spirit,' may serve as an example—which might seem to imply that the Spirit of God was thought of as a distinct person. But these are best understood in the light of prevailing usage, whilst they undoubtedly prepare the way for a doctrine which does not clearly appear within OT limits. See, further, art. HOLY SPIRIT.

4. Word and wisdom.—A history attaches to the two phrases, 'Word of God' and 'Wisdom of God,' which cannot here be traced out (see artt. LOGOS, WISDOM). God's word is viewed as the instrument of His working. 'He spake and it was done, he commanded and it stood fast' (Ps 33rd; cf. Gn 1, Ps 33rd 147th). Also, the thought of God is mighty; His wisdom orders and controls all. But, by a natural transition, in later Jewish literature a tendency appears to personify both Word and Wisdom—notably the latter in Job 28 and Pr 8. Whether the grammatical figure of bold prosopopoeia, viewing Wisdom as God's master-workman, had here passed in the mind of the writer into hypostatizing in the full sense of the term is doubtful; probably not. A distinction is discernible between the use in Job and in Proverbs, and further development is perceptible in Sirach and Wisdom of Solomon; but the poetical picture called up by the imagination had probably not given place to the idea of independent personal existence. Undoubtedly, however, in the use of these phrases a foundation was laid for the idea that the Thought or Will or Speech of God, going forth from God, might be conceived as an activity distinguished from God Himself, a manifestation of God in the world, distinct, though not separate, from His own proper Being.

5. Creation and Providence.—The relation of Jahweh to Israel is the main theme of teaching in the earlier periods; for, though He is thought of as supreme, only gradually did the idea of His relation to the world as a whole emerge. The notion of God as origin of all that exists is implicit from the first; but a doctrine of creation such as is developed in Gn 1 and embodied in many passages of 2 Isaiah and the Psalms is comparatively late. The problems of Providence dawned but slowly on the minds even of the teachers of Israel. In Job and in the later Psalms a few writers wrestle with these difficulties rather than

overcome them. The underlying postulate of religion was that Jahweh ruled and did all things well, punishing the wicked and rewarding His faithful servants. The presence and prevalence of evil were acknowledged as permitted or overruled by God, but no theodicy was constructed to account for its existence. The language employed is popular, the moral sense is keen and strong, the Divine hatred of evil is strenuously asserted, but the facts of life were accepted in a matter-of-fact, almost child-like fashion for centuries before the 'maddening riddle of the root' and a demand for an answer to it pressed upon the minds of an essentially practical people. Even in Is 45th the prophet is content with describing both good and evil as forces so completely controlled by the Supreme Ruler that it may be said, 'I form the light and create evil: I am Jahweh that doeth all these things.'

6. The Exile.—The exile in Babylon was a fruitful epoch in many ways in the religion of Israel; it brought with it especially a widened horizon in the conception of God and the right way of worshipping and serving Him. Amongst the most notable changes may be mentioned the increased spiritualization of the idea of God, the purification of the ritual from doubtful elements, and a growing superiority to local and material considerations. Jahweh could manifest Himself to His people and be found a present help in time of trouble, independently of a sacred land and a consecrated temple. From this time onwards a certain universalism takes the place of earlier particularism. Jahweh is the God of the whole earth in a new sense; He has sworn that every knee shall bow to Him (Is 45th). The destinies of the nations are in His hands, and He cares for all that His hands have made. Israel shall be the means of bringing the nations to a knowledge of Him. The captivity in Babylon, instead of weakening the attachment to Jahweh and leading to an increase in idolatry, sounded in reality its death-knell. Under the guidance of the prophets the people learned to see that the overthrow of the monarchy and the destruction of the Temple did not imply feebleness or apathy on the part of the God in whom they trusted, but were intended to be the means of leading them to loftier and more adequate views of Him. Their heart, while it trembled, would be enlarged (Is 60th); and they acknowledged, in the midst of their worst fears, that God's ways were higher than their ways, His thoughts than their thoughts (55th).

7. The Greek age.—In the Greek age and the following periods no change took place theoretically in the idea of God, but modifications passed imperceptibly over the spirit of Jewish religion and over the customary modes of acknowledging God, which reacted upon the very conception of Deity. There was no more any prophet in Israel (Ps 74th); the priest and the scribe took his place. The living God ceased to be realized as a present and active power, and the record in the Scriptures of His dealings in the past acquired a peculiar sacredness. In proportion as the Deity was conceived as transcendental, high above man, He became further off from man, and the 'pale cast of thought mckled o'er' the simple, healthy realization of a present, gracious Friend and Protector, who was ever thinking of His people, caring for them, willing and working on their behalf. Greek culture partly roused Jewish national feeling to greater intensity and deepened devotion to the national God. But insensibly it affected habits of thought, especially among Jews of the Dispersion. The Hellenic philosophy of the period regarded God as pure Being, transcendental, impassive, inactive, existing out of relation to time and earthly

changes. The Jews were not philosophers and never precisely adopted these views, but Greek influences aided in promoting a change which had begun as early as Ezekiel, is marked in some of the later canonical books, and is still more fully illustrated in extra-canonical literature. Greater reverence is shown for God, His name, and His word; anthropomorphisms are shunned, and a sharper contrast comes to be drawn between the natural and the supernatural. 'God is in heaven and thou upon the earth; therefore let thy words be few' (Ec 5²) is a significant maxim of the 2nd cent. B.C. The LXX in its periphrases smooths away stumbling-blocks from the language used concerning God in the Hebrew Scriptures, but at the same time robs it of much force and significance. The hallowing of the Ineffable Name by never pronouncing it was at the same time a mark of superficial reverence and of diminution of religious earnestness.

The Targums bear witness to the same general tendency. Names indicating the loftiness of God—'Lord of the world,' 'the Mighty One,' 'the Glory,' and especially 'the Most High'—multiplied on the one hand, and on the other it was found necessary to introduce intermediate phrases into passages where God intervenes in human history, lest due reverence for the Highest should be impaired. Hence the use of *Memra*, the Word of God; and later *Shabbatah*, the glorious Presence of God. In such passages as Gn 1 the Targum of Onkelos reads, 'Adam heard the voice of the word of the Lord'; and in Dt 5 'I stood between the word of the Lord and you.' Later extra-canonical writings abound in illustrations. Such a passage as Wis 18¹, 'Thine Almighty Word leaped down from heaven out of thy royal throne,' may be explained as a grammatical personification, but the literature of the period indicates a decided tendency to hypostatize the Word of God. The Philonian doctrine of the *Logos* (q.v.) does not come within the scope of this article, but it bears its part in a similar development of thought. Cf. art. GOD (Jewish).

The worship of God during this period underwent a corresponding change, which was partly effect and partly cause in relation to the altered conceptions of the Divine. The Temple still stood, and its ceremonial became more stately and elaborate, but comparatively few could join in it. The synagogue worship—without priest or sacrifice or formal ritual, its essence consisting in the reading of God's word to man and the offering to God of man's free and heartfelt prayers—effected a virtual revolution, and helped to perpetuate the prevailing conception of God as a spiritual Being who must be spiritually worshipped. Side by side with this the development of scribism, and an exaggerated and fanciful devotion to 'the Law' which almost deified it and put it in the place of God Himself, were the marks of a religion grown old and stiff, a formalism fanatical in its intense devotion to the letter, but impotent as a spiritual energy, because it had lost touch with the living God. The heart of the generations in the 1st cent. B.C. cried aloud for a regenerating and rejuvenating religious power which it was itself incompetent to produce.

II. **THE NEW TESTAMENT.**—An epoch was created by the appearance of Jesus of Nazareth. Himself an Israelite indeed, He had no entirely new God to announce; He begins with, takes altogether for granted, and proceeds to build upon the revelation of the one living and true God made through the generations to the Chosen People. But His teaching concerning that God and the personal manifestation of His life were such that the religious conception, which as a plant had already taken root and put forth green branches, burst into unexpected flower and brought forth new, un-

expected, and abundant fruit. Jesus assumes the fundamental conceptions of God already described. He is personal, spiritual (Jn 4²⁴ does but impressively declare what spiritually-minded Jews had long acknowledged), transcendent, yet draws very near to men in revelation and communion, unique in holiness, goodness, and the loftiest moral attributes. Thus the doctrine of God set forth in the discourses of Jesus exhibits the ethical monotheism of the prophets raised to its highest power. With this doctrine Jesus began; how far He travelled beyond it remains to be seen. The implications of His words and deeds were felt at the time to carry His hearers much further; in what direction and to what goal could not be immediately discerned.

1. **Christ's own teaching.**—The unity of God is taken for granted throughout Christ's discourses, and is explicitly dwelt on in Mk 12²⁹ as the basis of the first great commandment. The spirituality of God, emphasized in memorable words in Jn 4²⁴, also pervades the whole teaching of Jesus. The moral attributes which characterize the God of the OT all appear and reappear in the Gospels, though the emphasis is seen to lie differently, in view of the mission that Jesus had come to fulfil. Holiness and righteousness are fundamental characteristics of the Divine will; the subjects of the Kingdom are to seek righteousness above all (Mt 6³³). In the prayer recorded by the Fourth Evangelist, God is described as the holy and righteous Father (Jn 17²⁵). The majesty of God is implied in the epithet 'heavenly' or 'in heaven' used in the Lord's Prayer and often in the Sermon on the Mount. Yet He cares for the lowliest (Mt 6²⁶); not even a sparrow falls to the ground without Him; He works everywhere and always (Jn 8¹²). The sunshine and the rain, the lily in its beauty, and the common grain of the field, all have their message to deliver concerning Him. He is 'good' with a goodness that far outdistances the highest standards of earth; it is such as even the teachers of Israel had not fully understood; in comparison with it no other goodness deserves the name (Mk 10¹⁸). Especially is God good as being merciful and ready to forgive. Man is most like to God when he has learned the lesson of mercy (Mt 9¹³); the unforgiving cannot be forgiven (6¹⁵), but deserve severest punishment (18³⁴). God is gracious and long-suffering, but the judgment that is to come will prove that He is not slack or careless in His moral government of mankind, who are to learn reverently to fear Him in whose hands their whole destinies lie (Lk 12⁴⁹).

These characteristic utterances, however, some of which might have come from the lips of a prophet of the Old Covenant, cannot be rightly understood without placing the emphasis where Jesus Himself placed it, and interpreting all in the light of the *Divine Fatherhood*. This doctrine appears in the OT, but it describes a relation which exists between God and Israel, not with mankind at large, or with individuals who are children of God in virtue of their personal character (see Ex 4²², Dt 8⁵, Hos 11¹). If the king is regarded as a son of God (2 S 7¹⁴), it is in virtue of his position as the head and representative of the nation. Christ's teaching on this subject differs fundamentally from that of the OT. It described three concentric circles. (1) The innermost contains One Person only. The Father occupies a peculiarly intimate relation to Jesus Himself, who, not as a Son, but as the Son, knows the Father as no other can (Mt 11²⁷), and has been sent specially to reveal Him (Jn 14⁹⁻¹¹ 17³⁻²⁰). Amongst the first recorded words of Jesus (Lk 2⁴⁹), and the last (23²⁹), the name 'Father' is on His lips. He used no language to describe God such as was familiar to scribes on

the one hand, or to philosophize on the other, but He often offended His hearers by the familiarity with which He claimed God as His own Father, in a sense shared by no others (Jn 5²⁶). (2) The sense of sonship was to be enjoyed by all true disciples in their measure. 'Your heavenly Father' was the description of God which assured them that He might be trusted to supply all their needs (Mt 7²¹, Lk 11¹³). But this conception widened out into (3) a universal Fatherhood, as of One who cares for the unthankful and the evil, and is ready to receive not only the lost sheep of the house of Israel, but all wanderers from the Father's home. It is true that the message of Jesus for Gentiles is not explicit as was His mission to the Jews, but the three parables in Lk 15 are evidently intended to illustrate a deep-seated compassion of God for the lost as such (Lk 15²⁴)—yearnings of the Father's heart that go swiftly forth to meet all penitent children of men who arise and go to Him (Lk 15²⁴).

The characteristics that have been described have been drawn chiefly from the Synoptic Gospels. John does but emphasize the notes as clearly struck. The name 'Father' occurs far more frequently in the Fourth Gospel than in the other three put together, but all four Evangelists indicate that the word came always from the lips of Christ, not from His disciples, and the Master never ranks Himself and them together as sons. In the one passage that seems to do so He deliberately marks a distinction, saying, 'my Father and your Father, my God and your God' (Jn 20¹⁷). The universality of the Divine Fatherhood is made much more plain in the Fourth Gospel, and the word 'love' is seen to be the climactic word that describes the inmost nature of God. The unique character of the relationship between the Father and the Son is also much more fully brought out in this Gospel (Jn 5²⁶). It must be added in a word that no quotation of the words of Christ, apart from a study of Himself, His person, and whole work in the world, can ever suffice to set forth the full meaning of His teaching concerning the Fatherhood of God.

The Son and the Spirit.—The special mission of Jesus was to announce the coming of the Kingdom of God, and Himself to lay its foundations in a Gospel message (Mk 1¹⁵). He did not at first formally claim Messiahship, though from His baptism onwards His unique Sonship was recognized (Mt 3¹⁷). But the time came when His work as the Christ, who must through suffering and death accomplish the Father's will and establish His Kingdom on earth, was made clear, and His disciples began dimly to understand that He was not only the Christ, the King of Israel, but the Son of the living God in a deeper sense than the words had usually conveyed (Mt 16¹⁷). Further, Jesus had much to say, not only concerning Himself as 'only-begotten' Son,—to use John's characteristic word,—but concerning the Spirit of God (see Mk 3²⁹, Mt 10²⁰, Lk 11¹³; several other passages in the Synoptics, and especially the discourses recorded in Jn 14-16). The question, therefore, arises whether the manifestation of God in Christ was such that in His own lifetime the fundamental conception of God was modified by it, and whether a distinction of persons within the Godhead amounting to what afterwards came to be called the doctrine of the Trinity was taught by the Master and accepted by His disciples.

The question cannot here be discussed in detail (see art. TRINITY). If Mt 28¹⁹ contains the exact words of the Saviour, He did before His ascension virtually lay down this doctrine. But, quite apart from the special phraseology of this passage, it is safe to say that Christ's teaching contained the material elements out of which a doctrine of the

Trinity was formulated later. His claims for Himself, His authority, His power to forgive sins, His demands for absolute personal allegiance to Himself, and His assertions concerning His own knowledge and power and His coming to judge the world—not to speak of His miracles—were enough to show even before His death and resurrection that the new doctrine of the Saviour Christ could not but affect the old doctrine of the Ruler God. 'Who is this Son of Man?' was a question in the answer to which lay many more questions and answers, still latent. The main question, however, was not fully answered till Christ's work on earth was fully accomplished, and the full light shed on the doctrine of God by a clear doctrine of Christ was not revealed until some generations had passed away.

2. *The Apostolic doctrine of God.*—The position of the Apostles was wholly changed after the day of Pentecost. The death of their Master had greatly disconcerted them, and His resurrection formed the basis of their new message. Their early sermons and addresses were naturally not occupied with the mystery of His Person. Preaching to Jews with Calvary full in view, Peter urged that the crucifixion of Jesus was a crime, which God had overruled in raising Him from the dead, and that the meaning of both death and resurrection was to be found in the message of the Gospel. It promised remission of sins through faith in the Saviour; it heralded the establishment of the Kingdom of God with the Prince-Saviour at its head. The watchword of the whole was, 'Jesus is Lord; repent and believe in Him.' Salvation can come only through Him (Ac 4¹²); His work, now fully accomplished, forms the central theme of the new Gospel declared by Paul & others, 'first of all' (1 Co 15¹). The Acts faithfully reflects the gradual stages through which this position was gained, with far-reaching effects on religion as a whole.

A Christology was needed; the question, Who is this Jesus? must be answered. The theology, or doctrine of the Godhead, that followed turned upon the answer to this question. The teaching concerning the Holy Spirit did not raise the same difficulties, because the OT had so frequently used language which described the gift of the Spirit of God. But the experience of the new life in Christ, and the way in which the blessings of salvation were realized, pointed to a threefoldness in God's relation to man. Side by side with the belief in the God of the New as well as of the Old Covenant, and blending with it as a part of the same faith, was trust in a Divine Saviour and the consciousness of a Divine Spirit, Himself at work in the hearts of all believers. This experience found expression in the triple benediction of 2 Co 13¹⁴, and the baptismal formula of Mt 28¹⁹. Jesus the Christ was a manifestation of God to men, such as had never been known before; the Holy Spirit, after the Day of Pentecost, was a manifestation of God in men, such as had never before been possible. The Apostles realized that here was a richer revelation, an ampler Divine presence and blessing, which demanded fuller expression in their very definition of God, as the whole NT bears witness. The Synoptic Gospels in their measure (remembering the scope of their narratives), the Acts of the Apostles in continuing the history—Paul and John pre-eminently and at length, and other Apostles more briefly—all agree in representing the personal spiritual God, the righteous and loving Jahweh of the OT, as still believed in but displayed in a new light. God the Father over all, God the Son and Saviour for all, God the Holy Spirit operating in all, but especially in the believer, yet one God only, always and everywhere—this is the doctrine

of God, which, before the NT comes, has taken the place of the simpler 'ethical monotheism' of the prophets.

There is no 'doctrine' of the Trinity in the NT. But there are in it all the materials out of which such a doctrine came inevitably to be built up, together with evidence of the way in which that teaching arose out of certain central facts of history and experience, proclaimed by the Apostles and accepted by all believers as integral parts of the gospel. The intense monotheism of those who had been educated as Jews was never relinquished, but new modes of conceiving of God, of worshipping Him, and of realizing His relations to men as in some sense threefold, form an essential part of the doctrine of God in the NT. These were not so much theoretically adopted as felt to be indissolubly bound up with what believers had from the beginning held concerning Christ, and with what they themselves had enjoyed of His grace and salvation.

(1) *The Trinity*.—The testimony of Paul in 1 Co 8⁶ and elsewhere shows the process of advance. There may be, he says, 'those that are called gods'—gods many and lords many, but 'to us there is one God, the Father, of whom are all things and we unto him.' Yet, without prejudice to the unity of this one God, he adds, 'and one Lord, Jesus Christ, through whom are all things and we through him.' He also is creator and of cosmic significance; the doctrine of God henceforth is indicated through Christ. Lordship is the essential word. *Kyrios* renders the OT *Jahweh*, and in Ro 10⁹ the word is used of Christ in such a way as to show His essential Divinity. His standing name and title is 'the Lord Jesus Christ'; He is preached as Lord (2 Co 4⁵), and the characteristic watchwords of unbelievers and believers respectively are 'Anathema be Jesus!' and 'Jesus is Lord' (1 Co 12³). Nor is this Lordship a merely temporal office and honour. His pre-existence is implied in 2 Co 8⁶, Ph 2⁶, and Col 1¹⁵. All interpreters are not agreed that in Ro 9⁵ Christ is styled 'God over all, blessed for ever,' though this is the natural interpretation of the words; but few can doubt that in Tit 2¹³ the appearing in glory is expected of Jesus Christ, 'our great God and Saviour.' Paul's language concerning the Holy Spirit does not bear so immediately upon his doctrine of God, because the word 'Spirit' sometimes indicates a gift of God to men and sometimes God Himself working in men, as it did in the OT. A closer examination shows that the Holy Spirit is not a mere gift or influence; yet, while Divine, He is not the whole Godhead. The intensely personal language employed in such passages as 1 Co 3¹⁶, Ro 8¹⁶, and elsewhere, combined with the distinction maintained between the Spirit and Christ, the Spirit and the Father, makes the interpretation of the Holy Spirit in an OT or 'Unitarian' sense impossible. Again, apart from the phraseology of benediction in 2 Co 12⁴, the general tenor of description in such passages as 1 Co 12⁶ and Eph 4³⁰ shows that St. Paul thinks easily and naturally in terms of a Trinity in the Godhead, when speaking of Divine operations in the salvation of men and in the worship of the Church.

The author of the Fourth Gospel declares that his object in writing is that men may believe that 'Jesus is the Christ, the Son of God, and that believing they may have life in his name' (Jn 20³¹). The whole Gospel proves that the Sonship thus indicated was understood as one not merely of office, or mission, or ethical likeness, but of eternal and essential nature. He who shared the Father's glory before the world was is the one Saviour of men, the Way, the Truth, and the Life. The writer sometimes makes use of phraseology not

found elsewhere in the NT. His doctrine of the Logos in the prologue strikes the key-note of the whole Gospel, though the note itself is not repeated throughout its chapters, the name of the Son taking the place of the Word. There is no inconsistency in this, for in a narrative of the personal life of the Logos incarnate the emphatically personal name 'Son' is obviously the more appropriate. *Logos* is a convenient name for summing up certain ideas concerning God, which are characteristic of Paul as well as of John, though the former never uses the word. Paul expresses the same thought when he speaks of *eternus*, *eternus*, *eternus* *deus*, of One through whom are all things, in whom all things cohere, and in whom all are to be summed up (Col 1¹⁷). Similarly, the Logos is *deus*, not *dei*, God, not the Godhead. Thought and Speech, Reason and Utterance, *Sermo* and *Ratio* unite in the *Verbum*, the Word. The Logos in Philo is not personal; but the prologue to the Fourth Gospel, beginning with the transcendent God, sets forth the Divine Word as personal, extra-temporal, in closest relation with God, and as co-present and operative in creation, preservation, and the subsequent redemption of the world that all things are 'in and through him.' The same is He who became flesh, and who in the flesh spoke words and did works so symbolic of eternal reality that His whole life is one work of eternal significance, and that all man's duty may be summed up in the work of 'believing on Him.' The silent substitution of 'Son' for 'Word' in the Gospel and the absence of Logos from the first Epistle (1 Jn 1¹ notwithstanding) are significant. When the Word becomes flesh His name is 'Son,' and the various readings in Jn 1³ show how closely connected in Apostolic tradition were the ideas of 'only-begotten Son' and 'God only begotten.'

A modification is here implied in the OT idea of God, which might seem to necessitate a fundamental break in continuity. But in the teaching of both Paul and John concerning Christ there is nothing inconsistent with the unity of God, who for both of them remains still the One King, Eternal, Immortal, Invisible. It is significant that two writers occupying such different standpoints, and using such diverse phraseology, should unite so completely in what may seem a paradoxical position. Paul concentrates attention on redemption—sin, righteousness, and salvation through the death and resurrection of Christ; John's main theme is revelation—light, truth, and life eternal, the Incarnation rather than the Crucifixion being the centre of the whole. Yet both Apostles prove to demonstration that the Redeemer whom all Christians acknowledged and trusted, faith in whom constituted the very essence of the new religious life in the world, was Himself very God; and, whilst maintaining an intense monotheism as an unassailable axiom of religion, they worshipped in the one Godhead, as distinct yet inseparable, the Father, the Son, and the Holy Spirit.

(2) *God is Love*.—The ethical attributes distinctive of Jahweh in the OT are exhibited in the NT in an added light which, while it preserves, transforms them. Holiness and righteousness, faithfulness and truth, mercy and loving-kindness, are still characteristics of the one true God, but to each of the words is given a connotation so rich and deep that the use of the old words embodies a new gospel. One word, moreover, not entirely new, acquires so predominant, so consummate a place in the conception of God that henceforth it surpasses and encompasses all the rest—GOD IS LOVE. Not that love eclipses righteousness, still less is opposed to it. If with Paul the idea of righteousness seems to predominate, it is he who writes in 1 Co 13 the immortal hymn of love. If

it was left for John to expound the love of God in such a way as to mould Christianity all through history, it is he who makes the strongest and most uncompromising declarations of His righteousness that are to be found in the Bible. Neither of the Apostles can conceive of a God in whom the two attributes are not eternally and indissolubly blended; but only in Jesus Christ, Son of God and Son of Man, is to be found the abiding proof that God is both righteous and merciful in the deepest sense of the words; and only through Christ can man reach and maintain his true relation with a God of infinitely holy love.

Granted the promises that the Son of God has come to earth, suffered, died, and risen again for man's salvation, then all previous Divine manifestations pale before this stupendous Light of the world. Paul's theme in his greatest Epistle, the one which contains the fullest account of his central preaching, is *ἀγαθὸς θεὸς δικαιοδότης*, God's righteousness is revealed from faith unto faith (Ro 1st). Whether the righteousness of God means an attribute of His own nature, or a state or condition of man that is derived from and acceptable to Him, in either case much light is shed by the phrase upon the character of the God whom Paul preached. These two meanings are joined together later in the Epistle, where it is said that the object of the work and sacrifice of Christ was that God might be shown to be righteous Himself, whilst at the same time free to pardon and account as righteous every believer in Jesus (Ro 3rd). So far, therefore, as an exposition of the Divine nature is summed up in the phrase 'righteousness of God,' it is clearly not to be understood as bare and hard 'justice'; it combines flawless purity and perfect rectitude with a merciful provision by which a sinner may be freed from sin and obtain forgiveness in perfect accordance with the eternal law of righteousness. The climax of the argument, however, is not yet reached. Paul goes on to show that God commends His love towards man in that, while they were yet sinners, Christ died for them (Ro 5th), and the full revelation of the God in whom he trusts appears only when, in a burst of lyrical fervour, he exclaims that nothing in heaven or earth or under the earth can separate the believer from the love of God which is in Jesus Christ our Lord (8th).

Whilst Paul's theme in these chapters seems to be the salvation of man, and his reasoning upon it has been described as narrowly 'forensic,' he is in truth setting forth what amounts to an entirely new revelation of the innermost nature of God. John does the same. Having declared that God is Spirit and God is Light, he leaves it on record twice, before the canon closes, that God is Love (1 Jn 4th 7th). The meaning of this simply sublime utterance, which when it stands alone may easily be misunderstood, is found in v. 10 'Herein is love, not that we loved God, but that he loved us and sent his Son to be the propitiation for our sins.' Strike out this fact, and the significance of the teaching of both Apostles is entirely changed. Leaving out the Cross of Christ, the discussion whether God is Love or no sinks to the level of the question, 'Is the universe friendly?'—an interesting but altogether different question, in which promises, methods of proof, conclusions, and the very meaning of words are altogether altered.

It is impossible adequately to define love, but the conception which prevails in the NT is that of goodness spending and imparting itself to others in self-sacrifice. And the cardinal characteristic of its doctrine of God is that love in this high and sacred sense is His very essence.

Each word in the definition must be raised to its highest power: goodness conceived of as consummate, incomparable, self-impartation beyond human power or conception, realized in self-sacrifice so complete that no word but 'infinite' describes it. Whilst some other religions may have risen to a part of this conception, that of the NT alone sets forth as its central feature a Holy God in uttermost self-sacrifice for the salvation of man. It declares the exaltation of God above the universe in His excellence and glory, but its Gospel is that He is also within the universe, and, especially in the history of man, loving, striving, offering, agonising, because only thus can His free and disobedient children be brought to love and to do His perfect will. The conviction that this doctrine—in itself stupendous and incredible—is true is based on certain facts of history and on the interpretation put upon them by those who lived nearest to Christ and understood Him best.

The light thus generated shines out on other aspects of the Divine nature and on all God's relations with the world, in ways which it is impossible to trace here. Providence is to be studied in the light of the Gospel. The dark places of personal, social, national, and racial history are illumined by the Cross. A theodicy is possible in the light of 'I, if I be lifted up from the earth, will draw all men unto me' (Jn 12th), and 'He that spared not his own Son but delivered him up for us all, how shall he not with him also freely give us all things?' (Ro 8th). Christ becomes the centre of human thought and the goal of human life if He is Himself accepted as the interpretation of human history. Christology is for the Christian the heart of all theology. The Eternal Word has relation to all the world, but for this world and for man's comprehension of the mind and heart and will of God, the Word of God is Christ. Such at least is the teaching of the NT at its highest point, and it claims to shine by its own light as the purest and loftiest revelation of the Divine known in the history of the world.

III. THE FORMATION OF THE CHRISTIAN DOCTRINE OF GOD.—The Apostolic writings attempt no metaphysical explanation of the new conceptions of God which unquestionably dominated the whole experience and life of the earliest Christians. The doctrine of Father, Son, and Spirit, as embodied in the baptismal formula, implied trinity. The threefoldness of the Divine manifestation and operations, as well as the underlying unity of the Divine essence, is recognized throughout the Epistles. That Jesus is Son of God as well as Son of Man, and that the Spirit is Divine and personal, closely related with Father and Son, is assumed, but no attempt is made to show how this is reconcilable with the monotheism which was an unquestioned and unquestionable axiom in the thought of the Apostles and their converts.

The next three centuries witnessed the unfolding of what lay implicit in this teaching. The relation between the earlier and later stages is usually described as 'development,' but that word does not necessarily indicate a process in which literally nothing is added but what was actually present in the germ. The more correct, though pedantic, biological term, 'epigenesis'—a progressive differentiation and integration—connotes more than the bare explicating of the implicit: it is rather the gradual organizing in one whole of elements which the separate constituents before organization did not possess. Unquestionably the changing affirmations of the Church through the centuries contributed largely to the shaping both of faith and of theology. Christianity furnishes an example of 'creative evolution' in which the energy of a new spiritual life adapts, assimilates, and utilizes, as

well as unfolds. From the standpoint of Christianity a believer in a living God can never resolve 'development' into a mechanical process governed by natural laws. For him the God who has revealed Himself in Christ is still the ever-to-be-known God who illumines His Church in all generations by His Spirit. The change from the heavenly Father of the Sermon on the Mount to the dogma of the Trinity in the creeds of Nicea and Chalcedon has been described by Hatch and Harnack as a degeneration rather than a development, a corrupting of truth from its earliest simplicity, not an enrichment due to healthy and necessary growth. Such a conclusion is not lightly to be accepted. The formulation of partially realized faith is one thing; a tendency to desert the manifestation of the Triune God in experience and in history for abstract speculations concerning the interior relations of the Deity is quite another. Before the end of the 6th cent. illustrations of both processes appear in the Church, and it is necessary to keep in mind the distinction between them.

It is possible to test the legitimacy of development in the orthodox creed by means of a comparison. There were Christians in the primitive Church who took their stand on the OT and maintained its type of monotheism intact, except that Jesus of Nazareth—whether technically viewed as Messiah or not—was esteemed a prophet of exceptionally high and pure character, whose mission it was to conserve and purify the revelation of the Torah under a new covenant called the Gospel. Ebionites and Adoptionists (see EMBODIMENT, ADOPTIONISM) of various types preserved the OT conception of God, plus the acceptance of Jesus as a specially commissioned messenger from Him, one in kind with Moses and Isaiah, though far higher in spiritual degree. History has written its commentary on this doctrine, and proved that it was a specimen of arrested growth. Not along this line was it possible to carry on and carry out the teaching of Jesus Himself, of His interpreters Paul and John, and of the multitude of evangelists who in His name were beginning to regenerate the world. The Church of the 2nd and 3rd centuries, with the sacred traditions of the 1st held in trust, was called to fashion, under the guidance of the Divine Spirit, a conception of God such as would at the same time interpret Christian experience and mould Christian thought and life. That the Fathers of the Church were influenced by pre-Christian, especially Greek, thought, no one would attempt to deny. Probably pure Platonism exercised far less influence upon them than Alexandrian Hellenism, and some would rank the influence of Stoicism as still more potent. But it is in the use of philosophical terms, in forms of reasoning, and in general views of the relations between God and the world, not in essential views of God, that these influences are traceable. The vital germ of Christianity, implying a new conception of the relation between God and man in Christ—a conception not abstractly conceived in the intellect, but embodied in the experience of thousands of devoted lives—was not lost or destroyed amidst the enveloping pressure of pagan ideas. On the contrary, the new religion assimilated some current views of the Divine nature that were not polytheistic, and made use of them for its own ends. Aristides, the first Christian apologist, illustrates this in the opening sentences of his defence:

'I say, then, that God is not born, not made, as our abiding nature without beginning and without end, immortal, perished, and imperishable.' Later he adds: 'The Christians know God the Creator and Father of all things through the only-begotten Son and the Holy Ghost.'

Justin Martyr, philosopher as well as Christian, appealed to the idea of God innate in man (*Apology*

vj gōra rō dōpōrōv sōgē [*Apol.* ii. 6]); and Minucius Felix (in his *Octavius*), following in his own fashion the example of Paul at Athens, argues that the unity of the order of Nature proves the unity of God, who is infinite, almighty, eternal, and who before the world was to Himself in the place of the world (*ante mundum rō ipse fuit pro mundo*). Athenagoras does but represent all other exponents of Christianity, when, having established the unity of the Godhead by a philosophical line of proof, he proceeds to unfold the doctrine of the Trinity as the Christian way of conceiving that unity.

Gnosticism (*g.c.*), 'the first comprehensive attempt to construct a philosophy of Christianity' (see Harnack, *Hist. of Dogma*, Eng. tr., i. 298 f.), teaches chiefly by its fallacies. Gnostics of various schools furnished what were for the most part honest attempts to interpret Christ; but they did so in the light of preconceived ideas, some of which were incompatible with essential Christianity, and others inconsistent with its characteristic spirit. At this stage evolution took place by antagonism. The representatives of the Church learned some of their most valuable lessons by resistance to ideas of God thrust on their attention by the most active thinkers of the time. Monarchianism (*g.c.*), a reaction against the Gnostic tendency to interpose numerous orders of being between God and the creation, taught the unity of God in a modalistic, i.e. really anti-Trinitarian, fashion. For it the Son and Spirit have no distinct, personal existence, but are only modes in which the one God reveals Himself. Some of the Fathers, especially in the East, whilst avoiding this extreme, taught the subordination of the Son and the Spirit to the Father; and a tendency in this direction was for a considerable time present within, as well as outside, the pale of recognized orthodoxy.

2. Church doctrine of the Logos.—Amidst these diverging tendencies the Church built up a constructive doctrine, first of the Logos, then of the Trinity. Justin, Irenaeus, Clement, and Tertullian are representative names amongst those who contributed to the earlier structure. The prologue of the Fourth Gospel formed the foundation. The Logos was eternal, not created, not emanating, but begotten, the Sonship of the 'Word' seldom being lost sight of. The Logos was not a mere creating and ordering Reason of God, impersonally conceived. Rather was He the organ of Divine revelation and operation in creation and history, and pre-eminently in redemption. The eternal purpose of God was realized in the Word Incarnate; the personal Logos took upon Him human nature that men might be partakers of the Divine. For Clement the Logos is 'the highest principle in the religious explanation of the world,' as well as the centre of the work of redemption. In nature, as in grace, He is the Interpreter of the Father's attributes, being first the educator, then the Redeemer, of the human race. The work of the Holy Spirit was not at this stage ignored, though it was not elucidated and dwelt upon to the same extent.

The ideas concerning God which the Church had drawn from history and experience were not easy to express; the very vocabulary had to be created, and East and West were apt to misunderstand each other. Thus, if we find that by Tertullian and Origen, for example, whilst Christian thought was slowly crystallizing, phrases were used inconsistent with one another, or with the exact forms ultimately adopted, it will occasion no surprise. Technical phraseology, whether drawn from Roman law or from Greek metaphysics, was inevitable; but a true instinct was at work, now accepting and now rejecting the same

phrase, as certain associations seemed to render it serviceable, or undesirable, for the expression of underlying faith. The Godhead is 'one substance in three persons,' said Tertullian, employing Roman juristic terms, but the threefoldness is *non status sed gradus, non substantie sed forme, non potestate sed specie* (adv. Prax. 2). The Three are one in substance, condition, and power, but are three in relation, in mode of existence, and in special characteristics. The Father is one, the Son is another, the Spirit is yet another; but these three are one (*unum, not unus*); there is no division of the one substance, though each of the three is a substantial existence with characteristic properties. Origen believed in God as the One Self-existent Source of all that is, a living Person, but only relatively knowable through the mediation of the Logos, who has personal existence side by side with the Father, is of one essence with Him, His perfect image, and Himself God (*deus, not i deus*). The Word-Son is eternally generated, the process being continuous, timeless, and real; He is co-eternal with the Father. The Father possesses pre-eminence, the Son is subordinate in His derived being. Difficulties were created by Origen's language concerning the subordination of the Son,—though it was not of essence, but of person and office,—the Father being described as *eternus*, the Son as *eternus factus*, whilst the Holy Spirit, who is recognized as Divine and above the category of creatures, has come into being through the Logos, and is described as inferior both to Father and to Son. Origen was a pioneer in a difficult region of thought, his own ideas had not worked themselves quite clear, and discrimination between them, with a just estimate of their relative value, was effected only by a process of controversy.

2. Nicene doctrine.—The rise of Arianism enabled the Church to distinguish between what it really held and what it might seem to hold. This heresy, which waged so long a war against orthodoxy, and at times appeared likely to gain the upper hand, was never strong in doctrine. It taught a Trinity consisting of one uncreated and two created beings—herein it was both illogical and irreligious, if creatures were to be worshipped. It represented Christ as a demi-god, and its whole doctrine implied retrogression towards paganism. The strength of Arianism lay in the fact that a large portion of Christendom was not yet Christianized, and that believers had not yet come to understand the real nature and implications of their own faith. The Nicene formula, in insisting on *homoousios* to establish the Divinity of Christ, laid the foundation of the orthodox doctrine of God and His essential Tri-unity. The statement that in the one Godhead there are three Persons was never intended to mean three individuals, i.e. three self-conscious subjects and centres of personality as 'persons' are understood among men; nor merely three aspects (*ypostases*) of one unitary Deity. As time went on, it was clearly laid down that there were three eternal existences (*hypostases*), personal, distinct, but not separate, organic one to another and to the unity of the Triune God. Athanasius (q.v.) in his long and strenuous controversy was contending for real contact between God and men in a real redemption wrought out by a real Divine Saviour in the midst of the actual world. The philosopher, on the one hand, who taught that God operates continually in the world, could not preserve His personality distinct from the world, whilst, on the other hand, those who insisted on Divine personality tended to separate Him from creation in transcendental isolation. If a historic Incarnation was to be preserved in the fullness of its actuality and redeeming power, it must be based on interior

distinctions within the unity of the Godhead—a unity which is the home of distinctions realized and overcome. Athanasius contributed to the formation of a doctrine of God, by establishing not only the *homoousios* of the Son but also that of the Spirit as a necessary inference. The Holy Spirit is the Spirit of the Son; He is not a creature; He is the Giver of life and of celestial gifts—Himself God. Athanasius, like other leading Fathers, protests against being compelled to define relations within the Deity which are beyond human comprehension; but, finding in Scripture the word 'proceeding' used to denote the relation of the Spirit to the Father, he says that he will retain it as the best. The Arian controversy (see ARIANISM), which practically ended at Constantinople in 381, affirmed the faith of Nicene on the basis that, while in the Godhead there is but one essence or substance (*ousia*), in that unity there are three eternal modes of existence, now called *hypostases*, though that word had originally been synonymous with *ousia*, and the ambiguity had naturally been the source of some confusion.

3. The Trinity.—It is impossible here to trace the detailed stages by which the doctrine of the Trinity was finally shaped. The three great Cappadocian Fathers, Basil and the two Gregories (see CAPPADOCIAN THEOLOGY), contributed to a clearer discrimination of ideas and a more accurate use of words. It is to them that the theological use of *hypostases* as above defined was due. Neither Origen nor Athanasius had made it sufficiently clear that in relation to God 'person' meant more than mere aspect or manifestation, and less than the exclusive individual existence which the word implies among men. The subject of personality, Divine and human, was not discussed in the 4th cent. as it has been during the last hundred years; and even now a clear and definite vocabulary remains a desideratum. But there was no doubt in the mind of the Greek Fathers that the three *ypostases*, or modes of subsistence, of the undivided Godhead were not three *ypostases*, or aspects of a *hata* unity, neither were they three *ousias* which would imply three Gods; but all believed in *μία ousία δι τρεῶν ὑποστάσεων*, one Essence in three personal modes of subsistence, each with its characteristic properties, and each necessary to the One indivisible Whole. The Godhead in itself and apart from the world is an inexhaustible living Being, neither a barren unity nor a divided multiplicity. The Father is the primal source, the Son the mediating power, the Spirit the executive energy; and every Divine act is to be understood as a working of the Father, through the Son, in and by the Holy Spirit.

4. Augustine.—The last stage is to be found in Augustine (q.v.). The East had throughout preserved an element of subordination in its theology, the Father being the sole Fount of Deity, the Son deriving His existence by generation, and the Spirit by procession. The equality of the Three was asserted, but a real meaning was attached to the idea of *rank*, or order; and the Greek Fathers resented any attempt at change which seemed to interfere with the *μία εὐχὴ τριάς*, the One Fount of Deity. Augustine, followed by the Western Church, taught that the Spirit proceeds from the Father and the Son, and made the co-equality complete. In the opening of the treatise he lays it down that 'the one and only and true God is a Trinity, and the Father, Son, and Holy Spirit are rightly said and believed to be of one and the same substance or essence.' Later on he explains that each Person is the undivided Deity, and that the three Persons are together the one God. Augustine destroyed what remained of subordination; but this was possible only by moving in the direction of

Modalism. The Father is conditioned by the Son and the Spirit, as the Son is by the Father. If the unity is conceived so that each Person is the undivided Deity, then the three appear merely as relations in the one Godhead. It is true that this differs from the older Modalism, which rested upon the idea of successive manifestations; from the very first, God is to be conceived as Triune. But this is possible only through a refining of the idea of personal existence, till it becomes a 'mode' only in the simplicity of the Godhead. Doubtless the Neo-Platonic element in Augustine's thought was responsible for some of the language he employed. But the analogies he used to illustrate the subject—especially his favourite one of intelligence, memory, and will in human self-consciousness—show in what direction his mind constantly moved. He preserved theoretically the tradition of three Persons in one substance; but himself emphasized, not the personality of each Person, but the personality of the One God, and he never overcame the contradictions more or less implied in his attempt to combine the philosophic and the religious standpoints. Harnack describes Augustine's speculations as an attempt to

'conceive the most Inmanent of Inmanent Tridities and to annihilate the Trinity into a unity; and, just because it does this, it discards everything in the way of a basis in historical religion and leaves itself in paradoxical distinctions and speculations, while at the same time it is not able to give clear expression to its new and valuable thought' (*Hist. of Dogma*, Eng. tr., iv, 189).

It is surely harsh to say, as Harnack here does, that the *de Trinitate* 'can scarcely be said to have promoted piety anywhere or at any time,' but the speculative tendencies of Augustine did unquestionably tend to draw men's minds off from the living realities of historical Christianity. Augustine, more than any other teacher, prepared the way for the barren refinements of scholasticism; he almost occupied its standpoint and anticipated some of its methods.

The idea, however, which underlay Augustine's lofty meditations on the subject of the Trinity was not peculiar to him. It came to be defined later as *conspiration*, the intercommunion, or mutual interpenetration, of the Three Persons in the Trinity. John of Damascus, last of the Fathers and first of the Schoolmen (c. A.D. 700), gave currency to the word, and the thought which it expressed prevailed in East and West alike, though with a different emphasis. The Latin equivalents of the Greek were *circumincessio*, which implies the activity of mutual permeation, and *circuminsessio*, which denotes a mutual rest or abiding of each Person in the others. 'Co-inherence' is perhaps the nearest English equivalent; but, whatever word be used, it represents the thought that the whole Trinity is present in each Person, that each is as complete that it includes the others—a mode of speech which destroys the very conception of 'personality.' The idea first appears in Gregory of Nyssa, it was most fully developed by Augustine, and came to be the basis of orthodoxy in Scholasticism; but it has never been fairly interwoven with religious thought and experience in the actual life of Christendom.

5. **The Creeds.**—There is no small danger of losing sight of the main theme in the midst of discussion concerning the views of individual thinkers, however eminent. Controversies in the Church did not arise over the fundamental belief in one God, which was never questioned by any; nor, strictly speaking, were they concerned with the new revelation of God in Christ and the gift of His Spirit, which were the common heritage of believers. Questions did arise—and they were but slowly and with difficulty settled—as to the mode in which the altered conceptions of God could be most appropriately expressed amidst the environ-

ments of the Greco-Roman world of the 2nd to the 4th centuries. Faith in God the Father of all, in His Son Jesus Christ the Saviour of all, and in the Holy Spirit through whom Father and Son were revealed, formed the basis of all Christian creeds, and such trust was the animating principle of all Christian experience. It found very various expression, but it remains true that no Ecumenical formulation of the Christian conception of God was ever made. The chief records that have come down to us are as follows.

(1) *The Apostles' Creed*, an expansion of the baptismal symbol, may be described as the creed of the catechumen. From the time when it consisted only of three or four clauses in the 2nd cent., down to its full development in its present shape in the 8th, this venerable Confession of Faith always retained its original character. It was never debated by authorities or adopted at a Council; slowly it grew as the expression of the working faith of the Western Church. It contains the statements, 'I believe in God the Father . . . and in Jesus Christ His only Son our Lord . . . I believe in the Holy Ghost'; but the inter-relation of these is not defined, and no doctrine of the Trinity, properly speaking, is attempted.

(2) *The Nicene-Constantinopolitan Creed*, ratified at Chalcedon (451), is a theological document, shaped and re-shaped by successive Councils, its phraseology keenly debated and sharply defined. It was prepared for the purpose of excluding heretics, and its earliest form concludes with an anathema upon some of them. But in outline it consists of three parts that are not concatenated together. Its Christology forms its characteristic feature, and a doctrine of Christ undoubtedly implies a doctrine of God of a very significant kind; but here again no attempt at a definition of the mystery of the Trinity is attempted. It is otherwise with the Athanasian Creed.

(3) *The Athanasian Creed*—to use the modern misnomer for the anonymous *sermo* or exposition of Christian doctrine known as the *Quicumque vult*—emanated from the Western Church in the 6th century. It was a creed for the clergy, with accompanying comminatory clauses; and in its two parts it minutely defines the doctrine of the Trinity, and that of the two natures in Christ as intimately related to it. The teaching of Augustine and the phraseology of creeds in the 4th and 5th centuries are presupposed and adopted; but the document as a whole was never accepted by any Council, nor can it be described as an Ecumenical symbol.

(4) *The Te Deum*, on the other hand, was prepared for the purposes of worship, not to express nice metaphysical distinctions. Yet it embodies more adequately than any technical creed the faith of the Church, and the Christian conception of the God whom it adores—*lex orandi, lex credendi*. This lyric paraphrase of the Apostles' Creed, by whomsoever composed, in, as Luther said, a fine confession of the true faith of a Christian, as well as a hymn in which to praise God. The religious faith of the community, uttered by Paul in his solemn benediction, echoed by Clement of Rome and Ignatius, and repeated by every believer at his baptism, remained the same throughout, though only after the lapse of centuries were acceptable forms devised to express the deep convictions of the Christian heart. And throughout the generations the wisest teachers confessed with Augustine that the words that were used were at best inadequate for their purpose, and were uttered in reverence because, though speech was imperfect, silence was impossible. Scientific and speculative discussions have had their place, and metaphysical formulae their value, in shaping the Christian doctrine of God; but it has never been forgotten that religious conceptions, when ex-

pressed at all, can only be uttered in the language of religious faith.

IV. MEDIEVAL AND REFORMATION PERIODS.

For more than a thousand years the doctrine of God in the Christian Church preserved its character, substantially unchanged and unimpaired. From Augustine to Kant, or from the Athanasian Creed to the period of the *Aufklärung*, or Enlightenment (q.v.), orthodoxy remained stationary. The phrase does not necessarily imply theological stagnation, but such movement as took place was within lines carefully laid down and steadfastly maintained. The work done lay chiefly in the direction of elaborating the content of the ideas of God, filling up gaps, and attempting to answer difficult questions. But the gradual modification thus effected tended to make doctrine more philosophical and less religious, more complete on the speculative side, but less potent and real in practical life.

The writer known as pseudo-Dionysius exercised a wide influence from the end of the 5th cent. onwards. He attempted to blend some of the chief ideas of Neo-Platonism with those of the NT. Accepted at the time as the Areopagite of A.D. 170, the 'first bishop of Athens,' Dionysius influenced both the scholasticism and the mysticism of the Middle Ages. His philosophy distinguishes between 'affirmative theology'—which teaches truth concerning the nameless supra-essential Deity in the form of symbols, historical manifestations, and ecclesiastical dogmas—and 'abstracting theology,' by means of which the devotee may rise from these temporal forms to the direct contemplation of the transcendent inconceivable Infinite and Absolute Being. Dionysius appears to identify this highest principle of Deity with God the Father; and, while he believes in the Trinity, to him Jesus and the Holy Spirit are but branches or channels through which the Divine enters into relation with human life. A system of 'heavenly hierarchy' was constructed, of which the earthly hierarchy is the reflexion and continuation, but its author never succeeded in making clear the steps of ascent and descent in his speculative scale of being; and his name is preserved in history chiefly because of the lasting impression he produced upon medieval theology. Scotus Erigena, who in the 9th cent. heralded the approach of scholasticism, interpreted Christian doctrine in the light of Dionysius' teaching. His system was essentially pantheistic, and professed to lead from God, through the ideal and the real worlds, back to God. He attempts in his own way to solve the philosophical problem of the One and the Many by means of Scriptural doctrines and phrases to which he gives a meaning of his own. God is the supreme unknowable Deity, who yet manifests Himself in the manifold of creation. This process of unfolding is to be followed by the return of all orders of being back to the primal Unity, so that God may be all in all. The fundamental difficulty found in the presence of sin is met by resolving evil into a necessary factor of development which in due course will be overcome. Christ is the centre in this stupendous cycle of movement from God and to God, and Trinitarian phraseology is from time to time employed; but Erigena's scheme of existence is essentially philosophical rather than Christian, and was never accepted by the Church, though it exercised considerable influence on medieval thought.

1. Scholasticism.—Scholasticism (q.v.) has been described both as the reproduction of ancient philosophy under the forms of ecclesiastical doctrine, and as the imputation of Christian truth under the forms of Aristotelian philosophy. As a matter of fact it passed through various stages

—ancient Greek metaphysics and orthodox Christian dogmas being blended in varying methods and proportions. But, at its best, scholasticism represents God as the origin, centre, and goal of all knowledge; all things are viewed in relation to Him; He is at the same time cause and end (*principium et finis*) of all thinking things, of all subjects, of all thought. Sacred science, i.e. theology, is pre-eminent in the teaching of the schoolmen; but close observation shows that, partly as regards their conception of God, partly through the methods adopted of reasoning about Him and His relations with men, and partly through the resultant views taken of human life, vanquished philosophy had at this time transformed, if not actually conquered, its conqueror. It is not possible, however, to generalize concerning scholasticism as a whole; for, during its rise, progress, and decay, from the 11th to the 16th cent., changes of various kinds are discernible. It is difficult for us now to estimate the influence upon the doctrine of God exercised first by Neo-Platonist and afterwards by Aristotelian principles, and by the prolonged philosophical discussion concerning universals and the Realist v. Nominalist controversy. But the names of Anselm (q.v.) and Abelard (q.v.) in the 11th cent. mark the rise of a movement of which Thomas Aquinas (q.v.) in the 13th constitutes the climax and crown, as Duns Scotus in the 14th represents its incipient decay.

Anselm's ontological argument in his *Monologium* for the existence of God was characteristic of the time, and the Christological argument of the *Cur Deus Homo?* sheds light upon the ideas entertained of the justice and goodness of God and the meaning of the Incarnation. Abelard's rationalism led him to interpret the Trinity in a Sabellian fashion and to explain the Atonement entirely in terms of the love of God and the impression made by Divine love in self-sacrifice upon the hearts of men. These two representative thinkers were not in reality so far apart as their respective mottoes *Credo ut intelligam* and *Intelligo ut credam* might seem to imply. Both argued *a priori* concerning the nature of God, their premises being drawn nominally from Scripture, but in reality from quasi-philosophical ideas which belonged to their own time, and which had never passed through the searching fire of criticism. Abelard boldly challenged some assumptions of current orthodoxy, and his dialectic threatened to prove seriously destructive, but his fundamental ideas concerning the Deity did not seriously differ from those of his contemporaries. It may be said that Bernard the mystic and Abelard the rationalist presented complementary aspects of Christian thought, which were blended in different fashion in the philosophy of Aquinas and the poetry of Dante.

The general factors of development which prepared the way for Thomas's *Summa*, the standard theological monument of medievalism, were such as follow. The pantheistic tendencies which have been described as characterizing the Neo-Platonism of Dionysius and Erigena produced a marked reaction. In time the genuine Platonism which had been handed on from Augustine to the earlier Schoolmen gave way before a revived Aristotelianism, the doctrines and methods of the Stagira being used by Aquinas to establish and expand the truths of natural theology. God is defined as *primum movens immobile*, 'Mover of all, Himself unmoved the while,' and as *actus purus*, i.e. actuality without potentiality. The modes of proving the existence of God are chiefly deductive, being drawn from the nature of causality, the necessity of absolute being, and the need of intelligence in the great Designer. The metaphysical attributes

of the Deity—unity, infinity, self-existence, and the rest—are deduced in similar fashion. The proof furnished by Aquinas, that love necessarily constitutes the fundamental relation of God to the world which He has brought into being, stands in marked contrast to the idea and exposition of Divine love given in Jn 3rd and 1 Jn 4th. Thomas insisted on the distinction between the teachings of reason concerning the existence and nature of God and the teachings of revelation. These latter must be received by faith on authority, since they could neither be discovered nor proved by reasoning. The dualism thus introduced has influenced Catholic, and to a large extent Protestant, theology ever since. Thomas rejected the pantheistic teaching which represented God as the essence of all things; he viewed Him as creator of all things from nothing, i.e. without pre-existing material—not from all eternity, but at a definite moment, when time began. This relation of God to the world is discernible and provable by a posteriori arguments. Man has the knowledge of God *naturae*, if he does not by evil-doing stuff and destroy it. The doctrine of the Incarnation, however, must be received on the authority of revelation. It implies a union between the Divine and human natures in the One Person of the Logos, the human nature of Christ being impersonal. God's nature, including the combined attributes of justice and mercy, made necessary the 'satisfaction' rendered by the death of Christ on the cross, and from this fountain spring all the streams of salvation needed by guilty man in a sinful world. Thomas was essentially a Realist; for him the Ideal was the real in a truly Platonic sense. But, in analysing and expounding the fundamental truths of the Christian faith, he used the categories of Aristotelian philosophy. In many of his arguments concerning the persons of the Trinity, their properties and functions, and concerning God's ethical attributes, His relation to the world, and His operations in it, Aquinas seriously modified, from the standpoint of philosophy, the data of revelation which he professed only to state and interpret. Christian theology for six centuries past has been largely moulded—for better, but to some extent decidedly for worse—by the speculative reasonings of this *Dominus Augustinus*. Long after the technical letters of scholasticism had been broken, the movements of Christian thought concerning God were still too largely confined within the limits which the Scholasticism had laid down.

2. *Mysticism*.—The relation between Scholasticism and Mysticism (q.v.)—those twin forces in shaping medieval thought concerning God—cannot be defined in a word. The view that Mysticism represented a reaction against the extreme subtleties and logical analysis of the Scholastic method represents but a fraction of the truth, characteristic only of a few teachers at one particular epoch. Harnack's view (*Dogmengesch.* pt. II. bk. II. ch. vii.) is that Scholasticism is 'nothing but scientific thought,' though the science is in letters. Mysticism is the presupposition of Scholasticism, because medieval science based itself on piety. Piety prompts to thought, and thought in turn promotes piety. Where the knowledge of God is pursued for the sake of the inner life of the soul, it may be termed mystical theology; but, where the knowledge of the world in relation to God possesses an independent objective interest, the term 'Scholastic theology' is used. The two, therefore, neither run parallel to one another nor are in conflict with each other, but 'Mystic theology and Scholastic theology are one and the same phenomenon, which only present themselves in manifold gradations, according as the subjective or objective interest

prevails' (Harnack, *Eng. tr.*, vi. 27). 'Mysticism' is a word employed in such various senses that ambiguities are almost inseparable from the discussion of the subject. But Roman Catholic theologians distinguish between dogmatic, moral, and mystical theology, the last being essentially experimental and implying a pure and direct knowledge of God's innermost nature, obtainable only by a personal experience of the love of God as uniting the soul to Himself and transforming it in the process. In this sense, as Harnack says (ib.), 'Mysticism is the starting-point and practical application of Scholasticism'; but surely it is much more than this. In the Middle Ages, as always, it represents a transcendental method of attaining immediate spiritual knowledge, which leaves the dialectical methods of Scholasticism far behind. The mystical theology of Eckhart, for example, and of medieval saints generally, whilst it was not theoretically in conflict with Scholastic theology, was in practice opposed to Scholastic methods because it professed to impart an intuitive knowledge of God as Absolute and Infinite by means of an intimate personal union with Him in self-surrender (see MYSTICISM [Christian]). This kind of knowledge could never be attained by the most elaborate processes of the logical understanding as work upon the data of revelation; and here the relation of Mysticism to the doctrine of God goes far beyond the results of Scholasticism. Harnack has, however, rendered the important service of showing that these and other apparent antagonisms in the medieval doctrine of God are not ultimate. Anselm and his opponents, Bernard and Abelard, the German mystics of the 14th cent., and those who pronounced them heretics, were not inherently and fundamentally opposed to one another, but were travelling by different paths which led at least to the same goal.

3. *Schools of mysticism*.—Mysticism is neither Catholic nor Protestant, though it took differing and characteristic forms in Latin and in Teutonic minds. The connexion between the idea of God and man's mode of attaining communion with Him is very close. Hugo of St. Victor in the 12th cent. unites two modes too often disjointed, of conceiving and approaching God, when he says:

'In two ways God dwells in the human heart, to wit, through knowledge and through love; yet the dwelling is one, since every one who knows Him loves, and no one can love without knowing. Knowledge, through cognition of the Faith, creates the structure; love, through virtue, paints the edifice with colour' (*de Vita Nova morali*, I. 2 [PL xcvi. 613]).

The contemplation of God on which the Victorine school, with its Platonic tendencies, laid special stress stood midway between the logical analysis of Abelard and the emotional fervours of Bernard of Clairvaux (q.v.). Bonaventura later furnishes an excellent example of clear thinking concerning the Trinity and the Divine attributes on the lines accepted by the Church, combined with deep devotional feeling and an insistence on the necessity of religious experience for the attainment of any true knowledge of God.

'Through love Christ dwells in our hearts. This is the knowledge of Jesus Christ, from which, as from a source, comes the certitude and understanding of the whole Scripture. Wherefore it is impossible that any one should advance in his knowledge, unless he first has Christ infused in him' (*Revelationum, Prolegomena*, Quaracchi ed., p. 281. For these last two quotations, see Osburn Taylor, *The Medieval Mind*, II. 287 and 289).

The school of German mysticism, represented mainly by Eckhart, also by Tauler, Ruysbroek, and others, exhibits the tendency—always more or less inherent in mysticism—to less theological landmarks in unbridled and formless speculation. Eckhart was not a Pantheist, but he often writes like one. For him the Godhead is impersonal, for ever hidden and unknowable. God, however, reveals Himself in a trinity of persons, the subject of Divine knowledge being the Father, the object

being the Son, while the Spirit is the mutual bond of love whereby they are united. The world is in God, not God in the world; time, space, creaturely life are nothing in themselves. It is the duty of man by an act of intuition, which includes intellect, feeling, and will, to realise direct union with the Absolute; and so, in Origen's phrase, the end will be like the beginning, all will return to God, and the Many will be lost in the One, from whom (or from which) all have originally proceeded.

4. **The Reformation.**—At the time of the Reformation no controversy arose concerning the doctrine of God, so far as creeds and formularies were concerned. The Decrees of Trent reaffirm the Nicene-Constantinopolitan Creed with Western additions; it is noteworthy that no attempt at reconstruction was made on the lines of Aquinas. The Confession of Faith then passes to the subjects of Original Sin, Justification, and the other points of immediate controversy, with which also the Reformed Confessions were mainly occupied. The first article of the Augsburg Confession, however, after reaffirming 'the decree of the Nicene Synod concerning the Divine essence as true and without doubt to be believed,' proceeds thus:

'To wit, that there is one Divine essence which is called and is God, eternal, without body, indivisible (impertectibile), of infinite power, wisdom, and goodness'. . . and that yet there are three persons of the same essence and power, who also are co-eternal, the Father, the Son, and the Holy Ghost. And they use the name of "person" in that signification in which the ecclesiastical writers have used it in this sense, to signify, not a part or quality in another, but that which properly subsists.'

The corresponding Anglican article runs:

'There is but one living and true God, everlasting, without body, parts, or passions (impassibilis, impassibilis); of infinite power, wisdom, and goodness; the Father and Preserver of all things, both visible and invisible. And in unity of this Godhead there are three Persons, of one substance, power, and eternity: the Father, the Son, and the Holy Ghost (Art. 1).'

None the less, the Reformers exhibited a change of tone and of emphasis, though not of definition, in their teaching concerning God. Luther in his Small Catechism lays the stress where Scripture lays it, and he was wont from time to time to criticise the use of the term 'Trinity' as a 'mathematical' word, saying: 'Since it is not in the Scriptures and sounds cold, we shall do much better to speak of God and not of the Trinity.' Luther dwells often upon God as a loving Father, ready to forgive and providing for men a free salvation. But he is careful to say that this means 'God in Christ'; all knowledge of God outside Christ reveals Him as a righteous Judge, wroth with sin and stern in punishing the guilty. It is the work of Christ as Redeemer that makes forgiveness possible, and opens up communion with the Father for His rebellious children. It is Christ as Saviour, not as Eternal Word, that Luther preaches, though his doctrine of salvation loses its meaning if the Eternal Word did not become flesh and dwell among us as Jesus Christ our Lord.

A distinction between Luther and Calvin is discernible—still more marked between Lutherans and Calvinists—in the conception of God which appealed to them respectively. Calvinism is a 'theology' indeed, a doctrine of God throughout the length and breadth of its teaching. The glory of God is exalted, all else is banished or abased. God is celebrated in His omnipotence and omniscience, in His sovereign and inscrutable will, in the grandeur of His eternal, unalterable decrees, God in His soleness and absoluteness, in the accomplishment of His will rather than in the manifestation of His character, a will that instantly silences opposition and irresistibly effectuates its own purposes. Lutheran Christology, on the other hand, admitted a closer approximation of God to man than orthodoxy had always allowed. It emphasized

the love of God manwards, the self-emptying on the part of the Eternal Son, the quasi-deification of His humanity in the doctrine of the *communicatio idiomatum*. The contrast between Lutheranism and Calvinism furnishes a striking example of the fact that theoretical identity of creed is consistent with almost incredible divergency of spirit and temper.

5. **Protestant theology.**—The 16th and 17th centuries are marked by the establishment of a kind of Protestant Scholasticism. The post-Reformation theologians in their doctrine of God fell back on Scholastic categories, and laid down laws in their definitions of Deity which have been observed by their followers ever since. The second chapter in the Westminster Confession of Faith, 'Of God and of the Holy Trinity,' is a standing illustration of this in its definition of the One Being who

'hath all life, glory, goodness, blessedness, in and of himself; and is alone in and unto himself all-sufficient, not standing in need of any creature which he hath made, nor deriving any glory from them, but only communicating his own glory to, by, unto, and upon them:—he hath most sovereign dominion over them, to do by them, for them, or upon them, whatsoever himself pleaseth.'

God in His essence is defined as an infinite and eternal Spirit, His metaphysical and moral attributes are carefully mapped out, and an exposition of the doctrine of the Trinity on orthodox Catholic lines follows. But in the systematized doctrines of God of the 16th and 17th centuries, there are indications of constituent elements not yet sufficiently harmonized. The idea of the philosophical Absolute, God as the ultimate reality in the universe, the self-sufficing Deity of abstract thought, appears in them. There is present also a metaphysical conception of the Trinity as it had been developed through centuries of Catholic teaching. But at the heart of the whole is the living God of the Bible, the revelation of the Father in the Son of His love, the ever present Friend and Saviour of mankind; and in the whole thus presented there are uninvolved antinomies. The question how the philosophical and speculative elements in these definitions were to be harmonized with the purely religious teaching of the OT and NT had hardly emerged. In the passionate conflicts which shook Christendom to its foundations in the 18th cent., it was taken for granted that Catholics and Protestants alike worshipped the same God and accepted the same fundamental conceptions of Him.

V. **THE MODERN PERIOD.**—The date from which a 'modern' movement in thought is to be reckoned depends upon the subject handled and the standpoint occupied. For some purposes, in the study of theology the 16th cent. forms the watershed between medieval and modern ideas; but the critical investigation into the foundations of Christian Theism begins with Kant and the 'Enlightenment' of the 18th cent., whilst the scientific and philosophic movements which have affected the Christian doctrine of God belong chiefly to the 19th century. The progressiveness of Christian Theism within its own lines is a marked feature of the period, and there can be little question that the ideas of God entertained by representative Christian thinkers during the last half century have been none the less profoundly, because silently, modified, without necessarily losing their essential Christian character.

1. **Deism.**—The Deistic movement in England, with which may be associated the revival of Arianism in the early years of the 18th cent., affected orthodox thought only indirectly. Deism (q.v.) was a philosophy of the universe rather than a religion; it taught the existence of a God, but, as Kant said, not of a living God. Essentially

rationalistic in their methods, the Deists recognized the Ultimate Being only as a transcendental cause of the universe. They criticized revelation if they did not entirely deny its reality, they rejected the supernatural and all claims of authority in religion, while they asserted the doctrines of Providence, moral government, and Divine rewards and punishments. Bishop Butler answered them by showing the unreasonableness of accepting a bald natural theology with an absentee Deity, whilst refusing to recognize the analogous and superior claims of revelation; and Paley contended that the cosmological argument on which the Deists relied to prove the existence of the Deity in whom they believed necessitated an advance to teleological and moral arguments in proof of a living God who had not left the mechanism of Nature to run by the mere operation of its own laws. But the full reply to Deism was not possible in the 18th century. That came later, with a deeper and more adequate understanding of the two terms, Nature and God.

2. German theology.—Kant promoted advance by criticism. His keen examination of the currently accepted 'proofs' of the Divine existence was carried out on the lines of a critical philosophy which denied all direct knowledge of ultimate realities. For him God was but one of the 'ideas' of pure reason, or postulates of the practical reason, whilst his strenuous assertion of the claims of the practical reason led to a permanent strengthening of the moral argument for the existence of a righteous Ruler of all. Kant's criticism of time-honoured traditional arguments was undoubtedly serviceable to Theists by leading them to test the soundness of their foundations, but the critical philosophy could not, any more than Deism, bring men into the presence of the living God. Kant's religion found no place for prayer, and resolved itself into a Divinely sanctioned morality. Hegel's epoch-making work in philosophy profoundly affected theology, especially his exposition of the relation between God and the world, and his claim to have rationalized the Christian religion and its doctrine of the Trinity. The Hegelian logical process of thesis, antithesis, and synthesis, as applied to religion, meant that the Absolute externalism itself in Nature and comes to itself again in Spirit: that God in the process of historical development becomes self-conscious in finite spirits, and especially in Him whom Christians believe to be God manifest in the flesh. Hegelianism dissolves religion in metaphysics, and the terms used undergo a philosophical metamorphosis. Hegel's followers differed in their interpretation of his religious teaching, the right wing maintaining the personality of God in Himself apart from creation, and the doctrine of the Incarnation practically as taught by the Christian Church; the left wing—on the whole with more logical consistency—adopting a kind of evolutionary Pantheism. Schleiermacher's teaching blended philosophical and religious views of God without really reconciling them. He vindicated the place of religion as a fundamental and universal element in human experience, making its essence to consist in 'feeling'—in a wide and deep sense of the word. He helped to renew religion in Germany by his revival of the claims of devout consciousness as immediate, self-vindicating, and independent of the processes of reasoning on the one hand and the forms of morality on the other. But in the philosophy which underlay all his teaching, the explanation of religion is found in the infinite universe coming to self-consciousness in man. In Schleiermacher's earlier teaching the doctrine of the personality of God was conspicuous by its absence; personality

appeared to him a limitation; and his glowing and attractive exposition of Christian teaching, which he seeks to free from traditional accretions and exorcisms, does not conceal the fact that in his view we have no objective knowledge of God as He is in Himself, whilst the revelation given in Christ implies only that in Him human God-consciousness found historically complete realization. The fundamental idea of Schleiermacher's theology is that in 'God,' not necessarily viewed as personal, is found the identity of the ideal and real, which in the world exist as opposites. He is Sabellian, if not Pantheistic, and mysticism is of the essence of his religion. The redemption which he proclaims as characteristic of Christianity does not imply God in self-sacrifice for the salvation of men, but a gradual perfecting of human nature through communion with the Christ in whom human God-consciousness has been attained in perfect and consummate measure.

Lotze as a philosopher largely influenced the theology of the later 19th century. He asserted the knowledge of reality in and through phenomena, and followed Leibniz in his affirmation of the personality of God. True reality according to him is

'not matter and is still less idea, but is the living personal Spirit of God and the world of personal spirits which He has created. They only are the place in which God and good things exist' (*Metaphysics*, Eng. tr., II, 709).

Ritschl, on the other hand, who was in some respects a disciple of Lotze, based his theology upon a practically Kantian epistemology. He distrusted metaphysics, hated mysticism, rejected natural theology, and based his teaching on the NT, as incarnating a practical knowledge of God and a religion of redemption sufficient for man's needs. God in Himself is unknowable; but an objective knowledge of Him sufficient for salvation is revealed in Christ, who has for us the value of God. Accordingly, the Fatherhood of God, His love manifested in Christ, is determinative of His nature and of all His attributes. Love is, however, not set forth as in the doctrine of the Trinity, characteristic of God in His own essential being, for this is unknown, but it describes His relation to man as seen in Christ and as operative in the upbuilding of the Divine kingdom in the world. A religious agnosticism of a kindred type was inculcated in England by Mansel, following Sir W. Hamilton in his philosophical principle that 'to think is to condition.' Hence God cannot be known as He is by human thought, though specific doctrines of revelation, such as the Trinity and the Incarnation, have been granted for the guidance of men and may be defended as knowledge regulative but not real. A direct knowledge of God being impossible, the truths of revelation must be accepted as authoritative, in spite of the contradictions which they necessarily imply. But religion based on scepticism has never been far-reaching or long-lived.

3. Christology.—Every doctrine of Christ implies a corresponding doctrine of God. The chief feature of the Christologies of the 19th cent. has been their Kenotic character. A growing tendency has been discernible to adopt a humanitarian doctrine of Christ, with its correlative Unitarian doctrine of God. But, apart from this, many teachers within the pale of orthodoxy have shown a disposition to desert the Chalcedonian doctrine of the two natures in one Person; and, starting from the real humanity of the historic Jesus, have sought to combine with it a doctrine of His true Divinity by asserting such an exinanition, or self-emptying, on the part of the Eternal Word as made it possible for Him to exist within the measures of human nature. Kenotic theories differ considerably in detail, but they agree in insisting

upon the one Divine-human life of the Incarnate Word, the human not being raised to the level of the Divine, or absorbed in it, but the Divine strictly limiting itself within the bounds of the human. Thomasius, Gess, Martensen, and Dörner in Germany, Godet in Switzerland, and Fairbairn and Gore in England, represent varying shades of Kenotic doctrine. The self-emptying is sometimes understood as implying the entire abnegation of some Divine attributes, such as omnipotence or omniscience; sometimes it implies a virtual transformation of the Logos into a human soul. The doctrine as taught by Martensen is based upon a twofold existence of the Logos—in the bosom of God as Eternal Reason, and in the form of man as a holy redemptive Seed. In Dörner's exposition, Kenosis takes the form of a progressive incarnation, such that the self-communication of the Logos gradually increased during the life of Jesus from His conception till His ascension. In any case the mystery of the Incarnation is not solved, though some types of Kenotic doctrine have helped to remove difficulties which had long hampered thoughtful believers. It is to be borne in mind that the 'emptying' of Ph 2 is the laying aside of status, dignity, and glory, not of the essential nature of Deity implied in *μωϋσῆς*, which is retained throughout. Kenotists have impressed on the minds of recent generations certain fundamental Christian truths, such as that it is the glory of God to limit Himself in love for such a purpose as the salvation of the human race; also that the reality of the human nature of Christ must not be lost sight of, or overlaid, through a desire to honour the Divine in Him; and that it is safer and more truly Christian to rise from the historic Jesus to the Word Incarnate than to reason a priori from man's conceptions of what the Divine is likely to be, or must be. Every form of Kenotic doctrine, however, which weakens the belief that 'very God' was made flesh in Jesus Christ touches the living core of Christian faith, because it tends to undermine the work of redemption, whilst seeking to explain the inexplicable in the doctrine of the Incarnation.

4. *Modern Theism.*—The Christian doctrine of God is Theism raised to its highest power. Consequently it is affected by all current thought which bears upon Theism, as well as by Biblical criticism and investigations concerning the historical Christ. The two currents of thought that chiefly influenced theistic doctrine during the later 19th cent. were the remarkable development of physical science and the spread of Idealistic philosophy. The Materialism, Naturalism, and Agnosticism which dominated Western civilisation for some decades were simply foes to be resisted by all who believed in a living personal God. But in process of time it was seen that a mechanical explanation of the universe was incredible and impossible; whilst from an Idealistic view of Nature, as well as from the wealth of knowledge concerning its phenomena and laws that has been amassed by science, Theists have naturally learned much, and Christian conceptions of Deity have been imperceptibly deepened and enriched, without losing their essential character. It is impossible in a paragraph even to enumerate the gains that have resulted from this lifting of veil after veil from the face of Nature and the consequent heightening and deepening of the vision of God. The dawning conception of the vast reign of law, with the new enlargement and confirmation given to it in every department of knowledge, the establishment of evolution as the mode by which Nature works, the relations between mind and matter as exhibited by modern psychology, the proved dominance of spirit in the operations of natural and material forces, the

scientific study of humanity, its genesis and history on the earth—these are but a few examples of the workings of the modern mind which have led to a wider and truer apprehension of the being and nature of God, as understood by the Christian Theist. Conflict between the conceptions of God as seen in Nature and in history, in law and in grace, in tradition and in fact, has inevitably arisen, and there have been periods when it appeared as if the two diverse points of view would be pronounced incompatible. But as it has always been during a period of assimilation of new knowledge, especially when it has been rapidly acquired. The process of separating between the abiding and the transitory in traditional ideas, between the sound and the speculative in new theories, cannot be readily carried out; and, whilst it lasts, a strife arises not between religion and science, but between more time-honoured traditions of the past and more hasty speculations in the present. The result thus far has been to lay the foundations of a truer and fuller belief in God, as the ultimate postulate of all thought, the ultimate ground of all existence, and the ultimate presupposition of all that makes our actual experience possible. Steering between the rocks of crude mechanical explanations of Nature on the one hand and the whirlpool of a Pantheism which would merge the very idea of God in the natural self-evolution of Absolute Being on the other, modern Theism has learned to set forth the living God as an ever-present Energy in a universe which in its origin and history has been always dependent on Him for existence. Herbert Spencer declared that amidst all the mystery of our inscrutable existence 'there remains the one absolute certainty that we are in the presence of an Infinite and Eternal Energy, from which all things proceed,' but that it is unknowable (*Notes, Inst.* p. 543; cf. *First Principles*, pt. I. ch. 2 (ed. 1900, p. 34)). Contemporary Theism, accepting his premise, has interpreted the unknowable 'actuality lying behind all appearances' as the living personal God with a fullness and richness never possible before. The very considerable literature that has appeared under the auspices of the Gifford Lectureship has borne witness to the activity of very various minds in this direction.

Modifications in the idea of God have taken place, which cannot be briefly described. They have affected what are known traditionally as 'proofs' of the Divine existence—really analyses of the processes by which human thought rises Godwards, unfoldings of what is rationally implied in all human experiences. Natural theology has been modified, including the ideas of creation, miracle, and the whole relation between the natural and the supernatural. The transcendence of God taught by the Jew and the Muslim, accepted by the Deist and by the orthodox Christian in the 18th cent., is combined by the Theist of the 19th with a belief in His immanence, stress being laid on the latter in all recent attempts to expound the relation between God and the universe which He has brought into being. The meaning of the words 'God' and 'man' has been re-examined, and the nature of personality in both has been more fully investigated, with the result that Biblical teaching concerning their mutual relations has been illumined with a new significance. Theodicy has necessarily been modified, as the facts underlying every attempt to justify the ways of God to man have multiplied and changed their shape. The old world-problems of pain and evil have not been solved; the methods and ends of Providence have not been fully explained, but they are better understood, and the reasons why, in the nature of things, they can never be com-

pletely comprehended in this life have been brought home as never before. The result has been that many age-long enigmas represent now an 'overcome standpoint'; and the idea of God has been indefinitely widened and deepened by an inclusion of some of the standing antinomies of life in the order of His eternal purpose.

3. *Divine immanence.*—It does not lie within the scope of this article to dwell upon these modifications in detail. But no account of the doctrine of God in the modern period would be complete without a comment upon its most marked feature—the Divine immanence in the world. The phrase bears many meanings; it is here understood to refer to the newly emphasized belief that God is the ever-present, ever-active ground of all finite existence, that He is not only the cause and origin of all creatures and their powers and activities, but that always and everywhere He sustains and informs the universe, the whole world of things and of spirits being continually dependent on Him 'in whom they live and move and are.' The quotation of well-known words shows that this thought is old, but its application in the 19th cent. indicates that the theology of the 20th may not improbably be transformed by it. Instead of insisting upon a sharp opposition between God and Nature, God and the world, God and man, God and the history of finite spirits, the theology of the last half century has tended to trace the operation of God as seen in the ordinary workings of Nature, in the very constitution of man, and in the development of nations and of the human race in its long and complex history. Dualism in all these departments is preparing the way for Monism, of one type or another.

It is clear that for the Theist this process is accompanied by dangers. If Theism is maintained in its purity, the transcendence of God as of One whose infinite Being and resources are not exhausted by, or identical with, the universe will never be lost sight of. The fundamental distinctions between the Infinite Spirit and all and each of His finite spirits dependent upon Him, and the eternal contradiction between good and evil, moral light and moral darkness, must never be effaced or slighted. The philosophy which refuses to set the One over against the Many, and seeks to find the One only in the Many, is inconsistent with true Theism. Reality would thus be resolved into the organic unity of opposites, and individuals would become only elements, or factors, in one indivisible whole. Deism banishes God from the universe, but all forms of Pantheism imprison Him in it. If the Eternal Spirit only 'realizes Himself' in finite spirits, and the Absolute only 'comes to consciousness' in the facts of history, the essential meaning of the word 'God,' the significance of evil, and the nature of religion are alike completely altered. Neither pure Theism nor real Christianity can be erected upon this basis. But short of this, there is abundant room in the Theistic and Christian conception of God for a fuller stress to be laid upon the abiding, informing presence of God in the universe than was possible in the 18th century. The chief contribution of the 19th to the doctrine of God is the development of thought in this direction. Elements of crude anthropomorphism, ideas of externality, and a dualistic opposition between God and Nature, which had lingered in Theistic teaching, are now rapidly disappearing. Influences of various kinds lead the modern mind to find its rest in the thought of a Deity informing the universe from within, as well as ordering and controlling it from without. Creation, preservation, Providence, and all progress of human thought and civilization as directed by God are best understood from this standpoint. The supernatural is

intelligible in proportion as it is not severed from the order of Nature which it transcends, and revelation can be best understood when it is not opposed to that continuous operation of the Divine Spirit which guides and illumines the thoughts of all mankind.

4. *Divine personality.*—Religion is bound up with the doctrine of the Divine personality; philosophy has been for the most part opposed to it. But there need be no discrepancy between the idea of God viewed as the ultimate entity in philosophy thought and God as the ultimate ground of religious trust and hope. The philosophy of religion to-day, so far from accepting the position that to attribute personality to the Infinite limits and lowers the conception, rather lays stress on the category of personality as the only one that suffices for a worthy conception of Deity. Force and cause and substance are not ultimate in a true conception of essential being; only a Person represents existence by, in, and for itself. Personality must, of course, be rightly understood, not identified with the imperfect forms of it characteristic of finite spirits. Even amongst men it implies intelligence, feeling, and will; it is characterized by self-consciousness, and implies self-determination. As such it forms the highest category of existence that we know; even Herbert Spencer urges that the Infinite Energy on which all things depend cannot be less than personal. The Absolute must be Absolute Intelligence, and this carries with it, as implicit, Absolute Will. To assert this of the Infinite Deity is not to limit Him; to deny it constitutes the real limitation. A person knows; a thing is known. Such measure of personality as man possesses is the one source of infinitude within him; by virtue of it he grows in knowledge and power, and in *esse* infinite. The unquestioned limitations amidst which human personality is realized arise from the conditions under which it is being developed, not from the vital principle itself. The God of Theism is not the Unconditioned, out of all relation with the universe, nor is He the Absolute, in the proper sense of that much abused term. But He is Infinite Spirit, possessed of personality in a sense that can be predicated only of the Infinite—consciousness, knowledge, feeling, will, each at its highest, and all indissolubly blended in the unity of immediate, inalienable Self-existence. Some of the speculations of Aquinas in the 13th cent. have taken more definite and abiding shape and become the assured possession of the philosophy of religion in recent years.

5. *Christian doctrine.*—Theism, however, is not Christianity. As interpreted by some, a bare theistic doctrine of God has even stood in the way of the acceptance of the Christian gospel. The God of some theistic philosophers could never become incarnate. Christian Theism, rightly understood, only carries to completeness the conception of Deity implied in the definition of an Infinite and Eternal Spirit, perfect in wisdom, righteousness, power, and love. Christianity is nothing if not a religion of redemption, and the Christian idea of God is inseparably bound up with the doctrine of Divine Incarnation for the salvation of men. Given a God of infinite compassion, and the existence of moral evil in man as dire and deep-rooted as the Bible declares sin to be, then grace is as necessary a part of Divine self-revelation as Nature. A God who humbles Himself and suffers in order to redeem, because only thus can the redemption of finite spirits be effected, becomes more than credible. A supreme manifestation of holy love in action is demanded alike by the needs of man and the nature of God. Theories as to the kind of mediation necessary to set right the disturbed relations between the Father of Spirits

and His children are still various, as they have been throughout the history of the Church. But new light is continually dawning upon the minds of men as to what is implied in a Redeemer-God, and the Christian doctrine of God is continually illumined by it. The study of history and of the facts of human life, the fuller understanding of human nature yielded by modern psychology, the development that has taken place in ethics and ethical standards, and the stress laid by such writers as Eucken upon the life of the Spirit have combined to confirm the Christian doctrine of a God who, as an essential love, has proved the Divineness of His regard for men by giving Himself in uttermost self-sacrifice on their behalf. The kind of redemption set forth in Christianity is as different from the release from the Wheel of life in Buddhism as the fundamental idea of God differs in the two religions. A living, personal God of holy love delivers from sin in the cross of Christ, whilst a religion practically without belief in God and the soul can promise cessation from the four woes only by a long journey on an eightfold path leading to the happy absorption and disappearance of individual existence.

3. **The Trinity.**—Belief in an incarnate and redeeming God leads the mind beyond Unitarian Theism. In modern light it is seen to imply a richer and more adequate conception of God than that set forth in Judaism and Muhammadanism. The Christian doctrine of the Trinity cannot, however, be arrived at by philosophical reasoning, though a verification of it may be constructed from the standpoint of the higher Reason. In recent expositions the doctrine has chiefly been dwelt upon as the earliest Christians understood it, as one of revelation and personal experience. It best explains the facts of Gospel history, the teaching of the Apostles, and the religious experiences of believers in Christ from the first until now. Such a doctrine makes it easier to apprehend, however imperfectly, the meaning of personality in the Godhead and the true significance of thought, goodness, and love, as existing eternally in the Divine nature, by its indication of interior distinctions in the Godhead which do not impair unity. It avoids the extremes of Deism and Pantheism, preserving elements of truth in each with regard to the relation of God to the world. Trinitarian doctrine, however, did not originate in speculation, and it is not propounded to-day on *a priori* grounds arising from the nature of Deity. It commends itself to faith as the best expression of the fuller revelation of God which was given in Christ, and of the rich and many-sided communion with Him made possible in the gospel. In some important respects the phraseology of the 4th cent. does not express to men of the 20th what the Fathers of the Church intended to say more than a thousand years ago. 'Substance,' 'nature,' and 'person' do not mean precisely what *ousia*, *physis*, *hypostasis*, and *prosopon* meant to Athanasius, Nestorius, and Cyril, nor have the three English words always preserved the same meaning. The modern idea of personality would perhaps have been unintelligible to the Fathers at Chalcedon; and changes in that idea, subtle but significant, have taken place even within the last half-century. The theological phraseology employed to describe religious truth may well be varied as the generations pass. But the simple, untechnical language of the NT concerning Father, Son, and Spirit, Three in One and One in Three, whatever various comment it may receive, remains the highest and the best, as it was the earliest, expression of what the sacred name God means in the Christian religion.

W. T. DAVISON.

GOD (Buddhist).—A general statement of Buddhist belief with regard to the Divine, and of the conception which Buddhists generally have formed of God, presents considerable difficulties—less on account of the complexities of the belief in itself than by reason of its many-sided character, and of the very various views that are held in the many *Schools* of Buddhism. The sects of the *Hinayāna* and the *Mahāyāna* are as far apart in their doctrine of God as in any other article of their loosely-knit, respective creeds, and perhaps further. Both have departed widely from the position of primitive Buddhism, as formulated by Gautama Buddha himself, according to the usual interpretation of his teaching on this subject. There is, indeed, little evidence that that teaching was ever actually put into practice beyond a narrow circle, or the generation of his immediate followers and disciples. By its philosophic detachment and refusal to make concession to the natural desire of the human heart for some external support and supernatural aid in the conflicts of life, it set itself in opposition to the universal tendencies of religious thought and the cravings of the religious life, and—probably inevitably—while appealing to the few, lost the support of the majority of mankind, whose needs it thus failed to meet.

It is probably an erroneous view of the original teaching of Gautama Buddha which explains his attitude as entirely and of set purpose atheistic; as construing the universe in a materialistic sense, and denying the existence of a God. That he interpreted the universe in the sense indicated is in all probability true; and his views in this respect were derived from the ancient doctrine of the Sâṅkhya philosophy, which in India professed to explain everything in terms of soul and matter (*purusha and prakriti*), and to have no need for the

intervention of a Divine power. The latter view, however—that the founder of Buddhism intended to give expression to distinctly atheistic views—seems to be a mistaken inference from the response which he is recorded in the Buddhist books to have given to the questioning of his disciples with regard to another world, and his refusal to offer any definite instruction on the spiritual and unseen, or to illuminate, with any ray of light which he was competent to give, the uncertainty and darkness of the unknown realm that lay beyond the touch of sense. To all requests for enlightenment and teaching on the subject of the supernatural he steadily, if the record of the sacred books may be trusted, opposed a negative. The redaction of these books is, of course, many centuries later than the period at which Gautama lived. There is no reason, however, to doubt that in this respect they correctly report his views.

The inference, however, that he intended to imply personal disbelief in the supernatural and in the existence of a God, and to urge or enjoin this upon his disciples, is certainly mistaken. As 'enlightened' and in possession of the true and perfect *bodhi*, which he had gained after so many years of strife and endeavour, it is most unlikely that he meant to indicate that in this one particular—a subject of so transcendent importance—his insight was defective, and that he was unable of his own personal knowledge to satisfy inquiries as to the other world and its Ruler. Such a disclaimer would be entirely out of harmony with the attribute of omniscience, to which as *Tathāgata* and *Buddha* he laid claim, and which in other respects his teaching seems to have uniformly implied. Neither apparently did his hearers understand him in any such sense. The significance of his reply was rather this, that his disciples were to rely upon their own unaided efforts for deliverance from the misery of the world and of existence, not upon possible external aid; and that the question whether there were a God and a hereafter was of no moment for the obligation and duty of the present. The position which it was his purpose to adopt was neither atheistic, nor, in the strict sense of the term, agnostic. But for his hearers it was immaterial whether the reply were in the affirmative or negative; and speculation on the subject was discouraged or forbidden, lest it should impair or destroy that firm spirit of self-reliance which it was his object to arouse in their hearts. A declaration of ignorance on so momentous a subject would have been entirely at variance with his claims as a teacher of the truth, enlightened in regard to all the secrets of the universe, and of man's course and destiny therein. He simply refuses to communicate to his disciples knowledge which he judges to be needless for practical life, and the consideration of which would only minister to a harmful curiosity anxious to speculate on matters beyond human ken. In all probability he himself shared the ordinary views of his contemporaries with regard to the being and nature of God, and philosophically found himself in sympathy with the negative doctrines of the Sāṅkhya school of thought, which ignored the question of His existence, and constructed its scheme of the universe without reference to any possible interposition of the Divine (see AGNOSTICISM [Buddhist]).

The presentation of the doctrine of God in the Buddhist books of the Hinayāna school is entirely in harmony with this interpretation of the mind and purpose of Gautama himself. There is, indeed, no exposition of set or formal doctrine on the subject, or any definite and consistent body of teaching. It is assumed that the hearer or reader is in possession of certain general views, which are neither atheistic nor agnostic, but entirely theistic.

And a strongly anthropomorphic conception is elaborated with the utmost possible freedom, presenting a rich and even extravagant mythology, which is based ultimately, in all essentials, upon the popular polytheism of the Indian peoples, and reproduces the two main currents of thought of its original—that, namely, which exalted the object of its reverent worship as the supreme Author and Creator of all; and that which was content with an innumerable company of deities, of varied attributes and power, often deficient and liable to err, as frail and incompetent as men.

Thus a more or less complete enumeration is presented of the various classes of gods. There are Sakka and Yama gods, gods of the Tuṣita and other heavens, Brahmā and Mahābrahmā gods, etc.;¹ and of the thirty-one grades of being or sentient existence, the divine or that of the gods is one.² Elsewhere reference is made to the gods of the Thirty-Three, i.e. subordinate classes or varieties of gods, who approached Sakka the ruler of the gods with questions or complaints.³ And, entirely after the manner of Indian mystical conceptions and rules, of the ten subjects of meditation or 'reflexion' (which include the physical body and death, as well as the three 'gems'—the Buddha, Dharma, and Saṅgha) meditation upon the gods is one.⁴ The infirmities and disabilities of men are all predicated of the gods, e.g. they are liable to old age, decay, and death,⁵ and are not exempt from the law of transmigration or the control of Karma;⁶ they are subject to desire or passion with all its evil consequences;⁷ and even the greatest of them, Brahmā himself, has to confess to ignorance of the nature and constitution of things which he might be expected to know.⁸ As they are not omniscient, so also they are not omnipotent;⁹ and it is further explained that not even a god, but only one who is born a man, can by resolution and perseverance attain the highest state of a Buddha.¹⁰

Apparently also the abstract and philosophical conception of Brahmā as the First Cause, the Creator and Ruler of all, was taken over by Buddhism, but made no impression upon the disciples of the Hinayāna, and was too much out of harmony with the general propositions of the Southern School of thought to influence their system of doctrine. It appears in the *sūtras* of the Mahāyāna, sometimes only to be controverted; especially in the Chinese version of *Aśvaghosa's Life of the Buddha*.¹¹

The most striking and for Buddhist doctrine important conception of the Divine was the uniform exaltation of the Buddha himself above the highest god. In the Northern School this thought found expression in the conception of the Adibuddha, supreme and alone, the first of all the

¹ The *Dhamma-nikāya-piṭaka* Sutta, 57, enumerates seven of these heavens, each with its appropriate company of gods.

Buddha, without companion or peer.¹ But the religious thought of the Hinayāna, moving on different lines, glorified the historical Buddha, Gautama himself, and finally satisfied its need for an object of reverence and worship by practically deifying its Founder. At his birth and death the gods came to pay him homage; they strew flowers and garlands before the corpse, and worship the relics after cremation. On more than one occasion during his lifetime they appear and offer him reverence; but especially when Gautama gains perfect insight and enlightenment under the Bo Tree.² He also is their teacher and guide into the Truth;³ and they are by him converted to a knowledge of and obedience to the right way.⁴ Elsewhere the same worship is extended to all the Buddhas and even to the *arhats*, the sages, the men who have vanquished his passions and have entered on the path that leads to Buddhahood. Significantly also the perfect wisdom of the Buddha is contrasted with the imperfect and limited knowledge which the gods possess. He is god over all gods, supreme in knowledge as in power. And thus in the doctrinal system no less than in the actual practice of the Southern School, which in most respects is undoubtedly more true than its great rival to the teaching of Gautama himself, the deistic theories of the founder, or at least his prohibition of speculation and dogmatism on the nature of the unseen and the being of a god, have been ignored or transcended; and the faith and practice which he inculcated, and which bade his disciples look to himself and by virtue of his own strength and resolution win for himself deliverance from the bondage of existence and misery, have had superadded to them a practical deification of his person and a theistic belief in his supremacy and power.

Historically therefore, at least in its expansion and development within the area in which the Hinayāna school of thought has prevailed, Buddhist experience has been marked by the growth and strengthening of a theistic movement which has found its centre in Śākyamuni himself.

It is probably right to regard the Buddhist teaching of the Hinayāna as the truest exponent of Gautama's own doctrine and belief; and philosophically and in theory it has always remained loyal to the principles, deistic and agnostic, which he is understood to have commanded and enforced. In practice, however, outside of the circle of the more metaphysically minded and capable of the monks themselves, and certainly to the laity, the process referred to has restored to Buddhism the personal centre and object of adoration which was lacking in the impersonal self-centred doctrines of the primitive teaching. The earliest Buddhist thought, as expressed and formulated by the Master himself, was consistently agnostic, if the representation of the Pāli books may be trusted; professed its ability to secure the highest and most desirable aims without requisitioning external aid; and from its world-scheme omitted the superhuman and the Divine. That, however, was not a position in which the followers of Gautama Buddha were satisfied to rest. The human craving for an ideal or idealized object of love and homage was too strong for the remote aloofness and somewhat cold philosophy of the doctrine. The desire was met, and found its satisfaction, in the deification of Śākyamuni himself; and this tendency manifested itself, to all appearances, at or very soon after his death. With him were reintroduced the Hindu deities, or the more important and popular of them. But they were always subordinated in attributes and power

to the Buddha. And thus a system in theory deistic became a practical polytheism.

It was far otherwise, apparently from the very beginning, in the Mahāyāna system. There is no indication that the deistic type of thought ever found a place in the Northern School. Indian in its origin, it retained the rich, even extravagant, features of Oriental fancy and speculation which the Buddhist reform rejected; amplified its mythology, and elaborated a complete and extensive hierarchy of divine beings, of many grades and capacities, at the head of which, remote and altogether abstracted from practical life or experience, was the *Adibuddha* (g.v.), a metaphysical conception but not an active force in touch with the universe which he was supposed to have brought into being. The deities, moreover, so far from remaining unconcerned, interested themselves purposefully and actively in the affairs of their worshippers, and rendered them effective aid in all their most pressing needs (see *BODHIMATTVA*).

Mahāyāna Buddhism, therefore, was always theistic, and even monotheistic, not denying the existence of other deities, but subordinating them to a single Head. It differed remarkably, however, from the more colourless theism of the South in that among the innumerable Buddhas, who held the most exalted rank in the celestial hierarchy, Śākyamuni, the historical Buddha, occupied an entirely subordinate position. The process of deification had been applied to all the Buddhas; and all, having been human teachers upon earth, had by virtue of their own insight and effort won for themselves an abiding place in the highest heaven. Vows were made to them, prayers offered, and their favour and assistance sought in the ordinary as well as in the extraordinary events of life. Gautama, however, was only one among the rest, by no means the most distinguished or important. The first place was taken by Amida (Amida), a deity whose origin and history are altogether obscure,¹ but who was invested in the popular thought with every attribute that could attract devotion or win homage, and on the delights of whose paradise Mahāyānist writers expatiate with unrestrained delight. To be received thither after death and to see Amida in his glory was the longing desire of every pious believer. The Indian founder of Buddhism was hardly more than a figure and a name. In Amida every wish was centred. Grace, mercy, and beneficence, as well as wisdom and power, were his attributes. Homage might be and was given to others. But to Amida every heart went out in loving adoration with the assurance that he would hear and heed the prayers of his worshippers. A reform movement was initiated in Japan in the 13th cent., the object of which was to reinstate Śākyamuni in the supreme place. It proved, however, an entire failure. Amida has almost universally retained the position, which he has held from a very early period, the embodiment of every Divine grace, the all-wise and all-powerful guide and friend of all who call upon him.

From the speculative and metaphysical point of view also the Buddhism of the Mahāyāna, in formulating its conception of the Divine, gave expression to the familiar thought of a first principle, the primeval and essential cause of all that is. By the Buddhist thinkers of Japan in particular this result was attained. This determining principle and cause was known as the *Dharmadhya*,

¹ In one form of the legend he is born spontaneously from a lotus, without father or mother. In all probability the conception and worship of Amida were introduced into China from the West in the early centuries of the Christian era, and were of Indian origin. Other authorities, however, would connect his worship and cult with Persian Mithraism. His parable is always connected to be in the West.

the 'body of righteousness' or 'of the law' (cf. art. *ADBUDDHA*, vol. I, p. 97 f.); and was in theory identical with the Buddha, one of his three bodies, his essential and permanent nature, by virtue of which he was one with all existing beings and all existing beings were one in him. The *Dharmakāya* represented, in fact, the ancient Indian conception of Brahman, but with a very important difference. The Buddhist philosophers and thinkers never lost their hold of the personal element or attribution in the *Dharmakāya*. So far from being a blind or impersonal force, the *Dharmakāya* was conceived as endowed in the highest degree with the most distinctive attributes of personality, especially will, intelligence, and love. It is in Amitābha Buddha that the *Dharmakāya* has chiefly manifested himself, and Amitābha therefore is the supreme object of religious homage and worship. The whole creation, however, is a manifestation of the *Dharmakāya*; all are really now one in him, their union being darkened and obscured by ignorance, prejudice, and sin. In the final issue they will in the *Dharmakāya* find the light and their own true nature, and be delivered from the bondage of present evil and suffering.

Accordingly this was the crown and completion in the Northern School of Buddhist teaching with regard to the nature of God and man's relation to him from the metaphysical standpoint. It differed from the Hindu view in that it so strongly maintained and emphasized the personal element. In this respect it had not a little affinity with Christian thought. Necessarily, however, it was and remained the conception of the thoughtful few; and, although truly and faithfully representing Buddhist doctrine at its purest and best, it was of too abstract and mystical a nature for the apprehension of the many. Their faith and love centred in Amitābha with his paradise of perpetual bliss, and sought for nothing farther. The philosophical reasoning and the popular aspiration and devotion met and were reconciled in the doctrine that there were one and the same, that Amitābha (*Amida*) was, indeed, the highest manifestation of the *Dharmakāya*.

The Buddhist doctrine of God, therefore, even in its most abstract and speculative form, never lost touch, as did the Vedāntic philosophy of India, with which it is most natural to compare it, with experience, feeling, and devotion. It personified the highest attributes of man—mercy, gentleness, and love; and conceived these in a truly noble and generous spirit. In India its similarity is most marked to some forms of the so-called sectarian religions, and especially the Bhagavata faith, which inculcated devotion to the one Supreme Lord, and self-sacrificing love in His service (see art. *BHAKTI-MĀRGA*, vol. II, p. 540 f.). Its accord in many respects with Christian teaching is not improbably to be explained on the hypothesis that at some period in the course of a long history and development it came under Christian influence, and borrowed elements from Western teaching; and that in part at least the similarity is due to the assimilation of Christian doctrine and forms of belief conveyed more or less directly in the early centuries of our era by missionaries from Europe. The theory is incapable of proof in the present state of knowledge, and may be altogether devoid of foundation. Under any circumstances, however, the development of the doctrine has proceeded on altogether natural and Oriental lines. Whether historical contact has at any point taken place and a mutual influence been exerted, or whether doctrinal growth has been altogether spontaneous and independent, it remains true that, of all non-Christian conceptions of God, the Buddhist theory of the *Dharmakāya*, the Divine Ruler immanent

in the universe and manifesting Himself in His creation, is perhaps the nearest to the New Testament teaching, and ideal.

LITERATURE. The literature is sufficiently indicated in the articles to which reference is made, especially those on *Buddha* and *Amitābha*. For the Hindu line, see also D. T. Suzuki, *Outline of Mahayana Buddhism*, London, 1907; Arthur Li yd, *The Creed of Han Japan*, da. 1911; K. J. Saunders, *Buddhist Ideals*, Matrua, Lucknow, and Columbia, 1912. The best named work has regard mainly to the Buddhism of Ceylon, but is well worthy of study.

A. S. GEDEN.

GOD (Chinese).—The Chinese language possesses two terms which, as far as etymology goes, seem adequate to stand for 'God.' The former of the two is *Shang Ti*, or 'Sovereign (Ti) Above (Shang)'; the second is *T'ien*, or 'Heaven,' often used in later centuries for the visible heavens, but explained in the ancient Han dynasty dictionary (the *Shao Wen*, largely quoted in the Imperial Dictionary of Kang Hsi) as 'the Exalted in the highest, being formed of signs meaning the One who is great.' Some famous Chinese scholars have explained the common substitution of the latter for the former by saying: 'It is not lawful to use the name of *Shang Ti* lightly, and therefore we name Him by His residence, which is *T'ien*, or heaven'—on the principle that 'the Court' stands for 'the Emperor.' *T'ien*, however, probably seemed to the Chinese mind the more appropriate term for general literary use, after the early ages, standing, as it does, for an unformed God.

The earliest reference to *Shang Ti*, or indeed to any religion whatever, in the ancient history of China, is found in the words: 'The Yellow Emperor (2597-2598 B.C.) sacrificed to *Shang Ti*, gathered the whole populace together, and diffused among them (the principles of) government and religion.' We seem to have here a brief note of the worship of a patriarchal priest-king, somewhat 'after the order of Melchizedek,' in the days before that branch of the Tatarian race now called Chinese had continued their eastward migrations to the bank of the Yellow River, to occupy the territory which formed the nucleus of present-day China. For the palace of the Yellow Emperor is said (in a work 'probably of the 2nd or 3rd cent. A.D.' (Wylie) and universally cited) to have been on the Kun-lun mountain, over a thousand miles westward from the capital of the Chow dynasty sovereigns (1122 B.C. onwards).

The next historical reference to *Shang Ti* is in the reign of the emperor K'u (2425-2366 B.C.), father of the much-quoted emperor Yao: 'Chiang Yean (his consort) together with the emperor sacrificed to *Shang Ti*, and bore Ch'i' (or Hou Chi), afterwards Director of Husbandry under the emperor Yao. The *Book of Odes* celebrates the birth in the words: 'Shang Ti regarded her with favour; and without hurt or injury, immediately her months were fulfilled, she gave birth to Hou Chi.' Then, in the unimportant reign of Wu Tin (1224-1225), that ruler, wishing to obtain an able counsellor, 'reverently meditated upon moral matters, and in a dream *Shang Ti* bestowed upon him an able and virtuous helper' whom he afterwards sought and found in reality. From this point, as far as the Historical Annals are concerned, we find the term *T'ien* substituted for *Shang Ti*. Thus the 'Food-regulator' Yü (2336-2188 B.C.) on ascending the throne, said: 'I have received the decrees of Heaven, and will devote my whole energies to comfort the myriad populace in

¹ This quotation is found in the 'Early Edition of History,' published in 1711, and reaching second only to the 'Imperial Edition' edition, published in 1767. It is an abbreviation of an edition drawn up by Ch'ü Hsi (1150-1200), which was itself a condensation of the great work of Sun Shu-huang (180-109 B.C.). The tendency has always been to omit, never to add, references to mythical entities, and we may take the quotation as an ancient one.

their labours.' And to the tyrant Chieh (1812-1767 A.C.) a memorialist said: 'The hearts of the people are lost, and Heaven's decree no longer aids'; while of the model monarchs of antiquity an early commentator says: 'They enjoyed (the favour of) Heaven's heart, and received Heaven's manifest appointment.' But that the two terms *Shang Ti* and *T'ien* were interchangeable is strikingly shown in the *History Classic* (v. 23): 'Thus did they (Wan and Wu Wang) receive the true appointment of *Shang Ti*; thus did Imperial Heaven approve of their ways and give them the four quarters (of the empire).'

A prominent topic in the *History Classic* is the reverence with which a ruler should carry on his government. The object of that reverence would seem to be the Supreme, whether quoted by the term *Shang Ti* or by *T'ien*. But that the former term was in frequent use down to the 12th cent. A.C., and still current much later, is evident from the passages about to be cited. The earliest reference to *Shang Ti* in the *History Classic* does not give us a picture of absolute monotheism: 'The emperor Shun sacrificed specially to *Shang Ti*, offering lesser sacrifices to the Six Honoured Ones, to the hills and rivers also, and extended his regard to the multitude of spirits.' On the whole subject a memorialist of the Sung dynasty (Hu Hung, 11th cent. A.D.) says: 'The ritual of the Chou dynasty (1122-222 A.C.) consisted in the solitary sacrifice to *Shang Ti*, and in offering of heaped-up faggots to sun, moon, and stars, and of bundles of reeds (as in later ceremonial homage to Confucius) to the household and kitchen spirits, and to the wind and rain spirits.' In a memorial to the emperor Tai Chia (1703-1721 A.C.), his aged minister gives us an interesting glimpse of the religious opinions of the times, which prompted a secondary worship to 'the spirits of heaven and earth, of the land and grain, and of the ancestral temple'; for the former sovereign is said to have 'served and obeyed' all these, 'keeping his eye all the while upon the hallowed requirements of Heaven.' The 'spirits of heaven and earth' were destined in after years to loom larger in the popular imagination than *Shang Ti*; and in six hundred years' time we find a model ruler, who ousted the last tyrant of the Shang dynasty (1122 A.C.), announcing 'heaven and earth' (perhaps in those early days an equivalent to our modern word 'Nature') as the 'parent(s) of all things.'

Yet *Shang Ti* was still recognized as the one King of kings—often in a very literal sense. 'Now Heaven, to protect the populace, made for them rulers and instructors, able to assist *Shang Ti*, and to secure the tranquillity of the (realm in all its) four quarters.' And on returning to the earlier passages in the *History Classic*, we find Yu (afterwards emperor), while yet a minister of the emperor Shun, counselling him saying: 'Abide in your resting-point, attend to the springs of things, study stability, employ upright assistants, — then will your every action evoke a large response from a submissive populace, you will receive in brightness (the bounty of) *Shang Ti*, and Heaven will surely renew its appointment, dealing out blessing.'

The dynasty of Hsia, founded by Yu the Great, lasted four hundred years, and, like all the succeeding dynasties, grew rotten towards the close. A new start was needed, and Tang the Completer was the man for the crisis. Addressing the populace

to revolution, he addressed them saying: 'The (present) sovereign of the Hsia dynasty is an offender, and, as I fear *Shang Ti*, I dare not but rectify (the situation, by punishing him).' In a later chapter of the *History Classic* the case is represented in the words: 'I have heard that *Shang Ti* guideth to rest,' but (the sovereign of) Hsia would not enter into His rest, whereupon *Shang Ti* visited him with corrections. Then, as history repeated itself at the end of the dynasty founded by Tang the Completer, it is recorded of the last ruler of the series that he 'was much abandoned to dissolute idleness, regarding neither the manifest (will of) Heaven nor the importance of the people, so that *Shang Ti* no longer protected him, but sent down the great ruin which we have seen.' For, as another passage expresses it: 'The favour of *Shang Ti* is not (unconditionally) settled; it is upon the good that He sends down manifold blessings, but upon the evil-door manifold calamities.' Also 'The Majestic *Shang Ti* has conferred (even) upon the ordinary populace a moral sense, to comply with which would give them a right and constant spirit.' Then, passing over some fifteen other quotations in the not very massive *History Classic*, we find a glowing recognition of the goodness as well as the righteousness of *Shang Ti* in the ancient *Book of Odes*.

'Great is *Shang Ti*! Descending (or down-coming) in majesty, surveying all regions, seeking the pages of the populace.'

'How vast is *Shang Ti*, the Ruler of the populace below! How awful is *Shang Ti*! How irregular are many of His dealings! . . . (yet) it is still *Shang Ti* that has blessed this evil time, but Yü, is not following the (good) old (ways).'

'There is the majestic *Shang Ti*. Does He have any one? (Nay, He gives rich and fruitful seasons.) How beautiful are the wheat and barley! What shining produce we shall receive! The bright and glorious *Shang Ti* will give us a good year.'

In another ode there is the exhortation, 'Have no doubts nor anxieties, *Shang Ti* is with you.' This passage occurs in other languages, a thousand years later, in the *Annals of Shu-mo Ch'ien*, addressed to the emperor (Han) Wu Ti (140-87 A.C.): '*Shang Ti* sends down in grace and manifold blessing, bringing (the emperors) to a commendable conclusion.'

The great essentials of the devout life are described as having been fulfilled in the case of Prince Wen (father of the founder of the Chou dynasty): 'This Prince Wen, with the carefulness of a fluttering bird, served *Shang Ti* intently, and secured abounding blessing.' This passage is the more interesting as marking the non-imperial worship of *Shang Ti*, for the title 'Prince (or King) Wen' is merely the 'title of canonization' given to duke Ch'ang of the State of Chou, otherwise called 'Marquis of the West.'

The special ceremonies of worship, in yet earlier days, on the part of Tang the Completer, before he ascended the throne, are thus described by the worshipper himself: 'I, the little child . . . presume to use a dark-coloured victim, making clear announcement to the spiritual Sovereign of the high heavens.' Such is the version in the *History Classic*, and in the *Analects of Confucius*: 'I, the little child Li (the child-name of Tang), presume to use a dark-coloured victim and presume to announce to thee, O most majestic and imperial *Shang Ti*.' And the consciousness of priesthood on the part of the sacrificer, not yet 'Son of Heaven' or special representative of Heaven, is expressed in the rest of the invocation: 'If in my own person I commit offences, they are not to be attributed to the populace of the land. If the populace commit offences, they must rest on my person.'

Leaving unnoticed about seventeen other references to *Shang Ti* in the *Book of Odes*, we find the requirements of kingly worship described by a statesman of the Sung dynasty (Li Kang, 1068-1140): 'Heaven is to the sovereign as father and mother to a son, loving him with an extreme love,

¹ Traces of the worship of the heavenly bodies occur in the early history of China, in a memorial to the emperor Ku (1101-647 A.C.), and references are found in other works, amounting to some two hundred and seventy characters—such worship being described as extremely ancient. Traces of ancient altars to wind-spirits have also been found on an unfrequented hill-top in Kiangsi, and doubtless might be found in other parts.

and therefore giving him extreme admonition. Thus a ruler of men, admonished by Heaven, must be fearful and careful to the point of sincere awe.' To this a statesman of the 12th cent. (Hu Hung) adds: 'The sovereign serves Heaven as (a son serves his) father. He must do so with settled sincerity, and the most refined unity of virtue. He selects a spot of rural land to the south of the city, sweeps the ground, and sacrifices to "Shang Ti of the vast Heaven," the word "Heaven" pointing to His disposition, and the word "(Shang) Ti" referring to His essential nature.' An emperor of that dynasty (Hsiao Tsung, 1163-1189) replies to this: 'I sincerely and reverently serve Heaven, and Heaven continues to me happiness and blessing.'

That some of the ceremonies of Imperial worship were originally undertaken by way of example to the populace seems clear from their connexion with the annual handling of the plough by the sovereign and local officials—a ceremony continued every spring-time until the Revolution of 1911. The *Book of Rites* says: 'In the first month of spring the Son of Heaven prays to Shang Ti for a good harvest . . . and himself handles the plough.'

An emperor with an otherwise fair name set a very different example to the populace in after years by identifying Shang Ti with the visible sky, and raising Earth to a position of equality with Shang Ti as an object of worship—calling forth the condemnations of the best scholars ever since in connexion with his adoption of five T's at the same time. That emperor was (Han) Wen Ti (179-157 B.C.). The story begins with the accession of 'The First Emperor, as he termed himself, in the year 221 B.C., who for the time abolished the ancient worship of Shang Ti, setting up as objects of worship eight new deities, Heaven-lord, Earth-lord, War-lord, Yang-lord, Yin-lord, Moon-lord, Sun-lord, Four-seasons-lord; and so great was the resulting disorganization of Imperial worship that Wen Ti, coming to the throne fifty-two years later, passed fourteen years of his reign without attending to any religious rites at all. Then, in the fifteenth year of his reign, he was informed by the Master of Ceremonies that 'of old the Son of Heaven every summer (he should have said "every spring and autumn") personally offered ceremonial worship to Shang Ti, and the emperor, awaking to his duty in the matter, went forth to do so. But, wishing to improve on the ancient custom, he said: 'I now personally offer sacrifices to Shang Ti, but Regal Earth is without a sacrifice, and so the ceremony is one-sided'; whereupon he erected an altar to Regal Earth, and offered similar sacrifices thereon. Thus the historian Sou-ma Ch'ien relates in his 'Sacrificial Records.' And in his 'Historical Records' proper he says that altars to the 'Five Imperial Ones' were also erected. The emperor King Hsi, of the last dynasty, in his 'Imperial Annotations,' criticizes these serious public innovations by saying: 'Those who know the true constitution of the universe may not allow themselves to be thus deluded by spirits and bogeys.' And the editor of the 'Early Edition of History' in 1711 exclaims: 'Heaven is one! And to talk of Five Imperial Ones! Such is not following antiquity! Sick-minded Emperor!'

The action of Wen Ti, however, was to be undone by the weak emperor Hsi Tsung (A.D. 1101-1125), who defied a favorite court magician as the 'Precious Shang Ti,' literally 'Gemstone or Jade Shang Ti'—still the chief idol of decadent Taoism.

Under the term 'Heaven,' as used of the Supreme, there are many fine utterances. In the works of Yang-Tzu (53 B.C. to A.D. 18) we read:

'Heaven is spiritual, Heaven is intelligent, with an enlightened knowledge of all regions; Heaven is refined, Heaven is subtle, and all things do homage thereto.' Heaven is claimed by Confucius as the source of all that was good in him; and of the task of national renovation the *History Classics* declares: 'The work is Heaven's work; men are (but) deputies.' A work ascribed to Chiang Tai-kung (12th cent. B.C.), and on sale at the official libraries, contains the words: 'Heaven's extreme partiality in practice is really extreme justice.' The erratic philosopher Chuang-Tzu (3rd and 4th cents. B.C.) exclaims: 'Partiality is human, but a large completeness belongs to Heaven.' And, in Lao-Tzu's much-quoted words, 'The net of Heaven stretches everywhere; its meshes are wide, but nothing escapes them.'

Pan Ku, a notable historian (died A.D. 98) says: 'Heaven has a disposition (capable) of pleasure and anger, a heart of sorrow and joy, answering to that of humanity, so that Heaven and man may be at one.' And the work known under the name of 'Kuan-Tzu' says: 'When a man's deeds accord with Heaven, Heaven aids him; when his deeds are opposed to Heaven, Heaven disregards him. Those whom Heaven aids, though small, become great; those whom Heaven disregards, though successful, must suffer defeat.'

'Heaven is most high, yet listens to the lowliest,' says a work of the 3rd cent. A.D. In the *Book of Odes* some one suffering from slander exclaims: 'O vast and distant Heaven, who art called our Father-Mother!' And the statesman Ch'u Yuen (232-296 B.C.), under stress of calumny, says in one of his essays: 'Heaven is man's Origin; and when oppressed with poverty he recalls his Source. For when men are overwrought and worn out, who is there that does not cry to Heaven?' The latter remark applies to China of to-day.

W. A. CORNWALL.

GOD (Egyptian).—I. Name and Ideograms.—It is quite in accordance with the lack of the systematic faculty among the ancient Egyptians that, in all the vast profusion of their religious literature which has come down to us, no definition of the term 'god' has ever been found. For our knowledge of the conception we have to fall back upon discrepant allusions in the extant texts. The conditions of the earliest age of Egyptian civilization are indicated by ideograms which retained their ancient form in the script even when the objects for which they stood changed their shape. Of the ideograms used for the term 'god,' the subsequently rather frequent figure of the star (☆) was derived from the occasional, but never altogether systematic, identification of the gods with the stars. The figures of the hawk or falcon for 'god' and of the Uraeus-serpent for 'goddess,' recall the incarnation of the sun-gods (with which a large number of other gods were subsequently assimilated) as falcons, and of goddesses as serpents. The late usage of figures of the three most sacred birds—hawk, ibis, and heron—instead of three hawks, as the symbol of 'gods,' is more

¹ According to Leprieux, *Bulletin de l'Institut Français d'Archéologie du Caire*, III (1907) 12, the Falcon represents 'in the animal sacrifices, the most diverse kinds of predatory birds are mingled together (Leprieux and Gaillard, *Les Faunes égyptiennes*, Lyons, 1908, I, 134 ff.), and these are hardly ever been properly distinguished by the Egyptians.'

pictorial play.¹ A much more frequent figure is the short axe () , similar to that used by soldiers.²

The axe-head was set into a wooden handle and fixed with cords, and was painted yellow or white to suggest the polished stone used for such tools in the earliest age, and superseded later by copper or bronze. In the Nagada period, instead of the single axe-head, we sometimes find two such—thin and almost nail-like—attached to the handle. This symbol always represents a weapon, and in the inscriptions the standard, with which some have sought to identify it,³ is normally depicted in a different way. A cult of weapons is certainly met with on Egyptian soil. In the semi-Libyan Sais a shield and two arrows served as a sacred symbol of the nome, while an armlet with its straps formed the ideogram of the goddess Neith. Implements of war were worshipped in the Upper Egyptian city of Pa-ah, 'the house of conflict,' and are specified in a list from the reign of Pepi,⁴ while a duplicate of this list, dating from the reign of Seti I.,⁵ enumerates the weapons as sling (?), Amesceptre, club, harpoon, and two arrows. But the weapon-cult was, on the whole, of so limited a range that, while the derivation of the symbol for 'god' therefrom may seem probable, we are unable to trace the connexion with certainty.

The regular term for 'god' has the sound *nfr*, but from the time of the XVIIIth dynasty the final *r*, as in many other Egyptian words, tends to be dropped, and the Copt. *NOTTE* begins to come into use. Besides signifying 'nason'—a denotation which, in view of the fact that this substance was used in embalming bodies, might well arise from the meaning of 'divine'—the word *nfr* may be applied in two senses, viz. (1) to 'strike,' 'knock down,' 'throw,' and their derivatives () which, while it is written, not with the symbol for 'god,' but with another syllabic sign, would nevertheless accord with the figure of the axe; and (2) to 'grow,' 'thrive,' 'be young' ()—not,

however, in the special sense of 'to come periodically and to be renewed,' as Loret (*REg* xi. 86 f.) supposed; nor can the meaning 'to be vigorous or 'powerful' be decisively made out. The crenelated rampart with which the symbol is sometimes surrounded was intended, like the cartouches enclosing the king's name, to safeguard the term and its correlative concept against malefic magic.

The frequently recurring group  , *neter neter*, 'the youthfully fresh god,' is to be understood in the sense of 'being and becoming fresh, like a plant.' But this does not involve the wider sense of 'the god who by being renewed creates everlasting life for himself,' as such personal immortality was not an attribute of the Egyptian deities, who, as a matter of fact, grew old and were mortal. It is also doubtful whether the idea of vegetative youthfulness is really equivalent to the fundamental conception of deity, as, apart from the isolated figure of the sprouting Osiris,⁶ the distinctive character of which must not be regarded as general, plant-cults play but a small

part in Egypt. A reliable derivation of the term *neter* is, therefore, still to seek.

2. *Monothéisme* or *henotheïsme*?—The earlier Egyptologists believed that a species of monothéisme must have existed in the Valley of the Nile. As a primitive revelation, this, it was supposed, would mark the starting-point of the religious development, and was afterwards overgrown by polythéisme, so that it is now traceable only in vestiges.⁷ Other scholars were of opinion that monothéisme existed side by side with polythéisme, but that it was known only to the learned, i.e. the priests and the initiated. The theory of an Egyptian monothéisme was often combined with the hypothesis that a doctrine of mysteries likewise prevailed here, though this finds no support in the religious texts. Moret,⁸ arguing from the mystery plays of the Middle Ages, applies the term 'mysteries' to the Egyptian doctrines of immortality and of the ritual necessary for the attainment of the life beyond; but, as the texts show, these doctrines were in no sense esoteric. Greek writers who treat of the Egyptian mysteries speak of the belief in immortality—which formed an element in the secret mystery cults of Greece—as being an esoteric doctrine also in the Nile Valley, but here they are undoubtedly in error. In Egypt the only mysteries were magic words and ceremonies. Nor does the statement that certain chambers of the temples could be entered, and certain ritual performances witnessed, only by the initiated find any support in the extant texts.

From the Egyptian texts scholars have laboriously collected such passages as would imply a higher conception of deity, or such as attribute to the deity the qualities appropriate to a god regarded as One. They have also found passages which speak of a god as the creator of all life and all existing things, as one who traverses eternity, the lord of infinite time, one who cannot be grasped by the hand, whose evolutions are a miracle, the outstretch of whose being knows no limits, and who is king in Thebes, and, simultaneously, prince in Heliopolis, and the 'great of crowns' in Memphis. He cannot be seen; he listens to prayers; he turns his countenance to men according to their conduct; he is hidden, and his form is not known; he is alone, and there is none beside him.⁹ These attributes, however, were not all ascribed to the same deity, but now one now another of them was regarded as the special property of Amon, of Ra, of Ptah, or of some other member of the pantheon. Even when the texts refer to the One deity, they speak also of other independent figures. The One god is at most described, in a purely material sense, as the begetter,¹⁰ father, builder, conciliator, or king of the other higher powers. He is then, as such, the sovereign of the world of gods and men—one who, corresponding for the time being to the earthly Pharaoh, reveals his will to his subjects by dreams.¹¹ In all this, however, he is never more than *primus inter pares*.

Nor is this relation essentially altered when it

comes under the operation of syncretistic modes of thought, for in that case the other deities are defined as the various existences or phases (ren-¹, 'names') assumed in other localities by the One god, whose 'names' are many. The tendency to such syncretism was specially active in the later period. The highest place is given in turn to Amon-Ra, Ptah, Hathor, Khnum, Isis, and others. The practice finds expression more particularly in hymns, which ascribe the supreme, all-dominating position to the deity who happens to be invoked for the time, as, e.g., to Amon-Ra,² to other deities in the Oases of Charga,³ in Ennech,⁴ and so on. At a much later day, Apuleius (*Metam.* xi.) states that the true name of the god whom he was worshipped with various ceremonies, and under various forms and names, was Isis. How artificial the procedure might be in such cases may be seen from an inscription of the reign of Sabako, the aim of which was to assign, by syncretistic methods, the highest place to Ptah of Memphis.⁵ Such texts, however, just because of the prominence they give to the one deity invoked, are of little value for a proper estimate of the Egyptian religion as a whole. Notwithstanding textual data of this kind, the One god holds his dominating position only at a particular place, and even there the other gods are not absorbed in him, but maintain their own functions and individualities.

Once only in the history of Egypt was an attempt made, with the aid of the civil power, to invest a deity with a more comprehensive sway. About 1450 B.C. Amenophis IV. tried to secure a wider range for the cult of Aten, the solar disk—understood in a purely material sense, and therefore not little regarded. To this deity the king dedicated his residences, on the site of the present Tell of Amarna, and erected temples in his honour at Thebes, Memphis, and Heliopolis. He cut himself rigorously against the cult of Amon, whose name he ceased, as far as possible, to be evoked from the inscriptions. He manifested no such hostility towards other deities, such as Ptah and Osiris, and, though their worship was thrown into the background, it was not abolished. What is said by king Tut-Ankh-Amon (on a stela published and translated by Legrain, *RT* xxix. [1907] 102 ff.) regarding the gods who had suffered wrong at the hands of Amenophis IV. is really intended to extol the merits of the former in restoring the monolatry, and is not to be taken too literally.

The theory that Amenophis IV. engaged in a thoroughgoing campaign against all the traditional deities of his country is refuted, for one thing, by the character of the reaction against the cult of Aten which took effect after his death. It is true that the temples of Aten in Thebes, and perhaps also in Memphis, were destroyed, that the name of Amenophis was everywhere obliterated, and that he was designated as the blasphemer of the city of Khut-aten;⁶ but the monuments of his reign are, for the most part, left unharmed. As a matter of fact, a considerable number of these monuments survived till a late period in the temple of Amon himself at Thebes.⁷ Amenophis IV., in his religious reforms, did not in any sense deny the existence of Amon. His erasure of the latter's name rather proves the opposite, indicating simply that the king hoped thereby to damage and impair the god's prestige. With his efforts to have held that Aten was the only deity with whom he and his kingdom had any concern, he was no monolatrist in the strict sense of the word. It is to be regretted that his reforming movement cannot be distinctly traced in detail, as our only real information regarding the cult of Aten is derived chiefly from hymns,⁸ upon whose extravagant language we cannot safely rely.

The apparently monotheistic expressions on Egyptian monuments rest in reality upon henotheistic modes of thought. Each nome found its supreme Divine authority in its special deity. The god of the nome from which the Pharaoh had

sprung was always regarded for the time as the most important of the nome-gods. The very fact that he had raised his devotees to the throne of Egypt showed that he surpassed the other nome-gods in might. But his prestige lasted only so long as his chosen dynasty held the reins of power. If his favoured dynasty was supplanted by another whose members worshipped a different deity, he himself had to give place to the latter. Thus, on merely political grounds, the supreme position was held in the Old Empire by Ptah, under the Theban dynasty by Amon, and in the Saitic period by Nuth.

As a rule, however, the supreme position of the nome-god did not remain unchallenged even in his own nome. Here also he had to tolerate the cult of other deities, who, like the sun-god Ra, or Osiris, the god of the dead, were venerated by all Egyptians, or were concerned in some special way with certain localities, occupations, families, or private individuals. The lower classes in particular took but little cognizance of the nome-god, or of other gods worshipped by people of higher rank. They preferred to worship deities whose sphere of action was believed to be relatively narrow. Some of the popular deities could exercise their power at any time; others had special functions, as, e.g., that of affording security against demons in general (Bes), at birth (Thueris), on entering the under world (Amenthes, a form of Hathor), or that of protecting the corn (Nephtys), etc.

This class also includes the special and temporary deities (Germ. *Sondergotter* and *Augenblicksgotter*), i.e. the numerous by-forms in which the great gods were invested with independent personalities, and which sometimes attained to an important position in the pantheon. This took place, for example, in the case of Imhotep, 'he who comes in peace,' and Sakhmet, 'the mighty,' a secondary form of Sakhmet of Memphis. Probably Amon, 'the hidden one,' was likewise a special form of Min of Koptos, the god of fertility. To the same class belong, in particular, the numerous animals which might be regarded as animal-deities or as sacred animals.¹ Though the worship of such animals declined in the great temples, a wide range of power was frequently still ascribed to them. In many cases the penalty of killing one of these animals, even unintentionally, was death. Such an occurrence demanded an atonement, in order to protect the country from the vengeance of the slain animal and the ruler of its species—a vengeance which not even the greater deities would otherwise be able to avert.²

The existence of monotheism in ancient Egypt has been inferred, finally, from certain expressions in the so-called 'moral papyri'.³ In these we read that certain acts are desired, or rewarded, or punished, by 'god' (*netjer*), no particular deity being mentioned by name. In point of fact, however, the reference in such expressions is not to a mysterious, all-ruling God, in whom, as contrasted with the other deities of the country, the authors of the papyri believed. Any such inference would run counter to the established fact that these texts were designed for the general mass of a polytheistic people. In the passages in question the writer simply left the persons using the texts to supply the name of their particular nome- or family-deity. In certain cases he may himself have been in doubt as to which deity would be concerned with a particular act. Thus the use of the term 'god' in

⁴ For the most recent discussion of this, see Brugsch, *StA* V, 1011, p. 914 ff.

⁵ Inscription of Sen. ed. Gardiner, Leipzig, 1905, p. 64. It is very doubtful whether the hymn to Amon, in *Inscriptions to the Hierarchy of Thebes* (London, 1899, pl. 36), refers, as is held by Brugsch (*StA* xiii (1906) 100 ff.), to Amenophis IV. at all. The hymn draws a contrast between the adherents and the opponents of Amon—the one propters, while the other thers (I) but we need not regard this as alluding to any particular episode.

⁶ Legrain, *Annuaire du Service des Antiquités*, vi. (1905) 222 ff.

⁷ A long hymn addressed to him was first published by Bouriant, *Mém. de l'Acad. des Inscriptions*, i. (1894) 5 ff., in Wiedemann, op. cit. p. 65 ff.

¹ For both groups (already noted by Brugsch, *avil. StA*, at Wiedemann, *StA* viii, [1899] 211 ff., 220 ff., and also his *Der Faraos d. alten Ägypten*, Leipzig, 1913, p. 22 ff.)

² Wiedemann, *StA* viii, no. 10, (1905) 115 ff., *StA* xiv.

[1911] 640 ff.

these passages may be traced to the same vein of thought as finds expression in the celebrated dedication *Agave dei*, found by St. Paul in Athens (Ac 17th), or the *sei deo sei domus sacra* upon the altar re-erected c. 100 A.D. at the foot of the Palestine in Rome.

The foregoing considerations warrant the inference that monotheism had no place among the Egyptians, but that they had a leaning towards henotheistic conceptions, which, though they were never consistently applied, yet readily combined with syncretistic tendencies.

3. *Systems of deities.*—With a view to introducing some kind of order among the vast multitude of deities, the Egyptians attempted from a very early period to arrange them in groups. One such group after another was believed to have reigned as Pharaohs;¹ or, again, a particular deity was regarded as the king, or as the father and lord, of others, as in the case of Heliopolis.² In other instances we find certain smaller groups, as the octad of Hermopolis;³ sometimes also in the form of triads, which might appear as families (father, mother, and son, in Thebes), usually very loosely connected, or in even less coherent unions (god and two goddesses, in Elephantine) which never developed into trinities. Alongside of these we also find larger families (the Ovir cycle), and various other arrangements. But none of these systems comprised more than a relatively small number of deities, or had in general more than a local vogue. Moreover, the deities of a certain cycle in one locality might belong to an entirely different group in another. There was no single system embracing a majority of the pantheon, and, consequently, the functions of the individual deities were not everywhere defined in the same way. All the divine attributes might for the time be concentrated in a single deity, and, if occasionally some special function is ascribed pre-eminently to a certain deity, such as making war to Month, creation to Ptah, sovereignty among the gods to Ra, and procreation to the goat-deities, this arose from fortuitous and, for the most part, spemodically operative causes, which were nowhere permanently recognised.

4. The anthropomorphic character of the deities. —The gods, while they might assume the external form of men, animals, plants, or even the products of human art, were always represented as having the feelings and needs of men. They required sustenance; and food and drink were accordingly offered to them in sacrifice. Even the obolaks, the embodiments of the sun-god, received oblations of leaves and beer.⁶ In the daily worship, moreover, articles of clothing, ornaments, fumigations of incense as a protection against evil spirits, and the like, were consecrated to the deity in a fixed order of sequence.⁷ Attention was paid also to the housing of deities in temples and chapels, and to making these acceptable to them by such accessories as graven, laken, ships, attendants, slaves, etc.

In all this the relation between the deity and man rested upon the idea of reciprocity. The worshipper attended to the needs of the god, and the god was expected to requite the worshipper with divine gifts—life, prosperity, health, happiness, victory. In the temple-reliefs we see king and deity facing each other as partners to a con-

1982.

tract, and promising or actually bestowing their mutual gifts. In the inscriptions commemorating the dead the survivors are said to have given the 'royal offerings' to the gods of death. The gods, however, do not receive such gifts for their own use; they are under obligation to supply the divine personality (*ha*) of the deceased with food and drink. Should a man, and especially a king, fail in his duty towards the gods, the latter do not further befriend him, and may bring calamity upon the whole country; while, if the deity does not perform his part, the man does not need to trouble himself more about him, and, by way of punishing and injuring him, ceases to offer sacrifices.⁵ The deity made known his will and will, first of all, by sending adversity to his enemies and prosperity to his votaries. He also revealed his mind in the behaviour of certain animals—whether they turned towards the man or away from him, whether or not they took food from his hand, bellowed, entered certain chambers, and the like.⁶ The theophanies of Amon, and the movements of his head, mention of which is frequently made,⁷ are probably to be referred to the action of a sacred animal, rather than to the mechanically devised movements of a statue (cf. art. DIVINATION [EGYPT]). The theory of mechanism would really imply that the priests deceived one another intentionally, and this is not at all likely to have been the case in the most flourishing period of the Amon cult. Finally, the gods intimated their will by words and acts in dreams,⁸ and in various other ways. Even at a much later date we find Apuleius (*Metam.* x.) stating that Isis appears and gives counsel in dreams.

Besides hunger and thirst, however, the Egyptian deities were supposed also to experience joy, pain, and fear, and to be liable to sickness, senile decay, and death. Such ideas, it is true, find expression more particularly in legends,⁹ which were never reduced to a homogeneous system. An excellent instance is found in the contradictory traditions regarding the introduction of Tefnut into Egypt.⁷ The Egyptian sagas of the gods were not regarded as mere inventions or fabulous tales; on the contrary, they form an essential element in the religion. Some are found recorded in temples (e.g., the story of the winged sun-disk of Edfu), or on the walls of tombs (e.g., the narrative regarding the destruction of the human race). Numerous examples are preserved in magic texts, the underlying idea being that a relation of occurrences from the lives of the gods would make an impression on the gods themselves—and hence the narrator must have believed that the stories contained religious truth. They are, accordingly, not mere poetic transfigurations, like the Greek myths in Herodotus (cf. Windemann, *Herodots Zoologie*).

Buch, Leipzig, 1890, p. 226 ff.), but really represent the official priestly conceptions of deity.

The fullest list of human attributes is met with in the case of the sun-god Ra. The centre of Ra's cult was Heliopolis, but the kings of the Vth dynasty had erected great sanctuaries to him in the neighbourhood of Memphis.¹ Thenceforward the Pharaohs regularly designated themselves as sons of Ra, who, assuming the personal form of the reigning monarch, begot his successor, as is depicted by Queen Hatsheput in Dair el-Bahari, and Amenophis III. in Luxor.² Ra is accounted the king of gods and men; he is decrepit with age; his spittle drips from his mouth; his limbs have become silver, gold, and lapis lazuli; he prevails over malicious deities only by the aid of the sun-god Horus of Edfu. Incensed at the refractory race of man, he issues to the goddess Sochet an order for its annihilation, but presently repents, and can thereafter deal with the destroying goddess only by wiles. He suffers agonies as the result of a snake bite, and is cured by Isis. Nor are things any better in the case of other gods. Thus the sun-god Horus receives an injury in his eye.³ Osiris is slain and cut in pieces by his hostile brother Set. His son Horus suffers from headache and internal pains;⁴ he is stung by a scorpion,⁵ and, especially in his youth, has other afflictions to endure. The goddess Sochet becomes intoxicated with a mixture of beer and blood (legend of the annihilation of mankind); and there are many other incidents of similar character. Popular tales, in representing the gods as altogether human, were really quite in the spirit of the temple-religion. According to these stories, the gods move about the world as a band of musicians (*Papyrus Westcar*); Ra-Harmachis comes with the company of the gods to earth, and presents his favourites with gifts which afterwards work injury to their recipients (*Papyrus d'Orbinay*).

When any of the gods fell ill, they had to apply to others for help, as was done, e.g., by Horus and Set in Heliopolis (*Pap. Ebers*, II. 3-6). Like human beings, they found their chief source of succour in Isis, who composed the healing spells. Nor was it any Divine power that operated in such cases; the healing was effected solely in virtue of the magic. The superiority of magic to the principle of divinity was a primordial element in the religion of Egypt, and was permanently retained.⁷ The oldest surviving religious texts of any extent—the inscriptions on the royal pyramids of the Vth and VIth dynasties⁸—are collections of magic formulae designed to compel the gods to secure for the deceased a life of bliss in the world beyond. The so-called Books of the Dead, dating from the Middle⁹ and the New Kingdom,¹⁰ and the numerous

texts of a kindred type, have the same end in view as the so-called magic papyri. In the healing of diseases believed to be due to demons the right magic formulae were the essential thing. These formulae were annexed to the collections of medical recipes,¹¹ but they could be quite effectively used by themselves.¹² Hence the *cler-jeb*, who knew the spells by heart, or recited them from a book, became a person of outstanding importance in Egypt, and it was essential for each Egyptian, more especially in view of his life after death, to be a *mad-cler*,¹³ i.e. one who could recite the proper formulae in the proper way. The doctrine of amulets rests on a similar belief.¹⁴ The possession of certain objects enabled a man to compel the gods to protect him, or prevented evil spirits from injuring him in any way. Malevolent deities were helpless against the virtues of apotropaic symbols, such as the winged solar disk, the bull's head, the Bee-mask, the Uti-eye, etc. The idea that the gods could resist the correct employment of magic was never entertained. If the magician sometimes claimed to be a god demanding obedience, it was always for the purpose of enhancing his magic powers, never of providing a basis for them. Nor was this equality with deity imparted to him by the will of the higher beings; he had it in virtue of his own magical gifts, to which the gods themselves were subject.

5. Deities influenced by entreaty.—References must be made, finally, to a series of Theban inscriptions dating from c. 1800 B.C.,¹⁵ the contents of which seem at the first glance to form an exception to the above. These inscriptions make appeal, with praise or thanksgiving, mainly to minor, and, in particular, to specialised, deities, as, e.g., to Amun-Ra the hearer of supplication, Horus the hearer of supplication, Mer-eker, the mountain-dome of the West, the Moon, the mistress of the West, Amenophis I., and the god who hears applications. In these inscriptions we also find—though more rarely—the greater deities, e.g. the Sun, Khonsu, and Ptah, as independent figures. Here there is no reference to the power of magic; the desired boon comes simply by the favour which the gods manifest in response to urgent entreaty. Essentially similar ideas lie at the root of what we find in the stelae from Memphis bearing the figures of the ear in large numbers, and sometimes speaking of Ptah as the hearer of petitions.¹⁶ A list of the deities who thus manifest themselves as hearers of petitions has been drawn up by Spiegelberg.¹⁷ The idea of ascribing to a deity a large number of ears is also met with elsewhere in Egypt. Thus a certain very powerful deity is alleged to have seventy-seven eyes and the like number of ears;¹⁸ and in a hymn to the king—regarded as equal to the God—we find the words: 'When thou takest rest in thy palace, thou hearest the words of all lands, for thou art endowed with innumerable

ears.¹ The multiplicity of ears was supposed to make the anthropomorphically conceived deity able, in a material sense, to listen simultaneously to the numerous and varied petitions of many individuals.

But the texts in question do not present, as has been surmised, a higher conception of deity. Those who erected the monuments containing them were people of lower rank, and could, therefore, make no pretensions to possess magic powers. In the world they were not of those who dictate or demand, but of those who entreat, and, accordingly, they were not in a position to extort, but could at best only try by submissive humility to win, the favour of the higher powers. Hence, too, they paid homage to the popular deities, and especially to the sacred animals,² as those who would be more likely to be interested in them than the greater and more august gods. The utterances, in a like submissive tone, which sometimes emanate from persons of higher rank³ are to be regarded as mere cajolery, since in other parts of the same texts it is assumed that the deity is subject to the power of human magic and dependent upon human goodwill.

Conclusion.—The conception of deity among the ancient Egyptians thus never got beyond the primitive stage, and there is no evidence to show that it attained to any highly developed or refined form. Whenever such more exalted conception seems about to emerge, as in certain utterances in the hymns to the gods, it is at once repressed by the ascendancy of magical doctrines, and by the all-dominating idea of the reciprocal relation of deity and humanity which rests upon the assumption of their essential equality. GOD (Greek).—The words most nearly corresponding to 'God' in the Greek language are *θεός* and *δευς*,—both hitherto of unknown origin,—the former rather conveying the sense of an individual personality, the latter of a spiritual power. Minor differences and changes of meaning will appear in the sequel. The purpose of the present article is to trace the gradual development of the characteristically Hellenic conception of the Divine.

1. We are met at the outset with the prevalence of a multiplicity of gods. One who undertakes to unravel the tangled web of Greek polytheism is described by Plato as 'a laborious, and not very fortunate man' (*Phædr.* 229 D, *ἐνδοξὸν καὶ οὐδὲν εὐτυχὲς εὐδότης*). The former epithet remains, and will long remain, most apposite. But recent discoveries in archaeology and the comparative study

¹ *Pap. Amherst*, II. 2. 38, l. 4. 38. With this should be compared the directly opposite mode of thought in Greek speculation (as seen in *Plot. de Iud.* 76), conformably to which a statue of Zeus in Crete had no ears at all—for it is not meet that the Lord of all things should listen to any man.

² Maspero, *Études de mythol.* II. (1898) 295 ff.

³ *Parergon in Erman, SBAW*, 1911, p. 1109 ff.

of religions have removed some part of the obscurity. The earlier communities, whether they lived by hunting, pasture, or some primitive agriculture, could not but feel their dependence on powers over which they had only a limited control. Wild animals, their own flocks and herds, the seasons of the year, rivers, fountains, wind, and rain were all-important to them; vague fears of spirits, hostile or benign, were also inspired by the gloom of the forest and the darkness of the cavern, suggesting to the imagination the existence of subterranean powers into whose keeping the souls that disappeared from earth departed. It is sometimes assumed that primitive worship was wholly inspired by terror; but there must also have been in it the germs of hope and of affection. On this subject the words of Auguste Sabatier are worth considering (*Philosophie de la religion*, Paris, 1897, p. 13):

'En elle même et toute seule, la peur n'est pas religieuse; elle paralyse, elle rend stupide, elle terrifie. Pour que la peur devienne religieusement féconde, il faut qu'il y ait, dès l'origine, un sentiment contraire, un élan d'espérance, il faut que l'homme, en proie à la peur, conçoive d'une manière ou d'une autre la possibilité de la surmonter, s'est-à-dire de trouver au-dessus de lui une aide, un secours pour conjurer les dangers qui le menacent.'

The god of the family or tribe, perhaps an ancestor who had passed into the Unseen, was looked up to as the protector of his race from hostile powers, and from those spirits of evil which the primitive imagination was always ready to suspect as dangerously near. Immigrants by land or sea must have found existing aboriginal worship, of which probably that of some earth-goddess and of a heavenly rain-giver were most widely spread. The new-comers applied to powers worshipped by the conquered tribes names already familiar to themselves. The Aryan warriors may have found on certain mountain-heights the worship of a cloud-compelling deity, giver of the rain, whom they identified with their God of the Sky (*Dyaus=Zeus*); just as the word which signified the beech in northern climes was now applied to the oak, or as the Greek in later times recognized the objects of his familiar reverence in the gods of Egypt or of Persia. Thus the power that dwelt in the forest of Dodona now took the name of Zeus, and his female counterpart became Dione, while on Mount Lycæus the wolf-god that ravaged or spared the flock was likewise Zeus in the new nomenclature. Apollo, perhaps a sun-god, was blended with the protector of the herd, while Athene (perhaps a lightning-goddess), Artemis, Hera, Demeter, were names applied, whether by the Aryans or by some earlier immigrants, to female powers previously worshipped in different localities. Aphrodite, Heracles, perhaps Poseidon, owed their existence to Phœnician or other colonists by sea. Already those hospitable shores were sensitive to foreign influences. Ares was a Thracian; Dionysus partly Thracian, partly Cretan. Yet even he, though confessedly a late-comer, must have found in primeval village-festivals a congenial soil.

The Aryans also brought with them their own patriarchal system, involving the organized worship of ancestors, whence each family had its peculiar cult; and, when the family had grown into the tribe, there followed an amalgamation of such cults under one presiding power. Hence came a grouping of divinities differing in each central district, until in certain regions an *amphictyony* (q.v.), or federation of neighbouring communities, was loosely combined under the presidency of one chief god—as Apollo at Thermopylæ, Poseidon at Calanctia, Zeus at Olympia, Artemis in Ætolia; and, as tribes were gathered into cities, one worship in each place tended to become supreme,

e.g. Zeus at Dodona, Poseidon at Corinth, Hera in Argolis, Athena in the Acropolis of Attica. The attributes of each divinity were modified by the character and history of each city. Athens had different attributes at Athens, Sparta, Thebes, etc.; Zeus in Thessaly and Caria, Nemesis at Klazomenae and at Smyrna. Powers once supreme, as the Graces (vegetative powers) at Orchomenos, became subordinated to more prevailing deities. Colonies on the Asiatic seaboard, or elsewhere on the Mediterranean coast, and the several island communities were subject to special conditions. Apollo was the same and not the same at Delphi, in the Troad, and at Branchidae; Athena at Athens, in the Troad, and on the shores of Africa. The worship thus locally established were further modified in various ways. One potent cause was the love of story-telling which created mythology. When Hellenic worshippers were asked, 'What mean ye by this service?' their ready imagination furnished copious replies. Hence came an almost endless multiplication of divinities; for each attribute of a god or goddess tended to become a separate personality. Thus to Artemis were added Callisto, Iphigenia, Dictynna, etc.; to Aphrodite, Peitho, Harmonia, Helen, Ariadne; to Athena, Aglauros and her sisters; to Hera, Elithyia—and so forth. Such conceptions were further developed in literature and art.

2. *The Homeric poems* show this development already at an advanced stage. They present us with a special grouping of the chief divinities, embodying possibly the acme of Achaean culture. Zeus is above all, but his nominal omnipotence is limited in reality. And the so-called trinity of Zeus, Athena, and Apollo is the usual sanction for an oath. By this time the power of divination, once vaguely attributed to an earth-goddess or some deified ancestor, and still imagined to be accessible at many local shrines, was concentrated first at Dodona, and afterwards at Delphi, where the priesthood had secured a predominating and widespread influence.

Beneath the many-coloured veil of mythology there is evidence of the unconscious working of the human mind, endeavouring to form a general notion of that which is higher and mightier than man. All manner of mortal weaknesses are attributed to individual gods; yet there are grave moments in which essential deity is not unworthily conceived, and in times of exceptional emotion not an individual god is present to the mind, but the gods collectively. This becomes more frequent in the *Odyssey*, where the gods, both as *dei* and as *theoi*, are more often spoken of without particular mention of Zeus. What, then, are the general attributes of the Homeric gods? (1) They are immortal. This privilege is shared by some who are not dwellers on Olympus. (2) They live at once (*hoi* *pheroi*), exempt from pain and sorrow. (3) They feed not on the produce of the ground, but on ambrosia and nectar. (4) They are in their nature invisible, but have the power of appearing to men in various disguises (sometimes as birds). (5) They are the givers of all good, but (6) they are ever ready to punish the breach of an oath, the oppression of the stranger, and other acts of wrong. The mortal who contends with them is doomed to perdition. They visit cities in the guise of strangers, to observe the just and unjust deeds of men.

3. *The poetry of Hesiod* reflects a parallel and partly independent growth of the religious consciousness. The Muses of Mount Helicon are imagined as revealing to their devotees the realities of the superhuman world. A grade form of reflection comes in aid of poetic fancy, and is associated with a strong though simple ethical conviction.

Such abstract notions as justice, mercy or reverence, persuasion, rumour, contention, are personified. Fanciful affinities lead to genealogical description and narrative. The distinction emerges between divine and semi-divine (*theoi*, *daemones*, *gigantes*), nor is it always possible to discriminate between the cases in which an heroic ancestor is deified and those in which some power originally worshipped as divine or some attribute of a worshipped deity comes to be regarded as a demi-god.

4. *The development of art*, always in association with religion, is later than that of epic poetry, and it reaches an expression of more advanced conceptions. There are distinct traces indeed of an aniconic stage, in which the Divine presence was realized through some striking natural form or some rude symbol—a tree, a cave, a boulder, a cone, a pillar. Then came the stele, a block of wood or stone rudely carved in human form either partially or completely. The Trojan Athena in *Il. vi.* was probably of this nature. Such idols retained a special sanctity in historic times notwithstanding the advance in artistic skill. Athene Polias of the Erechtheum still claimed the offering of the embroidered robe in preference to the Parthenos, the Promachus, or the Lemnian statue. Until about the 6th cent. B.C. little was attempted in the way of denoting attributes through form and feature. Symbolic treatment came before expression. Hermes was known by his caduceus, Artemis by her bow, etc. But the pious artist, in meditating on the special worship which he sought to adorn, began by and by not merely to mould in bronze or marble with wonderful perception the human form, but to breathe into his creations 'the attributes of awe and majesty,' which worshippers hitherto had but vaguely imagined. Even in work of the 4th cent. B.C., the art critic has no difficulty in discerning, from feature and expression apart from symbols (such as the *egris*, *calathus*, *polos*, etc.), whether the person represented by a statue is human or Divine. This implies a remarkable elevation of religious feeling. It shows that, amongst all the vagaries of polytheism, there was a growing sense of something 'far more deeply interfused,' a power exalted infinitely above humanity, yet interpenetrating human life in all its aspects. It proves that the conception of divinity, while recognizing a great variety of manifestation, was becoming generalized and unified. The Phidias Zeus at Olympia, a work of the 5th cent. B.C., was felt by those who saw it, even in the latest period of paganism, to be a complete embodiment of the Divine ideal.

5. Epic poetry had an undoubted effect in moulding subsequent modes of literature and art. But side by side with Homer it is important to recognize independent and parallel orders of religious consciousness. Ceremonials once established remained for ages, as every page of Pausanias shows, little affected by the progress of religious thought. Some popular worship, on the other hand, such as those of Demeter and Dionysus, became the nucleus for the growth of a new body of mythology. Such movements were encouraged by influences from Egypt and the East that shot across the national worships and gave rise to a strange blending of religious ideas. In this connexion it may be well to quote the following passage from W. M. Ramsay's *Cities and Bishoprics of Phrygia* (vol. I. [Oxford, 1896] p. 87) on 'Anatolian Religion':

'Its essence lies in the adoration of the life of Nature—that life subject apparently to death, yet never dying but reproducing itself in new forms, different and yet the same. This perpetual self-identity under varying forms, this annihilation of death through the power of self-reproduction, was the object of an enthusiastic worship, characterized by remarkable self-abandonment and immersion in the Divine, by a mixture of ecstatic symbolism and sublime truths, by negation of the moral distinctions and finally that that which is a more developed

society, but do not exist in the free life of Nature. The mystery of self-reproduction, of eternal unity amid temporary diversity, is the key to explain all the religious legends and ceremonies that cluster round that mystery, and all the manifold manifestations or diverse embodiments of the ultimate single Divine life that are derived on the basis of *Autotheos*.

That religion had some elements essentially alien to the Greek spirit, which, however, like all strange things, possessed a powerful fascination for individual minds. Obtaining a footing at seaports, these cults found their way into the cities, bringing with them some impurities for which the earlier Greek cults were not responsible, but also diffusing a spirit of mystical devotion which in the Orphic and Pythagorean schools was associated with ascetic strictness of conduct.

6. Excesses, however, whether of impurity or asceticism, found little response until the decline of Hellenism, except on the outer fringe of Hellas. Cynbaotic wildness remained a peculiarity of semi-barbarous lands. The *Atys* of Catullus has nothing corresponding to it in classical Greek. Laments for Adonis were confined to women. Dionysiac exuberance, in Athens at least, had been tamed and regulated through the institution of the drama. To some such influx of foreign ideas, in which Egyptian, Oriental, and Thracian ingredients mingled, may be traced the origin of Orphism. A crude theosophy had already appeared in Hesiod. The tendency to Pantheism and blending of divinities (theocracy) had shown itself here and there, and in the worship of Dionysus the notion of a god who suffers, dies, and lives again was already present in germ. There was a tomb of Dionysus at Delphi, as probably in Crete. The founders of the Orphic mysteries wove these several threads together in a new mythology. Dionysus Zagreus, torn in pieces by the Titans, lives again as Phanes (see article ORPHISM). This was, after all, one phase in the general process by which the Greek mind was brought through generalization and inference towards the conception of a divine unity.

7. *Philosophy* in its earliest form stood aloof from common life, and involved a reaction from ordinary belief and custom. Xenophanes despised anthropomorphism, and Heraclitus could not tolerate the absurdities of popular sacrifices. Yet each great speculative effort was in effect a 'seeking after God.' The Heraclitean law of Change, the Perfect Sphere of Parmenides, the Thought of Anaxagoras, Pythagorean Number, were modes of expression for a new vision of the Supreme Being. Meanwhile, apart from philosophy, and from Orphic innovation, there were significant changes both in popular worship and in literary expression. The grouping of divine powers was symbolized by a common altar-place (*anorthion*), either for the eight or for the twelve greatest gods, at Athens and in Argolis; and the generalizing tendency already noticed becomes more distinct. In Herodotus, for example (I. 22, vii. 44, viii. 13, 60), the idea of God which is present to the historian is at once impersonal and personal. All exceptionally striking events and extraordinary phenomena are accounted for by a supernatural providence above and beyond the action of individual gods (see especially the curious bit of teleology in Herod. iii. 108). The stage of reflection which appears in his histories probably dates from an earlier time than that of their publication, representing a spirit which may be described as Ionian pessimism. The old suspicion of Divine malignity was confirmed by the sad uncertainty of life amongst those who lived beneath the ever-threatening shadow of Persia (*ἡ δὲ ἀνθρώπων ἀντιλήψις ἡρώδης*, Herod. vi. 36).

The idea of Fate (g. v.) as distinct from Divine volution at the same time acquires increasing prominence

(*ἡ δὲ χροιά*, Herod. passim). The hope of immortality, which in Homer had grown dim, was revived in the Eleusinian worship, and found poetical expression in Pindar. This poet has sublime conceptions of the Divine nature as exalted, irresistible, swift, etc., and he refuses to accept fables that seem to him degrading to the gods. But his ethical standard, that of the Hellenic aristocracy of birth, though noble in many ways, has not the human breadth and depth of the great tragic poets.

8. *Aeschylus* absorbed and carried further the theosophic speculations which were prevalent in the early 5th cent. B.C. For him they centred in meditation upon human things. The idea of Divine righteousness striking a harmony amidst a clash and confusion of events and bringing into order the moral chaos of the primitive world is the dominant note in him. He reserves the word 'God' (*θεός*) principally for the supramundane powers, and sometimes makes express opposition between the gods and the subterranean deities (see EUMENIDES). The mythopoeic faculty is still strong in him. But his mythology is not fixed into a system. It is an elastic medium for the expression of his thoughts. Apollo is the prophet of Zeus; Athena represents the glory, the freedom, and wise equity of Athens. In speculating on the Divine attributes he came to see clearly the necessity of combining power with beneficence and wisdom (*Prometheus Vinctus*).

9. In *Sophocles* the idea of justice is identified with the righteous but inscrutable will of Zeus, and destiny becomes the symbol of the mysterious, unaccountable element in human life,

'The burden and the mystery
Of all this unintelligible world';

Deiuss is used of any superhuman power directly acting on the life of man.

The 'eternal laws' (probably an Eleusinian notion—see *Lydiae, adu. Andocid.* p. 104) may not be broken with impunity either consciously or unconsciously, but the noble spirit, though ever-eluded for a time, is ultimately justified. Some notes of sadness here and there, chiefly in late plays, prepare us for the scepticism and newer pessimism which find frequent utterance in Euripides. This belongs to the period of the *Sophists* (g. v.), in which earlier beliefs and positive speculations gave way before obstinate questionings about the meaning of experience. Another aspect of the same time of transition is perceptible beneath the silence of Thucydides, who limits his vision to the facts of life—what has been and will be again while human nature remains. Sophocles, Euripides, and Thucydides had lived through the experiences of the Peloponnesian war.

10. It is observable that in the later tragedies the word for 'God' (*θεός*) is used with increasing laxity—for instance, for Niobe in Soph. *El.* 150—and is predicated for mere abstractions, such as Time (*χρόνος γὰρ ἀνάγκη θεός*, Soph. *El.* 179), Thought (*ἡ σκέψις ἀνάγκη θεός*, Soph. frag. 337), Caution (*ἡ δὲ ἀνέγκη, χρησιμότης θεός*, Eur. *Phon.* 782), Wealth (*ἡ δὲ εὐχάρις ἀνάγκη θεός*, Eur. *Ion.* 236, 237), *Plutus*, Shamfastness (*αἰδέομαι δὲ θεόν*, Eur. *Ion.* 236, 237), Poverty (*ὁ δὲ δὴν ὡς ἡμεῖς ἡμεῖς θεός*, Eur. frag. 360), and even Recognition (*θεός γὰρ αἰὶνός ἐστιν ἡμῶν*, Eur. *Hel.* 500). Hesiod had anticipated this mode of speaking in saying of Remour (*ῥέω*): 'She also is a god' (*θεός ὅς τις ἐστὶν αὐτῇ*, Op. et Dies, 702). How conventional Athenian religion had become, although as custom it had still a powerful hold, appears from the light treatment of Dionysus and other deities by Aristophanes.

11. With the career of *Socrates* (q.v.) a new era of reflexion, at once religious and ethical, begins. Plato is probably justified in representing him as accounting for his self-devoted pursuit of truth by the command and inspiration of Apollo, and the Divine intimation (*τὸ θεῖον*) which checked him when on the point of undertaking some new enterprise was likewise regarded by him as supernatural. While conforming to the religion of his countrymen, he rejected fables which attributed immoral actions to the gods. The simple teleology which we have already noted in Herodotus was carried by him somewhat further in recognizing the adaptation of organ to function in the human frame, and he warned his hearers against praying for blessings which the gods had placed within human power.

12. In *Plato* it is necessary to distinguish between his allusions to popular conceptions and his own original thoughts. In one place the ordinary notion of God is spoken of as the signment of a 'non-natural man' (*Phædr.* 246 C). In another the gods who exist through custom and convention are contrasted with the heavenly bodies to whom he attributes real divinity (*Tim.* 41 A). But, when he speaks most seriously, he expresses theological principles which are of permanent value. God is the author of all good, but never of evil. If He chastises men, it is that He may make them better. He cannot lie or deceive. God is the measure of truth, not man, as Protagoras had said. The world is ordered not by chance, but according to the mind of God. God is free from envy (here Plato contradicts his predecessors), and He would have His creature to be as like Himself as possible. In these and other passages God is imagined as a living personality. Elsewhere the place of God is taken by the impersonal idea of good. That is the Atlas on which the universe rests, and which 'preserves the stars from wrong.' It is this which gives validity to the highest principles of truth and being, and without which the fabric of the universe would collapse. Plato speaks with some reserve on theological questions, and in his *Lysis* the most sacred rites are to be performed in the temple of the Sun. Yet above and beyond all such rules of worship, there are unmistakable indications of a true monotheism. God is virtually identical with the good mind or soul, which in the end prevails over the evil or imperfect soul. That is the prime cause of motion and becoming—itsself eternal, unchanging, and unmoved. The unity of the supreme will is expressly recognized in the *Statesman*. Lastly, God is not to be sojourned by rites of atonement, or by prayer and sacrifice; and only a less dangerous error is to suppose that He takes no interest in human things.

13. In the system of *Aristotle*, the spheres of theology, ethics, and politics, though not unrelated, are distinct. The life of action and of moral choice is human; the life of contemplation is alone divine. God causes motion, but is Himself unmoved. His unceasing, uninterrupted energy is the thought of thought (*νόησις νοήσας*). This metaphysical notion, seemingly cold and unimpassioned, is yet informed with a strain of philosophical enthusiasm which occasionally breaks forth (*Eth. Nic.* x., cf. *Met.* xi.), and it has had an influence on Christian theology (both Scholastic and Reformed) more permanently effective than Platonism as later understood. Even in Aristotle the perfection of the Divine nature as immanent in the universe is not wholly abstracted from the symbolism of the circle and the sphere. But these shadows of Pythagoreanism are not essential to the philosopher's thought. God, the prime mover, Himself unmoved, is at once the first and the final

cause of all things. All Nature, from the lowest to the highest, is potentially Divine. From God it has received the seeds of being, and yearns to realize itself in higher forms. Hence the final cause is also at once the efficient and the formal cause. Particular ends, such as beauty, goodness, wisdom, truth, are all subordinate to the supreme energy which is the realization of the thought of God. At this point Greek religion has travelled far away from 'the gods of custom and convention,' and may be said to have reached its apogee.

14. *Epicurus*, following the Cyrenaic school in ethics, and Democritus in physics, and adopting one of the heresies denounced by Plato, taught that the gods, living happily in eternal calm, cannot be supposed to interest themselves in the affairs of men. The Stoic, on the other hand, while adopting Heraclitean cosmology, deified the moral ideal, and looked for God within the human mind and will.

15. By the end of the 1st cent. A.D. it had become impossible for persons at once religious and thoughtful to accept the old mythologies in a literal sense. Meanwhile other worships, especially those of Egypt and Persia, had met and mingled with the Greek and found wide acceptance in the Roman world. The blending of divinities (*syncretism*, 'syncretism') had gone far. In this welter of superstitions, those who clung affectionately to ancient ritual and tradition had recourse to allegory and symbolism. Plutarch's treatise concerning *Isis and Osiris*, addressed to a pious and intelligent lady, is very instructive in this regard. He is strongly imbued with Platonism, and quotes largely from the *Timæus* and *Lysis*. His own thoughts point clearly to monotheism. Yet he assumes that the religion of Egypt, however it is to be interpreted, is authoritative and lasting. He cannot imagine that it will ever be supplanted or done away. His explanation of the worship of the crocodile may serve as an example of his method: 'This animal's eyes are so arranged that he can see while himself unseen, a power which is justly attributable to the Supreme Being.' By accepting Plato's distinction between gods and demons (*θεοὶ καὶ δαίμονες*), Plutarch is enabled to effect a superficial reconciliation between monotheism and polytheism. The same antithesis was adopted and emphasized by the Christian Fathers, when they followed St. Paul in saying that the heathen prayed and sacrificed to demons and not to God (1 Co 10¹⁰).

Murray, *Four Stages of Greek Religion*, New York, 1913, including *Religion, On the Gods and the World*. LEWIS CAMPBELL.

GOD (Hindu).—At the foundation of all the religious life and thought of India lie her sacred books. The literary element, inspired and controlled by a dominant class and largely accommodated to their own ends, has exercised an influence the breadth and comprehensive nature of which finds few if any parallels outside of Christianity. Among no other peoples is the appeal to what is traditional more absolute and decisive; and tradition appeals in turn to the written word. If it may be said that custom in the East regulates and fetters social relationships to a degree unknown among Western nations, Indian life, on the other

hand, in its religious aspect is, broadly speaking, no less determined by the teaching of the Indian Scriptures. Every leader of thought, every reformer of doctrine, takes his stand upon these, and claims to be their true interpreter. Any survey, therefore, of the forms and developments of religious thought naturally and necessarily begins here; and an inquiry into the nature of the conception or conceptions which the Indian peoples have formed of the Divine must take account in the first instance of the evidence and teaching of the authoritative books.

1. *The Vedas.*—The earliest illustrations of primitive doctrine and belief as they existed in north-west India are found in the Rig-Veda; and the chronological uncertainty of this literature hardly detract from its supreme importance as a witness to the origin and development of 'theology' in the narrower sense of the word, the doctrine of God, as formulated and held by the Indian peoples. The succession of the literary strata, generally speaking, is not doubtful; and it is upon this that the history of doctrine rests. Behind it lies the Indo-Iranian period, whose ideas with regard to the unseen form matter of more or less well founded conjecture, but hardly as yet of secure inference. That these early hymns reflect the higher and serious beliefs of the people is not doubtful—as on another plane of thought the Atharva-Veda reflects the superstitions, the craving for unnatural or supernatural power, the cunning and greed of primitive man on his guard against demoniacal influences, seeking to overreach his fellow-man, and fearful lest his fellow-man should overreach him. Of both tendencies account must be taken in any attempt to trace the genesis and history of theistic belief. As a whole the Rig-Veda is the older collection, and has been most influential upon later thought. The Atharva-Veda, however, contains elements of very great, probably of not less antiquity.

It has often been pointed out that the conceptions upon which these ancient hymns are based are those of a primitive Nature-worship—a Nature-worship, moreover, which is sufficiently frank and inartificial to enable us to watch the process of personification, and to trace its development from the scarcely disguised natural phenomenon, where the god is hardly differentiated from the physical appearance, to the idealized and abstract personality, clothed with moral attributes, and endowed with a character wholly divine. To the former belong *Dyaus*, the broad bright sky, perhaps the only one of the great gods of the Veda who carries us back to pre-Vedic times; the *Maruts*, the deities of the storm; *Indra*, the god of the rain-cloud, who became the mighty warrior and champion of heaven; *Agni*, the god of fire, as regards some of his attributes and functions; and others, all of whom are in process of becoming detached from those phenomena of Nature which they represent, and obtaining an individual and abstract existence. The rich personification of the Veda extends over the whole realm of inanimate Nature. The heavens, the earth, the waters, the air are all laid under contribution; and there is a constant tendency to assimilation and interchange of attributes, so that not only are the same qualities ascribed to different deities, but the same actions are performed, and they thus tend to become indistinguishable in character from one another. The sameness of many of the Vedic divinities is no less noticeable than their derivation from the physical universe.

Abstract personifications are more characteristic of the later hymns, though they are not confined to these. *Aditi*, the immensity; *Prajapati*, the lord of creatures; *Hiranyagarbha*, the golden germ, are illustrations of a tendency, which seems

to have become more marked with the progress of time, towards a mystical, contemplative attitude of mind, which sought to dissociate the objects of its worship from the visible and tangible, and to assign to them a position of greater independence and exaltation. Hence especially the gods originally mortal become immortal, and cease to be moved by passions like men. They wrap themselves up in distance and mystery; and the worshipper cannot come crudely with a gift in his hand, hoping to receive an equal or a greater return, but needs to inquire the way, and reverently to approach one whose nature and being he cannot fully know. In the later Rig-Vedic hymns there is a distinct approximation to the speculative and pantheistic spirit of philosophic Hinduism.

A further and noticeable feature of the Vedic gods is their predominantly beneficent character. Malevolent deities, at least of the higher order, are absent; and the demons, malicious and hurtful, in their perpetual conflict with the gods are uniformly worsted. The great gods themselves are either neutral and indifferent, or interfere actively for the suppression of wrong and the punishment of the sinner. Ethically regarded, their power was conceived as making for righteousness; and, though subject to gusts of passion, and open to external inducements and cajolery like men, the gods stood on the whole for justice and right as against deceit, fraud, and wrong. There can be little doubt that in the lofty character of their deities a comparatively high moral tone of the worshippers found expression.

That behind some of these personifications lies a deification of the heroic and honoured dead is sufficiently probable, though it can hardly be said to be demonstrated. Traces of totemism also have been found in the names of tribes derived from the cow, goat, fish, etc. These indications, however, are obscure and indecisive, and at the most are readily explicable on other principles. It remains that the leading motive of the theology of the Rig-Veda is Nature-worship, the attribution of a personal and divine character to the objects and phenomena of the external universe.

It is not of so great importance as at first sight it might appear to be that the poets of the Rig-Veda ascribe omnipotence and supremacy to the individual deity whom for the moment they are addressing; that, in other words, the religion of these hymns is henotheistic. Each divinity in turn so fully engages the thought and attention of the seer that there seems to be no room for any other, or at least for any equal. To him attributes of majesty and greatness are assigned which can be the possession of but one alone, unique and without a peer. But, as he ceases to be invoked and passes out of sight, another comes forward, who is invested with precisely the same powers and dignified with the same titles. This is the essential feature of *henotheism*, the worship of one god at a time, who for the time is regarded as supreme, to the exclusion or subordination of all others. In no other primitive religion is this character so marked as in that of early Aryan India. The logical conclusion and development of a henotheistic creed is monotheism, and from this forward movement Indian thinkers turned aside. The East cares little for logic or consistency in the strict Western sense of the term. And the Vedic religion fell back into a luxuriant polytheism, which on the one hand fettered itself with the most uncompromising system of rites and ceremonies that the world has ever known, and on the other allowed the freest scope to a speculative daring which resolved the idea of God into a vague and mystical pantheism.

2. *The Brîhmagata.*—In the thought that char-

entered the period of literary development which followed, from the 6th or 7th cent. B.C. and onwards, it seems that to the active invocation of the gods by hymn and prayer had succeeded a ceremonial type of worship, which deadened all spiritual life, or at least drove it beneath the surface. The priest intervened, and demanded with growing insistence a rigorous precision in the observance of the niceties of rite and sacrifice, a strictness which in turn had the effect of making his own services the more indispensable. The gods needed placating, and none could placate them aright save the priest who knew the formulae and was able to carry out the ritual. Myth and story, precedent and custom ruled. It was an epoch of order and commandment, of method crystallising into principle, of elaboration of the minutiae of service, like to nothing so much as to the stringent demands of the later Judaic code, when beneath the weight of the letter of the law the spirit was almost crushed. Doubtless, however, the reality was not so entirely spiritless and formal as the extant literature would suggest. True progress was made, in doctrine as well as in the ritual and modes of the sacrifice. But the doctrinal changes hardly affected, broadly speaking, the people's conception of God. They were eschatological, extending the retribution which might be required of the sinner into a future life; building up a more ordered and settled theory of the constitution and government of the world; but leaving the idea of God still essentially that of one with whom a bargain might be made, and who for value received would forgo his wrath, acquit the transgressor, or bestow unnumbered benefits. This tendency found exaggerated and morbid expression in the practices of the hermits and ascetics, for whose use special books of rule and doctrine were framed (see art. *ARANYAKAS*), and who by intense meditation and prolonged self-mortification believed themselves able not only to wring from the gods any gift at will, but to supersede them in their dignity and sway, and to take possession of their throne (see art. *ASCETICISM, RENUNCIATION* [Hindu]). On the other hand, a reaction against the formality and religiousness of the times seems to have given birth to a materialistic or atheistic movement, which has left its traces in the literature, though naturally not allowed to assume a prominent place there; which scoffed at all things human and divine, denied the existence of a God, and, quite after the approved manner, sought to make the best of the enjoyments and opportunities of the present.

3. A line of thought essentially opposed to that of the Brahmanas is developed with great subtlety and power in the Upanishads (q.v.). Here the trend of thought on the nature and being of God is speculative and mystical, as contrasted with the practical and propitiatory view of the books of ritual. In germ there can be little doubt that the former is of at least equal antiquity; the human mind pondered and scrutinised certainly not later than it worshipped. But, in the form in which they have been preserved, the Upanishads present us with the final result of a long period of inquiry, discussion, and speculation, during which the ritualistic and the philosophical or speculative elements moved and were developed upon parallel lines, without in the main clashing with one another; until under Brahman influence they were brought together, and in some sort harmonised and made to agree. The leading doctrine or doctrines of the Upanishads seem to have originated among the royal or warrior caste; by whom in the East, not in India alone, respite from arms and strife was devoted to eager inquiry, and to the conducting of religious and philosophical disputations. Later, the Brahmins adopted and welcomed

the new modes of thought, interpreting their own ritual as type and symbol of higher truths, which in themselves indeed transcended the type, but were thus set forth by way of accommodation to the needs of the unlettered multitude, whose minds were incapable of rising to the conception of abstract or spiritual realities, and needed a concrete image of the true. Hence there were two ways of arriving at a knowledge of the truth, of Brahma, or of God—the *jñānabhāga*, the sphere of knowledge, in which he alone moves and by which he ascends who is gifted with purer, clearer insight than the common crowd; and the *karmabhāga*, the department of works, designed for ordinary man, who thereby may win a proportion of merit and reach forth painfully to a higher state. It is in the former that the kernel and essence of Upanishad teaching is to be sought.

The thought or thoughts, then, of the Upanishads and of the great systems of Indian philosophy which are more or less completely based upon, and find expression in them have penetrated and rule the Indian conception of the unseen and the divine to an extent to which an adequate parallel can hardly be found elsewhere, unless it be the influence of St. Paul's Epistles, and of Augustine his interpreter, on the development of Christian theology. Thinking India is dominated by the Upanishads. And, owing to the processes and authority of the Brahmins, who had constituted themselves the custodians of doctrine, the conceptions of the Upanishads made their way to the lowest strata of society, gradually modifying and humanising religious belief. It is true that outside even of these there was always a wide circle of non-Hindu aboriginal peoples; of whose creed Nature-worship, fetishism, and the like were the characteristic features. In more numbers these last formed the majority; as, apart from the looseness and elasticity of the term Hinduism, which has thrown its wide net over very many who have the most shadowy of rights to be called Hindus, they constitute the majority to-day. Moreover, peoples so diverse and distinct as those who inhabit India can hardly be said to have one only thought upon any subject, least of all upon the highest, the nature and being of God. In so far, however, as there is a common tendency of thought, an accepted principle, disavowed by few or none, and leading naturally, and in most instances by virtue of the meditative and introspective character of the people themselves, to a definite form or type of belief, the articles of that creed, and especially the first and greatest—the Divine character and essential attributes—are laid down in the Upanishads, and have been thence derived, expounded, and promulgated.

Interwoven in all this literature there are two main strands of thought, which issued forth in the form of the two greatest and most influential systems of Indian philosophy. These are the idealistic and the materialistic. But the latter never developed into a religion, or gave birth to religious conceptions, and was perhaps incapable of so doing. It is true that, as a system, it admitted theistic ideas, and was largely modified in a theistic direction—under the uncontrollable natural impulse to worship, which seems at all times and among all peoples to have been ultimately too strong for abstract materialistic theory. But, though at one time widely prevalent, it so completely yielded place and popularity to the idealistic view that the latter has been justly described not only as the fundamental principle of the Upanishads, but as the almost universal presupposition of all Indian thought.

In regard to the nature of the deity and the being of God, idealism, if it ventures on any state-

ment whatever, in almost of necessity pantheistic. And, if a single term is sought by which to describe the leading principle of the many and various ramifications of Indian speculation on this theme, it could be none other than 'pantheism.' With the doctrines or conceptions associated with this term the thought of India's sons from the highest to the lowest is saturated. The pantheism of the East, however, as represented in the Sanskrit books and adopted in the belief of the people, differed from that of the West, assuming different premises and arriving at different conclusions. Western pantheism, broadly speaking, has regarded God as immanent in Nature and the natural universe. To the Indian, Nature is immanent in God. European pantheism is hardly wronged, if it be said to have its eye first on the natural world, into which it introduces God. Indian pantheism makes God all in all, and introduces Nature only because the insistent demands of practical everyday experience compel it to do so, and to endeavour thus to reconcile theory with apparent fact; while at the same time it saves the unity and absoluteness of the Divine by denying to the natural universe any true existence or reality at all. The latter is always and only *mayā*, deceptiveness and illusion. Only of God may being, existence, reality be predicated, not of the material world. There is one only, not another. Hence Indian pantheism, as far as its conception of the deity is concerned, would be more strictly and correctly described as 'pantheistic monism.'

4. The great systems of Indian philosophy carry forward, reiterate, and develop the thoughts which are found more or less fully expressed in the Upaniṣads. But of the six recognised systems (see *cop. art.*), two, the *Vaiśeṣika* and the *Nyāya*, possess no significance from a religious point of view. Of the others, the materialism of the *Sāṃkhya* leaves no room for the spiritual or divine; and the decline of its influence, in the presence of its great rival, has been very marked. The *Yoga*, which philosophically is closely allied to the *Sāṃkhya*, has grafted upon the materialistic creed of the latter enough of idealism to give reality to its doctrine of union (*yoga*) with the divine. It is upon the completeness of this union that in theory the success or failure of its ascetic practices depends; and the penances and religious exercises for which Indian ascetics have ever been remarkable are designed by virtue of this fusion to secure prospective benefits or the immediate possession of miraculous powers. The *yogin*, therefore, is a real theist, whose theistic doctrines are nevertheless scientifically irreconcilable with the philosophy with which they are combined. Although, however, the genuine *śaṅkya* still commands great respect in India, the popularity and influence of the class are declining with the spread of European ideas and education. And there can be little doubt that, like the asceticism of the early centuries in the West, the *Yoga* also will finally disappear, leaving behind it, nevertheless, the memory of a marvellous self-control, of many a pure and simple life, and of an entire, if often useless and misdirected, devotion to one single aim.

Of the two remaining systems, the *Mīmāṃsā* and the *Vedānta*, which are mutually related, and which seem to have originally formed parts of one whole, the former, which devotes itself to the exposition of the ritual, contains nothing which enlarges or interprets the conception of God. It is concerned with practical observance, not with theological doctrine. The latter, the *Vedānta*, is the dominant philosophy of India, where philosophy and religion, more than in any other country, go hand in hand. Its estimates and definitions of God have swayed the minds at least of the more

thoughtful classes of the people almost as far back as the records will carry us; and have determined the trend and character of the general belief of all, from the highest to the lowest, to a degree perhaps unparalleled elsewhere. The great majority of Hindus, with more or less acknowledgment and consciousness of the fact, are *Vedāntists*; and *Vedāntism* is but the theoretical development and expansion of the governing conception of the *Upaniṣads*. Creed and practice, however, are not of necessity adjusted to one another. A complete adjustment would indeed, on *Vedāntic* principles, be an impossibility in experience. And not infrequently the man who in theory is a pantheist and idealist will in practical life repeat his prayers and perform ritual service to many gods with as much outward servancy as his unphilosophical neighbour.

So far from denying that there is a God, the *Vedānta* identifies everything with Him. All that is not mere *mayā*, unreality and illusion, is God. *Brahman* (God) is one—one being, one soul, one mind, one only without a second. This universal soul, moreover, is one with the individual soul, and therefore each soul is complete and perfect *Brahman*; there is no distinction of persons, for all is one. *Brahman* is also of necessity indefinable, since every predicate, even the most general and indefinite, implies a contrary, an opposite, and besides *Brahman* there is none else; he is all-pervading, all-comprising, thought without an object of thought, the thinker absolute and alone. Strange as such reasonings may appear, they were built up with consistent and unshrinking logic from the premises which the authors of the *Vedānta* laid down. And, if from these heights of refined fancy and speculation, where definition fails, where 'I am *Brahman*' and '*Brahman* is I,' and where idealism strains itself in the effort to reach the ultimate reality, thought was soon compelled to return and to endeavour to find a way to harmonize pure abstract thinking with the demands of experience and practical life, it remains true that in theory the Indian idealist is the most thoroughgoing and consistent in the world. His idealism, however, remains almost necessarily a mere creed, which he will expound with earnestness and fervour, but which under ordinary circumstances hardly affects his conduct and life.

5. Epic poetry.—The importance of the great epic poems of India, the *Mahābhārata* and the *Rāmāyaṇa*, for the history of religious thought in its bearing upon the Hindu conception of God, is second only, if indeed it is second, to that of the *Upaniṣads* and the orthodox systems of philosophy. The latter have been the property and study of the thoughtful and learned, and their influence has only indirectly touched the lower strata of the population; but the epic stories are the popular possession of the inhabitants of every village and hamlet, as well as of the great towns and centres of pilgrimage. The names of their heroes and heroines are household words throughout the length and breadth of the land. *Sita Rām* is the most frequently heard sound on the lips of the devotees, whether in the open air or at one of the many shrines consecrated to the worship of the god. *Hanumān*, *Bhīma*, *Rādhā*, and others occupy a position second to none in the affection and reverence of the villagers. And, while each district has its own store of folk-tales, and its own gods and goddesses, whose name and influence extend more or less widely into the region beyond, the great historical epics have penetrated the whole land. To use a somewhat hackneyed comparison, they are to India what *Homer* has been to Greece. Their heroes are known everywhere, and in many instances have become identified with

local or tribal divinities, whose attributes they have more or less adopted, and whose worship they have absorbed.

Many of the elements, the episodes, and the characters of this poetry may be traced back to a great antiquity, equal if not superior to that of the Upanishads themselves. Its thought, however, has moved on different lines, and the points of contact, of action and interaction, have not been numerous. But, while the tone and tendency of the philosophical literature has been pantheistic, mystical, and symbolical, that of the epic poetry has been uniformly in the direction of theism—not monotheism, but a rich polytheism, which has flooded the land with gods and goddesses innumerable. It is an illustration, moreover, of a bent of mind that has been noticed before, that from among this crowd of divinities there has always tended to emerge one or more with greater power and wider sway than the rest, whose vengeance is more to be feared and his anger deprecated, and whose aid it is more desirable to secure in times of need. The Indian pantheon is always a more or less stable monarchy, not a republic.

More or less dependent upon the epics proper is the secondary romantic and mythological literature, still imperfectly explored, and extant not in Sanskrit but in the various vernaculars, embodying material much of which has come down from a considerable antiquity. While the tone of a great part of this literature, as far as it is known, is sufficiently demoralizing and coarse, there breathes in some of the works a true religious spirit, which seeks to cast off that which is sensual and degrading, and to know and hold communion with a higher power that makes for righteousness.

A characteristically strange combination of theistic and ethical teaching with dreamy speculation is found in the *Bhagavad-Gītā*, the Song of the Blessed—the New Testament, as it has often been called, of Hinduism. To the European reader its many repetitions, its frank opportunism, its digressions, and the framework and presuppositions of unfamiliar ideas, fail to present an attractive whole; but upon Hindu thought there is no book which has exercised so fascinating and elevating an influence. 'When my heart is lonely,' said an Indian *adivasi* recently, 'I read in the *Bhagavad-Gītā*; and I like that better than any other book, because it makes my heart glad.' The very features which condemn it to Western taste are beauties and excellences in Indian eyes. But with all its difficulties and inconsistencies, characteristics which it only shares with nearly all Eastern literature, it cannot be denied that the *Bhagavad-Gītā* has been a moral force, and that on the whole it has promoted simplicity and purity of life.

The poem has suffered interpolation (see art. *BHAGAVAD-GĪTĀ*), and is no longer in its original form. To this claim undoubtedly are due some of the contradictions which meet us in the poet's view of God and the chief good. Action and devotion are the two themes upon which he insists. Nothing is better than faith in God, reliance upon Him, and obedience to His will, and this is the whole duty of man. The doctrine of Brahman, moreover, the soul of the universe, everlasting and changeless, is set forth in the manner, and even in the very phraseology of the Upanishads, and the entire poem, so it exists at the present time, moves in the atmosphere of Vedantic idealism. It has been usual to suppose that this idealistic teaching represents the view of the original *Bhagavad-Gītā*, and that the theistic and practical doctrines are a later accretion. In a recent monograph, however, E. Caestebeek argues strongly for the primitive character of the theistic element, holding that the basis of the poem was a monotheistic tradition or hymn designed to command the worship of Krishna as supreme god; and that this was worked over and supplemented more than once in the interests of Brahman orthodoxy and the associated idealistic views. The last word upon the past of the *Gītā* has

certainly not been said. But, however its tangled history may be unravelled, there can be no doubt that its monotheistic and spiritual teaching, modified as it may have been and contaminated by other tendencies, has been a most potent factor, perhaps the most potent factor, in the religious life of India.

7. *Sects*.—By the side of the philosophic doctrines and systems there exist and have existed from the earliest times innumerable sects, over all of which has been thrown the loose cloak of the Hindu name, but which differ widely from one another in belief and practice. Of these the larger number accept more or less fully the ancient Vedic divinities, recognize the supremacy of the Brahman rules and castes, and adhere to one or other of the philosophical systems above named. Cross currents, however, run everywhere; the sects and the systems are rarely or never contemporaneous. And it can only be said in general terms, which admit of numerous exceptions, that this or that form of religious belief is allied with a particular trend of philosophical speculation. The tenacity and conservatism of the Hindu, moreover, has led to the result that the circumstances of the origin and rise of a creed or sect, the environment and history of the founder and his immediate disciples, have exercised a more permanent influence on the character of the faith they have professed than is usual in the West. The sects that have rejected Vedic and Brahmanical traditions have been comparatively few, and in most, perhaps all, instances, the impulse to such rejection has come from without. Historically also they have ordinarily assumed the shape of a reform of existing usages, and a purification of doctrine and religious belief; and in relation to the dominant orthodoxy have run a more or less prolonged course of successive antagonism, toleration, and decay, sinking back into the all-absorbing and inert mass of Hinduism by which they found themselves surrounded. A broad and general classification of the sects on these lines may be made according as they owe their inspiration mainly to internal sources, Hindu or Buddhist, as Saktism, Rāmānuja, Chaitanya, etc., and the *Ārya Samāj*; to Muhammadanism, as Kabir, Nanak, and the Sikhs; or to Christianity, as the *Brahma Samāj* and kindred societies. But the originating causes of all are manifold and complex, and no such classification is exhaustive, or in details unexceptionable.

The greatest and most enduring revolt from Brahmanical assumption and claims was raised in Buddhism, which has left marked traces of its influence in many of the sects, and, though in general extinct in India, lingers obscurely to the present day in some of the villages of Bengal.

The sectarian or popular religions of India are thus essentially theistic. The two chief forms of religious creed and life, *Vaiṣṇavism* and *Śaivism*, which recognize Viṣṇu in one or other of his forms and Śiva respectively as supreme, can both be traced back to a great antiquity, and contain elements which it is impossible now fully to disentangle, derived from the ancient beliefs and practices of the aboriginal tribes, and from the perhaps loftier faiths of the incoming Aryans. Of the two, Śaivism is the older, and has preserved most of primitive ideas, customs, and tendencies. Vaiṣṇavism has come more entirely under the influence of Aryan thought, and has submitted more completely, as far as speculation is concerned, to Brahman ascendancy, following in its development the lead of Brahman advances. Śaivism, on the other hand, has hardly passed beyond a material and sensual view of things. Philosophically, the latter approaches nearest to the Sākhya; but on the religious or emotional side has allied itself with Saktism, the worship of the vital principle in Nature, and with the cult of the

¹ Quoted by T. L. Fennell, *Among the WIS Men of the Afghan Frontier*, London, 1903, p. 202.

Mātṛī or *Mahāmātṛī*, the 'mothers' or 'great mothers,' who are the source of all fertility and life, and on the other hand deal out disease and death. Kālī, the black goddess, whose temples are stained with blood, and whose ferocity reflects, no doubt, the traits of primitive savage life, has been identified with the wife of Śiva; and thus to her rites has been given the sanction of official recognition. Together with other deities throughout the land, of kindred nature and probably similar origin, though less widely popular and influential, this goddess and her worship have therefore become responsible for a degradation of the idea of God, which has made of the divine power a capricious tyrant, or a monster that needs to be propitiated with the best that his worshippers can provide. Early in our era and for many centuries Śaivism was apparently the dominant cult in India; but it has long been losing ground steadily to its great rival.

The second idea closely associated with the Śaivite form of faith was that of asceticism. Śiva was the great patron of ascetics, and himself strenuously practised self-mortification. And the *smṛtyāśa* or Indian devotees, who divested himself of all his possessions, was a *yogi* who sought, thus disencumbered, the final aim of union with God. To him the rejection of family ties and the abandonment of home and friends, together with the affliction of the body, were but means to an end—the securing of release from individual existence with all its pains and penalties, and becoming absorbed at last in the divine. The ascetic ideal therefore was not only inconsistent with the prevailing pantheistic mode of thought, but directly contradicted it. To the true Vedāntist there could be no question of absorption into a higher power, whether personally conceived or not. He was already essentially and altogether one with Brahman, and the only change necessary or possible was enlightenment, the opening of his eyes to a pre-existing fact, an eternal truth. The ascetic principle, however, as worked out in India, tacitly assumed the contrary. The quest for union, on whatever lines it was pursued, implied belief in a supreme power with which the union was sought; and that power was logically personal, though even here Hindu thought did not always accept or recognize its personality. The tendency therefore of the *yogi* conception and practice was all in the direction of theism.

It may be doubted, however, whether in ancient times any more than at the present day the ascetic ideal ever exercised really a great influence on the mass of the people of India, or modified to any appreciable extent their attitude towards the spirit world. They were vaguely conscious of its excellence, admired it in theory, and were ever ready in practice to bring their gifts. But they neither imitated nor desired to imitate the manner of life therein exemplified.

Of far greater immediate influence than the Śaivite faith or ideal is Vaiṣṇavism in one or other of its many forms and sects. Allied with the philosophy of the Vedānta, the Vaiṣṇavite creed has commanded the allegiance of three-fourths of the thoughtful minds of India, and has deeply, if not always consciously or professedly, permeated the life and moulded the conduct of the great mass of the people. It can hardly be disputed that Vaiṣṇavism is the truest general presentation of the religious tendencies and conceptions of the Hindus; and, apart from its theoretical idealism, it is more decisively theistic in practice than Śaivism itself. In its higher, purer forms the henotheism of the Vaiṣṇavite worshipper approaches closely to monotheism; and of all the so-called heathen cults, including Buddhism, this

faith in its creed and in many of its forms has most affinity with Christianity. In particular, the ascetic ideal presents no attractions to the true Vaiṣṇavite, and to him the ferocious character of the Śaivite divinities is especially abhorrent. In his temples no bloody sacrifices are offered, self-torture and self-immolation are unknown, and are indeed opposed to his religious principles. His entire conception of God is gentler and more humane, and is, moreover, deeply impressed at every point with anthropomorphic tendencies. The Deity is present to man, converses with him, walks by his side, sees and hears, knows and feels, and perpetually reincarnates Himself for the deliverance of suffering, helpless humanity. The similarity to Christian doctrines is often indeed merely verbal and superficial, as is the case with the Hindu theory of incarnation (see article INCARNATION [Hindu]). But the purpose is broadly the same, the rescue of man from the baleful dominion of a foreign and hostile power. Such 'descents' or incarnations take place continually, more or less of the deity being present under the bodily form. And every great ruler or teacher is thus regarded by his followers as divine, with a just claim not only to respect, but to formal reverence and worship.

3. *Reforming movements*.—Upon this theistic or monotheistic conception, as distinguished on the one hand from the vague idealistic monism of the philosophers and *yogies*, and on the other from the polytheistic beliefs of the common people, the reforming movements that have arisen within Hinduism itself have usually laid stress. In most instances a comparatively lofty moral and spiritual tone has characterised the teaching of the founders of these systems, and they have pointed the way not only to an amendment of life and manners, but to a purer faith.

(a) Perhaps the greatest and most influential of the reformers was Rāmānuja, who was born near Madras probably in the early part of the 12th cent., and took up the position of opponent of Śaṅkara in his interpretation of the Vedānta sūtras. He expounded and enforced the doctrine of a Supreme Deity, endowed with all the attributes of graciousness, wisdom, and love; of the separateness of the souls of individual men, who are unable of knowing and attaining unto God; and of the reality of the external universe. His teaching also has been supposed, without any sufficient justification, to owe its inspiration to Christian influence.

(b) The impulse which Rāmānuja gave to a higher, purer faith was effective mainly in the south of India, where his followers and disciples carried and still carry on his work. In the 15th cent., however, it became a power in the Panjāb and the north through the influence of Rāmānanda, an adherent of the principles and doctrine of Rāmānuja, who abandoned the narrow practices of the successors of the latter with regard to caste, and proclaimed the natural equality of all men, of whatever race, religion, or birth they might be. All that was best and most tolerant in his system was then taken up by Kabīr in the Panjāb in the 16th cent., who is said to have been a personal disciple of Rāmānanda. Himself of Muslim origin, Kabīr united in his teaching the strict uncompromising monotheism of Islām with the broader outlook and more generous views of the Vaiṣṇavite faith as represented by Rāmānuja and his school. The sayings attributed to him breathe a high moral tone, but are deeply penetrated by the mysticism characteristic of Indian thought. With him and with his great disciple Nānak originated the reforming movement of the Sikhs, which, taking cohesion and national life under the pressure

of external persecution, developed into a strong military society and kingdom, offering curious contrasts as well as resemblances to the militant orders of the Middle Ages in Europe; but which, while maintaining its own exclusive ceremonial and forms of worship, has ceased to possess a distinct religious significance, or to preserve its doctrinal and ethical superiority to the Hinduism by which it is surrounded. See, further, under art. SIXTH.

(b) In another direction, all the more interesting and instructive because it seems to draw its inspiration from purely native sources, the teaching of Rāmānanda and his school was taken up in the work and writings of Tulsi Dās, perhaps the greatest as well as the best-known and most popular of India's poets. Literature in India is, almost without exception, whatever its immediate theme, religious and philosophical in tone. And the poems of Tulsi Dās convey instruction in religious doctrine and embody a system of cult and creed, which by virtue of their popularity has been carried into every hamlet and almost every household where the Hindi tongue is spoken. 'Fully ninety millions of people base their theories of moral and religious conduct upon his writings.' In adopting and giving literary expression to the teachings of Rāmānanda, Tulsi Dās imparted to them a tenderness and directness of application to human needs which constituted their irresistible appeal to the hearts of the common people. There is one Supreme Being, who in love and pity became incarnate for the relief of man from his sin. In His sight all men are equal, without distinction of birth and position; all are alike involved in ruin irretrievable save by the grace of the Creator, and thus all stand in need of a deliverance which in and by themselves they are incapable of achieving. Tulsi Dās further declared that it was in Rāma, the blameless king, that the Deity became thus incarnate; so linking his teaching with the most popular hero and exemplar of bygone days. The justly celebrated and much-honoured poet died early in the 17th century. He also has been freely credited with having borrowed his doctrines from Christian sources; but there seems to be no real ground for the charge, at least so far as direct derivation is concerned. His creed is the outcome and highest expression of all that was best in Hindu thought, controlled and guided by a pure heart searching after wisdom. There have been many like-minded among the sons of India.

(c) The later and more modern reform movements within Hinduism owe at least as much to the ferment of Christian thought and ideals as the earlier movements of the Panjāb to Muhammadanism. Of these the *Ārya Samāj* (q.v.) claims to find a pure monotheism in the four Vedas, which alone it accepts as inspired and authoritative Scriptures. The adherents of this sect, while intensely hostile to Christianity, ascribe to the Deity attributes of mercifulness and grace, which have their nearest parallel in the God of the New Testament. They deny the possibility of an incarnation, and in this respect approximate most to the teachings of Islām. Their professed aim, however, is to restore the ancient unblemished faith of Vedic times, which they declare has been corrupted from without, at the same time maintaining strongly the doctrine of transmigration, although this is, strictly speaking, foreign to Vedic teaching. The influence of the *Ārya Samāj* is neither very deep nor far-reaching, and it has spread mainly in the ultra-conservative circles of those Brāhmins who have kept themselves aloof from Western ideas and education; its position

and tenets nevertheless bear strong testimony to the real tendency of Hindu thought in relation to its conception of the Divine.

(d) The *Brāhma Samāj* (q.v.) and kindred societies have been more deeply affected by Christian example and teaching, and more frankly acknowledge their indebtedness to Christian books. Their leaders have moved to the very border-line of Christian belief and confession, and have often been thought to have passed over it. They have, however, uniformly rejected the doctrine of incarnation, and with it the Christian conceptions of the Trinity and of the Divinity of Christ. They preach and teach a pure monotheism, and in this respect hold the same position as the adherents of the *Ārya Samāj*. Their views, however, are undoubtedly broader and more liberal, and in their public services passages are read not only from the Vedas, but from the New Testament and the Qur'ān. The reverence which the followers of the *Brāhma Samāj* profess for Christ and His teaching is deep and sincere, and the language they employ is not seldom such as would readily lend itself to a Christian interpretation, and has indeed frequently been so regarded. They do not, however, intend it in this sense. Their creed, so far as it concerns the nature and being of God, is limited to confession of faith in one only God, infinite in wisdom and goodness and power, whom Jews and Christians, Hindus and Muhammadans, Parsis and Buddhists alike worship, though under different names.

The members of the *Brāhma Samāj* and of sects allied to it by origin and creed are few in number compared with the total population of India; and their propaganda, though at one time zealous and earnest, has never been very successful. There can be no doubt, however, that the ideas which they represent commend themselves generally to the Indian mind, and are widely influential among the more thoughtful of the people at the present day.

9. By the side of all these sects, which by comparison may be termed orthodox, there have existed in India from the very beginning innumerable forms of *Nature-worship*, *demonolatry*, *polytheistic beliefs*, which vary from province to province, and almost from village to village. Of the origin and subjective history of such beliefs very different accounts have been given (see art. ANIMISM, and NATURE, NATURE-GODS). In practice in India they present themselves under the form of an almost universal belief in spirits or demons, who pervade and manifest themselves in all the forces and phenomena of Nature. It is only the higher and educated classes, and not always or all of these, who have emancipated themselves from the thralldom of the fear of invisible beings, ghosts, and imps, the spirits of fever and pestilence and mischief in general, that haunt their imagination, and render their lives a perpetual attempt at the reconciliation of powers of the unseen. *Ancestor-worship* also has played its part, chiefly under the form of a propitiation of the spirits of the dead, to secure that they shall not return to injure or torment the living. Men and women, conspicuous for piety or iniquity, from whom favours may be expected or whose wrath is to be deprecated, draw to themselves the worship of multitudes, stirred by hope or fear. *Totemism*, again, has left broad traces on the superstitious beliefs and practices of the people, and figures in hardly diminished vigour in country districts. No river or hill, no tree or rock or spring, is without its inhabiting divinity. Every malady is attributed to an evil genius, every misfortune wrought by a devil. The house, the temple, the road, the field, each has its guardian spirit—with the result that the thirty-

¹ G. A. Grierson, in *J.R.A.S.*, 1908, p. 426; cf. his art. in *J.A.*, vol. xiii, 1909, pp. 98, 192, et.; and art. Tulsi Dās.

three lots of deities, with which India is popularly credited, might easily be multiplied many times, if the reckoning were to take account of every way-side image and to enumerate every village spirit.

The truth is, however, that among all these variant forms and practices of worship there is a very great likeness. It is more often a matter of name than of nature; and the underlying conceptions and principles may easily be reduced to two or three. The vast majority, moreover, of the singularly monotonous and recurrent impersonations to which the Hindu villager does reverence, from the extreme north to the farthest south of the peninsula, are not gods in any real sense of the term. At the best they are godlings, miniature deities with restricted interests and powers; at the worst, spiteful and malevolent demons, whose immediate sphere of influence is comparatively circumscribed, and who reappear under different names but with almost identical attributes and functions in every part of the country. The great gods of Hinduism are few, and are mostly the descendants or survivals of the divinities of Vedic times. The supernatural powers of lower rank are without number, an ever-changing crowd, who push and jostle one another in the struggle for pre-eminence, and pass out of sight and out of mind like any mere man. The stable element among them is usually of ancient aboriginal derivation—deities of the woods and streams and fields, that have maintained their place in the affections and reverence of the people in spite of the pressure of invading Hinduism. India is full of the spirit of religious toleration and compromise; and the assimilation of rites and divinities and worship is proceeding at the present day probably more rapidly than at any earlier time.

10. Amid so great and endless a variety it would seem almost hopeless to attempt to frame a definition of the Indian conception of God which should be at once simple and sufficiently comprehensive to include all that passes under the name of Hinduism, and which at the same time should adequately distinguish her creed in this respect from the other great religions of the world. And indeed such a broad and general definition, except in the vaguest and most catholic terms, is impracticable. For it must be remembered that throughout the course of her early and late history Hinduism, by virtue of her very elasticity and open-mindedness, has been profoundly affected by the thought and practice of Buddhism, Muhammadanism, and Christianity, to say nothing of the numerous sects to which she has given birth and which she has nurtured within her own bosom. These last have contributed no insignificant share to the sum-total of her beliefs. In no respect, in regard to her faith, is Hinduism a complete articulated whole, but rather a loosely congested mass of materials, held together by the fascination of a common name, and the imposed bondage of prevalent social customs. It would seem possible nevertheless, even if the nature and history of Hindu thought forbid rigorous definition, to indicate certain broad tendencies of mind which have almost crystallized into articles of universal faith; which have, on the whole, maintained their ground throughout the centuries; and which combine to make up no unfaithful picture of the essential creed of the ordinary Hindu, as it concerns his belief in the unseen power that he knows as *Isvara*, or God.

Whatever measure of internal unity—unity of thought and conception, of outlook on the facts of life and interpretation of its issues—the Indian peoples possess is due to their religion. Politically and socially they have never been one. Nor are they such religiously, save in the general tendencies above indicated. But, on the other hand, Hinduism

has been so broadly comprehensive, gathering into its net the most diverse races and absorbing the most unlike and even contradictory modes of thought and worship, constraining them all to pass under one name and to recognise the advantages of one social order, that many have despaired of a definition on religious lines, and have affirmed that the common bond consists merely of external conformity to certain social usages, combined with a practical recognition of the supremacy of the Brahman caste. This denial to Hinduism of the status of a religion ignores the intensely religious character and tendency of the Hindu mind. Whatever else it may imply or concede, the essential indispensable element, without which there is no religion, is *belief in a higher power*, whether one or many. It may be doubted whether there has ever been a people among whom this belief has been more deeply engrained, or, to put the same thing in other words, who are more religiously inclined than the inhabitants of India. The definition, therefore, of Hinduism cannot be entirely secular; it will be simple, its articles few and broad, its terms of subscription wide and generously interpreted; but it will be distinctly a religious definition, not one of mere outward form or social conformity. With such a definition we have no further concern here than as it contains and gives expression to the Indian conception of the Divine, of God. It must be borne in mind also that general statements can never be other than subject to numerous exceptions and deductions.

(1) Hindu thought shows a marked inclination towards theism. It would, perhaps, be more correct to describe its speculative theory as henotheism, the occasional or opportunist worship of one divinity, the supreme object for the time being of the worshipper's devotion. Atheism has never found a congenial home on Hindu soil. Alien, like agnosticism, to Hindu nature and sympathies, it seems to have been almost always an exotic which has required delicate nurturing to bring it to even a stunted maturity. The philosophic pantheism of Sankara, on the contrary, has proved itself to be in harmony with the tendencies and dispositions of the people; and his interpretation of the Vedānta on those lines, although not unchallenged, has become the accepted metaphysical belief of the great majority of those who call themselves Hindus. The philosophical theory, however, does not interfere with the practical religious faith. In actual life Brahma, the All-One, with the doctrines of non-dualism, reality and unreality, illusion and the like that are associated with the Vedāntic creed, remains theory and theory only. The living potent force to which the man turns in need is not his philosophy, but the personal God, who, by whatever name He is called, as Rāma, Viṣṇu, Kṛṣṇa, or many another, is conceived as the sovereign dispenser of favours and the ultimate source of power.

(2) Together with this henotheistic and, as it were, ultimate though unformulated creed, there exists an indescribable wealth of polytheistic beliefs, godlings, male and female, without number, imps and elves, ghosts and demons, the vast crowd of whom not seldom obscures, and for immediate purposes puts out of sight, the loftier and more stable power in the background. Among the more primitive races and tribes of India also, as so frequently is the case among peoples low in the scale of civilization, there are found traces of a belief in a higher beneficent power, supreme and unchanging, seldom addressed, who has become a shadowy recollection rather than an active force or an object of worship, discarded from memory and regard in favour of spirits, whose malicious

designs it is the pressing necessity of the moment to frustrate. Hindu belief, therefore, is not wrongly described as polytheism. A better term would be 'polydemonism.' But the description does not cover the whole ground. It leaves out of account a higher and more significant element, in which the lower and more primitive is embraced, and by which in the more thoughtful minds it is superseded.

(3) To the Indian, religion and philosophy are inseparable. His thinking is essentially spiritual and idealistic. The imperious demands of a hard daily life leave, indeed, to the ordinary Indian peasant, no opportunity for leisure or speculative thought; but amongst the higher classes the trend is distinctly in a spiritual direction. The ever recurrent puzzle of the relation of mind to matter is solved, as far as the Indian is concerned. Matter is the shadow; mind is the reality; and mind is God. His philosophy, therefore, is cast into the scale, not on the side of materialistic views or dogmas, but on that of an idealistic and reasoned theism.

(4) Hindu beliefs, finally, are coloured by the universal, or almost universal, acceptance of the doctrine of transmigration. Obscure and uncertain as the origin and early history of this doctrine in India may be, it has become a part of the most intimate faith of the people, and has profoundly influenced their outlook upon life. And, inasmuch as the gods themselves are, theoretically at least, involved in the *samsāra*, and subject to the perpetual flux and change of all things living, it has tended to make the outlines of these indistinct, their character and functions interchangeable. The dividing line between men and gods is not so firmly drawn as in the West, or the place and features of the latter so clearly conceived. Logically, a doctrine of transmigration assumes and necessitates a doctrine of the separateness of individual souls, and is as incompatible with the extreme idealistic theories of the Vedānta as with Christian theism. But the two conceptions lie side by side in the Indian mind without interfering with one another, or carrying on the mutually destructive war which to the European would appear inevitable. His thoughts concerning the Divine adapt themselves, or remain unadapted, to a view of life which opens out to him a vista of recurrent mundane existences practically without end.

CF. ALSO HINDUISM, VEDĀNTA, VEDIC RELIGION.

LITERATURE.—For the literature of the several periods of religious development, the *sūtras*, etc., consult the separate articles. All the works dealing with the religion and philosophy of India in general discuss with more or less fulness the Hindu conception of God, cf. esp. A. Barth, *Religions of India*, London, 1891, *passim*; E. W. Hopkins, *Religions of India*, London, 1894, ch. vi; H. Müller-Willems, *Brahmanism and Hinduism*, London, 1891; Census of India, General Report, Calcutta, 1908, ch. viii, 'Religion,' with a valuable appendix on the 'Religious Ideas of some Antiquarian Tribes in Bengal'; P. Donson, *Philosophy of the Upanishads*, pt. i, 'Theology,' Eng. tr., 1904. A. B. GEDEN.

GOD (Iranian).—2. The idea of God during the Early Iranian period.—For ascertaining the conception of God entertained by the Iranians during the earlier period of their history we possess neither direct records¹ of their religious practices nor any form of sacred text crystallizing their religious experiences at that stage in the development of their God-consciousness. Nevertheless, the indirect

evidence bearing upon even this part of the subject is neither meagre nor wanting in significance, so that comparative science has succeeded in reconstructing what can be confidently regarded as the main content of the early Iranian pantheon.

In his well-known account of the divinities worshipped by the Persians in the middle of the 5th cent. B.C., Herodotus (l. 131) claims for the first part of his description an application to the conditions of a much higher antiquity:

'They are in the habit of ascribing the highest mountains and offering sacrifices to Zoro—they give the name Zoro to the whole celestial circle. Moreover, they sacrifice to the sun, moon, earth, fire, water, and winds. To these alone,' he adds, 'they were accustomed originally (*ἀρχαίως*) to sacrifice.'

According to this account, therefore, the early Persian idea of God was that of worshippers of the great forces of Nature—reserving for special veneration the sky with its associated phenomena. Although this description lacks completeness in one vital respect, as will appear later, yet, so far as it goes, it accords perfectly, as we shall now proceed to show, with what our other available evidence leads us to believe of the Iranians generally at that period.

Schrader has already shown very fully (see art. *ARYAN RELIGION*, vol. ii, p. 31) that the worship of the elements enumerated by Herodotus always formed an essential and characteristic part of the religion of all the Indo-European peoples. That religious regard for the same Nature-powers should survive amongst the early Iranians is, therefore, in the absence of any known great disturbing influence, what was naturally to be expected.

The Iranians, however, shared with one Indo-European people a common religion and culture for a much longer time than they did with any of the others; and this common life continued until the commencement of the period of which we are treating. That people was the Aryan sept which ultimately settled on the banks of the Indus, and are known to us as Indians. Of necessity, therefore, the earliest religious ideas and customs of those tribes have the highest significance for the study of the early Iranian ideas of God. It must not be forgotten that there were, as later developments strikingly prove, very marked differences between the two peoples in concept and custom, dating in some cases probably from Aryan, i.e. Indo-Iranian, times. Hence the necessity for caution in attributing Vedic ideas to the early Iranians. But, when we find the same religious beliefs and usages reflected in the Vedas as are attributed by other independent authorities, such as Herodotus, to the contemporary Iranians, we may feel fairly certain that we are dealing with phenomena that were common to both peoples.

Now, the Vedas reveal the same general stage in the development of the consciousness of God among the dwellers beyond the Indus, especially during early Vedic times, as we have postulated for the Iranians during, partly, the same period. The mighty Nature-powers that inspired the awe and reverence of the Vedic poets also compelled the sacrifices of the devoted Iranians. Comparative philology has shown that the two peoples from the period of unity employed the same two general terms for a god, thus indicating that the character of the objects of their worship was the same. One of these was *asura* (Skr. *asura*, Av. *asura*); the other was *dāiva* (Skr. *dāva*, Av. *daēva*), from Indo-European *deiv-*, pl. *deivōs* (connected with *deus*, 'sky'), 'heavenly ones,' meaning the sky and the great physical phenomena connected with it.

The premier position amongst early Persian *Asura* (l. 31)—on the authority of Zoroaster, Ahrimān, and Sraosha—says that previous to Zoroaster's reform the Persian religion closely resembled that of the Greeks (see Jackson, *SPR* 2, (1895-1896) 214).

¹ In the year 1897, H. Winckler announced in the *Zeitschr. f. Assyriologie* (no. 38) that he had found a number of names of Aryan gods in a Hittite inscription, of about 1600 B.C., at Boghaz-keui. Should the reading be finally confirmed, and especially their origin proved to be Iranian—a view defended by Ussing and other scholars—the above statement would, to that extent, require modification. On the significance of the discovery, see an article by E. Meyer in *Zeitschr. f. Assyriologie*, *Abd. der Wissenschaften*, 1900, p. 242; also several articles in the *JEA* 5 for 1900-10.

divinities assigned by Herodotus to the sky is in perfect consonance with the supremacy which the sky-god enjoyed amongst the Indians, whether in the oldest times under the name *Dyāus* or later under that of *Varuṇa*.

What was the name and what the exact connotation of the term the Persians employed in addressing themselves to the sky-god are most questions. Our indebtedness and gratitude to the Greek historians would have been still deeper had he on this occasion departed from his countrymen's usual custom and abstained from converting the Persian term into its Greek equivalent. That Herodotus had in mind the name *Ahura Mazda* is improbable,¹ for we have no evidence that he was acquainted with Mazdeism, as such, in any form, much less in its Zarathushtrian development. Spiegel suggests *Urothra* (Mod. Pers. *Uthra*) as the probable term by which the Persians invoked the vault of heaven. It seems not improbable that the old term *dyāus* had been handed down as part of the tradition upon which Herodotus relied for his account of the earlier period.²

If the evidence of the Iranian sun- and moon-worship is somewhat less abundant, it is scarcely any the less clear or certain. In Vedic times the Indians worshipped the sun under the name *Sūrya* and the moon as *Mā*. The former is cognate

with the Avesta *Ahur* (Mod. Pers. *خورشید*, *Khurshīd*, 'sun'); the latter with Avestan *Māh* (Mod. Pers. *ماه*, 'moon,' and 'month'). The re-appearance of the sun and moon in the post-Zarathushtrian pantheon is highly suggestive of their earlier worship.

In this connexion mention should be made of another very important divinity, who, if not himself a sun-god, was still intimately connected with the chief luminary and gave modern Persian its usual term (☼) for 'sun.' We mean, of course, *Mithra*, Vedic *Mitra*. Perhaps the best opinion is that which regards him as the god of the luminous ether (cf. C. de Harlez, *Avesta*, Paris, 1881, p. 53; also Moulton, *op. cit.* 36 f.). The prominence of this deity in Vedic religion, and his almost unique position among post-Zarathushtrian *Yasnas*, leave no room to doubt his existence in the early Iranian pantheon.

Although the Earth did not properly come within the category of the 'Heavenly Ones,' yet the widespread mythological conception of the Earth as one of the divine pair, the wife of the sky, is sufficient ground for accepting her as an Indo-European divinity. In the Vedas her name, *Prithivī*, is, with four exceptions, invariably coupled as a dyad with that of the sky, *Dyāus*, in the form *Dyādyathī*.

Moreover, we have the testimony of Herodotus (iv. 50) that at least one branch of the Iranian peoples—the Scythians—worshipped the Earth as the wife of *Zōn*.

There can scarcely be any doubt that the Earth or Earth-Spirit, under the name *Arəmaiti*, was worshipped by the main body of the Iranians during the early period (see Spiegel, *Die arische Periode*, pp. 198–200; Moulton, *op. cit.* 36).

The most characteristically Iranian divinities, perhaps, are those that come next for mention, namely, fire and water. When Strabo says (xv. iii. 14) that it was to fire and water especially that the Persians offered sacrifices, he was indicating no new emphasis in Persian worship. That they were part of the Indo-European heritage is well known. And the new physical conditions in

which the Iranians found themselves in consequence of their eastward migration served only to enhance the use and value of the two elements, and consequently to intensify their reverence for them or for the spirits which were associated with them. In India the chief fire-god was *Agni* (Lat. *ignis*); but in Iran he was venerated under another old name, *Atar*.

Another circumstance which substantially contributed to the prestige and pre-eminence of these two elements was their association with the thunderstorm—a phenomenon that specially excited the awe and reverence of primitive peoples, and for the Indo-European peoples it was not only a *deus*, but it proved to be a *fons malorum deorum*. We find among both branches of the Indo-Iranian people one very important and exceptionally interesting divinity, whose origin is to be traced to that great physical phenomenon, namely, *Apām Napāt*, or 'offspring of waters' (i.e. 'Sro that resides in water' (Tiele)). In the Vedas he is a god of fire—the lightning flash; and even in the Avesta he is once associated with another god of fire, *Nairiōangha*. But usually in the Avesta he is a god of waters. In the later books he is frequently invoked. In *Yast* 19th he is even said to have made and shaped man. As Spiegel observes (*Die arische Periode*, p. 215), we have in *Apām Napāt* a very ancient and highly venerated divinity.

The presence of another divinity in Vedas and Avesta and the functions assigned to him point clearly to his existence in early Iranian times. *Vṛtrahan* in India is Indra, the slayer of the imaginary demon of drought; whereas his counterpart *Vərəthraogha* was regarded by the Iranians as the god of victory in general.

The wind was worshipped by the early Iranians under the name *Vayu* (Vedic *Vāyu*). It was specially revered for the supposed help rendered to bring to the earth the fertilizing rain from the clouds. Nor should *Haoma* (Vedic *Soma*) be omitted from the list of early Iranian divinities. It may not, as Tiele observes (*Rel. of the Iranian Peoples*, Eng. tr., Bombay, 1912, p. 54), have been materially the identical *Haoma* plant of the Later Avesta, but that an immortalizing drink was doled at that epoch is fairly certain. Cf. art. *HAOMA*.

The prominence of the custom of ancestor-worship amongst Indo-European peoples generally, taken in conjunction with the cult of the *Pitras* in the Vedas, and particularly the lavish adoration of the *fromas* (q.v.) in Later Avestan ritual, points inevitably to the conclusion that only during the strictly Zarathushtrian régime had this ancient custom been discontinued among the Iranians.

A more difficult question confronts us when we inquire how the early Iranians regarded their gods; what precise character they attributed to them; to what point in conception and feeling they had attained at this time. Whatever vestiges of Animism there may still have been in their religious notions, we are certainly justified in asserting that in pre-Zarathushtrian days in Iran, just as in India, some of the gods were credited with a tolerably high moral character (cf. *Indus Varuṇa*). Moreover, the two classes of gods, *ahuras* and *daevas*, were even from Aryan times viewed in some respects as rivals in their claims upon the adoration of those tribes. In India, as is well known, even in early Vedic times, the *daevas* are in the ascendancy, although it is not until the later Atharva Veda that we find the *ahuras* regarded as demons.

In Iran the opposite course prevailed. The *ahuras*, who from Indo-Iranian times were the more feared and awe-inspiring, seem to have gradually gained in prestige, and, apparently at a very early epoch, one of them had become the *Ahura*

¹ Herodotus maintained that *Ahura Mazda* was not specially associated with the sky of Iran, but the Persian form of the term for 'sky,' derived from the Aryan *dyāus* (cf. Spiegel, *Iran. Alterthümer*, Leipzig, 1878, II. 120).

² Spiegel observes that *Ahura Mazda* was not specially associated with the sky of Iran, and in later epochs he was identified rather with the planet Jupiter (op. cit. II. 121, 122; also *Die arische Periode*, Leipzig, 1877, pp. 123–124).

³ See, however, Moulton, *Early Religious Poetry of Persia*, Cambridge, 1911, p. 20 (a small volume, but bristling with penetrating thoughts and pungent suggestions on the whole subject of this article).

per excellence. And it is in relation to this Ahura that the religious consciousness of the Iranians has since been primarily developed and exercised. Moreover, evidence seems to be accumulating¹ to show that even the epithet *Mazda*, 'wise,' or 'wisdom,' was, so early as the middle of the second millennium B.C., applied as the special cult-epithet of the great *Ahura*.

In consonance with this opinion is the fact that in the *Gāthās* Zarathushtra professed to reveal no new god to his countrymen, but only to bring a new revelation from one who was supposed to have been already well known. At this period, of course, even if supreme, he finds himself a member of a very extensive and miscellaneous pantheon.

2. The Gathic or Zarathushtrian conception of God.—It is in the five *Gāthās* of Zarathushtra and his immediate followers that anshrine the oldest as well as the highest and purest form of the idea of God to which the Mazdaian religion attained. Ahura Mazda, or Mazda Ahura, which is the more usual order in the *Gāthās*,² is already not only supreme, but sole God. The whole Nature-pantheon has fallen from heaven to hell.

And, if Mazda himself was at any period a Nature-god,³ the last vestiges of his ancient associations have been completely obliterated to the minds of the inspired writers of these spiritual hymns. Not that Mazda any more than Jahweh, the God of Israel, was praised in linguistic forms free from anthropomorphism or material imagery. The God of the *Gāthās* also puts on the solid heavens as a garment (Ys. 30²) and covers himself with flames of fire. But still in substance he is *mainyu*, 'spirit,' as his faithful ones are never weary of repeating.

His most characteristic attribute is *spenta*, 'beneficent,' or 'holy,' in the etymological and wider sense of that English word;⁴ and this Beneficent Spirit is, in the *Gāthās*, the great and sole creator. He made not only the light, but darkness as well; not merely the dawn and noonday, but midnight just as truly (Ys. 44¹). He is omniscient and omnipresent, the all-seeing Lord who cannot be deceived (40¹ 46¹ 29¹), the immutable, who remains evermore the same (31¹). Nevertheless, in one important respect he is limited: he is not omnipotent, or at least for the present that attribute is only potential, for there is another self-existent spirit, coeval with Ahura Mazda, fundamentally opposed to him in his very nature, and having for a period the power of thwarting the purposes of the Beneficent God and working evil and suffering among his saints.

From the principal passages in the *Gāthās* in which this doctrine is expounded, it would appear that Zarathushtra did not conceive of the Evil Spirit as gifted with positive creative power, such as is attributed to him in the post-Zarathushtrian portions of the Avesta. The truth that seems to emerge from the *locus classicus* of this doctrine in the *Gāthās* (Ys. 30²⁻⁴) is the self-determination of the rival Spirit for evil in harmony with his inherent nature, and his choice of wrong and death as the principle of his actions and influence. So far as the doctrine is developed in these hymns, *Angra Mainyu* or *Aka Mana* is conceived of as exercising his destructive and malicious power in

bringing about in the creation of Mazda an issue and culmination the very opposite of that destined for it by the Beneficent Spirit. In perfect keeping with this consciousness of a mighty, malicious, unjust, and death-causing Spirit ever bent upon defeating the Divine purposes, is the emphasis placed upon certain attributes and blessings of Mazda which are the absorbing theme of the *Gāthās*. That idea of *Angra Mainyu* is the dark background against which this conception of Ahura Mazda with his six (or seven, if *Sraosha* is included) ever-recurring attributes and blessings must be placed.

The minds of the Gathic poets are not so much concerned with the essence of Mazda's nature as with the endeavour to realize his true relationship to his saints and to the world as a whole. It is not theology proper that we find in the *Gāthās*, but the soteriological aspect of the doctrine of God. It is not his transcendence and absoluteness, but his immanence and relativity, which are here emphasized. These moral attributes, through which the ideal relationship is to be realized together with the blessings resulting therefrom, are conceived of in such a vivid manner that they are constantly personified and addressed as if they were distinct from their source and ground in Ahura Mazda. Still the words are so often used as common abstract nouns, that in these hymns there need be no mistaking them for separate personalities in the essence of Mazda. Perhaps Ps. 43¹ in the OT serves as a good illustration of this sustained personification of abstract ideas. The precise attributes emphasized, as well as their number, may have been determined in some degree by considerations dictated by the earlier history of Iranian religion.⁵ Still the nature of the case would have been sufficient of itself to account for the facts as we find them, and perhaps this has not always been duly considered by the exponents of this part of the Gathic doctrine. The two most frequently mentioned of these abstract qualities or attributes are *Vohu Mana*, 'the good or best mind or spirit,' and *Asha* or *Asha Vahishta*, 'rightness,' 'perfect order.' The former connotes the idea of good will or benevolence, that attribute of Mazda which desires and seeks his people's good in opposition to that spirit which meditates harm to them; and in Ys. 46¹ these two are thus placed in opposition. The other concept is that expressed by *Asha*, which has as its root-idea that of fitness, appropriateness; hence order, rightness, and other shades of meaning. It means that ideal relationship in which all would receive their due and highest good in conformity with their nature and destiny. The next is *Kshathra* or *Kshathra Vairyas*, 'power,' 'dominion,' 'kingdom,' or 'wished-for-kingdom,' and indicates that condition or state of things in which the power of Mazda completely avails, and in which his will is done, and where the two former concepts are fully realized. The fourth abstract attribute is *Armaiti*, 'piety' or 'devotion,' which Mazda produces in the soul of his saints, and in the subjective attitude corresponding to Mazda's benevolence and justice. The last two of the six conceptions are always mentioned together, namely, *Haumaiti*, 'health,' 'well'; and *Amervaidi*, or 'immortality.' They are equivalent to complete present and future salvation. This is the certain, if as yet distant, Divine event towards which the whole purpose and power of the Beneficent Spirit are ever directed.

Briefly this is the idea of God presented in the *Gāthās*, and the spirituality of their conception of

¹ See Hamilton, op. cit. pp. 27, 28, where Hammer's discovery is referred to and apparently accepted as genuine. See also, in this connection, Mills, *Essays*, p. 111 (=SBA, vol. xxi, 1897), introd. p. xxix, and note 1.

² The Gathic writers always write and decline the words separately, and were evidently conscious of the meaning of each part. *Ahura* meaning 'Lord,' and *Mazda*, 'wise' or 'wisdom.'

³ This strongly combats the idea. But many Vedic scholars and some Iranians regard Mazda as the counterpart of the Vedic Varuna.

⁴ See Jackson in *Muslim* for Jan. 1899 (an excellent manuscript on Ahura Mazda).

⁵ The concepts underlying the words *asha* and *armaiti* go back even to Indo-Iranian times, Vedic *ṛta* being the equivalent of *asha*, and connoting the idea of moral as well as physical order.

God is reflected in the inwardness of their ethic; for Manda demands truth and purity, not in word and deed alone, but also in mind and heart.

The apparent materialism of coupling *Ātar*, 'fire,' with the Spirit of Manda does not mar this spiritual presentation. That it has a merely symbolical significance is certain. It typifies the power and purity of the exalted Manda. In a beautiful psalm the Hebrew poet also couples with Jahweh's name the 'ark of his strength' (Ps 132²). Nor is the name of the holy fire more incongruous with the Spirit of Ahura Manda than is the mention of water with the regenerating Spirit in the NT (Jn 3⁵).

3. The Mandaism of the Later Avesta.—Ahura Manda is still supreme, but he is no more the sole object of worship in the Later Avesta than he was in pre-Zarathushtrian days. By this time the six abstract ideas or attributes which were frequently personified, but never really regarded as distinct persons in the *Gāthās*, had become separate personalities, and were called *Aməša Spəntas*, or 'Immortal Holy Ones,' and accorded Divine worship.

It must have been in this later form that the Greeks learnt of the doctrine, for Plutarch refers to them as six gods (cf. *de Is. et Osir.* 47^b); and Strabo speaks of a temple of Omanus (Vohu Mana), and a wooden statue of the god carried in procession (XV. iii. 15). Moreover, a distinct domain in creation is assigned to each, over which they preside (see *AMƏSHA SPƏNTAS*). The sacred fire, too, of whose symbolical and instrumental character the *Gāthās* are never unconscious, is now the son of Ahura Manda, and shares his praise and adoration (cf. above, p. 30²).

But the outstanding feature of the contrast between the Gathic and the Later Avestan divine circle is the re-enthronement of practically the whole of the pre-Zarathushtrian Nature-gods as *Yasnas*,¹ or beings meet to be worshipped side by side with Ahura Manda and his archangels. The number of the *Yasnas* is really unlimited. At this time practically the whole of the good creation was stamped as Manda-made, and worshipped. Still Plutarch (*loc. cit.*) was right when he mentioned twenty-four as the number of important *Yasnas*. The foremost amongst them is undoubtedly the god *Mithra*. His name is joined with that of Manda, just as it was with that of Varuna in the Vedas. In the Zarathushtrian system, Mithra naturally found no place. It would have been inconsistent with its strong monotheistic tendency to admit so serious a rival of Manda. His character in the later doctrine is that of protector and guardian of truth and veracity, the avenger of violated faith and compact (see *MITHRATUM*). Closely associated with the god Mithra at this period, we find a goddess who appears for the first time in the Iranian pantheon, namely, *Anāhita*, or *Ardevi Srao Anāhita*, the high, powerful, undefiled one. She is the genius of fertilizing waters, and Herodotus is right when he assigns to her a Semitic origin (see *ANĀHITA*). Reference has already been made to the worship of the *Frənošis*, or guardian spirits of good men and women. Moulton attributes the extension of this belief and custom in the Later Avesta to the influence of the Magian element in the Mandaism of the time (see *Thinker*, vol. ii. (1902) 493). This, perhaps, is the only contribution of Magism that concerns our subject.

4. The Mandaism of the Achaemenian Inscriptions.—Whatever may be the fact as to the historical relationship of the Mandaism of the Inscriptions, its general divergences from the Religion of the Avesta are sufficiently marked to justify our treating their teaching on the idea of

¹ Cf. and. Persian term *Isad* or *Yasna*, meaning 'God.'

God in a separate section of the present article (cf. Moulton, *Thinker*, *loc. cit.*). Whether the religion of the Inscriptions is the direct and independent descendant of pre-Zarathushtrian Mandaism, or a modified form either of Gathic or Later Avestan Zarathushtrianism, there can be no doubt that the Auramandā² praised and confessed by the Achaemenian kings in these Inscriptions is identical with the Manda Ahura or Ahura Manda of the *Gāthās* and the later books of the Avesta. But the position assigned to him is distinct in each of the three names. In the *Gāthās*, Manda Ahura alone is recognized as God. He only is invoked for aid and deliverance, either directly or indirectly, his attributes and blessings being poetically personified and besought to come to his people's succour. In the Younger Avesta, although a great host of divinities are prayed to and acknowledged as worthy of worship, still, formally at least, they are accorded that dignity as the creation of Ahura Manda. Even Mithra, 'the lord of wide pastures,' was created by the great Ahura (Yt 10¹), and Anāhita also 'proceeded from the Maker Manda' (5¹).

In the Inscriptions, on the other hand, there are associated with Auramandā, in the prayers of the kings, 'clan-gods' (perhaps the words should be rendered 'all the gods'), and 'the other gods that are' (cf. Xenophon's *reis Olous deois*). And, even when Auramandā is said to be 'the greatest of the gods' (*mathistiān bagdān*³), there is a tacit admission that he is only supreme, but not sole God. There is no suggestion that they are his creatures. Mithra is co-ordinated with Auramandā in the inscription of Ochus: 'May Auramandā and the god Mithra protect me and my kingdom and the work I have accomplished.' His predecessor, Artaxerxes Maemon, not only addressed his prayers to Mithra and Anāhita with Auramandā, but, according to Berceus (frag. 16, apud Clem. Alex.), he erected statues to Anāhita at Persepolis (see his inscription), Ecbatana, Bactria, Susa, and Babylon. Nevertheless, the whole of the Inscriptions of Darius and Xerxes breathe a spirit more akin to that of monotheism than that of most parts of the Younger Avesta. The recognition of the other gods in these Inscriptions impresses us as being, very largely, formal; for the number of times they are mentioned in conjunction with Auramandā is very small, compared with the instances in which he is prayed to alone. The character of Auramandā as creator is constantly emphasized in all except the Inscriptions of Mnemon.

A great god (*bagd* *caurō*) is Auramandā, who created this earth, who created yonder heaven, who created man, who created peace or prosperity or delight (*ahyōfi*) for man, who made Darius (Xerxes, Artaxerxes) king. Not even in the *Gāthās* is the creator conceived of as being more distinct from his creation than these words show him to be. As for his government and providence, he is more unfettered according to the Inscriptions. He has created peace (*ahyōfi*) for man, a state of happiness and prosperity of which even the *Gāthās* have no more than a promise.

5. The history of the later development of the idea of God amongst the Iranians is practically identical with that of certain sects in Sasanian times, whose views have also largely determined those of modern Parsism on this subject. The treatment of this period will, therefore, come more properly under SECTS (Parsian).

LETTER-VEVA.—In addition to works already referred to, see, on the earlier period, O. Schröder, *Prolegomena Antiquitatis of the Aryan People* (tr. Jevons, London, 1880); M. Rapp, 'Die

² Always, with one exception, written as one word.

³ *Bagd* is the general term for a god in the Inscriptions. It is found a few times in the Avesta in the form *bagha*, and applied to Ahura Manda in Yt 10¹ 70¹. In the Vedas it is the name of a particular god—Bhaga. Its opposite *bagh* (*bag*) is used in Shv. as a general term for 'god' (see below, p. 212²).

E. EDWARDS.

GOD (Japanese).—The Japanese word for 'god' is *kami*. Its derivation is uncertain. Some see in it an abbreviation of *kamigami*, meaning 'to look at,' 'to judge,' 'to decide'; others, a form of *kimi*, or 'lord'; while still others propose *kabi*, 'the mysterious,' as its origin. A comparatively modern theory traces it to an Ainu word, *kamui*, meaning 'he who or that which covers or overshadows,' and so representing divinity. The generally accepted derivation, however, is that to be traced in modified meanings of the same word *kami*, signifying that which is 'above' or 'superior,' in contrast to *shimo*, signifying that which is 'below' or 'inferior.' The upper part of the body is *kami*, while the lower part is *shimo*. A man of superior rank is *kami*, while an inferior is *shimo*. Heaven is *kami*, earth is *shimo*. So general is the term that it lends itself readily as an appellation of that which is looked upon with fear or respect, as above man in power or superior in any attribute. Motseiri, an eminent Shinto scholar (1730-1801), says:

'The term *kami* is applied in the first place to the various deities of Heaven and Earth who are mentioned in the ancient records, as well as to their spirits which reside in the shrines where they are worshipped. Moreover, not only human beings, but birds and beasts, plants and trees, sea and mountains, and all other things whatsoever which deserve to be dreaded and revered for the extraordinary and pre-eminent powers which they possess, are called *kami*. They need not be eminent for surpassing nobleness, goodness, or serviceableness alone. Malignant and uncanny beings are also called *kami*, if only they are objects of general dread' (*Kojiki*, ed. 1891, III, 181).

The primitive faith of the Japanese was Naturism, in which various natural phenomena, awakening awe and reverence, such as the sun and moon, fire and water, wind and storm, were worshipped, and in which various Divine names were given to the powers controlling the more noticeable manifestations of Nature. To this limited body of divinity others were added; and not a few from foreign countries were recognized, until the number was generously stated as 'eight myriads,' and the country was called 'the Land of the Gods.' According to an official record, compiled in A.D. 801, the number of shrines at that time was 2861, while the number of deities worshipped therein was given as 2132. This multiplication of deities has continued until the present time; and the latest official statistics give the number of Shinto shrines of all grades as 190,436. These shrines are sacred to: (1) mythical gods, (2) patriots and heroes, (3) phenomena and objects of Nature, and (4) various animals and objects. Among the shrines recognized as governmental and national, those under the special supervision of the provincial or national government are classified as follows: sacred to mythical gods, 100; to emperors and members of the Royal Family, 25; to patriots and heroes, 80; to sacred swords and dragons, etc., 8. The deities worshipped by the Japanese might be roughly grouped as: (1) stellar bodies; (2) the elements of earth, air, fire, and water; (3) natural phenomena; (4) prominent natural objects, as mountains, rocks,

trees, and caverns; (5) men; (6) animals; and (7) manufactured objects.

In short, anything conspicuous or exalted may have become an object of worship. Not infrequently the people worship *kami* of which they know absolutely nothing as to nature, origin, or being. 'What god we know not, yet a god there dwells.'

It does not follow that these manifold gods have been regarded as of equal importance, nor have they all been revered by the mass of the people. According to the *Kojiki*, which for the Japanese embodies the sacred story of beginnings and of the founding of their nation, the gods of heaven are the primal, chief divinities; and it is said that Jimmu, the first Emperor, worshipped the deities of Heaven and Earth. In the opening chapters of the *Kojiki* marked distinction is given to three deities: *Ame-no-minaka-nakahino-mikoto* (the Deity-master-of-the-august-centre-heaven), *Takami-musubi-no-kami* (the high-august-producing-wondrous-deity), and *Kami-musubi-no-kami* (the Divine-producing-wondrous-deity), who are said to have been 'born in the plain of High Heaven when the heaven and the earth began.' To them alone certain modern Shinto sects pay reverence.

Atsutane Hara, a modern Shinto scholar (1778-1843), says:

'The object of fear and worship in foreign countries is known by several names, the Supreme Being, Sovereign Ruler, Imperial Heaven, or Heaven. He is none other than our Heavenly *Kami* who dwells in Heaven and governs all the affairs of the world.'

This clearly shows the tendency of Shinto scholars to a monotheistic belief.

G. Kato, in a monograph in *TASS* for 1908, on 'the Chief god of Shinto,' concludes that the deity 'shows in its origin a clear trace of primitive monotheism, when viewed in the light of the modern study of the sciences of religion.'

It is true that a strict monotheism has never found congenial soil in Japan, yet there is not infrequently to be noticed the idea of a unitary force behind the manifold exhibitions of what are called *kami*. Moreover, the introduction of Chinese thought modified earlier Japanese conceptions; and *Shang-ti*, the Supreme Being, or *T'ien*, the Heaven, of the Chinese, became identified with *Kami*, and was worshipped, often supremely, though not exclusively by many. Shuntai Dami (1681-1747), a Chinese scholar, said:

'All the fortunes of man, whether prosperity or calamity, happiness or sorrow, are in accordance with the will of Heaven. Among all so-called *kami* there is none so lofty and mighty as Heaven.'

Belief in Heaven as the Supreme Force, the Providence over all, and the criterion of all, to whom is due allegiance to the uttermost, may be said to be universal among the Japanese, while individuals and classes reverence also in particular certain other subordinate *kami*. Among the most popular individual *kami* may be mentioned the Sun, associated with *Amaterasu Omikami*, as a sea goddess, with whom is identified the prehistoric ancestress of the ruling house of Japan; *Hachiman*, an old-time hero; *Ten-jin*, a great scholar, now revered as the god of learning; *Inari*, the god of rice; *Kompira*, revered by sailors, as in *Yebisu* by the seekers for good luck. In recent years Emperor-worship has been advocated by not a few as a unifying substitute for vaguer religious faith.

The rendering of the English word 'God' by *Jap. Kami* is not entirely satisfactory; but, in spite of the polytheistic ideas long associated with the term, it has been in a remarkable degree filled with the content of the English word as limited in Western religious and philosophic thought. The confusion becomes daily less; and the idea of a unitary Supreme Being is now one of the first conveyed to the educated Japanese mind by the

word *Kami*. The definition of the word in modern Japanese dictionaries is significant: (1) a spirit which is thought to exist invisibly, with unlimited supernatural power of good or ill, to punish crime and reward virtue in human beings; an object of religious trust or fear; (2) the honorific name given to rulers previous to the reign of Jimmu; (3) the name applied to spirits enshrined in Shinto shrines; (4) the Christian God, the almighty and omnipotent creator and ruler; the Heavenly Ruler; (5) the spirits of the dead in Shinto funeral ceremonies; (6) that which transcends human understanding (the *Jirin* by S. Kanamawa, 1907). Or, again: (1) God; a deity; supernatural being; (2) the consecrated spirit of the dead, especially of an emperor, sage, or hero; (3) that which cannot be conceived by the human mind; a miracle (*Jap.-Eng. Dict.*, by F. Brinkley and others, 1896).

TASUKU HARADA.

GOD (Jewish).—Whatever had still lingered in Israel of the ancient conception of Jahweh as a territorial God (which rendered a lapse into idolatry easy whenever interest urged a prior or collateral claim of some other local god) was largely eradicated during the Exile; and after Nehemiah's time the Jews were uncompromising monotheists. This faith Judaism preserved and confessed before the world by liturgical expression, by legal observance, and by dissociation from every appearance of idolatry. The secret of its power to hold its own against an opposing world lay in the conviction that the Jewish race was the favourite of Heaven. Indeed, Israel's election is an integral part of the Jewish conception of God. The Jews are monotheist because Jahweh is monolatrous. They have not chosen Him, but He chose them first.

'One God, one Israel, one Temple,' says Jonathan (n. Apoc. cap. ii. 25), and in the *Amida* for Sabbath vespers every Jew repeats: 'Thou art one, Thy Name is one, who is one (unique) in the world as Thy people Israel' (n. Suk. 65b *MS.* *MS.*, and 2 *MS.* 'Thy only one people').

2. **Anthropomorphism.**—The anthropomorphic expressions of the OT are linguistic relics of an age when the Hebrews attributed to Jahweh a human form and human passions (*HDB* v. 627). The Prophets retained these expressions as conscious anthropomorphisms and convenient terms to describe the personality and activity of the Deity. We doubt, however, whether the popular conception of Jahweh was other than of a gigantic warrior in human shape. The Exile brought the Jews into contact with the gross idolatry of the Babylonians; and, viewing their captivity as a punishment for disloyalty to Jahweh, they became the more averse to the gods and religion of their conquerors. The Exile became to the Jews a means of spiritual development. Jahweh ceased to be regarded as a territorial God, though the tribal conception remained. He was the God of the universe, but father of Israel—the God of Nature and revelation. Efforts began to be made to explain and remove anthropomorphisms.

The first step we read of was taken by the *Sopherim*—the early scribes and immediate successors of Ezra (L. H. Weiss, *Ezra* *Gen. d. jüd. Tradition*, Vienna, 1871–81, vii. xxiii.). In the Apocrypha, anthropomorphisms are used rarely and with caution. An important step was taken in the versions of the Bible. The artful manner in which the LXX softens down many anthropomorphic expressions is well known. And yet the version was viewed with distrust by the Palestinian Jews, for fear it might convey to the heathen world wrong impressions of the nature of the God of Israel. Versions in the Aramaic vernacular (see art. 'Targum,' in *HDB*) circulated orally in Pales-

tine from the days of Ezra (*MS.* 8). Children received their first instruction in the Law in Aramaic. At the public reading of the Law a *metathargum* (dragoman or interpreter) stood by the side of the reader, and rendered into Aramaic each verse as it was read in Hebrew. The frequent repetition must have produced in a very short time a stereotyped version, and we may safely assume that it is embodied in our editions of the Targum, and that they represent the oldest form of Judaism. In these all anthropomorphisms, with few exceptions, are paraphrased and spiritualized. Thus, e.g., by the eyes and ears of God are understood His omniscience, by the hand His omnipotence, by the mouth of God His immediate communication with man, or inspiration (e.g. Nu 12⁹). The finger of God in Ex 8¹⁹ is rendered 'this is a plague from before Jahweh.' Peculiar to the Targums is the use of the *Memra* (g.v.), the executive word of God. The existence of this intermediate being was deduced from passages like Ps 32⁶, Is 66¹⁴. Although not regarded as an emanation of the Deity, like Philo's Logos, the *Memra* was conceived as apart from God; and to it, and not to God, all anthropomorphisms and anthropopathisms were ascribed.

Turning to the Rabbinic Literature, we find that anthropomorphisms were removed in several ways. (a) The particle *wa-*, 'as it were,' or *u-*, 'as though it were possible,' was placed before anthropomorphic assertions. (b) Such appearances and actions as seemed inconsistent with an absolute Deity were attributed to intermediate beings and to angels. (c) Convenient explanations got rid of many anthropomorphisms. Thus 'a jealous God' (Ex 34¹⁴) is explained in the *Mekilta* as 'the God who rules over jealousy.' The same Midrash comments on Ex 12¹⁰:

'Is not everything revealed before Him? Why then does He say, "When I shall see the blood"? And "As a reward for executing My command I will reveal myself and protect them."'

In the same section it is asserted that anthropomorphisms are used *qiyas* *u-*, 'to sink it into the ear,' i.e. to assist a person's perception. R. Judan said: 'Bold, indeed, were the Prophets to liken the Creator to the creature' (*Gen. R.* 27¹; see also *Pequta*, 30b). Another Rabbi went so far as to deny that the Shekhinah ever descended on earth, or that Moses or Elijah ever went up to heaven (*Suk. 5*; *Mekilta* *Jethro*, 4).

When we turn to the Rabbinic writings from about the 3rd cent. A.D. onwards, however, we meet with gross anthropomorphisms. There is no special event in Jewish history to which we should ascribe the reaction. No doubt Essenism, the fertile imagination of Alexandrianism, the cessation of the sacrificial cult, the rise and progress of Christianity, with its offshoots of speculative Gnosticism, directly and indirectly influenced the Rabbis in favour of mysticism. But the reaction was rather the gradual outcome of legalism, according to which Israel's sole mission in the world was to keep the Divine Law. Israel's election was never lost sight of since the Exile, and ultimately developed a Judaized conception of God. The Halakha laid the foundation, and the superstructure was raised by the Haggada. The latter, originally with a few traditions in stock more or less based on facts or seriously deduced from them, might have been a good handmaid of homiletics, but in time it mounted the heights of imagination and spoke of everything. It not only wrote human history as it ought or ought not to have happened, but explored the seven heavens and revealed the Deity.

Putting together the passages from the Talmud and Midrashim, we find in plain prose that on the highest heaven is the throne of glory, on the back of which is engraved the image

of Jacob (*Targ. Jer. Gn 28:17*). *El* appears to close to the Deity. A *hata den*, a constitutive body, enables God in government (*Jer. Bar. ix. 5*). Satan accuses Israel, and Michael silences him by recounting their merits (*San. R. 12*). On God's seal is engraved *יהוה*, 'truth,' the first, middle, and last letters of the Hebrew alphabet, indicating that He was, is, and is to be (*Shab. 54*; *Cont. R.*). In the heavenly Jerusalem there is an altar on which Michael offers up the souls of the righteous (*Shag. 17*). Behind the throne stands Sandalphon, whose height is a distance of a walk of 500 years, and who binds chaplains for the Deity (*Sh. 18*). God is occupied with studying the 34 books of the Bible by day, and the six *sedarim* of the Mishna by night (*Targ. Cont. v. 10*). There are schools in heaven after the Rabbinic model, where Rabbin in their order discuss the Mishna, and God studies with them (*Beh. Nef. 28*). Every day He promulgates a new Halakha (*Gen. R. 45*). He wears phylacteries (*Bar. 6*), of which Moses saw the knot (*Sh. 7*). At the Exodus from Egypt every servant girl saw God bodily and could point Him out with her finger. When God descended on Sinai, He was wrapped in the Rabbinic *talitah* (*R. Shab. 17*). He has His own synagogue. He prays to Himself that His mercy should overcome His wrath (*Bar. 7*). He weeps daily over Jerusalem (*ibid.*). The last three hours of the day He sports with Leviathan (*Ab. Sara, 7*).

A more hideous form of anthropomorphism nests us in the period of the *Geonim* (7th-10th cent.). The success of Muhammadanism, with its disastrous effect on the Eastern Jews, revived Messianic hopes. Several false Messiahs appeared. Old traditions about the nature of the Messiah were searched out. Mysticism, which hitherto lurked only in dark corners, crawled to the light. The study of the Talmud was neglected in favour of this new theosophy. The experts were called *ba'alim d'middat*, 'men of faith,' who by means of charms and the recitation of senseless formulae worked miracles, healed the sick, assuaged the raging sea, and revealed the secrets of the Deity. The most monstrous book of this period was the *Shi'ur Koma*, 'Estimation of the Height,' of which we possess only two fragments—a greater one is the book of *Rashei*, and a lesser in the Alphabet of R. Akiba. In it the Deity is described as a huge being in human shape and out of all proportion. The measurement of each member, such as the neck, the beard, the right and left eyes, the upper and lower lips, the ankles, etc., is given in parangons.

Only 'these parangons are not like ours, for a heavenly parangon measures a million cubits, each cubit four spans, and each span reaches from one end of the world to the other.' 'And,' says the book of *Rashei*, 'blessed is he who knows these measurements, for he has a share in the world to come.'

The Karaites were the first to ridicule the *Shi'ur Koma*. The most learned orthodox Jews also, among whom were the Geonim Saadya, Sherira, and Hai, rigorously opposed mystic anthropomorphism. But Maimonides gave the most effectual blow. In his *Moré Nebukim* he asserts in philosophic language the spirituality of God, and explains the Biblical anthropomorphisms as figurative terms.

3. The names of God.—Evidence of a transition to a new conception of God after the Exile is found in the manner in which God is spoken of. (1) The covenant name *Jahweh*, originally a proper name necessary in polytheistic and henotheistic periods to distinguish Him from other gods, gradually vanished from the consciousness of the people as a personal name of the Deity, until, at the time of the Christian era (and probably considerably earlier) it was entirely forgotten. *Gen. R. 23* states that, whenever *Jahweh* is used, it signifies God in His attribute of mercy, while *Elohim* stands for His attribute of judgment (see also *Ex. R. 3*). To guard against an irreverent use of the sacred name the laity ceased to pronounce it. Only the priests at the benediction, and, after the death of Simon the Just, only the high priest, and he with bated breath, so as to render it inaudible even to his colleagues, pronounced the 'unutterable' name. The correct pronunciation of the name was delivered only to the pious and humble (*Exd. 71a*). According to Philo (*Vita Mos. iii. 14*),

it was breathed by holy lips into holy ears in a holy place.¹ The cruel death which R. Hanina b. Teradion suffered in the Hadrian persecution was accounted for as a punishment for pronouncing the name (*Ab. Sara, 18a*). A *wn* (*annus*), or substituted word, was used, the oldest of which was probably *wn*, 'the name.' The Samaritans still use and except when, in taking an oath, they pronounce the tetragrammaton *Yahweh*. The name is sometimes spoken of as *wn* (*Sanh. 60*), 'the distinguished or proper name,' and more frequently *wn*, 'the name pronounced' (in the Temple). It is also called *wn*, 'remembrance,' 'mention' (*Cont. R. ii. 4*); 'the name of four letters' (*Exd. 71*); 'the great name' (*Out. Targ.*); 'the great and precious name' (*Jer. Targ.*); 'the great and holy name' (*Targ. on Ps 47*); in post-Talmudic writings 'the name' *wn*; and in the medieval philosophic we find *wn*, 'the proper, the great, the wonderful, the hidden, the excellent name, the written-but-not-read name.' In the later Halakha all the names of God are styled *wn*. But the usual substitute is *Adonai* (the plural form of *Adon*), *wn*, the pointing of which is supplied to the tetragrammaton as a mnemonic technique (*Exd. 71*). The LXX renders *Jahweh* by *kyrios*, or the anarthrous *Kyros*. This, without a proper name to follow, must have been the origin of the charge of *kyrios* laid to the Jews of the Diaspora.

Adonai came to be styled the chief of the *kinuim*, and was invested with an awe similar almost to the name *Jahweh*. 'Abraham called God *Adon*' (*Bar. 7*), and taught Him as such to mankind (*Sot. 10*).

The name *El Elyon* or *Elyon*, 'Most High,' originally with a relative meaning, used in the OT by non-Jews, and in the Psalms absolutely of *Jahweh*, came into more frequent use after the Exile (G. Dalman, *Die Worte Jesu*, Leipzig, 1898, p. 103). H. J. Holtmann sees in the revival of this name a transition to an abstract conception of the Deity (*Lahr. der neutest. Theol.*, Tübingen, 1896-97, I. 40). The official title of the Hammonian prince seems to have been 'high priests of *El Elyon*.' *Rosh. Hash. 18b* records that, after the victory of the Maccabians, it was ordained that in dates of documents the name *El Elyon* should be added after the reigning high priest's name. The practice did not please the wise men, because of the irreverence to the Divine name when the documents are rendered useless and thrown away. It was accordingly abolished, and the day and its anniversary were observed as a festival. *El Elyon*, though occurring in the liturgy (e.g. first petition of the *Amidah*), is seldom met with in the Talmudic literature.

Analogous to this conception of God as having His residence in the most elevated spot of the universe is 'Heaven' (*wn*). That this term frequently stands for 'God' in the Talmudic literature, but never in the liturgies, indicates that it was a popular appellation borrowed from surrounding phraseology. Ahura Mazda was the ancient god of the vault of heaven. *Bel-Shamais*, 'the Bel of Heaven,' was worshipped throughout Syria, like *Isis Osipus* and *Caelus* in the Roman Empire.

The Divine Majesty, conceived as located in a special region in the heavens, was called *wn*, 'the place' (e.g. *wn* *wn* *wn*, 'God help him' [*Nidd. 46b*]; *wn* *wn*, 'blessed be God' [*Ab. Sara, 40*, and in the liturgies]; cf. response in the *wn*, 'Blessed be *Jahweh* from His place,' *Exd. 21b*). From Palestinian usage and not vice versa, Philo took his *wn*, although Philo's idea made its way back

¹ Josephus already makes a mystery of the tetragrammaton (*Ant. ii. xii. 3*).

into the Talmudic literature, e.g. 'Why do they call the Holy One, blessed be He, *appi*?' Because He is the place for the world, and not the world His place (*Pesik. R. 21*).

The usual expression by which God is spoken of is 'the Holy One,' with the doxological addition, 'Blessed be He.'

(2) *God as 'King.'*—The practice of uttering a benediction on various occasions is probably in imitation of Zoroastrianism. Copies of these benedictions were current in the Tannaitic period (*Shab. 115b*). Their composition and institution are traced back to the 'Men of the Great Synagogue' (*Ber. 28*). Every such benediction is invalid unless it contains *sh'ma* and *melekh*, i.e. the name of God and acknowledgment of His Sovereignty.¹ Likewise the response of the laity in the temple when the high priest uttered the tetragrammaton was, 'Blessed be the name of the Glory of His Kingdom.' It is also the response after the *Shema*. As King, God is repeatedly confessed and invoked in the Prayer-book. The phraseology is borrowed from the OT, but the model is not the Hebrew king, to whom the humblest of subjects can have access, but, as Holtzmann insists (*NTZG 204*), the Persian monarch. The 'Great King' lives in solemn seclusion from his subjects. Only the favoured few may see his face. Access to him without his grace is punished with death. Officials execute his will. Often he is not the author of his edicts, but government is carried on by his consent before him rather than through him. Books of remembrance are kept. Analogous to this is the Jewish conception of the court of heaven. God is transcendent. No one has seen His face at any time. 'To Moses He only showed the knot of His phylacteries (resting on His back)' (*Ber. 7a*). He is surrounded by angelic hosts in military array, who execute His will. Around His immediate presence are the Princes of the Countenance, of whom Uriel is one (*Ber. 51*); and so is Metatron (*Sot. 30*). The latter is also called the Prince of the World (*Yeb. 10b*; *Hag. 60a*), and enters the deeds of men in a book (*Hag. 15*). The seventy nations have each a representative in the court of heaven, of whom the greatest is Michael (*Yom. 36*). The forces of Nature are presided over by viceroys. Rahab is the Prince of the Sea (*Baba batra, 74*), Yerkami the Prince of Hail (*Pes. 118*), Dumah the angel of Spirits (*Baba batra, 94*), and Lailah the angel of conception (*Nid. 18*). The angels intercede for men; and, as they know only Hebrew, prayers should not be said in Aramaic. Sandalphon presents the petitions to God (*Hag. 13*). Kijah is a kind of Mercury, making known God's plans to the pious and sometimes solving their doubts (*Ber. 3*; *Pes. 70*). He travels from city to city (*Baba batra, 60*), is a frequent visitor among the Rabbis (*Sot. 113*), is familiarly known as 'that aged man' (*Evd. 6*), and assumes various shapes in accordance with the commission with which he is entrusted (*Ber. 6*; *Ad. ara, 77*, etc.). God's statute book is the Law, which existed before creation, according to which He created, governs, and finally will judge the world. To keep this Law, and to sacrifice to Him at Jerusalem, God chose to Himself the Jewish race. Hence a right standing before God is procured by adherence to the Law. Judaism is not a faith but a system of observances, the obedience of a slave to his master. The very word in late Hebrew for 'religion,' *my* (occurring only in Esther), is borrowed from Old Persian and signifies 'law' (*Oxf. Heb. Lex. s.v.*). Foreign knowledge itself is a piece of piety. The *goy*, or he who understands how to apply to and fulfil the Law under all circumstances, is

¹ The formula is, 'Blessed art thou, Jehovah our God, King of the universe, who,' etc.

accounted of higher merit than even an illiterate high priest. It was a saying of the 'gentle' Hillel: 'An empty-headed man cannot be a sin-fearing man, nor can an ignorant person be pious' (*Pirke Aboth, li. 6*).

(3) *God as 'Father.'*—Sometimes the epithet 'Father' precedes the word 'King,' as in the *Shema* *Malkenu*, four variants of which were known and used by Rabbi Akiba, or in a parallelism, as in the sixth petition of the *Amida*: 'Forgive us, O our Father, for we have sinned; pardon us, O our King, for we have transgressed.' 'Our Father, who art in Heaven,' is frequently used in the Mishna (*Yoma, viii. 9*; *Sot. ix. 13*), and in the Liturgy. The appellation, however, signifies nothing more than that Israel is God's property.

To a deeper penetration into the essence of God as Love it never led to Jewish theology. (Cf. Weber, *Judaismus Theologie*, Leipzig, 1897, p. 124). The address of God as Father gives one the impression of a just word in a strange world. The manner in which Jesus imparted intensity and depth to the spiritual life from the faith in a Father-God, such as in the Parable of the Prodigal Son, or when speaking of the birds under heaven, is peculiar to Him (W. Bousset, *Relig. des Judentums*, Berlin, 1886, p. 494).

(4) *God as 'Creator.'*—To the contrast of Judaism with Manichaeism under Persian rule is probably due the institution of the *Yakar*, in which universal creation is ascribed to God, with which the second part or morning prayer proper commences. Its original form consisted probably of 18 *40's*, in which God is styled 'Former,' 'Creator,' 'Maker.' A later epithet, availing of polemics against Gnosticism, is 'He who spoke and the world came into being.' It occurs in *Siphre* on *De 11th* 'Wilt thou know Him who, etc., study the Haggada'; and frequently in the Talmud, and is the invocation in the collect of the first half of morning prayer. In the various phenomena of Nature the Jew saw the operations of the Creator and the 'King of the Universe,' and uttered a blessing. Not only is there an elaborate grace after each substantial meal, but different blessings (many of which are referred to in the Mishna as known) on every conceivable occasion, such as at the partaking of wine, of water, of fruit; at the sowing of seeds, of fruit trees, of precious ointment; in a storm; at the sight of lightning, of the rainbow, of the sea, of spring-buds, of a king, of a wise man, of a monstrosity.

Fine, indeed, are the very few sentiments of the Rabbis on Divine immanence.

R. Hanina said: 'Sometimes the Universe and the fullness thereof cannot contain the glory of His Deity, and sometimes He converses with man through the hair of his head' (*Gen. R. 4*). To R. Yosi is attributed a dispute with a lady who was a serpent-worshipper. When she maintained that her god was the greater because Moses at the sight of the burning bush hid his face (*Ex 33*) but from the serpent he did not (*Gen. 3*), the Rabbi replied that in two or three days he could escape from the serpent, but from God nowhere (*Sot. R. 9*). 'As no one knows where the soul is situated in the human body, so no creature knows the exact place of the Holy One, blessed be He, nor even the Holy Spirits who carry the Throne of glory above it' (*Midr. Shema* *Yeb. 10b*).

(5) *Peculiar to post-Biblical addresses to God* is a lengthy enumeration of His attributes. Yet R. Hanina silenced a reader for saying 'O God, the Great, the Strong, the Awful, the Mighty, the Powerful, the Bold,' it being as derogatory to the Deity as praising a millionaire for possessing only a hundred thousand (*Neg. 22a*).

The tendency was to avoid the use of the name of God altogether. Already the Book of Esther, which records a providential deliverance of the chosen race, does not contain it, but only once alludes to it (*4th*). A similar reserve is observed in the first Book of Maccabees, where 'Heaven,' rarely 'Lord,' is substituted for 'God.' This is the more remarkable in a book of Sadducean authorship (Holtzmann, 283). In the Rabbinic literature the usual surrogates are one of the above-mentioned epithets or an attribute. Some-

As-Shem, 'profanation of God's name.' God's name is hallowed when His elect keep His precepts. No distinction, however, is made between moral and ceremonial precepts. The prayer in the *Kaddish*, which runs,

'Magnified and hallowed be the Great Name in the world which He has created according to His Will, and may He establish His Kingdom,' etc.,

would imply that it is a prayer for the conversion of the world to legalism. To hallow God's Name stood for keeping any commandment in the face of opposition (see, e.g., *Ber.* 30, and *Rashi*). To transgress the Law, however, when under compulsion, was considered permissible except in the case of idolatry, murder, and incest (*San.* 74). *Kiddush* *As-Shem* came to stand for confessing Judaism by martyrdom. The negative side of this precept is *Hulu* *As-Shem*. The name of God is profaned or blasphemed among the Gentiles when the Jew exhibits in conduct a lower standard of morality than what the Law prescribes, or does or omits to observe anything that will bring Judaism into ill repute. But the act must be a public one.

'When one perceives that his evil partner has the better of him, let him go where he is unknown, disguise himself, and do what his heart desires rather than profane the Name of God in public' (*ibid.* 67). 'Whoever has no regard to the honour of his Creator—it were better for him not to have come into the world' (*ibid.*). On the other hand, R. Johanan b. Berokah said: 'Whoever profanes the Name of God in secret will suffer the penalty for it in public' (*ibid.* 67).

Thus the central point of Judaism was Law. A knowledge of God and keeping commandments were convertible terms. Rabbinic legalism was finally codified in the *Turim*. Ponderous are the commentaries and super-commentaries of the Rabbis on that code, to carry out which involved utter dissociation from non-Jewish elements. This isolation rather than his faith was the exciting cause of many a persecution of the Jew. Heinrich Heine well said that Judaism was not a religion but a misfortune. The emancipation of the Jews in many lands was also an incentive to them to have access to the fund of historical and philosophical knowledge accumulated by Christians through centuries. But the new status and new learning produced a rocking and upheaval in the Jewish camp. On the one hand, Rabbanism is fast dying out. The misanthropic code of the *Turim* cannot be carried out by citizens of enlightened countries. On the other hand, no other system can save Judaism from dissolution.

LITERATURE.—Art. 'God,' in *NDB*, *F&B*, *Hamburger*, and *J.E.* and literature given there; also S. Bernfeld, *De'ath Elohim*, Warsaw, 1897; N. Krochmal, *Mora Nebukha Se-amun*, Warsaw, 1894; Morris Joseph, *Judaism as Creed and Life*, London, 1919, pp. 26-71. A. E. SUFFRIN.

GOD (Muslim).—1. The name for 'God' in common use amongst Muhammadans is *Allah*, a word which, according to their theologians, denotes a 'Being who exists necessarily by Himself, comprising all the attributes of perfection' (cf. further, 'Arabian, pre-Islamic' section of this art.). Another Qur'anic word is *ar-Rabb*, 'the Lord.' There are also many names which express the various attributes of God. These are called the *Asma' as-Syafi*, names of qualities in contradistinction to the *Isim adh-dhat* (*Allah*), the name of the essence of God.

It is said that, when Muhammad and his Companions addressed God as *ar-Rahman*, 'the Merciful,' Abū Jahl said: 'Muhammad and his Companions bid us worship one God, why, then, do they call upon another God?' On this the following verse was revealed: 'Most excellent titles hath God; by these call upon Him, and stand aloof from those who pervert His titles' (*Qur.* vii. 179). Those who perverted His titles were the pagan Arabs who were alleged to derive the names of their idols from names of God, as

al-Lat from *Allah*, *al-Uzza* from *al-'Azza*, 'the Mighty' (cf. *Qur.* lxx. 19), which is now considered a grievous sin, and even infidelity.

In a much earlier *Sūra* also, in a verse which emphasizes the unity of God, there comes a reference to, as if to show that their existence did not impair the idea of unity: 'There is no God but He. His are the excellent titles [*Asma' al-Husna*] (xx. 7). Again, a tradition recorded by Abū Ruraira states that Muhammad said: 'Verily there are ninety-nine names of God, and whosoever recites them shall enter Paradise.' These names all express some quality of God, and are such as *ar-Rahman*, 'the Merciful'; *al-Khaliq*, 'the Creator'; *al-Hafiz*, 'the Clement'; *al-Jabbar*, 'the Majestic'; *al-Hadi*, 'the Guide'; etc. (see full list in *Haykal* *DJ*, p. 141). The reason given for this large number is that God may always be addressed by a name suited to the need of His petitioner. Thus, if a man confesses sin, he calls on God as *al-Ghaffar*, 'the Forgiving'; or if *Tawaddu*, 'the Acceptor of repentance'; if he is in need of bodily sustenance, he prays to *ar-Razzaq*, 'the Provider'; if he is in doubt as to a course of action, he addresses God as *ar-Rashid*, 'the Director'; etc. To assist in the repetition of these names, a rumy of one hundred beads is used. The Wahabites, however, use their fingers, believing that to have been the custom of Muhammad. The name *Allah* is recited first or last to make up the hundred.

All Muhammadans agree that such names as 'the Living,' 'the Wise,' 'the Powerful,' can be applied to God, but they must be *tauqifi*, i.e. authorized in some revelation—Qur'an or tradition; e.g. God can be called *ash-Shafi*, 'the Healer,' but He cannot be called *al-Jabbar*, 'the Physician,' because that word is not applied to Him either in the Qur'an or by Muhammad. Some authorities are less strict and may think, though the exact word may not have been so applied, yet, if an attribute of the Deity has been praised, an adjective expressive of that attribute can be used; but, if names not so given are used of Him, such use must be looked upon as expressive only of His attributes and not of His nature. Such a term is *Muabbid al-ahd*, 'the Canner of names.' To the Persian word *Khuda* objection also has been taken; but, as it means 'one who exists in himself,' it is equivalent to the Arabic title *Wajid al-wujud*, 'one who has necessary existence,' and, therefore, may be used. Of names taken from a language of the infidels, such as 'God,' 'Dieu,' 'Gott,' the general opinion is that they ought not to be used at all.

Among the many names of God is the *Isim al-'Alam*, 'the exalted name.' According to one tradition, it occurs in *Qur.* ii. 186 and iii. 1. The names there are *ar-Rahman*, 'the Merciful,' *al-Qayyum*, 'the Self-subsistent,' and *al-Hayy*, 'the Living'; but, according to *K'ala*, the *Isim al-'Alam* is known only to prophets and saints. As it is believed that those who call upon God by this name will obtain all they desire, Sufis and dervishes profess to spend much time in the search for it, and, when they claim to have found it, they gain great influence over the common people. The desire to attain this knowledge has been a powerful incentive to enter on the long novitiate and discipline of the Dervish Orders.

2. The doctrine of God may be considered with reference to His essence, His attributes, and His works.

(a) Muhammad laid great stress on the Divine unity. His creed, 'There is no god but God,' contains the negation of false gods and the affirmation of the unity of the one true God. The principal passages in the Qur'an referring to this are:

'Say, "He is God alone, God the eternal, He begoteth not, and He is not begotten, And there is none like unto Him" (xxi. 1-4). 'Truly your God is but one; Lord of the heavens and of the earth' (xxvii. 61). 'God, there is no God but He; most excellent His titles' (xx. 7). 'This is God your Lord, there is no God but He, the Creator of all things, therefore, worship Him alone' (vi. 102). In a *Medina* *Sūra*, a verse which is probably Meccan occurs: 'Your God is one God; there is no God but He, the Compassionate, the Merciful' (li. 164). In the same *Sūra* (li. 165) we have one of the most beautiful passages in the Qur'an, the 'verses of the throne': 'God, there is no God but He, the Living, the Eternal, nor slumber seizeth Him, nor sleep, His, whatsoever is in the heavens and whatsoever is in the earth, who is he that can intercede with Him save by His own permission? He knoweth what hath been before them and

what shall be after them, yet sought of His knowledge shall they grasp, save what He willeth. His throne reacheth over the heavens and the earth, and the upholding of both burdeneth Him not, and He is the High, the Great. There is no God but He the Living, the Merciful. There is no God but He, the Mighty, the Wise (II. 1 and 4).

This strong conception of the unity of God led Muhammad to denounce what he considered to be the Christian doctrine of the Trinity. At Medina, when all hope of winning the Christians to his side had passed away, he thus appealed to them:

'O ye people of the Book, awaiting not bounds in your religion: and of God speak only truth. The Messiah, Jesus son of Mary, is only an apostle of God and His word, which He conveyed into Mary and a spirit proceeding from Him. Believe, therefore, in God and His apostles, and say not, "Three", for there is no better for you. God is only one God. For he is from His glory that He should have a son (v. 159).

In the last verse revealed we read: 'They surely are infidels who say, "God is a third of three," for there is no God but one God' (v. 77). And when God shall say: 'O Jesus, son of Mary, hast thou said unto mankind, Take me and my mother as two Gods beside God?' He shall say, "Glory be unto Thee. It is not for me to say that which I know to be not the truth" (v. 114).

Muhammad's idea was that the Christian Trinity consisted of God, Mary, and Jesus. He considered the Holy Spirit to be Gabriel, and, accordingly, not a person in the Trinity.

From a Muslim philosophic point of view, as nothing exists without a cause, it must be assumed that there is a Being, the first cause of all things, existing of necessity and self-sufficing. This Being must be one, and one only. This unity, or *tawhid*, is said to be either *tawhid ar-rubbiyya* or *tawhid al-'adhiyya*. The former means that God creates and sustains all things, but belief in this does not necessarily make a man a believer; belief in the latter does, for he who accepts it worships the one God only.

(b) Muslim theologians divide their definitions of God under the seven attributes of Life (*hayat*), Knowledge (*ilm*), Power (*qudra*), Will (*irada*), Hearing (*asm*), Seeing (*basar*), and Speech (*kalim*).

Life.—God has neither antecedents nor equal. Had there been in either heaven or earth gods beside God, both surely had gone to ruin (xii. 35). He is immortal, invisible, without figure, form, colour, or parts. His existence has neither beginning nor end. He is not a body composed of substances or elements. He is not an accident inherent in a body or dwelling in a place.

Knowledge.—God knows all things, whether in the present, past, or future, whether hidden or manifest, whether in heaven or on earth. He knows the thoughts of the heart of man, and the words which proceed from his mouth. He is free from forgetfulness, negligence, and error. His knowledge is eternal; it is not posterior to His essence. 'Dost thou see one that God knoweth all things that are in the heavens and all that is on the earth (viii. 17). With Him are the keys of the secret things, none knoweth them but He. He knoweth whatever is on the head and in the sea, and no leaf falleth but He knoweth it; neither is there a grain in the darkness of the earth, nor a thing green or bare, but it is noted in a distinct writing (vi. 59).

Power.—God is almighty. He can raise the dead, make stones talk, move walls, annihilate the heavens and the earth, and recreate them. His power is eternal, a power and a posterior. It is not posterior to His essence. 'Is He not powerful enough to quicken the dead?' (xxx. 26). 'If God pleased, of their eyes and of their ears would He surely deprive them' (II. 18). 'God hath power over all things' (III. 100).

Will.—God can do what He wills, and whatever He wills comes to pass. His will comprehends everything possible, whether good or evil. He willeth the faith of the believer and the unbelief of the infidel. His will is eternal, and is not posterior to His essence. 'God is worker of that He willeth' (xxx. 14). 'God misleadeth whom He will, and whom He will He guideth.' 'God doeth the pleasure' (xlv. 4, 52). 'If God pleased, He would surely bring them, one and all, to guidance' (vi. 26).

Hearing.—God hears all words without an ear, for His attributes are not like those of a man. 'He truly heareth and knoweth all things' (xlv. 4).

Seeing.—God sees all things, however small, yet He has no eye as men have. 'No vision taketh Him in, but He taketh in all vision' (vi. 103).

Speech.—God speaks, but not with a tongue as men do. Speech, the word of God, is one, but it has various modes, as command, prohibition, promise, and threat. To some of His servants He speaks directly, as He did to Moses on the Mount and to Muhammad on the night of the Ascension to heaven. To others He speaks by the instrumentality of Gabriel. This is the way He speaks to the Prophets. The Qur'an is the speech (*kalim*) of God, and is therefore eternal.

There is agreement as to the number of the attributes, but not as to their nature and the

extent of the knowledge concerning them to which men can attain. The differences with regard to the mode of their existence and operation may be brought under three heads: the ancient Mu'tazilite doctrine that the attributes are eternal and of the essence of God, the Ma'tasilite theory that they are not eternal, and the Ash'arite dogma that they are eternal but distinct from His essence. The first four of the attributes are called 'essential,' for without them the others could not exist. They can have no opposite in God. Thus, death, the opposite of life, cannot be predicated of God; life in Him is an essential attribute. They are also called *siyat ath-thubutiyya*, affirmative attributes, the privation of which would imply loss; there are also *siyat al-'adhiyya*, or privative attributes, such as that God has no form, no equal, is not limited by place, etc. Some difficulty has arisen over the expressions 'sitting,' 'rising,' 'descending,' and the references to face, hands, eyes, for, being connected with the idea of corporeal existence, these actions and references seem to imply imperfection and contradict the doctrine of removal (*tanahl*), according to which, in virtue of His essence, God is not like the creatures He has made. The four leading theologians, Abi Hanifa, ash-Shafi'i, Ahmad ibn Hanbal, and Malik ibn Anna, taught that discussions on such subjects were unlawful. They believed in the Qur'an and in the traditions regarding Muhammad, and accepted these without discussing on such abstract questions.

The Prophet himself said: 'Think of God's gifts, not of His nature; certainly you have no power for that.' Ibn Hanbal said: 'Whoever moves his hand when he reads in the Qur'an, saying, "In the name of the Most Gracious, the Most Merciful," I have created with my hands, for Gabriel has not had out of it, and whoever stretches forth his finger in repeating the saying of Muhammad, "The heart of the believer is between two fingers of the Merciful," I have created with my fingers, for Gabriel has not had out of it' (ash-Shahristani's *Ma'ad* by Nicholson, London, 1907, p. 79). The commentator as-Tawhidi said concerning the statement that God had descended to the lowest of the seven heavens: 'The descent is intelligible, the manner of it is unknown. The belief in it is obligatory, the discussion of it a blamable innovation.' Al-Buhārī says: 'Certainly sitting on the throne is an attribute of God, its manner is not known.' He has also been reported to say: 'God sits on His throne' means that He has the power of sitting. He held, with most of the orthodox, that to allow a figurative interpretation was to introduce a dangerous principle. No explanation could be given, for it is written: 'There is none like unto Him' (xlii. 4). 'Nought is like Him' (xlii. 5). 'Unworthy the estimate they form of God' (xlii. 75). One day a slave-woman was brought into the presence of Muhammad with a view to the granting of freedom to her. Muhammad said to her, 'Where is God?' 'In heaven,' was her reply. 'Get her at liberty, she is a true believer,' said Muhammad. The commentators explain that the Prophet was pleased with her, because she took the words 'In heaven' in their literal signification.

The orthodox position may be summed up in the saying, 'Just as the eye, turning to the brightness of the sun, finds darkness intervene which prevents all observation, so the understanding finds itself bewildered in its attempts to pry into the nature of God.' The attributes of God are beyond explanation, and so cannot be understood by men. Men should, therefore, mistrust their own notions, simply accept what Muhammad taught, and not exercise their reason in the consideration of the Divine attributes. This is not, Ibn Khaldūn explains, meant to depreciate the use of reason in all human matters, but it is an absurdity to employ it on things Divine (de Ilane, *Préliminaires d'Ibn Khaldūn*, iii. 46). The orthodox supported their position by the verse:

'He it is who hath sent down to thee the Book. Some of its signs are of themselves perspicuous (mubīnāt); these are the basis of the book, and others are ambiguous (mutashābihāt). But they whose hearts are given to err follow its ambiguity, waving discord, craving an interpretation: yet none knoweth its interpretation but God. And the stable in knowledge say, "We believe in it, it is all from our Lord." But none will bear this in mind, save men endued with understanding' (III. 5).

The difference between *mubīnāt* and *mutashābihāt* verses has been thus defined: 'The verses which

give orders and prohibitions are *muḥkam*; all others are *maṣāḥibā*. This ruling brings all verses which speak of God and His attributes under the term 'ambiguous'. That being the case, the orthodox say that this verse clearly shows that the interpretation of such is known only to God. There must not be any discussion on the ambiguous terms. This was the ancient rule (de Slane, *Prolegomenes d'au Kāhidūn*, iii, 67). A tradition records that 'A'isha said: 'One day the Prophet recited the 5th verse and said to me, "When thou seest those who follow its ambiguities, these are they whom God has named, avoid them."'

This apparently closes the door to any freedom of discussion, but men arose who altogether disputed the right of the orthodox thus to set aside the use of reason. They, too, based their position on this very verse by insisting on a different punctuation, which ran: 'None knoweth its interpretation but God and the stable in knowledge. They say, "We believe in it." Here God and the wise are said to be able to investigate all those matters which come under ambiguous expressions, and this use of reason then leads them to say, "We believe in it." The first reading is the orthodox one; the scholastic theologians generally adopt the second.

When the latter asked, 'How can man believe what they do not know?' the reply was ready, 'The act of belief is the unknown in the very thing posited by God.' Or, 'Why, if the Qur'an is a guide to man, are not all its verses plain?' The answer was: 'There are two kinds of eloquence, one the arrangement of words in a plain style, the other is figurative language. The Qur'an, as a perfect book, must contain both (see Zamakhshari reads the verse as "accepts God and his servants who are established in knowledge," *Com.* on iii, 6; see also Plancher's edition of Balghat, Leipzig, 1868-69, vol. I, p. 144, and footnote in Bell's *Path of Islam*, p. 191).

This controversy, however, dealt chiefly with the questions whether the attributes of God were internal or external, were part of His essence or not, were eternal or not. The orthodox party, called the *Sufāṭiyya* (*ṣūfū* = 'qualities', 'attributes'), held that the attributes of God are eternally inherent in His essence without separation or change. All the attributes are conjoined with Him, as life with knowledge, or knowledge with power. The ambiguous verses in the Qur'an were not to be explained. The *Mu'tazilites* opposed this, and rejected the idea of eternal attributes, saying that to accept the orthodox view would be to admit a multiplicity of eternal existences. The attributes of hearing, seeing, and speech they rejected; they were accidents peculiar to corporeal existence. They looked upon such an expression as 'the hand of God' as a figurative way of speaking of His power. Ash Shahrastāni in the *Muḥal wa'n-Nuḥal* (Carson's ed. p. 30) thus puts the *Mu'tazilite* view:

'They say that God is eternal, that eternity is the peculiar property of His essence, but they deny the existence of any eternal attribute (as distinct from His essence), they say that He is co-eternal as to His nature; living as to His nature; almighty as to His nature, but not through any knowledge, power, or life existing in Him as eternal attributes, for knowledge, life, power are part of His essence, otherwise, if they were looked upon as eternal attributes of the Deity, it would give rise to a multiplicity of eternal entities. They maintained also that the knowledge of God is within the province of reason, for knowledge is obtained only through reason.'

To the *Mu'tazilites* a plurality of co-eternal attributes, such as those involved in the Beautiful Names described above, seemed to conflict with the idea of absolute unity. They, therefore, apprehended them as states of the Divine essence, or identified them with the essence itself. The significance of the attributes thus, indeed, ran the risk of being lost. It is said that a philosopher who denied entirely the existence of any attribute said: 'God is by His essence a Being who knows.' A *Mu'tazilite* who denied the existence of an

eternal attribute did believe in attributes, and so far differed from the philosopher. His way of putting the case would be: 'God is a Being who knows, but by means of a knowledge which He Himself is.'

For the rise of the Ash'arite school, see art. AL-Ash'arī. It is enough now to say that Abū al-Hasan al-Ash'arī (A.H. 290-394) was for a time a *Mu'tazilite*, but returned to the orthodox views. His defection was a serious blow to the progress of liberal thought in Islam. On the question of the attributes of God, the views of his disciples, the Ash'arites, are opposed to those of the *Mu'tazilites*, and are slightly different from those of the *Sufāṭiyya*. They say that the attributes of God are not of His essence; they are distinct from the latter, yet in such a way as to forbid any comparison between God and His creatures. The great dispute ranged round the attributes of will and speech (see FATE and INSPIRATION (Muslim)).

There are other small sects which hold peculiar views, such as the *Mushabbihites*, 'Assimilators' (ash-Shahrastāni, p. 76), who, taking figurative expressions literally, held that there is a resemblance between God and His creatures; and the *Mujasimites*, 'Corporealists', who say that God has a self-subsisting body; but both of these views are considered heretical.

The question whether in the future world God will be seen with the physical eye has been a subject of much discussion. The orthodox quote the words to Moses: 'Look towards the Mount, and, if it abide firm in its place, then shalt thou see me' (vii, 139). It is argued that, as the standing firm of the mountain was possible, and, indeed, probable, so that which was connected with it—the seeing of God—must be possible also. The *Mu'tazilites*, however, held that He cannot be beheld with the corporeal sight (ash-Shahrastāni, p. 30). One day, a man was brought before the Khalīf al-Wathīq and questioned regarding the Vision of God on the Day of Judgment. He repeated the tradition recorded by al-Bukhārī.

'We were dining on the fourteenth night of the month [the night of the full moon] with the Prophet, who said, "Certainly, you will see your Lord, just as you see this moon." (Saḥīḥ al-Bukhārī, ch. on 'Sure Qd'), and declared his assent to it. The Khalīf called him a liar, and the man repeated the same. On this, the Khalīf became angry, and said: "What will He be seen as a circumscribed and corporeal form which space can contain and the eye see? Verily, I deny a God with such attributes. What say ye?"'

The *Mu'tazilites*, thus appealed to, gave it as their opinion that the man should be put to death—which was done. Some *Mu'tazilite* teachers tried to explain away this tradition by saying that Muhammad did not refer to Allah, but to the 'primary intelligence' or the 'primary reason,' which, in the cosmogony of the mystics, was the first thing created, and is the manifestation of the Supreme. Still, the *Mu'tazilite* doctrine was definite—God cannot be seen. The orthodox view is that Muslims, at least, will see God, though the manner thereof cannot be described.

As-Suyūṭī, a famous theologian († A.D. 1505), classified the attributes of God thus:

(1) Attributes which must necessarily be ascribed to God: existence, eternity past, eternity future, self-existence, unity. The first is the attribute of essence; the other four are primitive attributes. Then, there are the attributes of ideas (*ṣūfāt al-af'ā*) power, will, knowledge, life, hearing, seeing, speaking. These are all necessary (*waḥab*).

(2) Attributes which cannot be applied to God: non-existence, disappearance, similarity to created things, dependent existence, plurality in His nature, absence of power, of will, ignorance, darkness, dumbness, blindness, inability to think.

(3) Attributes which it is possible to ascribe to God: these may be summed up in the saying that to God can be ascribed the doing or the not doing of any thing possible.

He classified the *ṣūfāt al-af'ā* al-Fudhāl puts the case somewhat differently. He says that there are twenty necessary qualities in God: existence (*wuḥūd*), the proof of which is the origin of

the world, which must have had an originator; priority (*q'dim*), that is, there was never a time when He was not; continuance (*baq*), or lack of termination to His existence; difference (*muha'da'a*) from things created; self-subsistence (*q'dim bi-na'f's*), independence of anything; unity, power, will, knowledge, life, hearing, seeing, speech; being powerful, which is thus distinguished from the attribute of power—"when power exists in an essence, the quality called 'being powerful' is in that essence; being a willer, a knower, a living one, a hearer, a seer, a speaker." These are said to be qualities subsisting in His essence, and are status (*ha'at*); they are not the attributes of will, knowledge, etc.; but between them and the attributes concerned there is a reciprocal inseparability.

God is described as Merciful and Gracious, the Guardian over all, the Provider of daily bread, the Reviver of His people and their Deliverer, and many similar terms; but all that the Qur'an says of the loving-kindness of God is overshadowed by the teaching of Muhammad in the Qur'an and the tradition as to His Power. This is the prominent element in the conception of God as taught by the Prophet; it has ruled the Muslim world, and still rules it. The 'most excellent names,' ninety and nine in number, do not contain any term which denotes the relation of God as a Father to His people. The idea is repugnant to the Muslim mind, and so in Islam the relation of man to God must ever be that of a slave, who lacks the freedom and dignity of a son.

The Prophet's Semitic origin is apparent in his rigorous assertion of the unity of God. Allah, the God, the absolute ruler of Nature and of man, was to him the truest and noblest conception of the Divine Being. Whether, if he had not been brought into contact with Jews, his monotheism would have been so strong is perhaps doubtful. It has been well said that there is no 'charm in the abstract doctrine of the unity of God to elevate mankind,' and the general idea that has grown out of this dogma—that God cannot be known, and that inquiries into His nature are wrong—has tended to put the God of the Muslim afar off. The prevailing conception of God as the All-Powerful is not far removed from the idea of a despot, and fear, thus separate from love, is either the incentive to all effort or leads to the repression of all energy in the Muslim. The idea of unlimited, arbitrary power, unrestrained by any law of holiness, has so filled the Muslim mind that sin is regarded less as a breach of moral law than as a violation of some arbitrary decree. Certain actions of the Prophet were evil according to any law of righteousness; but no Muslim would admit that in doing them Muhammad committed a sin, for he acted under the command of God. Thus, salvation has come to be regarded not as the moral elevation of a man, but as safety from punishment. It is attained not by spiritual regeneration of the man's evil nature, but by the punctilious performance of certain religious rites, submission to the will of God regarding them being the essential characteristic of a good Muslim.

The Wahhabites, the most fanatical of all Muslim sects, have so emphasized this idea of the unity and power of God that, from their point of view, 'Islam may be called the Deification of Power, just as Hinduism denies the productive and generative principles of Nature' (see the description which Palgrave gives in his *Central and Eastern Arabia*, i. 365 [reproduced in Hughes' *DI*, art. 'God,' and Sell's *Faith of Islam*, p. 181 f.], of the Wahhabite idea of God; it is more or less true of what men of the other Muslim sects believe). Their conception of God realizes the greatness and grandeur of His power, but it does not tend to call forth the deep love of the human soul; and, as it retards the growth of spiritual life in the individual, so also it hinders progress in the community, and prevents the formation of a

national life. A practical fatalism settles sooner or later on all Muslim communities.

EDWARD SELL.

GOD (Slavic).—The word for 'God' in the Slavic languages is *Bog*. It is found in the names of primitive pagan deities mentioned in the ancient chronicles (e.g. *Stribog*, *Dazhbog*), and by Helmold (i. 2, *Zoernbock*, i.e. *donum nigrum*). It is the same word as the Skr. *bhaga* (Old Pers. *bagha*), which means 'good,' 'blessing'; and this meaning is found in derivatives from the root *bog* (e.g. *begavty*, 'rich'; *ubog*, 'poor,' etc.).

Procopius of Caesarea (11th cent.) seems to think it possible (*de Bello Gothico*, iii. 14) that the ancient Slavs had a supreme God dominating their pantheon, as Zeus dominated the Greek pantheon.

'The Slavs,' he says, speaking of those bordering on the Byzantine Empire, 'believe in a God who causes thunder, and is the sole master of the universe.'

Helmold (*Chronicon Slavorum*, i. 83) makes the same assertion in regard to the Slavs of the Baltic and the Elbe:

'Among the various gods to whom they attribute the fields and fountains, sorrows and joys, they are all agreed that one God rules over the others from the heights of heaven. This all-powerful God attends only to celestial affairs. The others have each their separate functions and obey Him; they are the offspring of His blood, and take precedence in rank according to their nearness to this God of gods.'

Unfortunately, we have no text to confirm what Helmold says of the filiation of the Slavic gods. A biographer of the missionary Otto of Bamberg tells us that the Slavs regarded their supreme God as 'glorious and filled with all riches' (Ebbo, ii. 1). In the treaty concluded in 945 between the Slavs and Greeks it is said (supposed Russian chronicle of Nestor):

'May the Christian Romans who violate this treaty be abandoned by the all-powerful God, may those who have not been baptized get no help from God or Perun.'

But no other text mentions this anonymous god.

LITERATURE.—L. Lager, *Nyktal. slav.*, Paris, 1901, pp. 47-51; G. Krehl, *Stadl. in die slav. Literaturgesch.*, Graz, 1887, p. 578 E. L. LUGER.

GOD (Teutonic).—2. The term 'god.'—The term 'god,' as used to denote anthropomorphic beings of a higher order, is found in all the Teutonic languages (Goth. *guf*, O.N. *goð*, A.S. and O.S. *god*, O.H.G. *got*), but in no other branch of the Indogermanic family. After the conversion of the Teutons to Christianity the word came to be applied also to the Christian Deity. In the heathen period it was a neuter; in Christian times, a masculine. Its etymology and its original meaning are obscure, and have been much debated (cf. O. Schade, *Altdeutsches Wörterbuch*, Halle, 1872-1882, i. 242; L. K. Weigand, *Deutsches Wörterbuch*, Göttingen, 1908, i. 751); but, as in Norse

source *gott* signifies 'image of a deity,' and as the word is philologically connected with Germ. *Götze* ('idol'), its original meaning was perhaps 'image,' 'figure' (Osthoff, in *Bezenberger's Beiträge zur Kunde der indogerm. Spr.* xxiv. [1900] 177). The higher being was believed to be present in the image, and so the term was transferred from the latter to the former.

2. The four pan-Tentonic deities.—The worship of anthropomorphic deities constitutes the final stage in the religious evolution of the heathen Tentons. It was, in the main, a development from the belief in souls and spirits. One of these innumerable creatures of the imagination was singled out as representative of a whole group, and became the central object of the cultus; it was worshipped by prayer and sacrifice, and gradually extended its sphere of influence, in harmony with the interests of the confederation whose members paid homage to it. Such was the origin of the deities worshipped by the Tentons and regarded as holy either by single communities or by whole nations. It sometimes happened that other deities surrendered their province to the god thus worshipped, became incorporated with him, and were then recognized as mere epithets of the chief deity; while, on the other hand, certain attributes of the latter were detached from him and became independent deities. There was no uniform cult common to all the Tentons. In many instances a cult migrated from one tribe to another, and so either superseded, or became amalgamated with, the indigenous cult (religious syncretism). We, nevertheless, find among the Tentons three specially prominent gods, who, moreover, are met with in all the different tribes, and must, accordingly, have come down from a period when the Tentons were still an undivided people. These three are **Wōtan*, the god of the dead and of the wind; **þonar*, the god of thunder and of the sky; and **Tiwaz*, the god of war. With these is associated a female figure who appears in the O.E.G. sources as *Fria*, in the O.N. as *Frigg* ('the beloved,' 'the wife'), and is always regarded as the consort of *Wōdan*. Roman writers identify *Wōdan* with Mercury; *Donar*—in the earlier period—with Hercules, and subsequently with Jupiter; *Ziu-Tyr* with Mars; and *Fria-Frigg* with Venus; and thus, when the Roman calendar was introduced among the Tentons, the *dies Martis* was rendered 'Tuesday,' the *dies Mercurii* 'Wednesday,' the *dies Jovis* 'Thursday' (Norse *Þórsdagr*), and the *dies Venere* 'Friday.'

(a) *Wōdan-Ōðin*.—From the host of souls which continue to exist in the wind—the spirit-army still known in popular legend as the raging host, the wild hunt, the *Angar* chase (in Norway), and the like—was evolved *Wōdan* as the leader of the host. This leader of departed souls then became the lord of the dead and of the dead-realm, and at length also the lord of life and death. The attributes of all soul-like beings are engrafted upon him: like the dead, he is ruthless, and deprives men of life; he is the swift traveller or rider through the air; he has the protean nature, and is able at any time to assume at will the form of man or animal; magic and divination are under his sway. In N.W. Germany, probably in pre-historic times, he had come to be worshipped in various Tentonic tribes, and here, accordingly, he became the god of war, and finally the god of the sky, or, in other words, the supreme god of a tribe or people. Thus, for example, he was worshipped as the supreme deity by the Anglo-Saxons at the time of their occupation of Britain (Geoffrey of Monmouth, 6); as the lord of battles by the Langobards, who, as legend tells, owed to him their name, and also their victory over the neighbouring peoples (Paulus Diaconus, *de Gest.*

Langob. l. 7, 8); thus, too, his cult migrated by way of Denmark to Scandinavia, gained a footing there, more especially at the royal courts, and, in Norway, frequently superseded the earlier cult of Thor. In the kings' courts, however—the residences of the skalds—he became also the god of poetry and poets. But his ethnonic character still adheres to him; he had found admission to the courts as the head of the *Áttar*, i.e. the ancestral spirits worshipped as divine; he is the lord of Valholl, the Norse paradise of fallen warriors; he is waited upon by the Valkyrs, who bring to him those slain in battle. His demand for human sacrifice is also known elsewhere. He has the power of changing his shape, and may show himself in a variety of human forms or as an animal. As the demonic wind-spirit of popular legend, he has a liking for amatory exploits. He presides over magic and spells. It was probably owing to this aspect of his character that he became the god of the poetic art, and then also of all higher wisdom—the one who, in particular, was aware of all that takes place in the life of gods and men. This knowledge, according to Norse mythology, he acquired by drinking the poetic mead, which was originally in the keeping of the dwarfs and then passed into the possession of the giants. In the form of a serpent, Ōðin crawled into the mountain within which Gunnlod, daughter of the giant Suttung, kept watch over the mead, outwitted her, and stole away with the precious liquor. He gave draughts of the mead to such men as he destined to become poets.

Ōðin's ethnonic nature shows itself also in his external form. He is depicted as an old man with a long grey beard, and is therefore called *Hárðarðr*; he is one-eyed, like the man-eating demons of other myths; he wears a slouched hat pressed far down over his face, and is thus also named *Sólaktr*. He is sometimes the tireless traveller ('viator indefessus' (Saxo Gram. l. 126)), sometimes the swift rider who is borne through the air by his eight-footed steed Sleipnir. He appears also as the god of war in full armour ('armatus sicut Mars' (Adam of Bremen, iv. 38)), wearing the helmet upon his head, and holding in his hand the spear *Gungnir*, with which he stirs up war, and smites down those whom he has destined for his ghostly army. To his immediate retinue belong his two wolves, Gari ('the greedy') and Freki ('the voracious'), and his ravens, Hugin ('thought') and Munin ('memory'), which bring him tidings from all quarters. His abode during his times of rest was originally the mountain Valholl, the ancient realm of the dead, and, accordingly, he speaks of himself as the 'ancient of the mountain' (*Reginmal* 16), while the skalds call him *fiellgautr* ('fell-god'). But, when he had been raised to the position of the supreme god among the Norwegians, Valholl became his citadel, where he sat enthroned as a king, exercising sway over the *sinkarjar*, the host of fallen warriors, and sending forth the Valkyrs, his wish-maidens, to bestow victory on his protégés, and convey the slain warriors to his castle. At their banquets there, the Valkyrs serve the *sinkarjar* with mead. Ōðin, having thus attained the supreme place, becomes lord over all other deities, most of whom, in fact—e.g. Thor and Balder—now become his sons. This final stage of his development was attained more fully than elsewhere at the courts of the Norwegian kings, and was the work of the skalds resident there (cf. H. M. Chadwick, *The Cult of Ōðin*, London, 1900).

(b) *Donar-Thor*.—A second deity acknowledged by all the Tentons was *Donar* (O.N. *Þorr*), who was in a special sense the god worshipped by the Norwegians. His name is connected with the root *ton*, 'to sound,' and the Lat. *tonare*, and means the 'thunderer.' He is properly the Tentonic god

of the upper regions, who manifests himself in the thunder. In this capacity he bears the axe or hammer, which he hurls from the sky, and with which he makes the earth fruitful (Adam of Bremen, iv. 28). He is depicted as a strong man in the prime of life and with a ruddy beard, and he is accordingly met with on the votive stones of Teutonic mercenaries as 'Hercules magnus' or 'Hercules barbatus' (W. Brambach, *Corp. Inscr. Rhen.*, Kibersfeld, 1867, no. 120 ff., 463). During the thunderstorm he travels through the air in a chariot, which, according to Norse mythology, is drawn by two goats. The saga also tells us that his hammer, which he grasps with gauntlets of iron, is called *Mjöllnir*, and, further, that he wears a peculiar girdle, which increases his strength when his anger is roused. By virtue of his hammer he is also the god of human fecundity, using it to bless the rite of marriage. He is attended sometimes by the youthful *Mjálfr*, pre-eminent in swiftness, and sometimes by *Loki* the cunning. His mother is *Jord*, 'the earth,' whom the skalds identify with *Fjörgyn* or with *Hlökkyn* (O.H.G. *Hindana*). In the North, of which his attributes are personified as his sons, *Magni* ('power') and *Móði* ('courage'), or as his daughter *Þrúðr* ('strength'), and his abode is called *Þrúðheimr* ('realm of strength') or *Þrúðvangr* ('land of strength'). His consort is *Sif*, i.e. simply 'the wife.' In certain districts Thor came to be regarded as the son of *Óðin*, but this took place only after the latter had advanced to the position of supreme deity. He, nevertheless, maintained his prerogative as the chief object of belief and worship among the peasantry of Norway and Iceland till the downfall of paganism. In all the Norse countries he is the friend of man, succouring him in his conflict with demonic powers. The latter being represented mainly as giants, Thor's battles with giants form the theme of numerous myths, the materials of which were to a large extent furnished by widely diffused legends. In both Norway and Iceland temples were erected to him in large numbers; his cult has left traces in many place-names, while the numerous proper names formed with Thor are a further testimony to the prevalence of his worship among the Northern Teutons. It is true that outside this area we find but few data bearing upon his cult; but such as we have are in complete agreement with the evidence of the Norse sources. Thor's sacred tree was the oak (cf. L. Uhland, 'Der Mythos von Thor,' in *Schriften*, vi., Stuttgart, 1838).

(c) *Ziu-Tyr*.—The third pan-Teutonic god was the war god—the O.H.G. *Zio*, A.S. *Týr*, O.N. *Týr*, whose name appears in the O.H.G. *Ziustag*, A.S. *Tiwesdag*, O.N. *Týrdragr*. He has often been regarded as a survival of *Tiwaz*, the Teutonic sky god of pre-historic times, but in our extant sources he is never anything else than the god of war. His worship was especially prevalent among the Western Teutons. Thus he is met with on the Rhine as 'praecipuus deorum Mars' (Tac. *Hist.* iv. 64); the Alemanni, in virtue of their being devoted to his cult, were also called *Cyruarii*, i.e. 'worshippers of Ziu'; Batavian mercenaries stationed near Hadrian's wall dedicated altars to him as Mars *Thingus* (*Thing*, another appellation of *Zio*; cf. *Dien*, in Germ. *Dienstag*, 'Tuesday'), the god of the popular assembly (cf. Dan. *Ting*, 'parliament'). Among the Saxons he was known also as *Sahenôt*, and *Er* or *Ear*. His symbolic weapon was the sword. Norse myths depict him as having one arm, and tell how he lost his right arm by a stratagem of the Fenris wolf.

(d) *Frija-Frigg*.—In addition to these three male deities, all the Teutonic tribes recognised the goddess *Frija* (A.S. *Frig*, O.N. *Frigg*), the wife of *Woden-Óðin*. Her name (akin to Skr. *prīya*)

means simply 'the beloved,' 'consort,' 'wife,' and she was, accordingly, the goddess of married women, and the bestower of children. She shared with *Óðin* his growing prestige, and became the mother of the gods; but she had no such position in the cultus as was enjoyed by her husband or by Thor.

3. Local deities.—Beyond the four mentioned above, no other deity was acknowledged by all the Teutonic peoples. Among the Southern Teutons and the Norwegians we meet with the indefinite figure of *Frija's* sister, who is called *Volla* by the former, and *Fulla* by the latter—a name signifying the dispenser of wealth. But we find a large number of deities belonging to particular districts—in Germany chiefly female, in Scandinavia both male and female—and known to us mainly from legendary sources. The great profusion of such local deities is shown by the votive stones erected by German mercenaries and inscribed with the names of goddesses. One of the most prominent of these was the *Nebalensis* worshipped in the Rhine delta—the tutelary deity of fishermen and the bestower of fruitfulness. The *Marsi* accorded a tribal worship to *Tanfana*, whose festival was celebrated in autumn (Tac. *Ann.* i. 61). A goddess of seafaring, whom Tacitus (*Germ.* 9) identifies with the Egyptian *Isis*, was worshipped by the Suevi. A confederation of seven tribes on the coast of the Baltic or the North Sea offered sacrifice and worship to *Nerthus*, who had her seat in a sacred grove, and travelled through the various territories in the beginning of spring (ib. 40; cf. Mannhardt, *Wald- u. Feldkulte*, Berlin, 1877, i. 367 ff.).

4. Deities peculiar to the Northern Teutons.—The deities of the Southern Teutons cannot compare in point of numbers with those met with in the Scandinavian sources. These Northern deities, moreover, are associated with mythology rather than with the cultus. The Eddas speak of two different classes of deities—the *Æsir* and the *Vanir*. We are told in a certain saga that these two groups were once at war, but ended their mutual hostility by a treaty, and thereafter became merged in one (*Ynglinga Saga*, cap. 4; cf. Weinhold, *Der Mythos vom Wanaabrieg*, Berlin, 1890). Here we can also trace the growth of the *Woden-Óðin* cult, and its eventual triumph over the Norse cult of *Frey*. In the North, accordingly, the more outstanding figures among the *Vanir* were also objects of worship.

(a) *Frey, Njörð, and Freyja*.—At their head was *Frey*, whose principal sphere of worship was in the fertile plains of Sweden, his chief temple being at Uppsala. His cult found its way thence to Norway (Tromsø), and was then carried to Iceland by Norwegian colonists. The name *Frey* means simply 'the lord.' He was regarded as the god of the fertility of the soil, and thus also as the dispenser of wealth and prosperity—the deity from whose hand came sunshine, rain, and favourable winds. In the Eddas he is represented as travelling in a carriage drawn by a boar with bristles of gold. He possessed a marvellous sword, able of itself to fight, and also the ship *Skíðblaðnir*, in which he travelled through the air. His father is *Njörð*; his sister is *Freyja*. *Njörð* is really the Norse form of the *Nerthus* found in Tacitus. If *Nerthus* was, as Tacitus says, 'mother-earth' (*terro mater*), *Frey* was her consort, and then, when the female *Nerthus* became in the North the male *Njörð*, the latter became the father of the older god *Frey*, and, like him, also the bestower of wealth—wealth, however, more in keeping with Norwegian conditions, i.e. as acquired by seafaring. In Norway, wherever *Frey* was worshipped, *Njörð* also was worshipped, and their names appear side

by side in the Norwegian form of oath. The female Northun, on the other hand, survived in Frey's sister Freyja, whose name may have been derived from her brother's. A Norse myth speaks of Nótun ('place of ships') as the abode of Njörðr, and says that his wife, Sköll, the daughter of a giant, stays with him only three nights in Nótun, while he spends nine nights with her in his mountain home. In Freyja, who appears only in the Norwigo-Icelandic sources, are combined attributes of her brother and of Frigg. She was the goddess of fecundity and love. As a chthonic deity she has a share in the slain. She has the elf-like power of flying through the air in the form of a falcon, while legend endows her also with a resplendent breast-ornament, the *Brisingamen* ('the sparkling jewel').

(b) *Balder*.—Of the other Norse deities the most prominent was Balder, whose name signifies 'light,' 'the bright one.' Nothing is known of a Balder-son, and what is told of him by Saxo Grammaticus and the Eddas consists of mythical narratives which group themselves round the subject of his death. The *Snorra Edda* says that he was noted for his lustrous appearance and his gentleness of nature. It is clear that, in the latest form of the myth, Balder has been endowed with certain attributes of Christ. His death, according to Saxo, was due to Hothrim (Höfr), who for the occasion availed himself of a magic sword; the object of the conflict was the winning of the beautiful Nanna, who was the lady-love of Hothrim and to whom Balder also had paid court (*Hist. Dan.* i. 110). In the Edda, on the other hand, Nanna is Balder's wife, and Balder is the favourite of the gods, who were forewarned of his doom by evil dreams. His mother Frigg, accordingly, made all animate and inanimate things take an oath that they would not injure Balder, and only the mistletoe remained unsworn. In this form of the myth, however, it is not Höfr, but Loki, who perpetrates the deed, Höfr being a blind *Áss* who acts merely as the instrument of Loki. Thus, when the *Áss* cast stones and other missiles at Balder, as they were wont to do in play, Loki thrusts the mistletoe hough into Höfr's hand and so instigates the throw which kills Balder (*Snorra Edda*, i. 173 ff.). In both forms of the myth Balder was avenged by a brother, whom Óðin begot for the purpose; this brother appears in Saxo as Bona, and in the Edda as Váli, of whom the *Völuspá* says that he will share the sovereignty in the new world. According to the Norse saga, Balder had a son named Forseti ('president'), who was the best of all judges, and is probably to be traced to the Frisian *Forste* (cf. B. Bugge, *Studien über d. Entstehung der nord. Götter- u. Heldensagen*, Munich, 1889; Fraser, *GB*, London, 1900, iii. 226 ff.; P. Kauffmann, *Balder*, Strassburg, 1902; Schück, *Studien i nordisk Litteratur- och Religionshistoria*, Stockholm, 1904, ii. 1 ff.).

(c) *Heimdallr*.—Another of the *Áss* named in the Norse sources is Heimdallr, i.e. 'world gleam,' 'he who shines over the world,' the sentinel of the *Áss* on the border of the Divine world, and as such provided with the *Gjallarhorn*, on which he sounds a blast at the outbreak of the last great battle between the gods and the demonic powers. In his capacity of watchman he requires less sleep than a bird, and sees equally well by day and by night. His ears are so acute that he hears the grass growing on the earth, and the wool on the sheep's back. According to a saga in the Edda, he is the son of nine sisters, daughters of the female sea-demon Rán, and derives his enormous strength from earth-force, the ice-cold sea, and bear's blood. Night after night upon the foaming cliff he wrestles with Loki for the possession of Freyja's

Brisingamen, and wrests from him the stolen jewel.

(d) *Minor and later deities: Ullr, Hoenir, Viliar, Bragi*.—(1) Still another figure numbered amongst the gods by the *Snorra Edda* is Ullr, whom Saxo calls Ollerus, making him the viceregent of Óðin during the latter's absence (l. 130 ff.). Ullr is highly skilled in fishing and ski-running, and is conspicuous for his beauty of form. (2) The figure of Hoenir as regards both his name and his character, is difficult to explain. In the sagas he is often found in alliance with Óðin and Loki, the three being repeatedly associated in tales of adventure. So, too, the *Völuspá* represents them as having created the human race, but here Hoenir never becomes prominent. He fills a peculiar rôle in the legend of the war with the *Fens*. After the treaty of peace he was given as a hostage to the latter, amongst whom he became notorious for his mental incapacity, leaving everything in the hands of his fellow-hostage Mimir. The only quality in which he excels is swiftness. (3) In the Eddas we read also of Viliar, the son of Óðin and the giants Gríð, as one of the gods. He is the tactician *Áss*, and bears a striking resemblance to Váli. Like the latter, he is destined by birth to be an avenger. He avenges his father Óðin by thrusting his sword through the heart of the Fenris wolf, and wrenching apart the creature's upper and under jaws. He shares with Váli the sovereignty of the renewed world (*Völuspá*, 53). (4) The latest group of Norse deities includes Bragi, who with Óðin is the god of poetic art. He was really the skald Bragi, who lived in the 9th cent. and was accorded a place among the *síngljófar*. In Valhöll he acts as Óðin's counsellor, and, with other *síngljófar*, receives the kings who die in battle. As an *Áss* he becomes a son of Óðin. He was noted for his long beard, and, according to the later sagas, was the husband of Iðun, who bestowed the gift of youth.

(e) *Loki*.—A peculiar position among the Norse deities is assigned to Loki. He is the *Áss* who sometimes succours, sometimes works injury; he is sometimes an ally of Óðin and Thór, and their comrade in travel, while, again, he seeks to overreach and deceive them. His double character makes him a favourite theme of poetic legend, and he became the nucleus of mythical incidents and Christian stories about Satan. Loki is in reality evolved from the chthonic elves, and in his original form he still survives in Scandinavian superstition as a domestic spirit. His chthonic character shows itself also in the blood-covenant which he makes with Óðin, while his elfish nature is seen in his power of assuming at will the form of a woman or an animal, in his artistic skill, his dexterity in theft, and his malicious cunning. His beautiful and graceful appearance and his lameness are characteristics also found among elfish beings. After the process of development by which the elfish appellation *loki* (related to *lida*, 'to look in,' as *hólða* to *Áslan*, 'to hide') had become personified as Loki the *Áss*, the latter joins with Óðin and Hoenir in the creation of man; he wanders with these gods in quest of adventures; he brings the apples of Iðun to the giants, and in the form of an eagle takes them away again; in the shape of a mare, after union with the stallion of the architect of Aegard, he gives birth to Óðin's eight-footed steed Sleipnir; he cuts off Sif's hair, and then brings hair of gold for her from the dwarfs; he accompanies Thór upon the expedition in which the latter recovered his hammer from the land of the giants, and also upon his journey to Utgarðaloki. But Loki also brings about the death of Balder, and it was on this account that Norse poetry fastened upon him

the saga of the chained monster, telling how he was fettered by the Asas. Among the latter his wife is Sigyn, and their son Nari.

In consequence of his destructive propensities, Loki became the enemy of the gods, and thus also the giant who at the head of the demonic powers has a share in bringing about the dissolution of the gods and the world. In this, the latest, phase of the myth, his wife is the giantess Angrboða, 'the worker of calamity,' while his children are the Midgard serpent, the Fenris wolf, and Hel, the queen of the under world (cf. A. Olrik, 'Loke i myre folkesoverlevring,' in *Danske Studier*, v. [1906] 193 ff., vi. [1909] 66 ff.; *Festschrift zu Paulsen*, 1911, p. 548 ff.; Colander, *Loke mytiske overlevring*, Upsala, 1911).

(f) *Female deities*.—In the Norse poetic literature, moreover, we find the names of numerous female beings, the *gyðjur*, but in most cases the name is all we learn of them. In addition to Freyja, the sister of Frey (see above), the Norse peoples recognised Gefjon, who was at one time regarded as the goddess of the fruit-yielding earth, and was even worshipped as such (cf. A. Olrik, in *Danske Studier*, vii. [1910] 1 ff.), and to whom the Danes ascribed the present position of the island of Zealand. She typified eternal youth, and was the guardian of the apples which rejuvenated the gods. Later tradition made her the wife of Bragi. Female deities having special functions are found in Grá, the messenger of Frigg; Sága, the goddess of wisdom, who in company with Óðin drank wisdom from vessels of gold at Sökkvabek; Snótra, who imparts wisdom to women; Sjöfn, who unites lovers; Lofn, who acts as intermediary between gods and men; Hlin, protectress in times of danger; Sýn, custodian of domestic peace; and Vor, guardian of oaths and treaties.

GODS, DRESS OF.—See *DRESS*, vol. v. p. 66.

GODĀVARI (Skr. *godāvarī*, 'granting water or kine'; but the name is more probably a Sanskritized form of the original Dravidian name *Gode* [Telugu *godē*], 'limit,' 'boundary,' in the sense that it divided two regions of the Dekkhin).—The great river of the central part of India, rising near Nāsik (q.v.), thence flowing E., and forming the boundary between the British District of Ahmadnagar and the Dominions of the Nizām of Hyderabad; thence through part of the latter territory, and finally falling into the Bay of Bengal in two branches—the E. or Gautami Godāvari, and the W. or Vasistā. Its total length is 506 miles. The Godāvari ranks high among the twelve sacred rivers of India, its chief rivals being the Ganges and the Nerbada. It is associated with the story of the wanderings of Rāma, who is said to have lived for a long time at a place called Panchavati, which is by some identified with Nāsik, but was probably lower down the course of the river. The chief sanctity attaches to the E. or Gautami branch, based on the legend that it was revealed by Rāma to the *ṛṣi* Gautama. Another story tells that it flows from the same source as the Ganges, and this connexion is shown by its name, *Vṛddha-gangā*, 'old lady Ganges.' Every part of its course is

sacred, and bathing in its waters washes away the foulest sin. Every twelve years the great Pashkara bathing-festival is held on its banks. One of the chief holy places is Trimbak (Skr. *Tryambaka*, 'three-eyed,' a title of Śiva), which contains one of the great *śiṅgas* of India. This is the reputed, but not the real, source. Here a place is shown under the name of Gaumukh, 'cow's mouth,' where the water drips from a lofty cliff through a stone cow's mouth, which the attendant priest decorates with leaves and flowers. Here the god is paraded in a litter every Monday; and every twelfth year, when the sun enters the sign of Leo, a great bathing-festival is held, the reputation of which is so great that the word *godāvari* is commonly used in Gujarat to express the number twelve (80 viii. 649 ff.). Nāsik, close by, is held to be one of the sacred places of India. Lower down the course of the river comes Bhadrābāham (Skr. *Bhadra-śāla*, 'lovely hill'), also known as Rāmātrītha, the sacred ford where Rāma is said to have crossed the river. It contains a famous temple dedicated to the god, which is a place of pilgrimage. As the river approaches the sea, the chief holy places are Rājāhmudry (Telugu *Rajamahendravaram*), which takes its name from the king Mahendradeva of the Orissa dynasty, and the village of Kotipali on the left bank of the E. mouth of the river.

GODDESS.—See *GOD, DEE MATHEE, FEMALE PRINCIPLE*.

GOETHE.—2. Life.—Goethe was born at Frankfurt-on-the-Main on 28th August 1749. The place was good and the time was great. For his was the generation of Herder, Voss, Bürger, and Schiller—a generation succeeding that of Klopstock, Wieland, Winckelmann, Kant, and Lessing. His father was a man of firm will and serious purpose; his mother a woman of warm, noble, and imaginative nature. He was trained in law studies at the University of Leipzig, though his likings all the while were for poetry and classical antiquity. Later, he pursued his law studies at the University of Strassburg. Here, at the age of 21, he met the gifted and unfortunate Lens; also the clear-headed Lessing and the strangely dreaming Jung-Stilling; and, most important of all, Herder, who, amid much interchange of thought, introduced him to the beauties of Shakespeare, and read with him certain other English works (1770-1771). Significant of Goethe's intellectual development is his writing to Salzmann in 1771: 'My views forwards is so strong that I can seldom compel myself to take breath and look backwards.' From Strassburg he returned for a short time to Frankfurt, whence he went to Wetzlar. It was while practising at lawyer-work, which he greatly disliked, that his *Göts* was produced, and met with the most enthusiastic praise.

In 1775, Goethe went to Weimar, by invitation of the Duke Charles Augustus, and there began those years of active service that ran on till 1798. To his friend Merck he wrote: 'We are playing the devil here; we hold together, the Duke and I, and go our own way.' The Duke's doings were boisterous enough, and Goethe did not fail to share them. Wieland soon became the fast friend of Goethe. For years the latter was more actively engaged in State duties, having been promoted to the work of the Privy Council, through the Duke's favour. His influence upon the Duke was beneficial. Of Goethe's relations with women, such as

his romance, earlier, with Lotte, and his Weimar relations with Frau von Stein, there is neither space nor call to speak here, as we are concerned with his life mainly in its intellectual development. Amid multiplying cares and distractions, Goethe maintained his interest in literary activities and plastic art; his official duties deepened his studies in science. Then came the years 1786-1788, wherein his life was made up of Italian sojourning, of which more will be said later.

After an absence of nearly two years in Italy, Goethe returned, and soon afterwards married a humble but winsome maiden, named Christiane Sophie Vulpius, in whose love he was happy. The years 1794-1806 were marked by the truly beautiful, and extremely striking, friendship of Goethe with Schiller. For the men were opposites, and did not readily draw to each other. Each was at first adversely critical of the other's work. In 1798, Schiller wrote that it would make him unhappy to be much with Goethe, who seemed egoistic; and for five years their friendship saw no advance. But, once an interesting start was gained, it remained faithful and fruitful to the end. Their despicable detractors they scourged in the *Jenais*, which varied very much in their quality. Goethe wrote to Schiller that their first cordial intercourse had been an epoch in his life; Schiller wrote to Goethe to the Countess Schimmelmarmann, in 1800, that 'there are in his nature a lofty integrity and truth, together with the highest earnestness in behalf of what is right and good.' Their correspondence shows how each was the complement of the other, and how each reinforced the other. When their union of hearts was broken by Schiller's death in May, 1805, it was an irreparable loss to Goethe, and his grief was great. A time of political troubles and distresses followed, until the peace that was concluded between France and Prussia in July 1807. Goethe's activities continued—official, literary, scientific, artistic. Years of revived life passed, but at length, in 1833, he had a serious illness, with slow recovery. Once recovered, however, he spent the years 1834-1839 in ceaseless activities, but 1835 was saddened by the death of his son, August. In 1831, however, his marvellous literary industry was proceeding. When he had put the finishing touches to *Faust*, he said to Eckermann that he considered the rest of his life a free gift. In the following year (22nd March 1832) he gently passed away. His death was laid beside that of Schiller—in death not divided.

a. Works and characteristics.—With Goethe's relations to religion and ethics we are here concerned in a particular manner, without in any way overlooking literary aspects. It may be remarked that his religion took the pantheistic form of a world-spirit unfolding itself into the whole and various forms of life and being. But the most characteristic thing in his pantheism is its sense of the cohesiveness of Nature—its universal unity. Nature is to him self-renewing, self-multiplying, self-loving, and self-revealing—a unity coherent, and growingly conscious of itself. His grasp of Nature proceeds from no casual mechanism, but from a unity, revealing itself in manifold ways. Anything like a machine-like conception was entirely foreign to his point of view. Nature was to him an infinite ocean, restless and heaving, or a boundless tide of ceaseless, glowing life. He would have none of the skilled analyses sought to be imposed on what was to him the all-and-over-living, exempt from application of mechanical and mathematical categories. Nature was to him God, and God Nature; man was a monad living in this God-Nature, enjoying it to the full, however many might be the metamorphoses through which he should be called to pass. In the spirit of man

Goethe found the same unity which for him marked the world of Nature. In these two worlds—the Nature-world and the Spirit-world—the Divine was for him the source of all harmony, pantheistic as the foundation of such a union might be. *Faust's* development is an instructive illustration. Goethe represents *Faust* as yearning for an inner comprehension of the secrets of Nature; he shows him as longing for a sense of oneness with her life, such that the intellectual and the sensuous spheres alike shall be transcended; he depicts him as demanding to be set above the limitations of human nature, and to share, though still as man, the innermost life of Nature. To Goethe the whole vesture of man's thought was but a parable or likeness of the eternal infinity of Nature—that *unendliche Natur* at whose breasts all things are nourished.

The philosophic thought which underlay Goethe's Nature outbursts was that of endless transformations of eternal substance in a universal activity, for the spell of the Spinozan ethics never ceased for him. But his Nature-contemplation was touched to joyous strength by Leibnizian optimism. In his indomitable study of Nature as one whole, he was led to anticipate organic unity, and to reject everything of the nature of final discrepancy or perfect isolation. His evolutionary instincts led him, in his studies of organic Nature, to lay fundamental stress on the type. Indeed, his aim was precisely for final unity, and he expressly said that the harmony of the whole makes every creature what it is.

In the literary work of Goethe, the creative and the critical functions were conjoined in a conspicuous manner, even if we should be obliged to hold that his creative spirit suffered in its results from the chill reflectiveness of the critical mind—from the prevalence of philosophic thought over the personal springs of nature. He distinctly recognized that there is a destructive criticism, and also a criticism creative or constructive; and he took the poet's aim, and the measure of its fulfilment, to be the supreme tests in criticism. His was the well-known and felicitous summarizing of criticism in the formula *im Ganzen, Gutes, Schönes, nützlich zu leben*—'to live resolutely in the Whole, the Good, the Beautiful.' Great as was Goethe's literary achievement, it must not for an instant be supposed that he reached the highest level of excellence in all the various kinds of work which he attempted, for that was by no means the case. Everywhere in his work there is high literary distinction, but not always, or perhaps anywhere, supreme excellence. The real ground of the profound impression which he made as a literary figure we shall see later. Meantime, we take critical account of many of his more important literary efforts. His *Götter und Helden*, a juvenile but captivating drama, attracted the attention of Scott, and was not without influence on *Ivanhoe*. It sets before us the ideal of freedom, in rude and natural forms of active and heroic will, battling against circumstance, and asserting its independence, under a native sense of justice. A like cry for freedom—the freedom of the artist—marks Goethe's *Prometheus*, which contains passages of living interest.

Of Goethe's superb power as a writer of ballads, instances are seen in his 'Bride of Corinth' (*Die Braut von Korinth*), 'The Erl-King' (*Der Erl-König*), and 'The God and the Bayader' (*Der Gott und die Bajadere*), which witness to his wide-reaching insight and subtle charm of expression, and abound in glimpses of beauty and mystery.

Goethe's sojourn in Italy, passed in rapt contemplation of Art and Nature, developed in him the spectatorial attitude rather than that of practical activity. This attitude, with its own ethical conception of the world, is reflected in his exquisite

drama *Iphigenia*, his refined play *Tasso*—neither of which, however, proceeded from a Shakespeare—and in his serious work, *Wilhelm Meister*. Of the last we shall presently speak, but meantime remark of his *Tasso* that he found it hard to complete this fine and penetrative piece of work. But he said to Eckermann that the play was bone of his bone and flesh of his flesh. The *Tasso* of the drama, it should be said, is in certain respects not at all like the *Tasso* of historic fame. In the same way, Goethe's *Egmont* differs in many respects from the *Egmont* of history, and is ruined by his inability to read hostility where it exists. There is something not quite admirable in Goethe's treating a noble figure of history, not only without any idealizing, but with positive reduction of moral stature. For all that, there are many fine things in the work. His *Iphigenia*, already mentioned, is a figure admirable and pathetic, drawn by Goethe's Hellenism with characteristically Greek reserve. Not less delicately drawn are the figures in his *Hermann und Dorothea*, which, while truly individual, are significant of the typical. Redolent of the Greek spirit they may be, but they remain genuinely German. Artistically, the piece is perfect.

Goethe's ethical attitude, to which reference has already been made, is a rather difficult subject, as is seen in his resolving morality into systematized self-expression and self-realization, even in the case of the self-development of *Faust*, wherein are incidents not easily brought within the ethical sphere. But Goethe's own moments of aggressive paganism are not to be forgotten, and they cast a significant light on his rather absurd impatience with what he regarded as Christianity's ascetic obfuscation of the senses. This is not to overlook the fact that he felt the force of Kant's thought with respect to practical problems of ethics. It was in one of his later stages that he took Christianity to be a religion inculcating reverence in three kinds—for what is above us, for what is below us, and for equals—and this Neo-Christianism, if it may be so termed, consisted in the fusion of these three elements.

The artistic view of life finds expression in Goethe's *Wilhelm Meister*, which has no lack of wealth of life and thought, though wanting in artistic finality. Culture, or *Bildung*, sums up his aim, and the work has been aptly styled an *Odyssey* of culture. The world is for him harmonized in cultured society. In spite of ethical and artistic drawbacks not difficult to find, many have been able to learn much from it. It presents the world as a 'vast quarry' of materials, which it is for us to reduce to an ideal form in virtue of the creative power within us. Thus a vague and formless idealism will be supplanted, under life's disciplinary processes, by definite and well-chosen activity. It is as a philosophical realist that Goethe so speaks, his own happiness being, in some sort, a religion to him. But the work insists that man shall develop his sentient and perceptive powers, no less than his powers of moral culture, in order to the harmonious working of all the powers of his nature. All these teachings, as to the wisdom and strength of life, are set forth in a manner as far as possible removed from didactic or moralistic presentations, in the rich and varied guise, indeed, of animated description and thrilling romance. This is not to say, however, that the work is not dull and prosaic enough in places.

In 'The Sufferings of Young Werther' (*Die Leiden des jungen Werthers*), Goethe gave utterance to that reaction against the domination of the understanding which marked the 18th century. He made the work expressive of the high sensibility, and the feeling for Nature, which were

being in new ways developed. But his Werther was too given over to the sway of sensibility to have it, as in Goethe himself, controlled and regulated by reflective reason. Hence the work has little healthiness of tone, and is infected with the malady of the age—the excessive sentimentalism of the closing 18th century.

Goethe's 'Election Affinities' (*Die Wahlverwandtschaften*) is a fine prose work, telling of the tragic significance of the relations which he calls 'elective affinities,' under given circumstances. The book is marked by great feeling, high imagination, and deep knowledge of man and the world.

As in *Wilhelm Meister*, so in the 'Poetry and Truth' (*Dichtung und Wahrheit*), the culture idea is emphasized. The work is an autobiographical record of somewhat unusual and informal character, but it presents, in light and graceful style, more than personal experience of his early life; it even reflects the national currents of thought and feeling. Famed as Goethe was of world-literature, he here complains that national subjects had practically no treatment from the friends of his early days. It contains, too, in a noteworthy way, his scorn of the 'melancholy, atheistical twilight,' wherein Nature is viewed as mere eternal and unaided movement of matter.

On the development of *Faust* we have already touched, but it remains to remark that *Faust*, as a work, is unique and incommensurable. It may be said to be philosophic for the way in which it embodies criticisms of life. The power and prestige of Goethe as a critic of life are extraordinarily great. In Germany itself *Faust* has been styled a world-epic, or *Welt-epos*, because of its vast range and wondrous universality. Great, however, as it is, it is scarcely to be taken as the most characteristic product of Goethe's genius, so marked by factual tendency and breadth, as of an inductive philosopher. But even in this work, knowledge of a true sort is to come, in its author's view, through direct, living, and wondering contemplation of Nature—looking 'into her breast as into the bosom of a friend'—and not through dry thinking or analysis. To know life in its concrete variety, pressure, and fullness is to be able to appreciate *Faust*. Here Goethe's religion is 'the religion of the dead,' which, in his pagan moods, he elsewhere describes as a kind of religion of healthy-mindedness, if that may be so termed which consists in sheer absorption in the world and its joys. But his religious attachments are characteristically vague. In an advanced part of *Faust* we find the 'religion of the dead' reappear, when it is announced that we have power to redeem 'him who labours ceaselessly striving.' It is to be noted that in *Faust* the problem of evil was what engrossed Goethe—whether to be regarded as an essential element of the universe or as a merely negative thing, a transient appearance to be overpowered. The attitude of *Faust* is that two souls dwell within his breast, the one fain to separate itself from the other. Should evil be destined to be overcome, Goethe would take *Faust* to represent the triumphant process. This is where the ethical worth of *Faust* is to be found, in its manner of typifying or embodying the modern spirit or tendency: in *Faust* is set forth the essential man—bold in aspiration, all-consuming in desire, hopeless in fallen condition, and exultant in ultimate salvation—so as to foreshadow the destiny of the human race. He expressly aspires to take up into himself what is portioned among the whole of humanity. The whole drama has profound symbolic significance. In its course the claims of the individual and the social spirit will mayhap be harmonized in an ideal of practical culture. Its basal thought is that evil is not a positive power, but merely some-

thing negative—an interpretation of moral evil, it must be said, of too optimistic a character, and one which is not quite clearly and satisfactorily wrought out, so far as the *Lösung* (the purification or rectification) of Faust's character and development is concerned. The program is wanting in inwardness of character. It is in the Second Part of *Faust*—often partially misconceived and greatly undervalued—that we see the triumph of humanity in Faust, mounting the heavens after his soaring ideal. The Second Part lacks, of course, the passion of the First; its erudite air is more felt; its philosophic intent and prolonged manipulation are more evident; its thought is less rapid and spontaneous; but, in spite of these and other defects, it has abundant genius, and does not fail to prove itself the completion of the First, as the present writer has elsewhere shown ('The Philosophy of Faust,' in *Essays Literary and Philosophical*). Goethe has contrived to introduce geology, optics, and chemistry into *Faust*; but such didactic attempts to combine science with poetry must always remain hazardous, if only because science cares nothing for the individual, while individuality is of the essence of art. *Faust* has, at any rate, given the world a supreme, unforgettable lesson as to progressive development being the essential mode whereby such conditioned beings as we are may hope to reach the ideal—the perfection of love.

The famous *Einigung*, or dedication, now used as Introduction to Goethe's poems, is of unsurpassed loveliness in German literature, impressing one, it has been said, as a lofty vestibule, with the awe-inspiring grandeur of the temple to be entered. Its lovely message leads up to the self-revealing of the Divine form of poetic Truth, who gives him a veil, and tells him how to see it.

Goethe's 'Italian Journey' (*Italienische Reise*) was worked up thirty years after the journey itself, from journals and letters belonging to that time. The book presents, in a most vivid form, the features of delight and charm that mark Italian travel; but it is even more interesting for its psychic experiences and revelations. On 6th September 1787 we find Goethe writing from Rome:

'So much is certain: the old artists had as great a knowledge of Nature, and as certain a notion (*Begriff*) of what can be represented, as Homer had.' And, further: 'These high works of Art have been, at the same time, supreme works of Nature, produced by men according to true and natural laws; all that is arbitrary or imaginary falls away; here is necessity, here is God' (*Ital. Reise*, ed. Deussen, Berlin, 1877, p. 202).

The way to perfect Art, in form and content, seems to have lain for Goethe through looking into the depths of Nature and Man. He held that in Art and Poetic personality is everything, and that the artist, to create something fit and capable, must be himself fit and capable. The comprehensive character of Goethe's interests and powers of observation needs no mention, but his strange limitations are not always clearly known and understood. His intense dislike of Byzantine and Gothic architecture; his huge indifference to the early art of Italy; his lack of interest in Medieval and Christian Rome; his supreme neglect of historical associations, as outside the realm of *Anschaung*, or intuition—all, in diverse ways, mark limitations due to a sense of form which kept from him the power of appreciation. Greek sculpture, Renaissance painting, architectural Rome—these were things that caught up, in significant fashion, his sense of artistic form. The Classicism to be found in Goethe was, it seems warrantable to say, more the result of this Italian journey and his study of antique Art than of direct contact with the ancient Classical Literature. It is not meant, in saying this, that his Hellenism had in it any-

thing of the nature of a literary pose. The chief result of his Italian sojourning on Goethe's work was the plastic quality imparted to it. When he says that Art and Nature are only one, that is because Art is for him the highest manifestation of the working of Nature. Goethe's world is the world of the eye. His evolutionary instincts led him to view the single specimen in its relation to the organic whole. We find him writing to Herder from Naples on 17th May 1787, that the *Urpflanze*—or grand type of all plants—is the most marvellous thing in the world, 'which Nature herself might envy me' (*Ital. Reise*, 208).

The 'West-Eastern Divan' (*West-östlicher Divan*) is concerned with the life of the East, and is not now to be dwelt upon; it must suffice to say that the work was largely a fruit of his study of the Persian poets, and is rich in its own varied metres, and wise, beautiful poems. It proved a well of inspiration to Rückert, Platen, and other poets.

3. Influence.—We cannot now pursue the study of Goethe's works further, but must be content to appraise his genius, work, and character in more general and comprehensive terms. The vitality of his ideas is very striking; the range of his activities was certainly extraordinary. Activity was to him life. The great principle of activity was woven into his philosophical conception of the universe. For he raised himself to contemplate the whole range and scope of man's existence, and pleased by his insight to the central core of reality. Thus he came to fashion the *Weltanschauung* which was his own (see the present writer's 'Goethe as Philosopher,' in *Literary Essays*). Sane and discerning as a literary critic, pre-eminent in genius and gifts as romancer, dramatist, and lyrical poet, Goethe yet did not escape originality in science, and in the criticism of Art. Emerson quaintly said of him that 'the old Eternal Genius who built the world has confided himself more to this man than to any other' (*Works*, vol. 1., London, 1890, 'Goethe, or The Writer'). It seems to be just in the totality of his achievement that Goethe's power and fascination lie; his career embodied a deeper synthesis of life—more of his own ideal of life in the Whole, the Good, and the Beautiful—than men had before seen; and all this, in spite of those limitations, shortcomings, mistakes, puerilities, and pessimisms, which are, even in his case, not at all to be denied. Striking as is the influence of Goethe on the whole German nation, he exerts an influence hardly less strong on the cultivated classes of Britain and America. Still, his aims were too intellectualized; and his striving was really too restless. He thinks restless activity proves the man—*wer rastlos betätigt sich der Mann*. One might almost apply to him what Marmonet said of Voltaire, that repose was unknown to him. Not even the calming power of Spinozism greatly helped him here. His will was not sufficiently invigorated by moral affections. He also lacked spiritualized unity of conception. But, in the sphere of intellect, he towers sublime, with amazing vigour and persistency in his intellectual performances. His ideal is *reine Menschlichkeit*, or humanity purified of every hampering element. In his latest years, at any rate, he cherished a belief in immortality; and it seems in some ways rather a fine thing that he declared the weightiest ground for that belief to be the fact that we cannot do without it.

JAMES LINDSAY.

GOKARN (Skr. *gokarna*, 'cow's ear').—A famous place of pilgrimage on the W. coast of India, in the N. Kanara District of the Bombay Presidency; lat. 16° 32' N., long. 74° 10' E. The name is based on a legend that Brahmā produced four eagles to carry on the work of creation, which they refused to undertake. He then formed Siva from his forehead. Siva hesitated to create the universe until he could devise measures to render it imperishable. So he dived into the ocean and remained for many ages in meditation. Brahmā, weary of the delay, moulded the earth and filled it with life. When Siva heard of this creation, he was wroth, and, rising through the water, struck the land. He attempted to force his way through it with his trident, when the earth-goddess, taking the form of a cow, bagged the angry god, instead of destroying her, to rise to the surface through her ear. Siva accordingly passed through her ear, and rose on the Gokarn beach, where a cave, known as the *Eudrayoni*, or 'Rudra's passage,' marks the spot. A story of the same type tells how the hero Parashurama, 'Rama with the axe,' by severe penances and propitiation of Varuṇa the sea-god and Bhūmī Devī the earth-goddess, was allowed to claim as his own as much land as could be covered by his axe when swung from Gokarn, which was then the Land's End, into the southern ocean. Thus was created the land of Kerala, reaching from Gokarn to Cape Comorin, which now stands at the S. of the Peninsula. These legends seem to embody a tradition of land elevation in pre-historic times, which is confirmed by modern geological researches (*Manual of Travancore*, 1906, l. 212 E.).

The chief temple at Gokarn is that dedicated to Siva under the title of Mahābalasvara, 'the very powerful Lord,' built of granite in the Dravidian style. It contains the famous *linga* known as *Ātma*, or 'self,' which, in his wrath at the creation of the world by Brahmā, Siva created out of his own essence, and long wore round his neck. There are also numerous shrines named after various gods and saints who visited the place and performed austerities here, including Brahmā, Viṣṇu, Siva, the ṛṣi Agastya, Rāma, and Ravana. The place is visited by hosts of pilgrims and religious mendicants, as well as by those who bring the bones and ashes of deceased relatives, which they consign to the waters, believing that this ensures for them eternal felicity. Bathing here cleanses from all sin, even that of murdering a Brahman. The mention of the place by Kalidāsa carries back its sanctity to the beginning of the 7th cent. A.D. (*IGIH*, [1906] 17). It is also mentioned in the *Mahābhārata* and *Rāmāyaṇa* (J. Muir, *Original Sanskrit Texts*, 1873, iv. 285; R. T. H. Griffith, *The Rāmāyaṇa of Valmiki*, 1905, p. 54), the sacred books declaring that he who spends three nights here and worships Siva gains as much merit as if he performed the horse-sacrifice; while he who remains twelve nights becomes pure in heart. Dr. John Fryer, one of the early travellers to India, visited Gokarn in 1676, and has left an interesting account of the place.

W. CROOK.

GOKUL (Skr. *gokula*, 'a herd of kins,' 'a cow-house').—A sacred town and place of pilgrimage situated on the left bank of the river Jumna, in the Muttra (Mathura) District of the United Provinces of Agra and Oudh; lat. 27° 30' N., long.

77° 46' E.; sacred as the scene of many legends connected with Kṛṣṇa. It is in reality only the waterside suburb of Mahābān (q.v.); and all the traditional sites of Kṛṣṇa's adventures which the *Purāṇas* fix at Gokul are also shown at Mahābān, which is the place alluded to whenever Gokul is mentioned in Skr. literature. But, as it retains its ancient name, this suburb is considered much more sacred than the original town. It is especially important as the headquarters of the Vallabhāchārya or Gokulāstha Gaudīas.

'The Episcopates of the East, who are not ashamed to avow their belief that the ideal life consists rather in social enjoyment than in solitude and mortification. Such a creed is naturally destructive of all self-restraint, even in matters where indulgence is by common consent held criminal, and the proclivity to which it has given rise is so notorious that the late Maharaja of Jaypur was moved to expel from his capital the ancient image of Gokul Chandra, for which the man entertained a special veneration. He further conceived such a prejudice against Vallabh in general, that all his subjects were compelled, before they appeared in his presence, to mark their foreheads with the three horizontal lines that indicate a votary of Siva. The scandalous practices of the Gaudīas and the scandalous subservience of the people in ministering to their gratification received a crushing aspect in a case allowed for trial before the Supreme Court of Bombay in 1891' (Groom, p. 204).

GOLDEN AGE.—See **AGES OF THE WORLD**, **FALL** (Ethnic).

GOLDEN RULE.—The Golden Rule, as it is often called, is found in two different connexions, and in slightly differing forms, in Mt 7th and Lk 6th. In Mt. it occurs in the Sermon on the Mount in the form:

'All things therefore whatsoever ye would that men should do unto you, even so do ye also unto them: for this is the law and the prophets.'

In Lk. the saying runs:

'And as ye would that men should do unto you, do ye also to them likewise.'

While in Lk. the maxim is found in immediate connexion with other sayings bearing on conduct towards our neighbours, in Mt. this is not equally the case; it follows on directions relating to instanty in prayer and on the promise that God will give good things to those that ask Him. It has, therefore, been argued that, while the saying formed part of the original *Logia* on which, in this portion of his Gospel, the Evangelist is drawing, St. Matthew must have wrongly inserted it in this particular connexion; and that it would more appropriately find a place among the precepts relating to our conduct to our neighbour in 5th, or should follow on vv. 1st and v. 6th of the 7th chapter. In the latter case it would seem, however, that the intermediate verses and not the saying itself have been wrongly inserted. The argument that the saying has got into a wrong place in Mt. is not very convincing; the connexion between it and the immediately preceding verses is not really very forced or unnatural. The train of thought would seem to be that, as God gives good gifts to those who ask Him, so we as Christians ought to render to others the sort of service, the good things, which we should wish them to render to us. That this is the connexion of thought which the earlier translators recognized in the passage is made probable by the fact that most of the early Latin versions, though not the Vulgate itself, render: 'Whatever good things, therefore, you wish that others should do unto you, even such do unto them; for this is the law and the prophets.'

We may observe that both St. Matthew and St.

Luke, though they differ as to the precise content in which the words occur, equally regard them as a summary of the principles by which the conduct of Christians in respect to their neighbours is to be governed. And this is the position which the maxim holds in the earliest quotations of it which are to be found in Christian literature outside the Gospels. The earliest of these occurs in the well-known passage in the Western (Cod. D) recension of the decree of the Council of Jerusalem, in A.D. 48. It runs as follows:

'It has seemed good to the Holy Spirit and to us to lay upon you no greater burden than these necessary things: to abstain from meats offered to idols, and from blood, and from fornication, and whatsoever ye do not wish should be done unto you not to do (or do not do) to others—from which if ye keep yourselves ye shall do well, being borne along in the Holy Spirit—Fare ye well.'

Now, there has arisen a considerable controversy between Blam and Harnack whether the Western or the text of other great uncial MSS represents the earlier form of text in the Acts, and the controversy has especially ranged itself about this particular passage. Blam holds that Cod. D, originally composed probably at Rome, represents the first rough draft of the Acts put forth by St. Luke; while the ordinary text gives us the more polished and elaborated recension which he ultimately dedicated to Theophilus. Harnack, on the other hand, maintains that the text preserved in the non-Western MSS embodies St. Luke's original recension, and that Cod. D represents a later and comparatively ignorant recension, dating probably from early in the 2nd century. This, on the whole, is the view taken also by W. M. Ramsay. The question, however answered, is not, for our present purpose, of first-rate importance; for those who regard the insertion of the Golden Rule in this passage as the work of a later editor still assign to that editor a very early date—not later than the opening years of the 2nd cent.—so that in any case the appearance of the saying in this connexion is a proof of the wide acceptance which the Rule, in this negative form at least, obtained in the early Church. And that, in spite of its absence from the received text, it continued to hold a place in this passage of the Acts down to a comparatively late date, we have interesting evidence from the 'Dooms of King Alfred.' One of them, quoting this passage, runs as follows:

'It seemed good to the Holy Ghost, and to us, that we should set no burden upon you above that which it was needful for you to bear, now, that in, that you forbear from worshipping idols, and from eating blood, or things strangled, and from fornication, and that which ye will that other men should not do unto you, do ye not that to other men.'

On this last precept the king observes:

'From this one doom a man may remember that he judge every man righteously; he need heed no other doom book. Let him remember that he adjudge to no man that which he would not that he adjudge to him, if he might judgment against him.'

Thus emphatically, but reverently, does the king enforce our Lord's own comment on the principle 'This is the Law and the Prophets' (see *Expt* x. (1890) 286 E., on A.C. 15th); and, for the reference to King Alfred's 'Dooms,' Estlin Carpenter and G. Harford's *Composition of the Homotouch*, ed. 1902, p. 103.

We observe, further, that in this earliest quotation the form in which the saying is presented is not the positive form in which it appears in both Mt. and Lk., but the negative form, i.e. as a prohibition, and not as a command: 'Do not do to others that which you would not they should do to you.' We note that the same characteristic is observable also in the two earliest quotations in which the phrase is to be found in post-Biblical Christian writings. The first of them is at the opening of 'The Way of Life' as presented in the *Didache*:

'First of all, thou shalt love the Lord thy God who made thee. Secondly, thou shalt love thy neighbour as thyself. All

things, then, whatsoever thou wouldst not wish to be done to thee, do thou also not do to another.'

The second reference occurs in the recently recovered *Apology of Aristides*. Towards the close (ch. 18), in giving a summary of Christian belief and practice, Aristides uses the following words:

'They [i.e. the Christians] do not commit adultery, do not commit fornication, do not bear false witness, do not covet their neighbour's goods, honour their father and their mother, love their neighbours, judge justly, whatever they do not wish to be done to them they do not do to another; they exhort them who injure them and make them friendly to themselves.'

Harnack considers that both these passages may very likely be taken from an early Christian catechism in wide use in different Churches; but, whether they are so or not, the appearance of the Golden Rule in two distinct summaries of Christian practice testifies to the importance attached to it in the early Church.

But the precept, at least in its negative form, is by no means confined to Christianity; it is to be found in the earlier Judaism, and on the lips of philosophers outside both Judaism and Christianity. For the first we may refer to *To Abi*, which runs: 'Take heed to thyself, my child, in all thy works, and be discreet in all thy behaviour; and what thou thyself hast, do to no man.' Hillel, the famous Jewish Rabbi, when asked for a short summary of the Law in relation to a man's neighbour, is reported to have given it in this form: 'Whatsoever thou wouldst that men should not do to thee, do not do that to them' (cf. *Bab. Shabb. 31a*). For other parallels, see C. Taylor, *Sayings of the Jewish Fathers*, Cambridge, 1907, p. 142 f., and cf. Hirsch, 'Golden Rule,' in *JE* vi. (1904) 21 f.

Among the Greeks, Isocrates is mentioned as enunciating the maxim, 'Do not do to others that at which you would be angry if you suffered it from others' (*Nicoles*, 81b). Plato, in more than one passage in the *Republic* (e.g. iv. 443), lays down a rule of a similar purport. Aristotle, when questioned how we should behave to our friends, is quoted by Diog. Laert. (v. 21) as saying: 'Exactly as we would they should behave to us' (cf. *Nic. Eth.* ix. 8). See also Epictetus, fr. 42.

In the wider world outside we find two further enunciations of the precept—one in a precise, the other in a less definite, form. Confucius, drawing, as he said, the maxim from the study of man's mental constitution, laid it down in the following terms: 'What you do not like if done to yourself, do not do to others' (cf. J. Legge, *Chinese Classics*, Hongkong, 1861-72, I. 191 f.). This is the Golden Rule in its negative form, but he expressed it also in the positive shape of 'reciprocity' or 'as heart to heart.' This was embodied by him in a characteristic Chinese symbol, and is given in places as the ultimate rule of life (*EB* vii, art. 'Confucius,' p. 912). Something like the same thought appears in the writings of his older contemporary Buddha; but here no precise words give expression to the apothegm; his principle more nearly approaches to the maxim of St. Paul, 'Rejoice with them that rejoice; weep with them that weep' (Ro 12th); and a certain self-centredness in his system, which makes the doing of kindnesses to others valuable mainly on account of the merit thus earned for a man's self, makes it clear that such a principle as our Lord enjoins was not altogether cognate to his thought (Copleston, *Buddhism Principles and Precepts*, London, 1902; but cf. A. J. Edmunds, *Buddhist and Christian Gospels*, Philad. 1902, § 12).

It would appear, then, that as a negative or limiting principle, a principle of justice, the maxim obtained a wide acceptance among the best and most enlightened intellects of the ancient world; but it was for them a restraining principle, a guide of what they ought not to do rather than of what

they ought. With our Lord, however, it has a wider sweep than this: with Him it is a rule of universal application, a rule of benevolence embracing all our relations to our fellow-men: 'All things therefore whatsoever ye would that men should do unto you, even so do ye also unto them: for this is the law and the prophets.' As such it has been accepted, and acted upon, by Christians ever since. But, as thus interpreted, it is obvious that the principle needs explanation and some limitation. Almost from the outset this seems to have been felt. We have already noticed that in some of the early Latin versions the words 'good things' were inserted after the word 'whatsoever'. This implies clearly that those who made the insertion recognised that it was not everything that we might be said, or thought, or fancy ourselves to wish for ourselves that we are bound to do for others. We might wish for ourselves, for instance, some form of illot or undesirable pleasure; and we certainly are not bound to provide for others such pleasures or to assist them in obtaining them for themselves. Common sense clearly suggests such a limitation as this. Augustine, in his Commentary on St. Matthew, gets over the difficulty in another way. He draws a distinction between 'desire' and 'wish,' and will not admit that a man, however much he may desire, can really *wish* or *wish* for himself that which is not good. This explanation precludes the possibility of our ever doing anything which is not good to others, since we cannot wish anything which is not good for ourselves.

Secondly, the maxim does not imply that we should always do to others exactly that which we should wish under our own present circumstances (which may be quite different from theirs) to be done to us. What the maxim implies is that we are, as far as possible, to put ourselves in the place of others; to consider what we would wish to be done to us, were we in their circumstances; to adopt the rôle, as Adam Smith puts it, of impartial spectators; and then, having made up our minds what in the circumstances, as so viewed, we should wish to be done to us, to act accordingly.

W. A. SPOONER.

GONDS.—2. Origin, name, and physical characteristics.—The Gonds are an important forest-tribe found in the central parts of the Indian peninsula, at the census of 1901 numbering 2,286,913, of whom the great majority, 1,936,586, are found in the Central Provinces, and smaller numbers in Bengal, Bihar, Haidarabad, and Madras.

The origin of the name is disputed. They call themselves *Gutur* or *Gutur*, a plural appellative regularly formed from *Gut*. In Chhattisgarh they call themselves *Kut*, and high-caste members of the tribe object to being called *Gond*, as this name implies that they are low-castes and land-owners (Hirst, *Gondwanas*, 17; Oppert, *Original Inhabitants*, 108, 109, 114; Hill, 64; Caldwell, *Dravid*, 303; Minto, the best authority on the tribe, derives the name *Gond* from Telugu *Gundla*, 'a mountain,' in the sense that they are a hill-tribe (Pope, 2; Oppert, 117), which is more probable than the theory of Cunningham, that the name is a corruption of *Gandha*, the ancient term to designate Central Bengal.

Though the Gonds, probably under Hindu influence, trace a legendary connexion with N. India, which they exhibit by burying their dead with the feet of the corpse towards the Himalaya, the supposed original home of their race, their physical appearance and speech connect them with the so-called Dravidian races of S. India. They include at the present time a group of tribes with a general physical uniformity, but differing according as they have been more or less exposed to Hindu or to other foreign influences.

Opp. J. Panyah, who was well acquainted with them, writes: 'Most of the Gonds possess the tall, well-proportioned figure and light complexion of the Hindu, but allied with more or less of the darkness of lip and colour type of countenance of the

pure aborigine. The men of the tribes, on the other hand, are marked by the black skin, short stout figure, and features of the negro-like (sic) race of humanity. But—were there are found certain sections of the tribes, who would also seem to have been imbued with something of the foreign blood, though in a less degree than the chiefs. Like the latter they affect dark (Hindu) manners and customs; and it is probable that they, too, are the result of some connection in long past times between immigrant Aryans and the indigenous tribes' (*Highlands of Central India*, 3, 156). Some of the women are more like monkeys than human beings; others 'fair-skinned by far than the men, and here Hindu blood may be fairly suspected,' (Hirst, p. 1) says: 'They have a ruddy face, dimpled cheeks, wide mouth, thickish lips, straight black hair, and many beads and ornaments; a few have curly hair, but not of the Negro type.'

The same conclusion is reached from a study of their language.

There are some Gonds who speak their own Dravidian language, others a broken Aryan dialect—both known as *Gondli*. The Dravidian form of speech has a common ancestor with Tamil and Kannara, but shows little connexion with Telugu, appearing in various dialects, such as *Mari* or *Mari*, and *Pargi*, both spoken in the Eastern State, and *Chapu* or *Gotta*, the dialect of the Huz Kola. The true *Gondli* speech is known in Chanda and the Nizam's Dominions as *Nalla*, and in Bihar as *Kallad* and *Ladlathi*, the latter closely connected and differing from other dialects. *Gondli* has no literature, except translations of the Gospels and the Book of Genesis (G. A. Grierson, *Concise of India*, 1901, I, 278, 297; Caldwell, 313-5).

3. The tribal legends.—The legends of the tribe have been considerably modified by Hindu influence; but some are original.

They believe that the sky once lay close upon the earth; an old woman, while sweeping, knocked her head against the sky and pushed it away, since then it has remained separate from the earth (Hirst, *Central India*, 1901, I, 66; cf. Tyler, *PC*, 1901, I, 232; Lang, *Myth*, 231, and *Ant.*, 1901, I, 231). *Belpura* are accounted for by a myth of the earth being turned upside down, and nobody being left alive save one *Dum* (p. 2), the gods, wishing to re-populate the earth, harvested seed-grain from the *Dum*, this was sown again, and villages are on land when he, now king of the *Dum* in the other world, demands it from the men and women—a story which seems to be the basis of the myth of *Rahu* in the *Puranas* (Hirst, I, 64; cf. Oppert, *PC*, 1901, I, 231). A more elaborate story is that of *Linga*, a name by some connected with the *linga*, or phallic emblem. It tells, in order, of the creation of the world and of the Gonds, how they were driven into a cave by *Siva-Mahadeva*, of the birth, death, and life of *Linga*, the tribal hero; of his control and how he delivered the Gonds and how he instituted marriage rites among them. *Panyah* (p. 232-3), who verified the version recorded by Hirst (p. 11), justly regards it as largely due to Hindu inspiration.

4. History of the tribe.—The early history of the Gonds, except so far as it can be gathered from the tribal legends, is a blank.

They have been identified with the *Kandah* of Ptolemy (VII, 1, 66; J. W. McCrindle, *Ancient India as described by Ptolemy*, Calcutta, 1896, p. 180), and the *Phyllites*, with whom they are connected, are supposed to be either *Bhils* (p. 181) or *Palidars*—a term applied to various aboriginal races (but see Oppert, 30 a.). The Gonds are remarkable as being the only Indian forest-tribe which has established flourishing monarchies. Of them, four dynasties ruled the greater part of the present Central Provinces from about the 10th down to the 16th cent. of the Christian era (A. S. Nelson, *Gondwanas*, 17-22; G. Grant, *Gondwanas*, 1901, p. 301-2). These kingdoms gained power on the destruction of Hindu authority in N. India by the Mohammedans, and on the disruption of the independent Mohammedan powers of S. India by the Mughal Empire. They attained a fairly high type of civilisation, as is shown by the great irrigation works constructed by them. They finally fell before the Marathas (Grant, op. cit., introd. ix, 11-12).

5. Social position.—It is remarkable that the Gonds, who are now a subject race, have never fallen into a state of degradation, like the monial castes in other parts of the country.

The explanation is that they were protected by the immense utility of their country from conquest such as overtook the other aboriginal races; they long held the place of rulers, and were not ousted from possession of their lands by the new race, which appeared as conquerors rather than conquerors (Hirst, I, 170-1; Grant, introd. xii, xxi-ii). At present several of the tributary States in the Central Provinces are ruled by Gond chiefs, who belong to the aristocratic branch of the tribe, and are called *raja*, or 'royal,' Gonds. These are gradually asserting their claims to be regarded as *Rajputs*, and one great *Rajput* sept, the *Chandels*, is believed to be of Gond origin (Hirst, *Highlands and Revolutions*, London, 1896, I, 231; Smith, *Early Hist. of India*, Oxford, 1901, pp. 299-300, 370-1). In the plains the lower class, known as *Nalla*, *Dhar*, or *Dharwad* Gonds, are in a state of serfdom, making their living by labour. Between them two groups come the really wild Gonds, of whom the most primitive are the *Mari*, or 'true,' Gonds, who serve no master, and who subsist by hunting or by a rude system of bartering the

jungle and sowing seed in the sown—a process known as *dalpa*—and collecting various kinds of jungle produce. All the authorities believe that these are a peaceable, truthful, law-abiding people when they have not been corrupted by contact with the Hindus of the plains. Under British rule even-temperance in intertribal disputes, one of their chief virtues, has been greatly checked (Forsyth, 1892; Grant, 1891; Hialop, 7).

g. Domestic rites.—The rites of birth, marriage, and death are of the normal Dravidian type (see art. CENTRAL PROVINCES, vol. III, p. 311 ff., DRAVIDIANS [North], vol. v, p. 1 ff.).

d. Religion.—'In religion,' says Forsyth (p. 143), 'the Gond tribes have passed through all the earlier stages of belief, and are now entering on that of idolatry pure and simple.' Every prominent mountain has a spirit, which must be satisfied before its slopes can be cleared. When a field is sown, the field-god, Kodopon, said to represent the god of the *Ando* millet (*Paspalum acroculatum*), but more probably a hill-god, is propitiated. The tiger-god has a hut built for him in the jungle so that he may not approach their dwellings. Their worship is chiefly devoted to the propitiation of the malignant Mother-goddess, known as Matā Devi, the goddess of smallpox, or Mari, who presides over cholera. In her more awful form she is known as Dantavari, 'the goddess with teeth,' at whose shrine in the Bastar State human sacrifices are said to have been performed in early days (Grant, 181, 327; Brett, 30). Her consort is Budhā or Bārhapān, sometimes known as Thākur, 'lord,' who is worshipped as a house-deity. In Seoni he lives in a *aj tree* (*Terminalia tomentosa*), which is held sacred (Russell, *Seoni Gazetteer*, 58). He has now come to be identified with the Hindu Śiva, and his spouse with Kālī. Animism is represented by the cult of objects supposed to be the abode of spirits. Pharnapen is represented by an iron spear-head (Skr. *parashu*). The trident said to have been received by the ancestors of the Bastar family from the goddess Bhuvanesvari at Mathurā, and the sword given by Māpikya Devi or Dantavari, their family-goddess, are still worshipped—a record of the impression made upon a tribe in the Stone Age by the introduction of iron (Brett, 36 f.). Pharnapen is supported by Ghāghrāpan, the bull-god, the bull being sacred, as among the Todas (Rivers, *The Todas*, London, 1908, p. 424; cf. *PE* I, 158); and by the chain-god, Bānkarpān, represented by a few links of a chain supposed to be endowed with powers of motion, but really the *gurdā*, or magical chain of the allied tribes, with which hysterical patients are beaten to drive evil spirits from them (Grant, 275; *PE* I, 99, 155). A favourite household god is Dāhādeo, the spirit of a bridegroom who died in a tragical way at his wedding (Sleeman, I, 123 f.; *PE* I, 119 ff.). Tree-worship is found in that of the bamboo and *aj tree* (Hialop, III, 47). The spirits of the dead are propitiated, at least for a year after death; those of distinguished persons are worshipped for some years or generations at earthen shrines, on which sacrifices are yearly offered—a cult which, among the more advanced branches of the tribe, takes the Hindu form (Hialop, 17, 20; Kitta, *Census Rep. Berar*, 1881, p. 79). In Sambalpur the ancestors are represented by small pebbles kept in the holiest part of the house, the kitchen, and periodically worshipped (L. S. S. O'Malley, *Sambalpur Gazetteer*, 75). Many of the exogamous sects are of totemic origin; but totemism seems to be a purely social institution (Russell, *Census Rep.*, 1901, I, 189 f.). Like all secluded races, the Gonds are reputed sorcerers, and witchcraft in a cruel form is sometimes found among the jungle groups (Grant, *Introd.* cxxx ff., 110, 156). Berpent-worship appears, but it is done in secret (ib. lxxvi). At the beginning of the sowing season, the Gāit branch set up a line of stones represent-

ing the gods, dash them with vermilion, and make offerings to them; at harvest Bārhapān is worshipped in the form of a small copper coin; and sacrifices, which in former days included that of a cow, are made to him (Hialop, 22). Among the allied tribes, like the Majhwān and Kōyla, the beliefs and usages are of a similar type (Cooke, *TC* III, 413 ff.; Thurston, *Castes and Tribes*, IV, 27 ff.; Bilgrami-Willmott, *Sketch of the Nizam's Dominions*, I, 325 f.; Risley, *TC*, 1891, I, 322 f.; Dalton, *Descrip. Ethnol. of Bengal*, 275 ff.). For the bairgi priests of the tribe, see *ERE* II, 333.

GONGS AND BELLS.—1. Scope of the present article.—Among instruments of percussion the bell and the gong hold the first place, either one or other being found among most races of mankind. To define the difference between bell and gong is not easy. A bell is a hollow cup-shaped body made of cast metal, giving a sonorous vibration throughout its entire circumference when struck by a metal clapper usually hung inside. A gong, on the other hand, is usually made of hammered malleable metal, flat or approximately flat in form, and is struck by hand with a soft mallet. Many of the Chinese 'bells' are made without an internal clapper, and are struck on the outside edge with wood. Presumably they are gongs, although bell-shaped. The essential difference, then, are that a bell is struck by a metal clapper, while a gong has a hammer of material other than metal, and that the sound of a bell is usually obtained by the movement of the bell, while the gong remains stationary. The small crotal bells and bells made of riveted plates, which are used for religious purposes by some peoples, are included in this article.

Oncostopos plays a large part in the title of bells. The Lat. *Matronabulum* suggests the tinkling of the hand-bell. The hollow of the large brass suggests 'bell' from Lat. *bellera*, O.E. *bellum*. 'Gong' is suggested by *gongyifer*, 'to marmur'. *Oncostopos* is used in later writers for a large bell, and *notos* for the small hand-bell.

The object of the present article is to give by typical examples some idea of the significance of the religious use of bells.

2. Origin of bells and gongs.—As to the origin, there is considerable difficulty. Wide search among encyclopaedias and books dealing with campanology meets with an almost unvarying intimation that 'the origin of bells is lost in antiquity; they probably came from the East.' Such a statement is unsatisfactory enough. Some bolder writers refer to the bells on Aaron's high-priestly clothing (Ex 28²²) as the earliest mention. But these probably were not really bells but merely jingles—small carved pieces of metal which emitted sound by striking against the metal pomegranates, and not by a clapper. The two formed an ornamental design similar to the lotus and bud border

used in Egypt (*HDB*, art. 'Bell'). Then, too, there is evidence of the art of bell-making being practised in Japan during the 8th cent. B.C., at the time when large bronzes were cast for the temples of Buddha.¹

Such evidence, however, does not help us to find out the origin of these instruments of percussion, and we are reduced to conjecture. Quite probably bells may date from the Iron Age. Fairies and witches were creatures belonging to the more ancient Stone Age which was passing away; and the new metal, iron, was considered hateful and harmful to them.² The metal itself was a powerful prophylactic, but the sound of metal had even greater virtue for restraining their evil influence. It would soon be found that by striking the edge of metal pots a more resonant note could be obtained than from an iron bar; and from this it is but a small advance to turn an iron basin upside down and fasten some sort of a clapper inside. Armed thus, man would feel himself fairly safe from the attacks of his spiritual foes. Such a possible explanation of the origin of bells and gongs has at least the merit of being simple and of complying with the stereotyped phrase, 'the origin of bells is lost in antiquity.'

3. Early uses of bells.—Probably the earliest use of bells was, as has been said, prophylactic. Man, who believed the air to be crowded with demons eager to destroy him, used the most efficacious safeguards that came to hand. Among all peoples we find the bell used for this purpose, and even in the Christian era this superstition has survived.

The gong of Dodona³ mentioned by Aristotle (*Metaph.*, s.v. *gongos*) seems to have consisted of two pillars supporting respectively a cauldron (*kylix*) and the figure of a boy (*kylix*) grasping a whip, whose bronze lashes, when swayed by the wind, struck the inside of the bronze cauldron and produced a resonant sound which was considered to have oracular intent. Theocritus (*Il.* 36) refers to bronze as employed in all kinds of purificatory ritual. Moreover, it was considered as itself pure, while the sound of it was an averter of pollution. From many Latin sources we know that bronze was beaten at solaces to avert the evil. Bells were sometimes placed in tombs. A bas-relief in the Louvre (Fröhner, *Cat.* 645; *Reinach*, *Revue de la sculpture grecque et rom.*, Paris, 1907-08, I. 101) represents the sacrifice of a ram to Attis, from an oak whereon are suspended two bells. On a coin representing Cybele enthroned with Attis at her side two bells are seen in the foreground. P. Gasman (*Pompeii*, Paris, 1899, p. 146) gives illustrations of many little bells found at Pompeii, and speaks of them as used 'comme moyen de protection.' The British Museum possesses a small bronze bell (*Cat.* 318, fig. 11) from the temple of the Kabiri at Thebes. The attendants of Dionysus are frequently represented as carrying tympana edged with a row of small bells. A small bell of gold found on the Esquiline has an inscription referring to the evil eye. Moreover, to avert evil influences, bells were attached to the heads of horses used in a procession of criminals led to execution.

Possibly the gongs or bells attached to the façade of the second temple of Jupiter Capitolinus have this prophylactic object. Triumphant generals hung bells on their horses' heads to avert the evil eye. This is found not only in Greece but also on sculptures in Assyria.⁴

² Tylor, *PC* 4.1. (1903) 140.

³ A. B. Cook, *JHS* xii. (1901) pt. 2, p. 62.

⁴ For further illustrations of such usage, see Smith's *Dict. of Gr. and Rom. Ant.*, London, 1890, s.v. 'Ephthalma.'

Among the Greeks a bell was used at funerals to keep off the crowd and warn the *kléos* *Diaís* lest he be polluted by sight or sound of funeral music. But there is evidence of usage other than as a prophylactic. Bells were used for the opening of market or the baths, and by sentries on night duty. The priests of Proserpine at Athens rang bells when calling the people to worship. Small bells were similarly used in the mysteries of Bacchus. But for the most part the Greeks had wooden rattles, such as are now used by Muslims. The use of bells for summoning to worship arose in the Far East, and was not customary in countries bordering the Mediterranean till late Hellenistic times.¹ In Egypt, Palestine, and Assyria, people were summoned to worship by the sound of the trumpet. The precise purpose of the bells attached to high-priestly robes seems debatable. Arabian princesses have bells on their garments to announce their movements and warn people to keep out of the way. No one was allowed to enter the Persian court without giving audible warning, and perhaps the bells on Aaron's robe were intended to announce his movements to Jahweh. An alternative suggestion is that the stillness of the Holy Place was full of peril to intruders. The air became charged, as it were, with the Divine influence, and this was dangerous to mortals. In order to dissipate this noxious condition, the high priest's robe was decked with bells, which, by stirring the laden air, made it possible for man to enter the Holy Place. More obviously the jingles are explained as useful to let the people know how the high priest was progressing with his ministrations. The horse-bells in *Zec* 14² are inscribed 'Holy unto the Lord.' The object is not clear. It may have been intended to add efficiency to any magical powers the bells possessed, or else the bells may have been thought of as sending far and wide the message of holiness.

4. Christian use of bells.—At the dawn of the Christian era bells were used, but the Greek and Roman style of architecture did not readily lend itself to the use of large bells in buildings. During the first three centuries the use of bells for summoning the faithful to worship was impossible, owing to the certainty of persecution; but it is probable that soon after the Edict of Milan (A.D. 313) the Christian Church availed itself of this obvious means of calling to worship. The introduction of large bells is attributed to Paulinus, Bishop of Nola in Italy, about A.D. 400; but, as he omits any reference to bells in his letter giving a very full description of his church, the claim made for him seems to be doubtful. St. Jerome (*In Isai.* 2² (*PL* xxv. 994 f.)) speaks of musical instruments used in religious worship under the generic name *reus*; and, although his description is not clear, it appears that small peals of bells were used in conjunction with trumpets.² Certainly, however, by the 6th cent. bells were used in the Western Church. Gregory, Bishop of Tours (573), speaks of bells as *signa*. This takes us back to Sidonius Apollinaris. Rather later the *Gregorian Sacramentary* (600) contains a formula of benediction which came from Rheims. The campaniles give fairly strong evidence of the use of bells before the end of the 6th century. That of Ravenna dates from the 6th century.

Quite early in the Celtic Church bells were used by the bishops as part of their episcopal insignia. In the *Life* of St. Patrick the office of *campanarius* is mentioned, and in an illustration, given by de Flourey, in *La Masse*, St. Patrick is depicted as

¹ E. Stoll, *Archäologie der Kunst*, Munich, 1885, p. 515. A few small bells have been found at Gizeh (*PEF*, 1904).

² Paul Lacroix, *The Arts in the Middle Ages and at the Renaissance*, Eng. tr., London, 1876.

handing a bell in a box to a bishop consecrated by him. The probable object of the bell was to command silence when the bishop was about to speak. In the museum of the Royal Academy of Ireland a Celtic bell is preserved which on fairly good evidence is attributed to St. Patrick. Small hand-bells were often engraved with the name of a saint, and in later years were venerated as relics.¹ Bede (*HE* iv. 23) mentions a bell rung after the death of Hilda at Whitby (800). Adamnan (*Vita S. Columbae*) has references to a *cleen* which was used to call the brethren to prayer. Egbert, Archbishop of York (740), in his 'Excerptions' ordered his clergy to toll bells at the hours of service. We first hear of a peal of bells at Croyland Abbey in 900; but, as Ingulphus compares the tone of it with others, it seems clear that many other churches had more than a single bell for summoning to worship. Early in the reign of King Edgar (950) the new canon provided for bell-ringing as preliminary to prayer in church, and the clergy of the Church of England are still required to toll a bell daily before service.

Another use for bells is indicated in the Bayeux tapestry.² In the illustration of the funeral of Edward the Confessor the corpse is accompanied by two boys, each ringing a pair of hand-bells. This was a practice taken from paganism, but with altered intentions. The ringing of bells at funerals called the faithful to pray for the departed soul. Still, however, the supposed power of driving away evil spirits was commonly believed in, and the ringing of hand-bells at funerals was carried to such excess during the 14th cent. that the abuse called for the attention of the bishops. Not only were bells carried by the funeral officers, but the people used to open their doors and ring vigorously any bell they had while the cortège passed by. The 'lych' bell is still rung at Oxford before the body of any University official is carried to burial.

Distinct from this is the custom dating from the 7th cent. and enjoined by Canon 67: when 'any is passing out of this life, a bell shall be tolled, and the minister shall not then slack to do his last duty.' This is the 'passing bell.' During the ages of superstition men lost sight of this call to pray for the dying man's soul, and thought of the bell as a means of scaring away the evil spirits lying in wait for the dying man's soul. After death the 'soul' bell was knelled in order that all might give thanks for the deceased's deliverance from this vale of misery. This custom was carried to such excess that Elmbroth forbade more than one short peal, lest it should be an annoyance to the living and injurious to the fabric and the bells themselves. In later times the varied uses of bells in funerals have been curtailed; the 'passing' bell has become merged in the 'soul' bell, and, being knelled some time after death, serves as an intimation of the age and sex of the departed.

Indisputably, during the Middle Ages bells were chiefly valued for their prophylactic powers in scaring the evil spirits from doing harm ghostly and bodily. Most wide-spread was the idea that bells could dispel storm and lightning. Originally the object was to call the people to church to pray for deliverance from the danger. Then the devil was thought of as hating the sound of bells, because they called the faithful to prayer; and, later, the original idea was lost sight of, and the mere ringing of bells was considered efficacious of itself. Largely owing to their popularity, bells escaped the destruction of things 'Romanish' at the Reformation. In order to increase their supposed

efficacy, bells were 'christened' with elaborate ceremonial. Originally the bells were thought of as heathen, and were baptized to make them converts; but, later, the object was clearly to strengthen their powers over the spirits of the air. Charlemagne in 780 protested against this 'baptism,' but the rite found a place in most pontificals until the Reformation, and is still used on the Continent.

In pre-Reformation times it was rare to find fewer than two or three bells in one tower. Frequently a small bell was hung in a bell-cote over the chancel and rung at the Elevation of the Host. This 'singing bell' gave intimation to sick folk of the consecration of the elements. Distinct from this was the *sanctus* bell, a small hand-bell tinkled within the church at the 'Ter Sanctus,' and necessary in large churches, where the musicians were at a distance from the high altar. In the Middle Ages bells were often embroidered on bed-curtains and other hangings, as well as on ecclesiastical vestments.³ The fundamental idea was probably superstitious. For the many other religious and quasi-religious uses references should be made to some of the excellent books mentioned in the Literature. The same underlying ideas seem to inspire the Continental use of bells, the real difference being the method of ringing large bells. Change-ringing is confined to Great Britain; abroad the carillon takes its place. It is a mechanical contrivance by means of which a number of elaborate tunes can be played by one performer on the bells by hammers which strike the edge of the bell. In England bells are chimed in this way and also rung. In ringing, the bell is made to swing round through a complete circle so that the clapper strikes twice in each revolution.

5. Non-Christian uses.—To the Far East we must look for the earliest use of bells, but there is little evidence before the 8th cent. B.C. At that time large bells and gongs are found to have a definite part in ceremonial. One dating 677 B.C. is inscribed: 'We will everlastingly prize this bell and use it in our ritual worship.' This bell would be hung in the temple, its purpose being to call the shades to the funeral meals prepared for them.

In Buddhist ceremonial, bells and gongs play a large part. The noise made during certain rites is quite deafening, the object being to call the attention of the divinity to the prayers and ceremonies of the devotees. The pagoda style of architecture lends itself to the suspension of a number of bells which are made to tinkle by the wind. This is considered by many to be prophylactic, and to scare away the demons. The Buddhistic theology is practically identical with the Brahmanical, and a bell is invariably connected with every Buddha as part of the insignia. The opening up of Tibet has given us several books upon the Buddhistic ceremonial. In Lhasa the more mainly of the lamas wear a tinkling bell on the crown of their hats. Before their devotions the chief lamas cross themselves, touching their foreheads with a bell; and they hold a special service for one who is sick, in which tinkling bells are used.⁴ Hand-bells are placed upon the very altar itself. The probable use in these cases is to attract the god's attention.

The supposed influence of the bell on the spirit world is further illustrated by the attempts to expel the death-demon by the aid of bells. In India we find these usages supplemented by others.

² G. E. Tysack's *A Book about Bells* (London, 1897) contains much fairly reliable information about English customs. It is probably the best book on the subject.

According to the Brahmans, two things are indispensable to the sacrificer—several lighted lamps and a bell to wake the divinity from sleep so that he may consume the offering, while the vagrant ghost is scared away by the same sound.¹ The *paddri* priest in Mirzapur and many classes of ascetics carry bells and rattles of iron which move as they walk, the object being to protect the wearer from evil spirits. The Gopds have elevated the bell into a deity, in the form of Ghaghraṇ, or 'bell-god'; and one special class of their devil-priests, the *marid ghydis*, devote themselves to making bells; and they themselves wear them continually. The Todas of Madras worship Hiriya Deva, whose representative is the sacred buffalo-bell which hangs from the neck of the finest buffalo of the herd (Crooke, i. 108). The goddess Pārvatī, as Durgā (p. 8), has certain insignia which are invoked in this manner: 'Om to the bell (*ghaṇḍ*) striking terror by thy world-wide sound into our enemies. Drive out from us all our iniquities. Defend and bless us, O Lord.' In Burma great bells are found at most of the shrines. The worshipper takes a large deer antler and strikes first the ground and then the bell, to summon as witnesses beings under and above ground, and further to make them join in the act of worship.²

In West Africa some witch-doctors have a custom, when going their rounds, of ringing a bell before the houses of the guilty. Bells are often hung over doorways, probably for prophylaxis.³ Very few bells are found in the rest of Africa, except among the Massai and tribes of similar culture. They hang bells around the necks of animals, but there is no evidence to show that these were worshipped, or that the bells were used to scare evil spirits. Probably they are merely utilitarian.

In Egypt there is little evidence. The *clatrum* was invariably used in the worship of Isis. Possibly small coral fingles were attached. In later times bells were used as charms, but with no real musical purpose, and they are very rarely found in Egyptian religion proper. The same may be said of bells among the Assyrians. They had no religious use and very little in magic. Clappers took the place of bells. Layard (*Momuments of Nineveh*, London, 1848-53) illustrates some horse-bells, possibly importations for magical purposes.

Bells and instruments of percussion are not found in New Zealand. In the Tonga and Fiji Islands a *lali* is used. It is a form of gong made out of a tree-trunk.⁴ It is the favourite instrument at Tonga and is named in the same way that we give names to our bells. It is chiefly used to summon worshippers to their religious exercises. In many parts of the world babies are given rattles to which fingle bells are attached. The underlying object is probably prophylactic.

Although the religious value of bells varies considerably in different parts of the world, in Turkey alone is there found an aversion to their sound. The Muhammadans do not use them, because of their associations with Christianity, and the Fatiḥīd Muslims have a prejudice against gongs, as they are supposed to disturb the dead, who awake, thinking the Day of Judgment has arrived.

ADDISON J. WHEELER.

6. American bells.—(1) Bells of metal were in use in certain regions of America long before the Columbian discovery. They were natural developments from, or modifications of, previously existing rattles and like implements of clay, shell, gourds, and other materials. According to W. H. Holmes (*Bull. S. B. 22-24*), metal bells were in common use in Middle America in pre-Columbian times, but they are rarely found north of the Rio Grande, either in possession of the tribes or on ancient sites; but bells were certainly known to the Pueblos and possibly to the mound-builders before the arrival of the Whites. The copper bells occasionally found in the south-eastern part of the United States may, some of them at least, have been introduced by way of trade (like certain varieties of tobacco-pipe and tomahawk) with the Indian tribes, since specimens of undoubtedly European origin have been discovered in mounds and other burial-places that are distinctly post-Columbian. Others of the metal bells from this region may, however, have been brought to the north by way of Florida, etc., from Central America and Mexico as incidents of inter-tribal commerce or the like. Metal bells are also known in large numbers from the remains of the civilizations of the Pacific coast of South America and from the area of so-called 'Calchaqui culture' in the Catamarcan country of Argentina, etc. Bells of other materials, such as clay, are, of course, more widely distributed among aboriginal peoples of a type less civilized than the Aztecs, Mayas, Peruvians, and others very close to them in matters of art and religion. Many wooden bells have also been found, e.g., in the Atacaman region of Pacific South America (Boman, *Antiq.*).

(2) Some investigators were formerly of the opinion that the bells found in the New World were all imitations of European models, and that no such thing as a genuine pre-Columbian bell of aboriginal manufacture existed. But for the Pueblo region, as well as for Mexico, Central and South America, the existence of bells of Indian make long prior to the coming of the Whites has been demonstrated. The variety in the forms of the bells of primitive America, their presence as ornaments on statues, figures of the gods (Mayan MSS and monuments; Aztec deities, etc.), their utilization as decorative motifs (e.g. eyes in the golden figures of reptiles from ancient Chiriqui), the situation and circumstances of their discovery in ruins of great age in different parts of the continent—all these facts make the theory of European origins impossible, and it has now been abandoned by the best authorities. The existence of bells of wood, clay, copper, and gold testifies to the evolution of a bell in primitive America from the rattle. According to Holmes, the genealogy of the bell is first a nut-shell or gourd, then a clay model, and, finally, metal forms cast upon models, like those of the ancient Chiriquians. Doubtless some of the less civilized tribes imitated in clay or wood the metal bells of their neighbours of higher culture, which sometimes came to them in the way of trade, or in some other incidental fashion. The more or less civilized peoples, upon whom the Europeans intruded, may have also, at times, imitated bells of

Old World origin. There seems no doubt, however, that bells, used for several different purposes, were in existence in pre-historic times in various regions of North, Central, and South America.

(3) Both metal and clay bells seem pre-Columbian in several parts of the ancient Pueblo region of New Mexico and Arizona. The small copper hawk-bells obtained from ruins in southern Arizona are said by Fewkes to be 'identical in form and make with those used by the ancient Nahuatl [Aztec] people' (17 *BBW*, pt. 2, p. 629). A clay bell found in the oldest part of the old pueblo of Awatobi, and in all probability pre-historic, is regarded by Fewkes as 'made in exact imitation of one of the copper bells that have been reported from several southern ruins' (op. cit. p. 629). In this case the Pueblo clay bell would be modelled upon the copper bell, and not vice versa. In Awatobi was also discovered a fragment of a copper bell of Spanish origin, such objects coming into the Pueblo country with the Catholic priests and their churches. In the Tusayan ruins immediately about the inhabited towns, Fewkes found no copper bells of such great age that they could be called pre-historic. A fragment of one of the old Spanish or Mexican church-bells 'was used for many years as a paint-grinder by a Walpi Indian priest' (op. cit. p. 608). Hough found that bells of clay, like those from Awatobi described by Fewkes, were somewhat numerous in the great ruin of Kavalokuh. They are undoubtedly pre-historic, and earlier than the bells, similar in form, used in trade. In ancient Mexico bells (*silinilli*) of copper were in general use before the Spanish Conquest, and from the Aztecs the knowledge of them passed northward to some of the less cultured peoples of the southern United States. The characteristic Mexican bell has rather marked and peculiar differences of form and structure which indicate its aboriginal origin. The ancient Aztecs had also large numbers of little golden bells, employed chiefly for ornament, and for use in dances and other ceremonial observances, moriscas, etc. Metal bells were known also to the semi-civilized races of Central America, the copper bells of the ancient Chiriquians of the Panama region being especially noteworthy. Spinden (*Mem. Peab. Mus., Harv. Univ.*, 1913, vi, 146) states that copper bells, 'similar to the common sleigh-bell,' were well known in the Maya country; a few gold bells have also been found there. Some of them, after having been cast, were 'plated' or 'washed' with gold. One of these Chiriquian bells is very interesting as having upon it the features of a human face. Others are surmounted by rude figures of animals, through the bodies of which, or under them, are apertures for cords, etc. Some have holes for such purposes at the top. Most remarkable, and suggestive of the intimate relationship between the bell and the rattle, is a triple bell or rattle of gold found on the Rio Grande near Panama. This instrument consists of 'three very neatly shaped and gracefully ornamented bells mounted upon a circular plate, to which a short handle is attached' (Holmes, op. cit. p. 23 f.). On the handle is the figure of a bird. In the case of the bell with human features, 'double coils of wire take the place of the ears, and the other features are formed by setting on bits of the material used in modelling' (ib. p. 23). Many bells more elaborate in character than this are reported from Chiriqui. The Pacific coast area of South America, with its several different 'civilizations,' has furnished many examples of the bell. Capitan has recently described some bronze and copper *tininnabula* with movable rings and hollow spaces to contain pebbles, bits of metal, etc., from ancient Peru. One is of an entirely new type. Some re-

call certain Buddhist *tininnabula*, and likewise those of the lake-dwellings of the Bronze Age.

The bronze and copper bells of the Calchaqui region, especially those from the province of Salta in Argentina, have a very characteristic form, slightly resembling, according to Ambrosetti, certain ancient Chinese bells. The mouth is a sort of compressed ellipse, the sides flat, falling in as they reach the narrow top. No bells of this shape seem to have been discovered in the ancient Peruvian sites. These Calchaquian bells are perforated, for suspension, at the top, and they are ornamented with figures whose nature is much the same as those occurring on certain bronze disks from the same region. One bell from Cartiambre has on each face the outlines of five human countenances; others have three, two, one, in like manner. Other ornamentations are triangles, vertical lines, zigzags, animal figures, etc. Besides these, another sort of bell from the Calchaqui region is described by Ambrosetti, which is also prior to the Spanish Conquest. The form is that which would be produced by making four folds in a very thin lamina of metal, so as to shape it somewhat after the fashion of certain hats or fancy dishes. There are some more modern bells of this type which have been modified through Spanish influence (in the clapper, the tang, etc.). But the general form of the ancient bell has been preserved. These bells, Ambrosetti thinks, were used by the Indians to attach to the domestic llamas, or to suspend from their clothes or belts in dances and festivals, as the Indians of the Gran Chaco still do with fruit-shells, the ancestors of the bell. In the pre-historic necropolis of Calama (Chilian province of Antofagasta), in the area of Atacama culture, Count G. de Créqui-Montfort discovered in 1804 a wooden bell similar in form to the Calchaquian copper bells of the first sort described above (Boman, op. cit.).

(4) The uses to which bells were put in aboriginal America were various. Concerning the Pueblo Indians, Fewkes informs us: 'Copper bells are said to be used in the secret ceremonials of the modern Tusayan villages, and in certain of the ceremonial foot races metal bells of great age and antique pattern are sometimes tied about the waists of the runners' (op. cit. p. 623). Many of the small clay bells from the Pueblo region and elsewhere were also used as pendant ornaments of some sort, as were doubtless also some of the smaller metal bells from various parts of the continent. The nature of many of these, which are provided with holes or with perforated tangs, indicates their suspension to a cord or some similar object, and their attachment to articles of dress or ornament. One of the clay bells from Pueblo ruins still contained its pellet of clay, and 'on being shaken, produced an agreeable tinkling sound'; it was evidently used as a bell to produce musical sounds—a purpose likewise served by many other bells of metal and clay in ancient America. Here the bell lies close to the rattle. On ancient sites in New Mexico and Arizona, besides clay bells of this sort, copper bells with stone tinklers have been discovered. In various parts of Mexico and Central America little bells of gold were employed as ornaments, as the devices for suspension and attachment prove. In ancient Mexico such bells were attached to the ankles of important warriors and other prominent participants in ceremonial dances. They were also attached to the feet and wrists of victims of sacrifice, those who represented deities, etc. The gods Tezcatlipoca, Tlaloc, and Huastlopoctli, in particular, were represented with little golden bells at their ankles (in the case of the first, to the number of twenty). According to Cogolludo, copper bells were to be found in the houses of the

nobles among the Mayas. The Mayas also used bells as ornaments for their gods, etc., represented in the hieroglyphic writings. Brinton mentions the fact that Ah-Puch, the god of death, occasionally has bells attached to his ankles and clothing. One of the Mayan signs usually interpreted as 'eye' may really represent sometimes the small bells used for ornament. Holmes found that 'the eyes of the golden figures of reptiles (ancient Chiriqui) are in many cases minute hawk-bells' (op. cit. p. 94). According to Ximenes de la Espada, some of the ancient Peruvian rattles and bells were used in religious ceremonies 'to call the devil' (Capitan). In some parts of Central America, little bells are said to have been in use as a sort of currency.

ALEXANDER F. CHAMBERLAIN.

GOOD.—See GOOD AND EVIL, SUMMUM BONUM.

GOOD AND EVIL.—I. GENERAL DEFINITION.—When we collate instances of their usage, we find that the meaning and implications of 'good' and its opposites are most varied. Let us take at random 'good measure,' 'a good beating' (which, curiously, is synonymous with a bad beating), 'a good dinner,' 'good music,' 'a good knife,' 'a good soldier,' 'a good intention,' 'a good man.' In the series scarcely two will be found wherein 'good' means in the one precisely what it means in the other. In all cases, in pronouncing a thing good we are judging its value, and the meaning of 'good' or its opposite in any particular case depends on the point of view from which we judge. It may be almost a purely quantitative judgment, e.g. 'a good ten miles.' It may be a judgment of sensuous value, in which case 'good' = 'pleasant' or 'agreeable,' e.g. 'it tastes good,' 'a vile odour.' It may be an aesthetic judgment, e.g. 'a good view,' 'bad music.' It may be expressive of the suitability or efficiency of tools, instruments, implements, etc., as means to particular ends, e.g. 'a good knife.' It may be a judgment of skill, e.g. 'a good marksman.' Then come the senses of 'good' and 'evil' of most importance, and almost exclusive importance for our present purpose, good as well-being, good as well-doing, evil as the opposite of both.

It is possible to frame a broad general definition of 'good' and 'evil' which shall include all the above varieties of meaning. Such a definition is given by Neville (*Problem of Evil*, ch. I), who puts it: 'Good is what ought to be, evil is what ought not to be.' To this two objections may be raised. (1) There is no valid application of 'ought' to unthinking non-moral objects. In strictness of language, to say that an instrument such as a pen ought to be of a particular quality is absurd. (2) 'What ought to be' seems to apply better as a description of what is right. And, though the right and the good may largely be identical, the implications of the two are different, and the difference is worth marking and conserving. 'Right' means according to rule. 'Good' means valuable

for some end, therefore desirable. Both in 'right' and in 'good' there is reference to a standard of ideal; but, while 'right' emphasises the compelling, prescribing power of that ideal, 'good' emphasises its attractive power. Hence, if we wish such a broad general definition, we should say that the good in all its senses is the desirable, and the evil is the undesirable (cf. Sidgwick, *Methods of Ethics*, London, 1901, p. 110 f.). This seems to be the summary of Royce's statement:

'By good, as we mortals experience it, we mean something that, when it comes or is expected, we actively welcome, try to obtain or keep, and regard with content. By evil in general as it is in our experience, we mean whatever we find in any sense repugnant and intolerable. . . . We mean [by evil] precisely whatever we regard as something to be gotten rid of, shaken from, put out of sight, of hearing, of memory, unshared, expelled, recalled, or otherwise directly or indirectly resisted. By good we mean whatever we regard as something to be welcomed, pursued, won, grasped, held, persisted in, preserved. And we show all this in our acts in presence of any grade of good or evil, conscious, aesthetic, ideal, or moral. . . . whether you regard us as animals or as moralists, whether it is a sweet taste, a poem, a virtue or God that we look to as good; or whether it is a burn or a temptation, an outward physical foe or a stealthy, inward, ideal enemy that we regard as evil' (*Studies of Good and Evil*, 12).

It may be noted that, in defining the good as the desirable and evil as the undesirable, we are not committing ourselves to a hedonistic view. It is a false psychology which maintains that the only object of desire, therefore the only desirable, is pleasure.

II. GOOD AND EVIL ACTIVE AND PASSIVE.—While the definition of good and evil as the desirable and the undesirable respectively would probably be universally accepted, it is certain that, as soon as individuals begin to fill in the definite content of the general notion, there will be nothing approaching unanimity; and this fact constitutes one problem with which we must deal. But, before approaching it, it is best to draw a distinction between two kinds of good and evil. There is good which comes to us, and good which starts from us. There is evil which befalls us, which we suffer and endure; on the other hand, there is evil which we do. This is not represented as an absolute distinction; the two kinds are inter-related in a variety of ways; still it is a convenient distinction. It is not easy to find appropriate names for the two kinds. Fairbairn designates them *physical* and *moral* (*Philos. of Christian Religion*, 134), but 'physical' must be used in a somewhat unusual and perhaps scarcely justifiable sense.

'Physical evil means all the sufferings he may have to endure, whether bodily or mental, nervous or sympathetic, alike as a distinct individual and a social unit, alike as a natural being, freely and morally, and as a human being, sharing in the special history of a people and in the collective fortunes and immortality of the race' (op. cit. 134 f.).

Now, as regards the good and evil that befall men there will be little lack of unanimity. Health, strength, abundance of food, gifts of fortune or of friends, and a multitude of such like things will be classed as good universally. Sickness, accident, death, penury, destructive forces of Nature, and a host of other ills to which men are exposed will be as universally acknowledged to be ill. With regard to this kind of good and evil, men differ only in the number of goods and ills they know, and in the degree of importance which they attach to this or that particular good or ill. When we turn, however, to consider moral good and evil, the good or evil that men do, we find an altogether different situation. Here we find endless variety in the beliefs of men as to what is good and what evil.

It does not lie within the scope of this article to set forth and discuss the various ways in which the good has been more particularly defined. For that the art. ETHICS and articles dealing with various schools of ethical speculation must be consulted. But here it is necessary to try to gather the signifi-

cases of the fact that there is no universal agreement among men as to what conduct is good and what evil. That is plain from consideration of the variety of view maintained in different systems of ethics. It is still plainer and becomes a problem when we consider the contrariety of opinion and practice among mankind in general. What in one place is esteemed as virtue, in another is held to be vice; for what some men approve most highly others cannot find words express to their abhorrence.

'We hardly know of anything just or unjust which does not change its character with a change of climate. Three degrees of polar elevation overturn the whole system of jurisprudence. A meridian determines what is truth. . . . There is not a single law which is universal' (Pascal, *Pensées*, ed. P. Faguet, Paris, 1904, II, 1301).

This raises the problem, Are good and evil purely relative? Are we to say *homo mensura*? If 'somewhere east of Suez there ain't no ten commandments,' have we simply to acquiesce in the fact, because others may be as right in their notions as we?

III. OBJECTIVITY OF MORAL LAW.—If we answer the foregoing questions in the affirmative, it is obvious that all moral effort has lost its spring and inspiration. Further, morality which should be purely subjective and individualistic would not be morality at all. The ineradicable belief of every moral being is that the law he obeys, the ideal he strives to realize, are something of universal validity: valid for and binding on him not as *despotes* *tu*, but as *despotes*; binding on him not because of the differences which distinguish him from all others, but in virtue of his oneness with all others.

'The Moral Law has a real existence, there is such a thing as an absolute Morality, there is something absolutely true or false in ethical judgments, whether we or any number of human beings at any given time actually think so or not. Such a belief is distinctly implied in what we mean by Morality. The idea of such an unconditional, objectively valid, Moral Law or ideal undoubtedly exists as a psychological fact' (Rushdall, *Theory of Good and Evil*, II, 211).

It is to be noted that, in most statements made to demonstrate the relativity of morality, we find manifest exaggeration both of facts and of the significance of them, and an ignoring of considerations such as profoundly modify the problem presented by the indubitable facts. Is it really the case, as is alleged in the passage by Pascal part of which has been quoted, that 'truth on this side of the Pyrenees is error on the other'? If so, it can be only a very trivial truth or error that is in view, a difference of etiquette or such like. The theory of relativity of morality is in sore need of support if it requires and uses such support as that. The theory, indeed, makes out its case largely by pointing to the fact that the customs and institutions of different peoples vary. And it can bring out striking differences only by contrasting savage or semi-savage peoples with the civilized and cultured. That such differences should exist is no wonder, and constitutes no problem, granted that moral knowledge, like knowledge in general, is capable of growth. When customary morality has given place to reflective morality, and when we compare peoples that have reached approximately the same degree of development, we find that differences in moral belief and practice are not so pronounced, not so much of a problem after all. And, so far as such differences actually exist, we have to remember that customs and institutions are, at the best, imperfect revelations and embodiments of ideas and ideals. They are, from the nature of the case, conservative. The public 'conscience' is usually ahead of them. The most 'enlightened' members of the community are usually in open protest against and conflict with them. Hence, in comparing two communities, a difference in customs and institutions is not safely interpreted as the exponent of a like difference of moral ideas

and ideals; between the two differences there may be no relation of strict proportion.

Or, again, customs and institutions may be regarded as means to moral ends, means of realizing ideals. And, plainly, difference of view as to appropriateness of means does not necessarily imply divergence of ends and ideals. Two individuals may identify themselves with the same end; but, because one has more power of insight and foresight, they may differ to any degree in their choice of means. Through lack of insight or foresight, one may adopt means which in reality more or less defeat the end in view—a fact of which all are painfully aware from their own experience. This is shown, too, by the degree to which, and the facility with which, individuals fall in with a more excellent way when it is represented to them. After all, there is so much ground as to what constitutes goodness common to the South Sea Islander and the missionary of a vastly higher morality.

It is not here being argued that moral ideas and ideals as actually held by men do not vary after all. The point is that, in considering the significance of the manifold variety of moral belief and practice on which the theory of relativity of good and evil bases itself, we have to bear in mind such considerations as have been adduced, which go to show that great varieties are possible without anything like the same divergence of idea or ideal.

Coming now to differences as to moral ideas and ideals, the existence of which we have no concern to deny, we may hold that a sufficient explanation of them also has been indicated above. The fact that men differ in power of insight and foresight explains not only why they adopt different means as appropriate to the like ends, but also why they identify themselves with quite different ends, and define their desirable in very different ways. This is just what truth there is in the Socratic identification of virtue with knowledge, and vice with ignorance. It does not require the genius of an Aristotle to perceive that the good man is not merely one who knows what is good, or that the problem of moral evil is far from solution when ignorance is abolished. The statement of Socrates is no adequate explanation of the fact that men do evil, but it is an explanation of the fact that they differ in their views as to what goodness is. To know what is really desirable requires insight and foresight, and men differ in their conception of what is desirable because they possess these powers in varying degree.

If thus the relativity of moral conceptions resolves itself into a relativity of moral knowledge, it may seem that the problem of the relativity of morality is on all fours with, is indeed simply part of, the problem of the relativity of knowledge, into which it is not our place to enter. There appears, indeed, to be an important difference between the two questions. A moral ideal, it may be argued, is not a real thing in the way that the world of fact with which physical science deals is real. It seems easy to hold that a certain scientific fact is true, whether any individual or any number of individuals deny it or not. About a moral ideal there is not the same objective constraint. On the other hand, it may be replied that the scientist will be puzzled to give an account of an 'independent' world, of a fact which is anything save a fact for his mind, of a "correspondence" between experience and a Reality whose *esse* is something other than to be experienced' (Rushdall, *op. cit.* §11).

The stages on the path of progress of science are marked by the derailets of abandoned—because, as advancing knowledge proved, erroneous—hypotheses, views which were held for truth at the time, and served their purpose for a time. There lie,

with all reality now denied them, 'caloria,' 'epicycloids,' various 'corpuscles' and 'vortices,' and the like. Yet their presence does not daunt the scientist in his pursuit of truth. But it is as easy for a sceptic, by adducing them, to adopt *homo mensura* as the answer to the question, What is truth? as it is for another to argue the pure relativity of moral conceptions from a comparison and contrast of views held in various quarters. To *homo mensura* we reply: Beyond the truth and the good as regarded by any individual there is Truth and Good absolute; otherwise there is no meaning in speaking of progress; what you call progress is but change; and you will have difficulty in adducing any rational ground for any one desiring to change the views in virtue of which he is already the standard of true and good for himself.

We come back to the psychological fact already referred to, viz. that we have an idea that an unconditional objectively valid moral Law or Ideal exists. We must ask, Is this idea capable of justification? What are its implications?

IV. IMPLICATIONS.—1. God as Mind.—We have the idea that an absolute moral ideal exists. Where does it exist? Very plainly, a moral ideal can exist only in some mind. It is as plain also that it is to be found complete in no human mind. We admit, with whatever criticism we pass on a tendency which we think exists to exaggerate the facts or their significance, that men do think differently on moral questions. We may also admit with Rashdall that 'there is no empirical reason for supposing that they will ever do otherwise' (*loc. cit.*). The conclusion to which we are led, then, is that we must postulate a Mind in which the absolute Moral Law or Ideal exists. God as Mind is implied in the existence of an absolute standard.

'Only if we believe in the existence of a Mind for which the true moral ideal is already in some sense real, a Mind which is the source of whatever is true in our own moral judgments, can we rationally think of the moral ideal as no less real than the world itself. Only so can we believe in an absolute standard of right and wrong, which is as independent of this or that man's actual ideas and actual desires as the facts of material nature. . . . Our moral ideal can only claim objective validity in so far as it can rationally be regarded as the revelation of a moral ideal eternally existing in the mind of God. . . . The existence of God . . . is essential to that belief which vaguely and implicitly underlies all moral beliefs, and which forms the very heart of Morality; its highest form. . . . Moral obligation means moral objectivity. That of itself seems to be implied in any legitimate use of the term. . . . Such a belief we have seen imperatively to demand as explanation of the Universe . . . which shall recapitulate the existence of a Mind whose thoughts are the standard of truth and falsehood alike in Morality and in respect of all other existence. . . . The belief in God . . . is still a postulate of a Morality which shall be able fully to satisfy the demands of the moral consciousness' (Rashdall, *op. cit.* II. 112 f.).

An alternative to this view is, of course, possible. It is to deny the validity of the idea of an absolute moral distinction. This is the only course open to those holding materialistic and naturalistic views of the Universe. The idea in question must be classed as an illusion, or set down as meaningless and inexplicable, the mere freak of a mindless, purposeless Nature, which somehow has superimposed on material phenomena consciousness as an epiphenomenon. This is not the place to offer a criticism of Materialism (*q.v.*) or Naturalism (*q.v.*). We must hold it sufficient to say that, in our view, the Universe and morality require far other theories adequately to account for and explain them. It is a short and easy way with ideas to set them aside as illusions. But, if one thinks the matter out, one will find that, after all, it is not an easy view to take that an idea is an illusion, though it is implicit in every moral judgment. Hence we hold that it is not to be set aside, but accepted with all its implications, all the postulates it can be shown to require. Thus we postulate God as the Mind, in which exists the absolute moral Ideal.

2. God as Will.—This is not a postulate in the

same immediate sense as that of God as Thought. It is not at once apparent that, if there be an absolute ideal, there must be also a Will active in realizing it. As we shall soon see, when one contemplates the world, one might be excused for coming to the conclusion that nothing is so certain as that there is no superhuman Will active in realizing an Ideal of absolute Good. Nevertheless we hold that God as Will is an implication of our first postulate, God as Thought—and for this reason, that thought apart from Will does not seem to be a thinkable conception. To distinguish between Thought and Will is convenient and necessary enough. To regard them as really separate or separable is a very different matter. As we know them, the one always involves the other. To suppose that anywhere there exists Thought without Will is to hypostatize an abstraction. So, if we are to postulate a Mind in and for which the absolute Law or Ideal exists, it must be a Mind which wills as well as thinks. As nothing can be said to be willed which is not thought of as good, it follows that God must will the absolute Good, the Ideal of which exists in His Mind; and the Universe must have a purpose, an end conceived of as good by the Mind which wills it.

It may be noted in passing that we do not regard the above considerations as a demonstration of a Theistic position or set them forth with that aim. It is possible for one to hold that there is a rational principle in or behind Nature, a fundamental rationality in the Universe, while coming more or less short of Theism. Thus in Buddhism we find a profound belief in *dharmas* (*q.v.*), an inexorable, intelligible, impersonal principle, combined with an explicit denial of anything like Theism. We are not concerned here to justify Theism. We justify our use of terms which seem to have theistic implications, by saying that they seem the best terms to use, if not, indeed, the only terms that can be used. We are not coming nearer adequate expression of the truth of things in proportion as our thought and language become vaguer.

Now, if there be a superhuman Mind which thinks and wills absolute Good, the question arises, Is that Good realized? If we admit that such a Good must be realized—and we cannot do otherwise—we are immediately confronted with some of the most perplexing and painful problems that have occupied the mind of man, and we must now consider them.

V. PROBLEM OF EVIL.—It is common to speak of the problem of evil, and there is no objection to that, provided we understand that under the name are grouped a number of separable problems; for evils are of different kinds and raise different questions; and of all kinds two questions may be asked, What is the *terminus a quo*, and what the *terminus ad quem*?

It is to be noted that the problem of evil of any kind exists in most acute perplexing form only for those holding a Theistic view. Just in proportion as God is held to be omnipotent, all-wise, all-loving, the 'blessed and only Potentate,' the Creator, the Disposer of events, and so on, does the existence of evil become an ever deeper mystery. Only if there be a God, and a God in some sense outside of, superior to, and responsible for the world, can any complaint against what is be entertained. It is meaningless to criticize and protest against the scheme of things as we find it, if there is no One responsible for it, who, we conceive rightly or wrongly, might or should have made it other than it is. Of this Job, to whom the problem of evil was acute, has clear perception. 'O that I knew where I might find him! that I might come even to his seat! I would order my

cause before him, and fill my mouth with arguments. I would know the words which he would answer me, and understand what he would say unto me' (Job 29th). In this way, indeed, all problems of evil merge into one—the problem of theodicy: 'si Deus bonus est, unde malum?'

VI. REALITY OF EVIL.—As men survey the facts of experience and the world about them, they come to varied views as to the extent of evil. So little do ills and evil bulk in the view of one that he regards all the talk of evil as a gross exaggeration, and for the evils that he is compelled to admit he finds simple and adequate explanation lying on the very surface; and he is prepared to pronounce all things very good. Another finds everywhere evil in one or other of its manifold forms triumphant: the world is full of misery; Nature is blind, reckless, indiscriminating; human life with all its pains, sorrows, defeated hopes, thwarted aims, and brief span, which indeed is, after all, too long considering what it brings, seems not worth the living.

'Life which ye prize is long-drawn agony.'

To the optimist who says 'no world could be better,' the pessimist replies 'no world could be better; better that no world should exist than that there should be such a world as we have.'

On the question as to the extent of evil, men will give different answers. Something has to be allowed for temperament and personal experience. But it is clear that, if any one takes anything more than the merest superficial and the most contracted view, it will be impossible for him to take the optimistic view that, as a matter of fact, all things are very good and quite as they should be. Take no more than external Nature as we find it. We have Wordsworth's stanza:

Thus haply from a vernal wood
May teach you more of man,
Of moral evil and of good,
Than all the wags can.

On the other hand, we have J. O. Mill's violent indictment of Nature:

'In sober truth, nearly all the things which men are hanged or imprisoned for doing to one another, are nature's everyday performance. . . . Nature impales men. . . . and has hundreds of other hideous deaths to reserve, such as the cruelty of a . . . Dumitri never surpassed. All this, Nature does with the most supercilious disregard both of mercy and of justice' (*Essay on Nature*).

In Mill's statement there is an element of rhetorical exaggeration, but for all that we may feel that it does more justice to the facts as we know them than the verse quoted.

Pessimism is an advance on optimism, and is nearer truth, since it recognises the facts of the case, that there is disorder in Nature, and that there are seeming irrationalities in the external world, and in human experiences ills which, by their number and the extent to which they can blight happiness and maim and stunt life, constitute an almost overwhelming perplexity. Reviewing the facts of life, we may say with Schopenhauer:

'To see optimism, when it is not merely the thoughtless talk of such as harbour nothing but words under their low foreheads, appears not merely as an absurd, but also as a really wicked way of thinking, as a bitter mockery of the unpeakable suffering of humanity' (*The World as Will and Idea*, Eng. tr., I. 439).

Yet it has to be observed that, as there may be a shallow, self-centred optimism, which spreads a rose light over all because of personal well-being, so there is such a thing as a no less shallow, insincere pessimism, a megalomania not uncommon to youth, a pose deliberately adopted, a morbid sentimentalism—a pessimism which is certainly as absurd as, and probably more wicked than, the optimism referred to. The *Waltchmans*, so frequent at the stage of adolescence and not unconnected with physiological changes, represents only the difficulty felt by an individuality taking

its first independent steps, and normally soon passes.

Optimism and Pessimism, however, are not merely estimates of the extent to which evils exist; they are theories of the origin, significance, and final issue of evil. One who can adopt the pessimist's estimate of the extent of evil may yet be an optimist as holding that 'Good is the final goal of ill'; that

'Good shall fall
At last, but not, at last to all,
And every winter change to Spring.'

To accept the pessimistic estimate of the magnitude of the problem does not involve the acceptance of a pessimistic solution of the problem.

The problem as noted is, If God is good, whence comes evil? and we must consider—

VII. THE MAIN TYPES OF SOLUTION THAT HAVE BEEN OFFERED.—It is easy to see how one might adopt the position: the world and life being what they are, either (1) God is not good; or (2) He is not omnipotent; or else (3) evil is not what it seems to be, it cannot be anything but good, and we must try so to interpret it. Each of these positions has been adopted as explanatory of evil, and we may so group the theories we consider.

1. The view that God is not good.—This is a convenient way of grouping some theories which have little enough in common save that all hold that God (using the term in a wider than the Theistic sense, to denote the fundamental Principle of the Universe, the World-ground, or however else He or It may be named) is not good, or, what comes to the same thing, that the goodness of God is something essentially different from what we in every other case understand by goodness.

(1.) First we consider *Pessimism*. Its estimate of the extent of evil we have seen to be not unjustifiable. We must now look at its general account of evil. In brief, Pessimism holds that existence itself is evil, that non-existence is preferable to existence, that the root of all evil is the desire for existence. Pessimism, both as a temperamental attitude of mind towards the world and as a philosophy, is native to the East rather than to the West. In modern times, however, there has appeared in the West a popular and more or less vague pessimism in poetry, and even in the philosophy of the street corner; a political pessimism (Nihilism); and, what we are concerned with, a pessimistic philosophy.

(a) Eastern (or ancient) Pessimism has its best known and fullest expression in philosophic Buddhism. Buddhism grew out of the current Brahmanism, and so far accepted its teaching. In that system the old simple Theistic Aryan faith had given way to a belief in an impersonal Neoter (Brahma, Atman, or Paramâtman), the source and goal of all existence, which in some dim way had willed existence in order to realise itself. A vast interval separates source and goal, and through it the wheel of existence turns, involving for souls incalculable changes till at last they escape back into Brahma whence they sprang. The soul passes through one incarnation after another, each state of being with its conditions being determined by merit or demerit acquired in the preceding state. It is easy to see how to Buddha it was only a making explicit of what was already implicit to say that the wheel of existence itself is an evil, the evil. The soul craves for rest, and will never find it so long as it is turning with the wheel. Rest means escape from the wheel. And every act is a thing which binds the soul to the wheel. Hence a good deed is only a less evil for the soul than a bad one, for it maintains the soul in being.

Existence, then, seemed to Buddha to be evil. Life means sorrow, and the only escape from

sorrow is to escape from life. There is no God, only an impersonal inexorable Law (*Arma*), which attaches fitting consequences to merit and demerit. Escape from evil is possible just in proportion as we retire from the world and suppress the very desire to live, and stifle that will to act which by impelling us to action blinds us, be it by merit or demerit, to the wheel of existence. When we have ceased to desire, we shall escape and attain Nirvāṇa.

In thus holding that escape is possible, Buddhism may be said to be, after all, an optimism. At the best it is a negative optimism. The final Good is one ever to be desired, never to be enjoyed; though it may be attained, never to be consciously attained. We are not concerned with practical Buddhism, which on the whole may be as optimistic a system as Christianity, or at least comparable with it (see the art. on NIVĀṆA and KARMA).

(b) Western (or modern) Pessimism is represented in the systems of Schopenhauer and von Hartmann.

Schopenhauer (1788-1860) was a student of Oriental philosophy, and his pessimism is largely influenced by, if not borrowed from, Buddhism as we have outlined it. We find in his *Die Welt als Wille und Vorstellung* the same estimate of life and existence as evil, and the same doctrine that the desire to live must be mastered and destroyed by way of asceticism as we find in Buddhism. Instead of *Arma*, Schopenhauer finds behind and causative of all existence *Will*. Will is the *Ding an Sich* which Kant regarded as unknowable. Will is the innermost essence of everything and of the totality of things. This Will is blind, stupid, and groping; hence a world of such misery as we find. If creation and life as we know them were the work of a conscious Creator, 'he would be the greatest of all wrong-doers. He must have been an ill-advised god, who could make no better sport than to change himself into so lean and hungry a world.' Hence Schopenhauer rejects Theism, and finds in the transition from Theism to Pantheism a progress from what is indemonstrable to what is absurd. In his view the world is so bad that non-existence would be preferable (*The World as Will and Idea*, Eng. tr., I. 403, et al.).

Von Hartmann is so far a disciple of Schopenhauer, though his originality is conspicuous. He develops more fully the *a posteriori* argument for the universal extent of evil. He comes to an 'indefinite conclusion' that pain is greatly in excess of happiness, even in the case of the most fortunately situated individuals. Nor is there any prospect of anything better in the future. Due to the development of human intelligence and sympathy there will come an ever keener sense of the predominance of pain. The practical conclusion is that we must aim at the extinction of the will to live, must work towards the end of the world-process. But von Hartmann's view is neither so simple nor so intelligible as that. Like Schopenhauer, he posits an unconscious Principle, but he differs from his predecessor in making it a Principle in which a dualism is inherent. There is not merely unconscious Will from which all existence with its miseries has sprung; there is an unconscious Intelligence which is striving to undo the mischief wrought by unconscious Will. The Universe then has an end, and the Absolute is good as seeking to realize it. And this end must be the end for us also. We are told that the only right course for us in the present time is to ratify the will to live, for only by surrender to life with all its pains, not through cowardly renunciation, can we play our part in the world-process (*Philosophie des Unbewussten*, p. 748). That act of universal suicide which seemed the only rational thing must be postponed, indefinitely it would

seem. For, if it took place, the Absolute which has produced the existing number of men would immediately produce other individuals to take their place (*Das sittliche Bewusstsein*, Berlin, 1870, p. 476). Hence von Hartmann's pessimism is the most absolute of all.

(ii.) The view has been expressed that evil largely at least disappears as a problem, if we hold that the distinction of good and evil is different to God from what it is to us. In various forms this view has been held by, e.g., H. L. Mansel, F. H. Bradley, A. E. Taylor, and in a sense by von Hartmann. And it has become a kind of fashion to talk of a super-moral sphere. The view in question is worked out in Bradley's *Appearance and Reality* (London, 1897), and Taylor's *Problem of Good* (do. 1901). (It has to be noted of the latter that to a great extent it has been disowned by the author.)

Without entering into detail, we may state the position shortly. The view is that the spheres of Religion and Morality are distinct. Morality, the lower, is concerned with human action alone. Moral distinctions applicable enough to men are inapplicable to God. Owing only to the limitations of human nature we present some things to ourselves as bad. Religious faith reveals a perfect world. There is ultimately nothing which ought not to be. Acts and principles of action which seem to us immoral are in God perfectly good. To some extent the human mind can see that it is so already, and, when it cannot see, it is the task of faith to trust that in all cases it is so.

Now there is considerable plausibility in such a view. It may seem to humble piety to be simply a comment on the text 'As the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts' (Is. 55). We all realize that God's view of good and evil must differ in great measure from ours. But are we to say that this difference results in a *sharpening* or in an *obliteration* of the distinction of good and evil for God? Either view is possible; the former is the conviction on which all our moral striving is based; the latter is the view we are now considering. That we should be mistaken, as we often are, in our estimate of the degree to which any particular thing is good or bad is absolutely no ground for holding that to the Supreme Mind, with perfect knowledge, there is no real distinction between good and evil at all. To say that God is good and yet that to Him there exists nothing of our distinction between good and bad is contradictory and meaningless. If there is nothing bad to God, He is not good. If He does not feel about evil as we feel, only with far greater intensity, it is not obvious why we should trouble to worship or seek to serve Him, nor is it plain why we ourselves should draw distinctions which are not real in themselves, and have nothing in reality corresponding to them.

'It is of the essence of the moral consciousness, as it actually exists, to claim universal validity: if it possesses no such validity, it is not merely particular moral judgments that are false and defective but the whole idea that there is such a thing as an end which absolutely ought to be promoted, and that we have a power (more or less adequate) of determining what that something is' (Rushdell, II. 176). 'The word "good" means the same in him (God) and in us, else it means nothing to us' (W. H. Charles, *Outline of Christian Theology*, Edin. 1886, p. 69).

(iii.) The conclusion, God is not good, follows logically from views which make the will of God a capricious, inexplicable thing, or which represent Him as permitting (if not willing) evil in order primarily to reveal certain of His own attributes. A God who wills the existence of persons as mere means towards an end in which they have no share, and which involves for them inexpressible suffering, can be called good only by affirming contradictions (cf. Kant, *Dialectic of Pure Practical Reason*, v.).

2. The view that God is not omnipotent.—The second group of theories is constituted by all that in various ways deny that God is omnipotent. They hold that God is absolutely good and means good, but cannot carry out His purpose of good immediately at least. There are obstacles which thwart and retard His purpose.

(i.) Here we have first various forms of Dualism (q.v.). We classify relevant dualistic theories thus:

(a) Those which postulate two equally original and eternal Principles which have been ever in rivalry and conflict. The evil principle can create, and throws his works among the creations of the Good Principle; hence all evil (Iranian dualism).

(b) Those which postulate the eternity of matter. God did not create matter. He made the world out of matter He found, and He made it as perfect as the intractable material would allow (e.g. *Timæus* of Plato). What imperfection exists, therefore, is due to the matter, not to the Maker, of the world. In various quarters this belief developed into the view that matter is inherently evil. In some Gnostic systems the world was represented as the outcome of the evil, originally subsisting in chaotic matter, organizing itself into a Kingdom. And man is a microcosm; the enemy of the highest principle within him is the material sensuous element, which is not merely, as we all hold, often the occasion or instrument of sin, but in itself is intrinsically evil. Cf. art. GNOSTICISM.

(c) Those which postulate an original dualism in God. We have noted this in von Hartmann's system. It appears also in the view of Boehme († 1624). Evil must have its root in God; this root is that in God which is not God, if we understand by God love only. Yet it is a Divine element, broken away from the original harmony to become 'God against God' (*Morgenröte*, xiv. 72). It appears also in certain Gnostic systems in which we have a representation of a fall within the Pleroma. A product of this fall is a Demiurge who is either ignorant of or hostile to the supreme God.

Dualism of type (a) is on the whole optimistic in outlook. The evil principle is destined to be at last vanquished and destroyed. Type (b), on the other hand, tends towards a pessimistic or at any rate a gloomy view. Existence in this world is evil; the body is the prison of the soul which must seek deliverance through asceticism (so notably the *Rosanes*, *Plotinus*, many Gnostics), or vindicate its liberty by antinomianism (Ophites and other Gnostics).

Dualism is just the assertion that what we find now in the world has been there all along. The world is dualistic for each of us as we find it. Two streams of influence beat upon us. We feel the conflict of two tendencies within us. And Dualism explains the conflict by saying that it has always been so. It is an ultimate fact. Dualism in any of its forms cannot be expressive of the final truth of things, and thought cannot rest satisfied with it.

(ii.) We have next *Pluralism*, a philosophy which has in recent times come into great prominence, expounded by, e.g., W. James, Howison, and F. C. S. Schiller. Pluralism, when thoroughly asserted, asserts that God is limited *ab initio* by other beings, among whom He is only *primus inter pares*. Souls are uncreated, eternally pre-existent. In the world-process God is striving to rid those souls of evil. Thus God is in no way, near or remote, responsible for evil. Pluralism (q.v.) is a *Weltanschauung*, and cannot be confuted in a sentence. As to pre-existence (q.v.), if we say with Rashdall,

'For one difficulty which the theory of Pre-existence removes it creates a hundred. . . . The theory is certainly not capable

of positive disproof, but it is unsupported by the obvious and prima facie evidence of experience; and involves, the more it is worked out, a ramifying network of difficulties only to be dispelled by some metaphysical structure which itself is the greatest difficulty of all' (op. cit. ii. 248f.).

The Pluralist may reply in Ward's terms:

'[The theory of pre-existence] involves a "network" of assumptions unquestionably; but if it is "certainly not capable of positive disproof," the objector is bound to show that the result of the whole is worthless. As regards this particular hypothesis of pre-existence, its complexity is no advantage certainly; but even so the "network" of assumptions in proportion as the separate assumptions are analogous with actual experience and consistent with each other' (*The Reason of Being*, 'Pluralism and Theism,' p. 404f.).

It is, however, a strange doctrine that the burden brought with any theory should be primarily a burden of disproof for the objector. The existence of a race of intelligent beings in the interior of the moon is a hypothesis not capable of positive disproof, its assumptions are all analogous with actual experience and quite consistent with each other, and the objector may be unable to show that the result of the whole is worthless. In spite of all that, the hypothesis is still in want of a single justifying consideration.

The theory of pre-existence must certainly be treated with respect. It is the belief of a large proportion of mankind. It has ever appealed to those who grapple with the problem of evil, and many names may be quoted in support—from Pythagoras, Plato, and Origen, to Kant and J. Müller. Admittedly no theory of the origin of souls is free from difficulty. But, obviously, to explain the taint of souls in this life by a 'fall' of created or emanated souls in a former life leaves the problem of evil exactly where it was. To gain anything we must hold that souls and evil are eternally pre-existent; and the gain, it seems to us, is small, balanced against the difficulty of this enormously complex problems that immediately confront us.

The metaphysical difficulty of Pluralism may be put thus: if the monads are absolutely separate, it is not obvious how a common can arise; while, if they are inter-related, there is no intelligible sense in which they can be ultimate.

(iii.) That the omnipotence of God is *inherently* limited is implied in all theories which represent evil as necessary. In some sense the necessity of evil must be an element in every attempted solution of the problem; and hence in some sense it is true that evil exists because God, though perfectly good, is not omnipotent. What kind of limitation of omnipotence is compatible with an adequate Theism? Only the limitations necessary to make omnipotence a thinkable conception—limitations without which omnipotence is a totally absurd notion, meaning power not only to do all possible things, but to determine what is possible; an omnipotence which absolutely excludes impossibility. This is the foolish notion of omnipotence argued upon by, e.g., Schopenhauer and J. A. Mill.

The Creator is the author not merely of the world, but of possibility too. He might accordingly have devised this in such a way as to admit of a better world (Schopenhauer, *Parerga*, §. 127; cf. *KOH. Theism*).

This meaningless omnipotence is denied as soon as God is conceived of as a definite Being at all, with any stability of intelligence or will. *Omnis determinatio est negatio*. To find that derogatory to God is to abuse language.

Plainly God is limited by His own Being (He cannot deny Himself), by His own purpose, and by His own works. It cannot be otherwise. We should also have a Being to whom no predicates could be attached, of whom nothing could be firmly hoped.

Hence in many quarters evil is represented as necessary; and, as noted, it must in some sense be so. The thought is not free from difficulty. For, if evil be necessary, is it not justifiable? Can we

condemn what must be? If a thing is necessary, is it not in a sense good? Even if we say, 'Evil must be, not in order that it may be for its own sake, but in order to be thwarted, fought with, destroyed, and to make good possible,' the evil-doer may still justify himself. If we say to him, with Royce, 'God's will is your will. Yes, but it is your will thwarted, overruled, overruled, defeated. . . . God wills you not to triumph. . . . And that is the use of you in the world . . . to be willed down in the very life of which you are a part' (*Studies*, p. 28), he may reply, 'Your argument is irrelevant. It remains true that on your own showing I am fulfilling a useful and necessary function in the scheme of things. Without me you can do nothing; your goodness were impossible without me to contend with. In your interest it is necessary for me to exist, and it is goodness in me to choose to constitute myself a round in the ladder of your ascent. Evil if justifiable in the abstract is justifiable in the concrete; in the abstract it does not exist. If there must be evil, there must be evil-doers.'

The possibility of evil is clearly necessary; it is no true limitation of omnipotence to affirm that. And, as Royce himself shows the possibility of evil (*Studies*, iv.), the presentation of moral choice is all we need for knowledge of good and evil. It is a delusion that we have more knowledge by yielding to temptation than we have in resisting it. Hence the difficulty remains, Why did not God prevent the actualization of evil? It is not an adequate answer to say, God cannot prevent moral beings from choosing evil rather than good. For, if God can govern moral beings now, as it must be admitted He can and does, He could have done so all along without damage to their moral freedom. Besides, the other difficulty remains as to why moral beings should will evil. After all, there is much to be said for Lotze's view:

'Of all imaginable assertions the most indefensible is that the evil of the world is due to the validity of eternal truth; on the contrary, to any unprejudiced view of Nature it appears to depend upon the definite arrangements of reality, besides which other arrangements are thinkable, also based upon the same eternal truth. If there were retained the separation . . . between necessary laws and the creative activity of God, in our view evil would undoubtedly belong not to that which must be, but to that which is freely created. Let us therefore . . . say that where there appears to be an irreconcilable contradiction between the omnipotence and the goodness of God, there our faith within has come to the end of its tether, and that we do not understand the solution which yet we believe in' (*Microcosmus*, 4, Edin. 1856, p. 717).

3. The view that evil is not really evil.—The view that what is to us evil is not evil to God we have discussed above. Here we deal with various arguments which attempt to show that what at first sight seem evils are not, when better examined, evils to us. The characteristic formula of all such theories is, 'Partial evil is universal good.' And the most familiar expression of it is Pope's *Essay on Man*, which is a summary of Deistic optimism as represented by, e.g., Bolingbroke. The view is, 'Whatever is right, i.e. there is really no evil. Suffering is to be borne with content because the evil suffered is serving a great universal end. Nature is not to be rebuked for enforcing her laws at the expense of an individual.

'Respecting man, whatever wrong we will, May, must be right, as relative to all.'

A similar view was to some extent accepted by the Stoics, who grappled earnestly with the problem of evil—not in Pope's dilettante manner—and in regard to the bearing of evil and the good that comes out of evil said nearly all that can be said. The Stoics, too, regarded the world as perfect. 'The nature of evil exists not in the Universe' (*Epictetus*, *Enchir.* 27). Evil is conducive to the best of the whole. Chrysippus and M. Aurelius compare evil to the coarse jest in the comedy, which, though offensive by itself, improves the

piece as a whole (*Aur. Med.* vi. 42). 'God has fitted all, evil with good, in one great whole, so that in all things reigns one reason everlastingly' (*Cleanthes, Hymn to Zeus*). In reply to this position that partial evil is universal good, we say that it does not make the evil any less or any less real. The individual afflicted for the good of the whole may well ask, Why select me? As Voltaire in *Candide* asks, Why should Lisbon perish while Paris escaped? Was not Paris sunk in evil too? However true it be that evil leads to good and to greater good, the problem remains as to its distribution. And, whatever its effects, near or remote, evil is still evil.

It may be said that evil appears only in particular, and that when we take a comprehensive view of the great whole it disappears, but of what use is a consolation the power of which depends upon the arrangement of chances in a sentence? For what becomes of our consolation if we convert the sentence which contains it thus—The world is indeed harmonious as a whole, but if we look nearer it is full of misery? (*Lotze, Microcosmus*, 4, p. 716).

Another point emphasized by the Stoics, and in many quarters since, is that evil is good as a disciplinary agent. On this point Seneca writes in almost a Christian strain in his *de Providentia*: 'Fragilis are the plants that grow in a sunny valley.' And so Epictetus (*Disc.* iii. 24): 'God sends me hither and thither, shows me to men as poor, without authority, and sick . . . not because He hates me . . . but with the view of exercising me and of using me as a witness to others.' This is all fine and true, but the problem of evil remains. For this does not explain the suffering which destroys the very possibility of moral improvement, e.g. by reducing a mind to imbecility, or the fact that the evil inflicted seems utterly disproportionate; the old question is, in fact, raised in acute form, Is God not good to His own, or is He powerless, that this is the only way in which He can educate them?

Still another consideration is urged by the Stoics which has also played a great part in explanations of evil, viz. Evil is the necessary condition, the correlate, without which good is not conceivable. No evil, no good. This gives rise to different views. (a) Evil is a merely negative or privative conception, meaning only the absence of good; (b) evil is the condition of knowing or doing good. In answer it is easy to point out that evil is no more negative. It is something quite positive which attempts to usurp good. Evil is not merely goodless, but anti-good, if we may use the words. A man may fail to exhibit a virtue without being guilty of the contrary vice, or, as we say, have only negative virtue. As to our knowledge of good:

'Things are known to us only in relation to their opposites. . . . But the law need not be so interpreted as to require that these opposites must be absolute antitheses. In order to comprehend, we must have change. . . . But change does not necessarily mean transition to the entirely opposite state.

'We should be conscious of good without experience of positive sin or evil, if there were within good itself change from one degree to another, or if there were varieties of good' (*Darwinism, State Creed*, p. 217).

The position that evil is necessary if moral beings are to be good and do good has been in our view already.

VIII. CONCLUSIONS.—We have seen that every proposed solution either leaves the old question unanswered or raises new ones. The problem is for the human mind insoluble. However far we may get with an answer, ultimately

'There is a veil past which we cannot see,' and the final and complete answer to 'Si Deus bonus, unde malum?' lies within. There are, however, considerations which so far lighten the problem.

1. Metaphysical evil (the fact that we are finite) is no evil at all. 'To be finite is unsatisfactory,' says Royce, but it is scarcely a thing to complain

about, if, as we actually find, the finitude is capable of indefinite expansion, and if, as we have ground for hoping, this is destined to be immortal. When knowledge cannot be extended, when possibilities of discovery and invention have been exhausted, it may be time to find our finitude an evil. When our world is conquered, we may weep.

2. Physical evil, the evil we suffer.—(a) If one argues, We can conceive the world and the conditions of life as better than they are, why are they not better? the answer is: As a matter of fact they are becoming better, our demand for a better world is God's demand, our purpose to make it better is His purpose, our task in improving it is His task. To demand from God a better world, to complain that it is so imperfect, is to demand for man an easier task, that there shall be less which man has any share in producing. The demand for a perfect world is the demand that man shall have no task, no function in the world at all, and makes the creation of a world needless and unintelligible. As Iversen says, 'the world is not yet made, it is only in the making' (see also Fairbairn, *The Philosophy of the Christian Religion*, p. 56); and man himself is called to play a part in the making of it. He is not at home in the world as he finds it; by his labour he has to make it more of a home. Hence it seems inevitable that there should be suffering in various forms for him. Which is preferable—a world in which man has nothing to do in making it a better world, or a world which calls him to be a worker along with God?

(b) Physical evil has been the goad which has impelled men to most of those achievements which make the history of man so wonderful. Hardship is the stern but fecund parent of invention. Where life is easy, because physical ills are at a minimum, we find man degenerating in body, mind, and character. With a new world we must demand a being different from man as we know him, i.e. not man.

(c) This indicates that the demand that the world should be other than it is in this or that particular leads us whither we know not. It is not one thing which has to be changed when one change is proposed, but ultimately all things; and a world totally different from the world we know cannot be thought out. It is not possible to foresee all the changes necessitated by one change regarded as desirable. Could we foresee them, it is conceivable that we should find the last state worse than the first. Leibniz's formula, 'this is the best of all possible worlds,' does not admit of demonstration, but neither does its denial. We cannot prove that there is no more suffering in the world than is necessary for any good purpose, neither can we prove that there is more. And the burden of proof seems fairly to rest on the critic of Providence.

3. Moral evil.—There are ultimate questions that cannot be answered, e.g. the origin of sin, and its universality (see art. SIN). Here it is in place to state that we may hold that it was God's purpose to have in man not merely an intelligent fellow-worker, but a moral being who should be partly the architect of his own character and worth. Again we ask which is preferable—a being who cannot do evil, or a being who with full power to do evil abstains? a *non peccare peccatore*, or a *peccare non peccatore*? We note that Huxley answers that he would prefer the former:

'I protest that if some great Power would agree to make me always think what is true and do what is right, on condition of being turned into a sort of clock . . . I should instantly close with the offer' ('*Methods and Results*,' *Collected Essays*, Lond. 1880-81, i. 187).

But it may be doubted if many will agree with

him. Once again it is a demand for no task, no battle; and what is the worth of such a character? The wine of life would be drawn under such conditions; man would have no share in working out God's plan. Which is preferable—a grim fight, with the possibility of splendid triumph, or no battle at all?

The possibility of evil is necessary for a moral being. And the actuality of evil is the only ground we can see on which there rises any need or any possibility for the manifestation and development of some human virtues, and the revelation of some Divine excellences, which we regard as among the best. Nor, though we might have knowledge of evil, could we have knowledge of the consequences of evil, were evil not actual.

It will appear that we might go on to say that God wills not merely the possibility, but the actuality of evil. If we admit that He has perfect foreknowledge and wills a possibility which He knows will be realised, manifestly it might seem His responsibility is not different from that of willing its realization (cf. Rashdall, ii. 343). We prefer to say that here we are in a difficulty which shows, in Lotze's phrase, that our thought is at the end of its tether.

4. Connexion of physical with moral evil.—The problem of evil would be far less acute if we saw that suffering was proportionate to wrong-doing. The greatest problem of all is the apparent indiscriminate with which good and evil fortune are assigned. Three considerations must be regarded.

(a) We see but in part. Could we see the whole, it is not inconceivable, to say the least, that the apparent disproportion would wear a very different aspect. As Royce puts it, we see things in the temporal series; the problem may be quite other *sub specie eternitatis* (*World and Individual*, ii. 222).

(b) For then, in particular, we should see how God's government of the race modifies His government of the individual. God has the race to govern, and the race can be disciplined only in individuals. Hence there is vicarious suffering, and it is difficult to hold that what is reasonable in man, who in various circumstances must and do punish, causing vicarious suffering, is unreasonable in God.

(c) If we believe in immortality, the whole problem of evil, and this one in particular, is profoundly modified. And this problem is one point of view from which it may be shown that immortality is a postulate of morality. If we believe that the conflict with evil shall result in final victory for good, that evil shall at last find its place in Reality only as trampled on and triumphed over, and, further, that we who have striven and suffered and been perplexed shall see the triumph of what we fought for, and the good meaning of our burdens, and the explanation of our problems, then at the worst life is full of interest; it is good to be, worth while to suffer and to fight.

In brief, our view is: God is good and means only good, but His purpose is to realise His ends with our co-operation; and in some sense evil is necessary that they may be revealed to us, and striven after by us.

LEARNERS.—The main ethical passages are Gen. ii. 1-17, Exod. 20. 2-17, Lev. 19. 1-18, Rom. 7. 1-6, 13. 1-10, 14. 1-10, 15. 1-10, 16. 1-10, 17. 1-10, 18. 1-10, 19. 1-10, 20. 1-10, 21. 1-10, 22. 1-10, 23. 1-10, 24. 1-10, 25. 1-10, 26. 1-10, 27. 1-10, 28. 1-10, 29. 1-10, 30. 1-10, 31. 1-10, 32. 1-10, 33. 1-10, 34. 1-10, 35. 1-10, 36. 1-10, 37. 1-10, 38. 1-10, 39. 1-10, 40. 1-10, 41. 1-10, 42. 1-10, 43. 1-10, 44. 1-10, 45. 1-10, 46. 1-10, 47. 1-10, 48. 1-10, 49. 1-10, 50. 1-10, 51. 1-10, 52. 1-10, 53. 1-10, 54. 1-10, 55. 1-10, 56. 1-10, 57. 1-10, 58. 1-10, 59. 1-10, 60. 1-10, 61. 1-10, 62. 1-10, 63. 1-10, 64. 1-10, 65. 1-10, 66. 1-10, 67. 1-10, 68. 1-10, 69. 1-10, 70. 1-10, 71. 1-10, 72. 1-10, 73. 1-10, 74. 1-10, 75. 1-10, 76. 1-10, 77. 1-10, 78. 1-10, 79. 1-10, 80. 1-10, 81. 1-10, 82. 1-10, 83. 1-10, 84. 1-10, 85. 1-10, 86. 1-10, 87. 1-10, 88. 1-10, 89. 1-10, 90. 1-10, 91. 1-10, 92. 1-10, 93. 1-10, 94. 1-10, 95. 1-10, 96. 1-10, 97. 1-10, 98. 1-10, 99. 1-10, 100. 1-10.

Young, *God and Good*, Lond. 1846; F. Rohrer, *Gut und seine Schöpfung*, Nördlingen, 1867; A. Schopenhauer, *Die Welt als Wille u. Vorstellung*, Berlin, 1869; W. H. Smith, *Greenham, or Thoughts on Good and Evil*, Edin. 1892; H. Lotze, *Mikrokosmos*, Leipzig, 1856-64 (Eng. tr., Edin. 1890); E. Dühring, *Der Werth des Lebens*, Breslau, 1895; A. Comte, *De la morale*, Florence, 1848; J. McCosh, *The Method of Divine Government*, *Physical and Moral*, Lond. 1867; E. Bultner, *Gott, Welt, u. Mensch*, N. d. h. 1899; R. Roth, *Theologie, Ethik*, Wittenberg 1899; K. R. v. Hartmann, *Philos. des Unbewussten*, Berlin 1871; H. Martensen, *Die christliche Ethik* (allgemeiner Theil), Gotha, 1871 (Eng. tr., Edin. 1890); E. Naville, *Le Problème du mal*, Lausanne, 1897 (Fr. tr. Edin. 1911); J. S. Mill, *Nature, Utility of Religion and Theism*, Lond. 1874; A. Ott, *Le Problème du mal*, Paris, 1888; H. Bergson, *Essai sur les données immédiates de la conscience*, do 1889; J. Sully, *Psychism*, Lond. 1892; W. L. Davidson, *Theism*, do 1893, lect. xi.; J. Royce, *The Religious Aspect of Philosophy*, Boston, 1897, *Studies of Good and Evil*, New York, 1898, *The World and the Individual*, do 1901; F. R. Tennant, *The Origin and Propagation of Sin*, Camb. 1902; A. M. Fairbairn, *The Philosophy of the Christian Religion*, Lond. 1902; H. Rashdall, *The Theory of Good and Evil*, Oxford, 1907; G. T. Ladd, *Knowledge, Life, and Reality*, Lond. 1909; W. E. Orchard, *Modern Theories of Sin*, do 1909; J. Ward, *The Realm of Ends, or Pluralism and Theism*, Camb. 1911; S. A. McDowell, *Evolution and the Need of Atonement*, do 1912; J. Y. Simpson, *The Spiritual Interpretation of Nature*, Edin. 1912; J. Watson, *The Interpretation of Religious Experience*, Glasgow, 1913, lect. xi., xii.; B. Bosanquet, *The Value and Nature of the Individual*, Lond. 1913. Further, the subject is treated in nearly all Philosophies of Religion (Schopenhauer, Lotze, Pfänderer, etc.), and Systems of Dogmatics (Aquinas, Ockham, Martensen, Hodge, etc.).

W. D. NIVEN.

GOOD NATURE.—That quality of temperament which is evinced, outwardly, in easy and agreeable accommodation to the social environment, and, inwardly, in aptness for adaptation without irritation or undue disturbance. Two types of good nature are to be distinguished.

(1) The first and more austere type consists in an attained orderliness of the sensibilities and a consciousness of harmony with nature. In its pagan interpretation it is the virtue of temperament sought in the Stoic ideal of wisdom as pious accord with natural law, to be attained by reasoned self-discipline; psychically it is marked by evenness of mood, avoiding both exuberance and depression, and it is generalized as right feeling (*eûdaimonia*), at finer fortitude than mere patient endurance. In its Christian interpretation good nature is the native innocence and right inclination which are conceived to have been the original endowment of mankind; it is (to quote Jeremy Taylor) 'the relics and remains of that shipwreck which Adam made,' or, more precisely, 'the proper and immediate disposition to holiness.' Hence it is the source of natural morality and innate apprehension of the good.

(2) A second type of good nature, more lively and spontaneous, is a fact of elementary psychology—in no sense a product of discipline. Kindliness and easiness are its salient traits, health and sound

nerve its primary conditions. Over and above these is implied a mental constitution mobile and facile enough to meet change without friction or strain (ill nature is as likely to be a result of lax and sodden as of hypersensitive nerves). It is to be noted that such good nature is susceptible of cultivation, suggestion and auto-suggestion being capable agents for its inducement, and that it usually results in physical benefit. Many of the cures of 'Christian Science,' 'Mental Science,' etc. are primarily cures of temperament; the result is probably attained by inhibition (through suggestion) of irritations arising from local strains, and the process is, in effect, a centrally induced rest cure.

In its moral aspects good nature favours certain perils, such as over-readiness to be persuaded, or a too easy complaisance in abetting or condoning what should be morally repugnant. 'Weak good nature' is a manifestation of deficient will (cf. ANOUIA), shown either in extreme susceptibility to suggestion or in that temperamental laxness which appears in disinclination to fortify moral resolution in irksome directions. It is this aspect of good nature which has chiefly impressed itself upon the modern use of the term, where it is widely given a derogatory turn, as implying want of moral stamina. As a social virtue it should properly be cultivated between the extremes of hyper-conscientious scruple on the one hand and lax compliance with social expediency on the other.

H. B. ALEXANDER.

GOODNESS.—The story of the Fall has a profound truth embedded in it. Science regards it as the legend of the awakening of man from a merely animal state to the consciousness of good and evil, of his transition from thoughtless innocence to purposed virtue or deliberate vice, of the introduction of a new sense into the world, the sense which is named conscience. 'A fall it might seem, just as a vicious man sometimes seems degraded below the beasts, but in promise and potency a rise it really was' (O. Lodge, *Man and Nature*, London, 1906, p. 91). Later, for all peoples that have a history, there has, somehow or other, come a time of reflexion, and with it there has arisen 'a conception of good things of the soul, as having a value distinct from and independent of the good things of the body, if not as the only things truly good, to which other goodness is merely relative' (T. H. Green, *Prolegomena to Ethics*, Oxford, 1884, p. 261).

1. The Greek conception.—The 'good' (*τὸ ἀγαθόν*) was made the subject of reflexion in all the philosophical schools of Greece, and it is to Socrates and his successors that we owe our chief moral categories. The Platonic and Aristotelian conception of virtue is final in so far as it defines the good as goodness.

'It marks the great transition, whenever and however achieved, in the development of the idea of the true good from a state of mind in which it is conceived as a well-being more or less independent of what a man is in himself, to that in which it is conceived as a well-being constituted by character and action' (Green, *op. cit.* p. 200).

As a concrete ideal, however, the Greek conception of virtue, limited as it necessarily was by the moral progress of the nation, is inadequate. For us, as for Aristotle, the good is the realization of the powers of the human soul or the perfecting of man; for us, as for him, the good for the individual is to be good; but the idea of human brotherhood, which had no meaning for the philosophers of Greece, has achieved, and is destined to achieve, results of which they did not dream.

In opposition to the moral scepticism of the Sophists, some at least of whom reduced morality to a matter of private caprice, Socrates held that virtue is one and may be taught. Following out

this thought consistently, Plato was led to 'the Absolute Good,' or 'the Idea of Good' (*ἡ οὐσία τοῦ ἀγαθοῦ* [*Rep.* bk. vi.]), which is the source of all truth, all goodness, and all beauty. Its apprehension by the soul is knowledge, its indwelling in the soul is virtue, its shining forth to the soul (it may be through the medium of senses) is beauty. It is the eternal and unchanging principle of goodness. Correcting the Pythagorean dictum, Plato asserted that God, not man, is the measure of all things. He believed that the ideal for each lower soul is to become dear to God and to grow like Him.

Socrates further taught that 'Virtue is knowledge.' Himself blessed with a will which obeyed all the behests of reason, he fell into the error of ignoring its operations. Assuming that all motives are rational, he held that practical wisdom (*σοφία*) is the sole condition of well-doing. No man, he was wont to say, knowingly chooses the evil and rejects the good—a statement which owed its plausibility to the double meaning of the word 'good,' virtue and interest. He taught that the various forms of goodness are wisdom in different spheres of action: to be pious is to know what is due to the gods; to be just is to know what is due to men; to be courageous is to know what is to be feared and what is not; to be temperate is to know how to use what is good and to avoid what is evil.

The principle that wisdom is the sole good and ignorance the sole evil became the basis of all subsequent discussions of the ethical problem. For Plato, the philosophic man is the good man. Plato was, indeed, too clear-sighted and fair-minded to suppose that virtue is the exclusive possession of a few choice spirits. He admits that there is much to commend in the lives of some men who are not philosophers. Ordinary citizens who are brave, temperate, and just must have certain true notions of good and evil; their right opinion comes partly from nature or 'divine allotment,' and partly from custom and practice. But for the perfecting of character and conduct, for the adequate preparation of men for good citizenship and especially good government, there is needed the discipline of philosophy. True knowledge, and with it true virtue, can be imparted only to the soul that has undergone a long course of training. Practical excellence of character is the finished product of a liberal education.

Aristotle's famous formula that virtue is a mean, or carefully chosen middle course, between two vices which are related to it as excess and defect makes goodness synonymous with prudence. The Epicurean sage, for whom pleasure was the sole good and pain the sole evil, counted all virtuous conduct empty and useless except in so far as it ministered to his happiness. He determined the only real (or reasonable) goodness by a careful consideration of the pleasant or painful consequences of men's actions. The Stoical wise man was free from passion, unmoved by joy or grief, sufficient unto himself (*αὐτάρκης*), living in harmony with the all-controlling law of nature. The strength of Stoicism lay in the heroic severance of virtue from interest. This stern creed had a natural affinity with the Roman mind, and under the Empire almost every noble character, every effort in the cause of freedom, emanated from the ranks of Stoicism. But all the later Stoics sadly confuse how great is the gulf between the ideal sage and the actual philosopher. 'Ah, show me a Stoic!' says Epictetus. 'By the gods, I long to see one. Show me at least one who lies in the crucible in order to be cast. Pray do me this kindness. Pray refuse not to an old man, from ill-will, the sight of a spectacle that I have not seen till now' (*Diatrib.* II. xix. 24 ff.). Experience proved that

this type of goodness could not be realized. It was too violently opposed to nature, and the passionless sage was nowhere to be found. The ethical code whose dominant notes were 'Endure' and 'Refrain' could not be the final law of life.

The philosophical endeavour to attain virtue or goodness by knowledge was prolonged for centuries, and enlisted many of the finest minds of Greece and Rome; but it was a *tour de force*, which was bound to fail for various reasons. Virtue was made too academic: the faint murmurs of the schools scarcely ever reached the dull ear of toiling humanity. It was too intellectual: after all, men 'live by admiration, hope, and love.' It was too secular: there never was any certainty that man's beautiful moral ideal had its source and sanction in the character and will of God. And it was too superficial: man cannot really be moralized and meliorized unless he is first regenerated. 'Genuine goodness is no necessary consequence of the enlightenment of the understanding; it can only dispel follies, but not vices' (Martensen, *Christian Ethics* [Individual], Edinburgh, 1884, p. 20).

2. In the Old Testament.—The Hebrew prophets and poets do not analyze abstract ideas, but give impassioned utterance to the spiritual truths by which the moral life is generated, fostered, and perfected. For them the energy of goodness lies in the will, behind which is the immutable character, of God. They teach, exhort, and rebuke their nation with an authority which is justified by their inner assurance of being called to speak for a God of absolute righteousness. 'Good and upright is Jahweh' (Ps 25), requiring men to depart from evil and do good (34¹⁴), condemning all who obliterate moral distinctions (Is 5²⁰). He deepens the sense of sin till men cry in anguish, 'There is none that doeth good, no, not one' (Ps 14³). But He is good and ready to forgive (89¹). He is good to all (145⁹), and the moral ideal which He sets before men is beautifully simple: 'Trust in Jahweh, and do good' (37³); 'He hath showed thee, O man, what is good; and what doth Jahweh require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?' (Mic 6⁸).

The Old Testament conception of goodness is vital and therefore progressive; dynamic, and not till after the Exile merely static. The morality of the Hebrews, like their religion, had a history. The ideal of conduct cherished by the prophets was very different from that of the rude nomads who swarmed from the desert into the land of the Canaanites. Under the discipline of events, interpreted by the genius of spiritual leaders, less and less importance came to be attached to outward righteousness, more and more attention was directed to the hidden springs of action in the soul. But the prophetic sense of the weakness of human nature stirred a longing for the inspiration of a new supernatural power. Jeremiah's hope of the triumph of goodness lay not in the self-amendment of Israel and Judah, but in Jahweh's making a new covenant with them, putting His law in men's inward parts, and writing it in their heart (Jer 31³³⁻³⁴).

3. In the New Testament.—Jesus both extends and deepens the prophetic conception of goodness. Absolute faith in the goodness of God is the keynote of all His teaching. He refuses to be lightly called good (Mk 10¹⁸), not because He is innocent of any evil in Himself, but because He has still to be perfected by struggle and temptation. He has a sense of the immeasurable contents of human, as well as of Divine, goodness. For Him no action has value apart from motives and dispositions; He seeks the source of morality in the inner spirit of conduct; He goes back beyond the legalism of His time to the fundamental moral ideas of the Law and the Prophets, disengaging the principle upon

which they rest. To Him the only real good is the good self: make the tree good and the fruit will be good (Mt 7¹⁷). He has an optimistic assurance of the triumph of goodness, rejoicing even in reviling and persecutions as part of the process through which evil is to be vanquished. In His view nothing can permanently withstand the power of love. 'Man can only seek for truth and goodness, and if for a time he turns his energies against the good cause, it is not in the spirit of a being who desires evil—for man is not a devil, but in his real being "a son of God"—but in his confusion of the true with the false' (John Watson, *Christianity and Idealism*, Glasgow, 1897, p. 28). In the life of Jesus the image of goodness rises as a universal example. The moral ideal, which is latent in every man, is active and triumphant in Him. In contemplating Him men for the first time really 'feel how awful goodness is, and see virtue in her shape how lovely.'

¹ Religion cannot be said to have made a bad thing in pitching us (this man as the ideal representative and guide of humanity) nor, even now, would it be easy, even for an unbeliever, to find a better translation of the rule of virtue from the abstract to the concrete than to endeavour so to live that Christ would approve our life' (J. B. Mill, *Three Essays on Religion*, pop. ed., London, 1904, p. 107).

His goodness is so far from being a possession to be enjoyed by Himself alone that it is communicated everywhere to faith; and, inasmuch as His followers are transfigured into His image (*arrasopagetai* [2 Co 3¹⁰]), He becomes the Founder of a new humanity, pledged to secure the ultimate victory of His Divine ideal of goodness.

4. In modern speculation.—The problem of the nature and sanction of goodness has, for three centuries, engaged many of the keenest minds of modern Europe. Every thinker has had the task of squaring his ethical conceptions with his general view of man's place in the cosmos. The school of Hume, for which the human mind is merely a bundle of states of consciousness, can recognize no higher motive than the agent's interest or happiness, so that the noblest character is merely a means to an end—the promotion of pleasure. Kant holds that there is nothing good but the good will, which is good in itself, not with reference to any external facts. He teaches that man, as a rational being, is bound to obey a categorical imperative, the content of which is given in the formula: 'Act only on that maxim (or principle) which thou canst at the same time will to become a universal law' (*Metaphysic of Morals*, sect. ii.). Character, which Novalis (*Schriften*, i. 242) defined as 'ein vollkommen gebildeter Wille,' is thus so far from existing for anything else that all other things rather exist for its sake. The pleasures and pains of life are but part of the raw material out of which character is created. Grant that 'the attempt to establish an absolute coincidence between virtue and happiness is in ethics what the attempting to square the circle or to discover perpetual motion is in geometry and mechanics' (L. Stephen, *Science of Ethics*, London, 1882, p. 430), this discrepancy, which so perplexed and troubled the ancient Hebrews, can now be calmly contemplated. The presence of suffering in all noble lives proves that there is a higher and than pleasure: here the Stoics were absolutely right. To inquire after the utility of goodness 'would be like inquiring after the utility of God' (Carlyle, *Miscellaneous*, i. 48). What gives the moral life its Divine sanction 'is the discovery that your gleaming ideal is the everlasting real, no transient brush of a fancied angel's wing, but the abiding presence and pervasion of the Soul of souls' (J. Martineau, *Study of Religion*, Oxford, 1888, i. 12).

5. Relation to evolution.—The doctrine of evolution has shed a new and bewildering light upon the problem of the genesis and worth of goodness. It

has raised anew in the acute form the old question whether the Soul of the world is just—whether goodness in man is, as Plato thought, a manifestation of the Absolute Good. Huxley was impressed by 'the unfathomable injustice of the nature of things'; he affirmed that 'the practice of that which is ethically the best—what we call goodness or virtue—involves a course of conduct which, in all respects, is opposed to that which leads to success in the cosmic struggle for existence'; he in fact denied the possibility of identifying 'the power which makes for righteousness' with 'the power behind natural evolution' (*Evolution and Ethics*, London, 1893, pp. 12, 33). Nietzsche, on the other hand, hailed the ethics of evolution as a kind of new gospel; he glorified brute strength, superior cunning, and all the qualities that secure success in the struggle for life; he demanded, in the name of development, a revaluation of all moral values, a demoralization of all ordinary current morality; and he thought he foresaw, as a new Messiah, the Superman who is *jenseits von Gut und Böse*.

It is probable that there is much more real goodness in Nature than either Huxley or Nietzsche allowed; that she is not so 'red in tooth and claw' as she has been painted; that there has, since the very beginning of life in our planet, been a principle of altruism (q.v.), a struggle for the life of others (E. Drummond, *The Ascent of Man*, London, 1894, p. 29 ff.). Science cannot disregard the principle of continuity, and the future evolution of humanity will be as much a part of the cosmic process as the past. But that which is natural is first, and afterward that which is spiritual. We are allied to that which is above us as well as to that which is beneath us. Nature is so imperfect that the Stoical doctrine of life in conformity with her—centimentally accepted by Rousseau and fiercely by Nietzsche—is not enough for the moral guidance of man. As Matthew Arnold says in his sonnet 'In Harmony with Nature':

'Know, man hath all which Nature hath, but more,
And in that more lie all his hopes of good.'

JAMES STRANAW.

GOODWILL and its opposite, 'illwill,' denote by their etymology distinctively moral characterisation formed by voluntary effort in contrast to the instinctive disposition or temperament described as good nature or ill nature. But there is a certain fluidity in the use of the terms, so that, like their Latin equivalents, *benevolence* and *malevolence*, they are readily applied to the instinctive impulses of nature as well as to creations of will. Thus goodwill expresses one side of amiability (q.v.). It is the disposition or willingness to love, though it does not, like amiability, suggest that this is calculated to evoke a response of love in others.

J. CLARK MURRAY.

GOOD WORKS.—See MERIT.

GORAKHNATH.—The traditional founder of the Indian sect of Knapthā, or split-eared, Yogis (see YOGI). The name is a corruption of the older Skr. form *Gorakṣanātha*, 'Lord of cattle-herders,' or, possibly, 'Lord of Gorakṣa' (see below). His date is unknown, the three most circumstantial legends concerning him being so contradictory that nothing certain can be gathered from them. In Nepal he is associated with King

Narendra Deva, who reigned in the 7th cent. A.D.;¹ in Northern India he is represented as a contemporary and opponent of the reformer Kabir, who flourished in the 15th cent.;² while, in Western India, one Dharmnath, who is said to have been his fellow-disciple, appears to have introduced the Kānpāṭh doctrines into Kachchh at the end of the 14th century.³ If the traditional relationship between Dharmnath and Gorakhnath can be established as a fact, the last-mentioned date is the most probable one.

The Kānpāṭh Yogis trace the origin of their tenets far beyond Gorakhnath. All authorities agree in making him one of the twelve (or, according to some, twenty-two) disciples of Matyendranath, a disciple of Adinath and a Yogi saint whom the Nepalese identify as none other than the Buddhist deity Arya Avalokiteśvara. Some make Adinath the founder of the Yoga, while others carry the list much further back.⁴ All traditions state that the disciple Gorakhnath was greater than his master, and that it was he who introduced the custom of splitting the ears of disciples and founded the sub-sect of the Kānpāṭh. The Kānpāṭhs themselves fall into two groups—those of Hindustan proper, who trace their descent directly from Gorakhnath, and those of Western India, who refer their immediate origin to his fellow-disciple Dharmnath. Several Sanskrit works are attributed to Gorakhnath,⁵ which may or may not be genuine; but the most authentic account of the tenets of the sub-sect will be found in the *Gorakhnath-til Gorāṭh*, a modern Hindi work reporting a controversy between him and Kabir, and written by a partisan of the latter.⁶ These do not differ from those of other Śaiva ascetics; for an account of them, see art. Yoga.

In Indian legend Gorakhnath is ubiquitous and all-powerful. He was the patron saint of the State of Gorkhā (Skr. Gorakṣa), for many years the rival, and ultimately the conqueror, of the adjoining State of Nepāl, of which the protector was Matyendranath. It is from Gorkhā that our 'Gurkha' soldiers take their name. Tibetan tradition⁷ claims Gorakhnath as a Buddhist magician, and states that his Kānpāṭh disciples were also originally Buddhists, but became followers of Śiva (i.e. Śaivas) on the fall of the Soma dynasty at the end of the 12th cent., as they did not wish to oppose the Muslim conquerors.⁸

Another Nepāl legend makes Gorakhnath cause a drought lasting twelve years, by the simple expedient of collecting all the sources of water and sitting on them. Buddhist and Brahmanical traditions differ as to the method by which the water was released, but the episode is one of the most important in the cycle of old stories which forms a preface to the sober historical notices of the country.⁹

Gorakhnath has long been deified in India proper, and legend gives him omnipotence. He can coerce even Brahmā, the god of Fate, and command him to alter a person's destiny.¹⁰ Sometimes he is shown as greater even than Śiva.

¹⁰ Cf. W. Crooke's note to the story of Gāṅgā, *JA* xiv. (1886) 51.

himself.¹ His principal shrine is at Gorakhnath in the district of Gorakhpur in the United Provinces. The best account of this is that given by Buchanan-Hamilton.² The local tradition is that Gorakhnath is identical with the Supreme Being. In the Satya Yuga (or Golden Age) he lived in the Panjāb,³ in the Treta Yuga (or Silver Age) at Gorakhpur, in the Dvāpara Yuga (Copper Age) at Harmaṇ (Hormus), and in the Kali Yuga (or present Age) at Gorakhnath in Kāpāliwar.⁴ He also for some time resided in Nepāl.

In a cyclic poem, entitled *The Song of King Manik Chandra*,⁵ current in the Rangpur District of Bengal, his immediate disciple, the Haṭi Siddha, a magician of great power, was a kind of domestic chaplain to the terrible queen Mayana, and induced her son, King Gopichandra, to abandon his kingdom and to become an ascetic for twelve years. During this time Gopichandra had to sink to the lowest depths and perform menial offices to a common harlot. The Haṭi Siddha was himself a sweeper by caste—a fact which, in the locality in which the poem is current, implies nameless abomination. Rangpur lies outside the traditional Aryan pale, and the whole group of circumstances points to non-Aryan tradition. The poem, moreover, contains numerous traces of Buddhist influence.⁶

The legend of Gopichandra is also met with in other parts of India. A popular, and widely spread, version makes Gorakhnath himself convert the famous King Bhartṛhari and induce him to adopt an ascetic career. According to others, the name of the hero is Gopichand, and sometimes Gopichand-Bhartṛhari.⁷ Indeed, the association of Gorakhnath and Bhartṛhari forms the theme of a drama by Harihar, the *Bhartṛharivivada* (tr. Gray, *JAS* xv. (1904) 197-230).

No legend is more popular in Northern India than that of Gāṅgā, of which several versions have been published.⁸ Here not only is Gorakhnath the wonder-working saint who is responsible for the birth of the hero; he is also the *Deus ex machina* who ever and anon appears to help him. It is in this story that, as we have seen, with this object he bends even Fate to his will.

So also in other important folk-tales, such as those of Pūrṇa Bhagat, and of Rājā Rasālā, he takes a most prominent part.⁹ In fact, in the popular religion of India he is the representative of Śiva, or even a form of that god himself—a character which is consonant with the literary tradition that he was a great teacher of the Śaiva religion, and an opponent of the medieval Bhakti-mārga reformers of northern India.¹⁰

¹ Cf. G. A. Grierson, *JAS* xiv. pt. I, p. 120 E.

² A. Montgomery Martin's *Eastern India*, London, 1866, II, 484.

³ According to D. Throckmorton, *Outline of Punjab Ethnography*, Calcutta, 1880, p. 488, the Kānpāṭh Yogis are especially strong in the higher Panjāb Himalaya, where Śiva is worshipped. There they perform semi-sacerdotal functions.

⁴ Cf. *SG* viii. (1884) 144, 145.

⁵ Edited and translated by G. A. Grierson in *JAS* xiv. pt. I, p. 120 E.

⁶ So, Gorakhnath shuts up the rain for twelve years, and was one of the twelve disciples of Matyendranath.

⁷ Cf. Dinanath Chandra Sen, *Hist. of Bengali Language and Literature*, Calcutta, 1911, p. 54 E.

⁸ Cf. G. A. Grierson, 'Two Versions of the Song of Gopi Chand,' *JAS* vi. pt. I, p. 85 E.; and W. Crooke, *FC*, Calcutta, 1886, III, 148 E.

⁹ E.g. W. Crooke, *PR*, London, 1886, II, 311, and *JA* xiv. 491. (In the latter there are references to other versions); J. M. Duns, *PNQ* I. (1880) 8, R. Temple, *Legends of the Panjāb*, Bombay, 1884-1900, I, 121 f. and II, 381.

¹⁰ For these, and others, see R. Temple, op. cit. Index, s.v. 'Gorakhnath.' According to a tradition of the Nepāl Turā, during Yudhiṣṭhira's journey through the Himalaya to heaven his brothers fell behind and perished one by one. Only Bhama survived. He was saved by Gorakhnath, who made him king of Nepāl (Grierson, 186).

¹¹ Cf. G. S. Leonard, 'Notes on the Kānpāṭh Yogis,' *JA* vii. 528. For Bhakti-mārga, see *ERS* II, 260 E.

It is difficult to sift any grains of truth from this heterogeneous mass of fable. If Gorakhnāth is not a purely mythical personage—a reflexion in the popular mind of the great Śaiva doctor Saṅkarācārya—it is probable that the literary account of him is correct, and that he did convert Nepāl from Mahāyāna Buddhism to Śaivism. He may himself have been a native of the Himālaya, where, alongside or in spite of Buddhism, the worship of Śiva has always been prevalent. We have seen that in the western Himālaya, north of the Panjāb, his followers, the Kānpaṭā Yogis, still perform sacerdotal functions. If, on the other hand, his name merely means the 'Lord of Gorakṣa,' it may simply represent Śiva as the guardian deity of that State; and the conversion of Nepāl may refer to the historical fact of the Gorkhā conquest of the country, which was under the protection of the Buddhist Arya Avalo-

GORGON (from Gr. *γάργυς*, 'terrible,' 'wild,' 'fierce'; cf. O. Ir. *garg*, 'wild,' 'rough'; M. H. G. *gar*, 'strong,' 'violent'; Russ. *sarkij*, 'angry,' 'quarrelsome'; Slav. *grosa*, 'horrid'; Ir. *grain*, 'ugliness' [see Prellwitz, *Etymol. Wörterbuch*, Göttingen, 1905, and Boissacq, *Dict. étymol.*, Heidelberg, 1907 ff., s.v.]).—The Gorgons are to the modern mind three mythological beings of hideous form and evil character, one of whom, Medusa, was slain by Perseus. Her terrible face, later conceived of as beautiful, had power to turn men into stone. Her head, cut off by Perseus, was put by Athene in the centre of her shield; it was called the Gorgoneion. We now know that the Gorgons took their rise not in mythology but in ritual, and that they are expressions ('projections') of a very primitive religious emotion. It is unnecessary nowadays to spend time and space in examining bygone attempts at interpreting the

FIG. 1. Gorgon on Rhodian Plate.

kiteśvara (Matsyendranāth). Such an explanation, though well-suited to the state of affairs in Nepāl, will not account for the prominent position occupied by Gorakhnāth in the folk-religion of the plains of India.

No connected account of Gorakhnāth has hitherto been written. The subject is well worthy of further investigation, for it is of considerable importance in the religious history of India. But such a study must be undertaken on the spot, by a scholar conversant not only with Indian literature, but also with ethnology and folklore.

LITERATURE.—The authorities for the various statements contained in this article will be found in the footnotes.

G. A. GRIERSON.

GORAKHPANTHĪ.—A name sometimes used in Northern India for the Kānpaṭā Yogis, as disciples of Gorakhnāth. See artt. GORAKHNĀTH and Yogis.

mythological Gorgons, as, e.g., storm-clouds. Such attempts were possible only when it was supposed that the concept as well as the name of Gorgon was confined to the Greeks. We now know it to be world-wide. What the Greeks did here, as so often elsewhere, was by their fertile play of fancy to conceal a simple fact—the use of ritual masks for magical and especially for apotropaic purposes. The Gorgon as monster sprang from the Gorgoneion, the terrible face or head; not the Gorgoneion from the Gorgon.

The primitive Greek had, in his ritual, a grinning mask, with glaring eyes, protruding beast-like tusks, and pendent tongue. He called it *gorgoneion*. He used it, as the savage does today, to scare away evil things—his enemies in the flesh and his ghostly enemies. He wore it on his shield; he placed it over his house; he hung it on his oven; doubtless, though here precise evi-

dance falls as, he danced with it as a mask at his ritual dances. Most anthropological museums contain specimens of *Gorgoneion*-like dancing-masks; the Museum für Völkerkunde at Berlin has excellent examples, with tusks and protruding tongue. The function of such masks is permanently to make an 'ugly face' for prophylactic purposes.

Ritual masks fell into disuse, but still the pictures of them went on, on pottery, as the blazon of shields; the traditional Athens not only wore the goat-skin *asgis* which had once been the ordinary dress of her people, but on her breast she wore the Gorgoneion, the beast's head, humanized by degrees, but always made frightful. The Greek, being always curious as to causes and a born story-teller, asked the question whence came the bodiless dreadful head: it must have been severed from the body of a monster, the monster must have been slain; a slayer was provided—the hero Perseus. The name Gorgoneion presupposes the Gorgon, but the conception of the monster rose out of the bodiless head, the mask.

Our earliest literary notice of the Gorgon bears out this interpretation—that the head is primary and essential, the monster begotten only to account for it. Odysseus in Hades (*Od.* xi. 633 ff.) desired to hold further converse with dead heroes, but,

'Are that might be, the ghosts thronged round in myriads manifold,
Weird was the magic din they made, a pale-green fear-gat hold

Of me, lest, for my daring, Persephone the dread
From Hades should send up an awful monster's grizzly head.'
It would have been more natural and efficacious for Persephone to send up the monster herself, but there was no monster, only a grizzly head (*γεργένης κεφαλή*). In early representations in art the dreadful head is always prominent; and the body like a mere appendage tacked on. This is clearly seen in fig. 1 from an early Rhodian plate in the British Museum (*JHS* vi. [1886], pl. lix.). Here the 'ugly face' has been furnished with a body

—not a human monster. Art has been at work to make it more hideous: the staring eyes are surrounded by a pattern in spots; the upstanding hair, which sometimes develops into snakes, is well shown, and the tongue protruding from the wide grinning mouth; the mouth grins in order the better to show the teeth. The gesture of putting out the tongue to show aversion survives in the street-boy of to-day. The origin of the gesture seems to be not so much to show disgust as to eject some hurtful substance from the mouth. The religious content is the same as that of spitting—at first to get rid of evil, then to avert it. We may compare the Greek word for winnowing-fan, *wrier*, or the spitter, i.e. the rejecter of chaff (see art. *FAN*, vol. v. p. 764). If we were to give such action a specialized name, we should have to call it not apotropaic but *apoptotic*.

FIG. 2. Gorgon on Corinthian Vase.

In fig. 3 we have a Maori staff in the present writer's possession decorated with a Gorgoneion. With such staffs held horizontally, the Maori advance against their enemies to frighten them by showing the 'ugly face.' The protruding tongue forms the front of the staff; the tongue is elongated out of all proportion, and at first sight the Gorgon-head is not easy to recognise. But all the

FIG. 3. A Maori Staff with a Gorgon-head.

and four wings; the monster thus compounded holds two birds in heraldic fashion like 'Lady-of-Wild-Creatures' (*πόρνα θηρῶν*). She has developed from an 'ugly face' into an evil demon.

In fig. 2 we have a Gorgon from a Corinthian vase at Munich. Here it is evident, from the long drooping ears, that the 'ugly face' is that of a beast

usual features are present: eyes filled in with enamel, overhanging brows, nose, mouth, and, inside the latter (invisible in fig. 3), a row of teeth. The face is, however, so subordinated to the long, highly decorated tongue that its meaning might easily be lost.

Finally, it is of interest to note that the the-

strical masks of Dionysos retain the wide open mouth (see MASKS). The gorgonion is, in fact, only one particular form of a dance-mask. It stands as a constant memorial of the religion of fear—it is Terror incarnate.

GOSAIN.—s. Name and distribution.—The name in its varied forms (Gosāin, Goswāmi, Gosāmi, Swāmi, Sāmi) comes from Skr. *gosa* 'master of cows or herds', with the secondary sense of 'one who has brought his passions into control.' It is used to designate an Order of Hindu asceticism or bhattara, of whom 182,648 were recorded at the Census of 1901, being most numerous in Bombay, Rajputana, Bengal, the Central Provinces, and Bihar.

a. Classification.—The term is ill defined, and its import varies in different parts of India. The most convenient distinction is between the Śaiva, or worshippers of Śiva, and the Vaiṣṇava, or worshippers of Viṣṇu.

(a) Śaiva Gosāins.—The most respectable members of this Order are the spiritual descendants of the great South Indian teacher, Śaṅkarācārya, the very incarnation of the strictest Brāhmanism, who lived in the beginning of the 8th cent. A.D. He is said to have had four principal disciples, from whom the ten divisions of the Order—hence called the 'ten-named,' or *Daśanāmi Dandis*—originated. These are: Tīrtha, 'shrine'; Āśrama, 'order'; Vana, 'wood'; Aranya, 'forest'; 'desert'; Saravati and Bhārati, the goddesses of learning and speech; Puri, 'city'; Giri and Pāravata, 'a hill'; and Sāgara, 'the ocean.' Each member adds to his own name that of the group to which he belongs—e.g. Ānanda-giri, Vidy-āranya, Rāma-āśrama.

There are but three, and part of a fourth mendicant class, or those called *Nirtha*, or *Nidra*, *Āśrama*, *Saravati*, and *Bhārati*, who are still regarded as really Śaṅkara's Dandis. These are sufficiently numerous, especially in and about Benares. They comprehend a variety of characters; but amongst the most respectable of them are to be found very able exponents of the Vedānta system. Other branches of Śaṅkarī literature owe important obligations to this religious sect. The most sturdy bhattara are also members of this Order.

Their contributions are levied particularly upon the Brāhmanical class, as, whenever a feast is given to the Brāhman, the Dandis of this description present themselves as unbidden guests. . . . Many of them practice the Yoga, and profess to work miracles. . . . The remaining six and a half members of the *Daśanāmi* class, although considered as having fallen from the purity of practice necessary to the Dandis, are still, in general, denominated *Āṭṭa*, *Sār* *Āṭṭa*, "poor away, shorn from worldly cares and passions" (H. B. Wilson, *Religious Sects of the Hindus*, l. 1902). The Dandis derive their name from the fact that he carries a small wand (*danda*) with several projections from it, and a piece of cloth dyed with red ochre, a colour which comes down as the part of religious persons from the Brāhmanas and Epik periods (A. Weber, *Hist. of Indian Literature*, Eng. tr., London, 1902, p. 75). In this cloth his Brāhmanical cord is supposed to be confined. He carries his head and beard, wears only a patch of cloth round his loins, and rubs himself with ochre, probably in the first instance taken from the medicinal fire, with which he purifies himself, repels evil spirits, and exorcises demons (cf. J. E. Harrison, *Proleg. to the Study of Gr. Rel.*, Cambridge, 1903, p. 262). L. E. Parwell, *The Evolution of Religion*, Oxford, 1903, p. 100). He usually wears on his forehead, as a charm or amulet, and as a mark of his Order, a triple transverse line, made with sacred ashes. His substitute on food obtained ready dressed from the houses of Brāhmanas once a day only, and this he receives in a small clay pot which he always carries. The main distinction between the Dandis and the *Āṭṭa* is that the latter does not carry the

staff, possesses clothes, money, and ornaments, prepares his own food, and admits ascetics from castes other than the Brāhmanas.

Śaiva Gosāins fall into two classes—monks, known as *Maṭhādharī* (Hind. *maṭhā*, 'a monastery', *dhārī*, 'occupying'), as contrasted with the *Gharbārī*, or laymen (Hind. *ghar*, 'house and home'). The true Dandi should, in accordance with the precepts of Manu (*Law*, vi. 41 ff.), live alone, near to, but not within, a city. Many of them, however, at the present time, particularly at holy places, like Benares and Haridwar (q.v.), specially devoted to the cultus of Śiva, live in monasteries. The lay members of the Order follow trade and other secular occupations, marry, and have families. While the true Dandi Order is recruited only from Brāhmanas, the Gosāins receive not only children devoted by vow or those born to lay members of the Order, but all classes of Hindus, except the very lowest and most polluted castes. In the Deccan they are drawn chiefly from the Kunbi (cultivators) or Māli (gardeners) (*BG* xvi. 400). In Benares, according to M. A. Sherring (*Hindu Tribes and Castes in Benares*, Calcutta, 1872-81, i. 266), the admission of a novice usually takes place at the festival known as the *Siva-rātri*, or 'night of Śiva.' Water brought from a tank in which a *linga* has been deposited is poured over his head, which is then shaved. The guru, or head of the Order, whispers one of the usual Śaiva formulae (*mantra*) into his ear—*oṃ namo Śivaya*, or *oṃ namo Śivāya*, 'In the name of Śiva,' or *oṃ nāṃ Śivāya*, 'I am He,' embodying the Śmārtā principles that man's spirit is identical with the One Spirit (*Ātma*, *Brahma*), which is the essence and substratum of the universe, and cognisable only through internal meditation and self-communion (M. Monier-Williams, *Brāhmanism and Hindūism*, London, 1891, p. 26). According to J. Grant Duff (*Hist. of the Mahrattas*, Bombay, 1872, p. 7 a.), in the Deccan those castes which wear the loin-string destroy it, and substitute a piece of cloth, if any covering be deemed necessary. Up to this stage the novice may change his mind; the irrevocable step by which he becomes a Gosāin for ever is the performance of the *homa*, or fire-sacrifice, when butter and milk are poured on the holy fire; and, while sacred texts are repeated, the candidate vows poverty, celibacy, and a life spent in constant pilgrimages to the holy places of Hinduism (cf. *BG* xv. pt. i. p. 260 f., xix. 118).

(b) Vaiṣṇava Gosāins.—The term Gosāin is also applied to the heads of the Vaiṣṇava communities in Assam and Eastern Bengal (see *ERS* ii. 126 f.; E. A. Gait, *Assam Census Report*, 1901, i. 80 ff.; B. C. Allen, *ib.*, 1901, i. 30). The adoration of the *guru* is the essence of Vaiṣṇavism in Bengal, and it has been extended among the Vallabhācāryas, 'the Epicureans of the East,' until among the Bombay leaders, known as *Mahārāja*, 'great king,' it became a cause of shameful scandals (J. Wise, *Notes on the Races, Castes, and Tribes of Eastern Bengal*, 57; (Karmadās Maṭi), *Hist. of the Sect of the Mahārājas or Vallabhācāryas*, London, 1905; *Report of the Mahārājā Līdār Case*, Bombay, 1902; F. B. Growse, *Mathura, a District Memoir*, Allahabad, 1902, p. 222 K.). J. Wise writes:

'The Gosāins are a comparatively pure stock, and fair specimens of the higher Bengali race. As a rule they are of a light brown, or wheaten, colour, tall and large-boned. Monks they ought to be, but indolence and good living stamp them at an early age with a look of sensuality and dissipation, and they become large fat men, fond of sleep, their chief muscular exertion consisting in holding out the feet to be kissed by admiring followers. Their lives are passed in sensual pleasures, and the boundless influence they wield among thousands of the middle classes is, unhappily, not directed to their moral elevation. Secluded with a blind and unquestioning adoration, they are quite content, if it lasts during their lifetime, to disregard the possibility of agitation and revolution' (q.v. cit. 100).

On the other hand, B. C. Allen then writes of the class in Assam:

'The leading Vaishnavite Gaudins, who live in their palaces or colleges surrounded by their bhaktas or monks, are men who exercise great authority over their numerous disciples, and on the whole exercise it wisely and well. . . . Unlike many priests, the powerful Gaudins have always been conspicuous for their loyalty to Government, their freedom from bigotry, and the liberality of their views, and Hindutva is seldom presented in a more attractive form than that which is found in the Vaishnavite monasteries of the Majuli, the island which is formed by the confluence of the Brahmaputra and the Lohit' (*Conquest Report*, 1901, i. 41).

It is admitted on all sides that the wandering Gaudins are a profligate class, who consort with prostitutes and women who have deserted their husbands (*BG* xiii. pt. i. p. 196, xx. 183 f.; H. Risley, *FC* ii. 344 E.). In former times they were notorious in many parts of the country for their violence and rapacity (see numerous references in *BG* xiv. 136 a.). Later they joined the Mahratta armies, garrisoned many hill forts, and were recruited in large numbers in the service of Mahādji Sindia (*Grant Duff*, 478 f.; *BG* xviii. pt. i. p. 482).

LITERATURE.—Most of the chief authorities have been quoted in the article. The best general authority is still H. H. Wilson, *Religious Sects of the Hindus*, London, 1861–62. For the Panjab, the *Omara Reports*—1881 by D. C. J. Ishwara, 1891 by S. D. Madhava, 1891 by H. A. Rose; for the United Provinces, W. Crooke, *FC*, Calcutta, 1898; for Bengal, H. Risley, *FC*, do. 1891; J. Wilson, *Notes on the Races, Castes, and Tribes of Eastern Bengal*, London, 1898. Jagendra Nath Bhattacharya, *Sindia Castes and Tribes*, Calcutta, 1898; for Bombay, *FC*, ed. J. Campbell, Bombay, 1877–1896; Govindlal M. Desai, *Omara Report Sindia*, 1911.

GOSĀLA.—See *ĀSTVĪKA*.

GOSPEL.—This word (from *Godspell*, i.e. 'God-story' or 'Divine word') has since Anglo-Sax. times been the translation of *εὐαγγέλιον*.¹ In Homer the Greek term denotes the reward given to a messenger for bringing good tidings: *εὐαγγέλιον δὲ μὲν ἔρως* (*Od.* xiv. 165; cf. 166). In Attic Greek, *εὐαγγέλιον* means to present a thank-offering to the gods for good tidings. In the LXX the plur. denotes a messenger's reward for good news. David relates with grim irony that, when a man came to him to announce Saul's death, expecting to be welcomed as a bearer of glad tidings, his reward (*εὐαγγέλιον*) was death (2 S 4th). In 2 S 18th 2, where the idea of a reward for good news is unsuitable, it is probable that *εὐαγγέλιον* (noun form sing.), signifying 'tidings,' should be read instead of *εὐαγγέλιον*.

The first explicit reference to the preaching of Divine good tidings—a gospel intended for a whole people—occurs in Deutero-Isaiah (40th 41st 55th 60th 61st). In 40th 5 *εὐαγγελιστὴς* (πρῶτος) represents an ideal band of heralds sent to announce to Zion and Jerusalem the glad tidings that, Israel's sin being now forgiven, the exiles are to be delivered from Babylon and restored to their own land. In 55th—'How beautiful upon the mountains are the feet of *εὐαγγελιστῶν*,' i.e. *εὐαγγέλιον*—is quoted in an abbreviated form (Ro 10th) by St. Paul, who adds, with thoughts of Israel's unbelief in his own day, 'but they did not all hearken to the glad tidings' (*εὐαγγέλιον*). In Is 61st the speaker, who may be either the prophet himself or Israel idealized as the servant of Jahweh, announces that Jahweh has anointed him (*ἐξουσίαν*) to preach good tidings to the meek (*εὐαγγελιστῶν* *πνεύματι*), and Jesus appropriates the words as the text of His sermon in the synagogue of Nazareth (Lk 4th).

After the crises of the Baptism and the Temptation, 'Jesus came into Galilee preaching the gospel' (*εὐαγγέλιον* *τὸ εὐαγγέλιον*, Mk 1st). He 'went about

in all Galilee' (Mt 4th), 'all the cities and the villages' (9th), publishing it. He sent His disciples to proclaim it (10th, Lk 9th). It was called 'the gospel of God' (Mk 1st), i.e. the good tidings sent from God to men through Jesus, and 'the gospel of the Kingdom' (Mt 4th 9th 24th), i.e. the gospel which prepared men for the immediate founding of the Heavenly Kingdom on earth. In the Apostolic Church it was known as 'the gospel of God' (Ro 1st 15th, 1 Th 2nd 9th), 'the gospel of the grace of God' (Ac 20th), 'the gospel of Christ' (Ro 1st etc.), simply 'the gospel' (Ro 10th etc.), 'the gospel of the glory (manifested presence) of Christ' (2 Co 4th), 'the gospel of your salvation' (Eph 1st), 'the gospel of peace' (6th), 'an eternal gospel' (Rev 14th).

2. The content of the gospel.—Here two points have to be kept distinct. (1) What did the evangel signify for Jesus Himself, and for the disciples whom, in the course of His Galilean ministry, He sent to preach it? (2) What did it mean, after His Passion, in the Church which was founded on the fact of, or at least the belief in, His resurrection?

Pursuing the historical-critical method of investigation, scholars have obtained a definite answer to the second of these questions. They agree in the conclusion that the good tidings preached in the very earliest Apostolic Church was a gospel regarding the incarnate, atoning, judging, redeeming, glorified Christ. It was the Church's first confession of faith that Jesus was declared (or determined, *ἀποφασίς*) to be the Son of God with power by the resurrection of the dead (Ro 1st, cf. Ac 2nd–7th). There never was a time when the Church merely honoured Him as prophet, hero, or saint; she always worshipped Him as Lord and Redeemer. There is no evidence of any consciousness of a transition from the subjective religion of Jesus to the objective gospel of Christ. The Church was not founded on a new doctrine of God the Father of which Jesus was the teacher; it was based on the faith of the Church in His own unique personality. He was not the discoverer of a fact which was independent of Himself; He was the gospel, the mystery hid from the ages and finally revealed. It is, indeed, one of the accepted results of NT criticism that the primitive Church was never anything else than 'evangelical.'

But the other question remains to be answered. What was the gospel according to Jesus? What was the substance of His own teaching? What were the glad tidings which He bade His disciples—'whom also he named apostles' (Lk 6th)—carry to the lost sheep of the house of Israel? In other words, What was the spiritual legacy which He personally wished to bequeath to mankind? To this question the most diverse answers are given by living scholars.

(a) Some say, with Harnack, that 'the whole of Jesus' message may be reduced to these two heads—God as the Father, and the human soul so ennobled that it can and does unite with Him' (*What is Christianity?*, p. 65).

¹ In the combination of these ideas—God the Father, Providence, the position of man as God's child, the infinite value of the human soul—the whole Gospel is expressed' (p. 70). 'The gospel, as Jesus proclaimed it, has to do with the Father only, and not with the Son' (p. 147). 'The sentence, "I am the Son of God," was not inserted in the Gospel by Jesus himself, and so put the sentence there side by side with the others is to make an addition to the Gospel' (p. 149). The gospel according to Jesus, it has to be admitted, is connected with an antiquated view of the world and history. 'But Harnack contends that the criterion is not indefinable. "The man to whom the Gospel addresses itself is "timeless," that is, it addresses itself to men, who, in spite of all progress and development, never changes in his inner constitution and in his fundamental relations with the eternal world. Since that is so, this Gospel remains in force for us too" (p. 152).

(b) Others follow Johannes Weiss, Loisy, and Schweitzer in identifying Jesus' gospel with the apocalyptic hope of the speedy coming of the

¹ In the NT *εὐαγγέλιον* never denotes a Gospel in writing, or one of the Four Gospels, though Mt 11 prepares the way for this later usage, which is apparently, though not certainly, found in the *Didache* (ch. iv.). Justin Martyr (*d. post.* i. 66) is the first to make explicit reference to the Four Gospels as *εὐαγγέλια*.

Heavenly Kingdom. The 'Weismann theory' is that the Kingdom of God was not, as has generally been supposed, partly present and partly future, but wholly future and wholly transcendental.

'It is in this hope or sorrow that the historian should set the context of the gospel, as no other idea holds so prominent and so large a place in the teaching of Jesus' (Lotz, *The Gospel and the Church*, p. 69). 'The thought of Jesus was entirely dominated by eschatological conceptions of the end of the world' (ib. p. 14). 'All His instructions to His followers bear the stamp of "last supreme indifference to human interests which is, historically, the force taken by the gospel" (p. 81). 'Nowhere does He identify the kingdom with God, and God's power acting in the heart of the individual' (p. 69). 'The new order which the gospel announces "is objective, and consists not only in the kingdom of the believer, nor in the love that unites him to God, but involves all the conditions of a happy life, both the physical and the moral conditions, the external and the internal conditions, so that the coming of the kingdom can be spoken of as a fact that completes history, and is in no way surrounded with the uncertainty of those who are called to it" (p. 85).

On this theory the moral teaching of Jesus was not so much the ethics of the Kingdom as teaching which prepares for the Kingdom. It is an *Interimethik*, designed for an interval which is expected to be brief (Schwartz, *Von Romulus zu Wrede*, 202). Jesus 'does not found a Kingdom; He only announces it. He exercises no Messianic activity, but He waits, with the rest of the world, for God to bring in the kingdom supernaturally' (ib. 226).

(c) Others, like Wellhausen (*Einleit. in die drei ersten Evangelien*), prefer to say that what Jesus taught was not 'the gospel.' We must make a broad distinction between Him and the Christian conception of Him which has existed since the foundation of the Apostolic Church. What the actual Jesus was, and what He preached, we can now only surmise. Even in the earliest Christian record which has been preserved—the memoirs of Mark—He stands transfigured before us. The most Christian part of the narrative—Mk 8th to 10th—is the least historical. The Christian Messiah does not represent Jesus' own conception of His Messiahship, but rather the idealised conception which the nascent Church threw back upon His lifetime after His Passion. Divested of the attributes in which dogmatism has clothed Him, Jesus would be a very different figure from the Christ of 'the gospel.' Could we get 'back to Christ,' we should probably find that He was not a Christian but a Jew, who more prophetically taught a new and better way of serving God. But He is the Great Unknown. It may be well that we can never discover the truth of what He was, as we should only be disillusioned. If He did not reveal and proclaim 'the gospel,' the Church dreamed it, and she cannot now abandon her dream. Jesus is irrecoverably lost, but the ideal Christ of Paul and John remains. With their evangel we must be satisfied. Wellhausen ends his investigation with these remarkable words:

'If it had not been for his death, Jesus would never have become a subject for history. The impression of his power depends upon the fact that it did not run to a conclusion, but was broken off short, when it had hardly begun.'

(d) Others maintain that the scientific study of the NT is bringing us more than ever face to face with the Founder of Christianity, and removing all suspicion of an antithesis between the religion of Jesus and the gospel of Christ. In the historical Jesus they see 'a Person, who is not only equal to the place which Christian faith assigns Him, but who assumes that place naturally and spontaneously as His own' (J. Dunne, *Jesus and the Gospel*, 1908, p. 374). In many passages which the critical analysis leaves unimpaired, the Son of Man reveals His consciousness of Himself, of His vocation, and of His claims upon men in startling and unparalleled language. So far from being unknown, He is the best-known figure in history. Fragmentary as the records of His life confoundly

are, His portrait is singularly complete, and it is instinct with self-evidencing Divinity. It is from concrete historical facts that the great ideas of the gospel derive their value and force. The original impulse of Christianity, the motive-power which from the first ensured its success, did not emanate from the Church's 'will to believe,' but was communicated to the Church by His transcendent personality. The cause cannot have been less wonderful than the effect; the victorious ideal must have been supremely real. It is contended that the resurrection of Jesus, illuminating all His teaching and justifying all His claims, made the Christian faith inevitable. In that stupendous event God gave His Church a supernatural, super-historical Lord and Saviour, and in every age the inner testimony of the Holy Spirit, transmuting the faith once delivered to the saints into a vital, personal, irrefragable experience, establishes the conviction that the gospel of Christ, like the Christ of the gospel, is a Divine Fact, the same yesterday, to-day, and for ever.

While the gospel may be studied as a whole or in its parts, some conception of its entirety and immensity is needful for a due appreciation of any individual aspect of it. De Bese (in *The Gospel in the Gospels*) analyses it into the Gospel of the Earthly Life, or the Common Humanity; the Gospel of the Work, or the Resurrection; and the Gospel of the Person, or the Incarnation.

'The life of Jesus would not be a gospel to us if it were not a revelation and a promise of human redemption' (ib. p. 88). 'The rise of the gospel could dispense with the death of Jesus' (p. 117). And 'there is not one of the Gospels which would have been written, there would be no Gospel at all, if there had not been not only the death but the resurrection' (p. 127). 'The Easter faith of the Apostolic Church was inseparable from the Easter fact.' 'No criticism can assail the essential fact that something happened, shortly after our Lord's death, which enabled to maintain the disciples that He had arisen, and was still alive' (E. F. Scott, *The Judgment of the NT*, p. 47). 'All the theological demonstration of the Divine significance of Jesus is grounded in the historical fact that He rose again from the dead' (ib.).

2. Gospel and Law.—It has always been felt that the charm and power of the Gospel lie in its antithesis to Law. From the beginning of His ministry, Jesus evoked the wonder of His hearers by His 'words of grace' (Lk 4th). What makes His message to men 'glad tidings' is the forgiving love which differentiates it from the awful majesty of justice. Not that He ever spoke a word in disparagement of Law, whatever He might say of human traditions. His followers never imagined that He intended to relax their moral obligations; rather they felt that He immeasurably raised their ideal of duty to God and man. But Law could never be His last word. While the scribes counted the multitude who knew not the Law accused, Jesus gave them glad news of forgiveness to make them blessed. In the Apostolic Church it was not the thunders of the Law, but the music of the Gospel which caught the ear of mankind. Paul knew from the hour of his conversion that he must 'testify the gospel of the grace of God' (Ac 20th). 'Grace' and 'Gospel' were his inevitable words, the one occurring some 20 and the other some 60 times in his Epistles. To the 'hard pagan Roman world,' with its 'deep weariness and satiated lust,' he published an evangel of grace abounding over sin (Ro 5th). Having himself lived successively under Law and Gospel, and believing both to be Divine, he made it his theological task to harmonise them in thought, and to substitute for the tyranny of Judaism 'the law of the spirit of life in Christ Jesus' (Ro 8th). On the whole, it is probable that he has not misunderstood the yoke which Jesus called easy and the burden He deemed light, but that the Epistles are an interpretation only, and not a transforma-

tion or even an essential modification, of the Gospel of our Lord' (Du Bos, *op. cit.* vii.).

LITERATURE.—W. Baldenpater, *Das Selbstverständnis Jesu im Lichte der messian. Hoffnungen seiner Zeit*, Strassburg, 1908; A. JAMES STRAHAN.

GOSPELS.—The justification for including an article on the Gospels in an Encyclopedia of Religion and Ethics must lie in the immense effect which the Four Canonical Gospels have had and still have in the development and maintenance of Christianity. In the past few years much has been done towards solving some of the preliminary problems connected with the Gospels themselves and the traditions which underlie them. Some assured results have emerged and, as a consequence, certain ways of regarding the Gospels and their contents are imposed on the historical and philosophical investigator, and certain other ways are excluded.

The problems connected with the Gospels may be grouped as (1) *literary*, (2) *dogmatic*, (3) *historical*; and at the end we have to consider (4) the *value* of the Gospels for present-day questions of ethics and religion. Or, to take the case of a single Gospel, we have to consider (1) the method of its composition and the sources used; (2) the theological and ecclesiastical standpoint of the writer; we may then estimate (3) the historical worth of the picture drawn in the Gospel, as a whole and in details; finally, we may ask (4) what religious value and authority this picture of a far-off drama has for our own age.

It is important to notice at the outset that (1) and (2) are indispensable for (3) and (4), and to a great extent can be studied independently of them; but no scientific study of the important subjects grouped under (3) and (4) can be prosecuted without some satisfactory solution of the preliminary questions connected with (1) and (2). To take the most obvious example, a discussion of the general historicity of the Evangelical tradition must start from Mark, and not from Matthew or Luke.

Before surveying the Gospels in detail, we should consider some inevitable features of any document of early Christianity. In the modern study of the Gospels one chief aim is to reconstruct an intelligible picture of the life and work of Jesus Christ. We want the strong lights thrown by the ardour of faith, but we should like also shadows to give individuality to the figure. We want to hear the Gospel story as told from various points of view, and not only from that of the convinced and un-critical believer. Whether we should be really in a better position to comprehend the genesis of Christianity if we had documents of this sort is a question which admits of argument; what is certain is that we have no such documents, and that we are not likely to get them. Even when we have isolated our 'original' authorities, we

shall not be able to regard them as so many independent witnesses such as were sought for by 18th cent. apologists—at least, to continue the metaphor, we must expect to find them agreed upon a tale. The scenes of the life of Jesus Christ on earth were indeed enacted in public, and the multitudes heard His words; but our knowledge of them is derived from the disciples. We must hope to know more than the collective memory of the first circle of the believers at Jerusalem. Without pressing the narrative of the Acts in all its details, we learn from St. Paul's Epistle to the Galatians (2nd) that less than nine years after the Crucifixion St. Peter was living in Jerusalem, and it is there and not in Galilee that our authorities place the home of the infant Church. Galilee has never been a Christian land. From the very beginning the Christians lived at a distance from the country in which the Master had worked. Moreover, we are told that 'the multitude of them that believed were of one heart and soul; and not one of them said that ought of the things which he possessed was his own; but they had all things common' (Ac 4th). This may be an ideal picture, and in any case the state of things was not permanent, but, if it be at all true of individuals in any one particular, we cannot doubt that it was specially true with regard to their reminiscences of the Lord. The memory of the words and deeds of Jesus Christ must have been thrown into the common stock: 'When he was raised from the dead, his disciples remembered that he spoke this; and they believed the Scripture, and the word which Jesus had said' (Jn 2nd). Out of the bare reminiscences of the disciples those sayings and acts which in the light of later events were seen to be of significance were repeated to the younger generation that gradually took the place of the companions of the Ministry. The object of the Evangelists was not biography, but edification.

The Gospel record passed through a full generation of pious reflection and meditation, before it began to be written down and so fixed for all time. This explains to some extent the selection of events and the method of treatment. Above all, it helps us to realize what we get when we come to the final results of the purely literary criticism of the Gospels. Our Second Gospel may be the work of John Mark, some time the companion of St. Peter, and it may embody some things which he had heard from St. Peter's mouth. But even so the narrative has lost much of the personal note; it is far too even to be mere personal reminiscence. The tale of St. Peter's denial, for example, may be substantially true, but the narrative in Mark does not read like St. Peter's own first confession of the story. It is not a tale told for the first time. We are not here suggesting that any written document in Greek or Aramaic underlies St. Mark; the narrative may have been written down for the first time by the author, but some of the tales which he is putting on paper had been repeated many times before by word of mouth.

It is not to be denied that all this lets in the opportunity for errors of detail. 'These things his disciples did not know (*οὐκ ᾔδεισαν*) at the first,' says the Fourth Evangelist; 'but when Jesus was glorified, then remembered they that these things were written of him, and that they had done these things unto him' (Jn 13th). The Gospels took their shape in an atmosphere of growing and unquestioning faith; they were compiled by men writing in the light of subsequent events. Under such circumstances it is hard for memories to be dryly accurate, it is easy to feel that the more obviously edifying form of a story or a saying must be the truer version. The eye-witnesses of the Word, of whom St. Luke speaks (1st), had

known Jesus the Nazarene for a friend, but they had learned to believe that He was the Only Son of God, and that He now was waiting until the fullness of the times at the right hand of His Father. He had lived among them as man with man, as a master with his disciples, and at the time they had not thoroughly realised the importance they were going through. Now they felt that they would be fools and blind if they failed to see the deep significance of occurrences to which they had paid so little attention, and words of which they had only half understood the meaning. The real wonder is that any intelligible picture of the events has been preserved to us.

1. The origins and literary sources of the several Gospels.—The four Gospels are not, even in a literary sense, four independent works. The Fourth Gospel is most conveniently treated apart. But the three Gospels, according to Matthew, Mark, and Luke, obviously have something in common; they must either copy one another or make use of a common source. The first question is whether this source (or sources) was written or oral. The opinion of the present writer, most unhesitatingly, is that it was a written source. In the first place, the common matter is not mere floating tradition, the property of all the Christian community. Had it been this, it is natural to think that the incidents identically related by Matthew, Mark, and Luke would have been to a larger extent the critical points of the Ministry, and not a capricious selection of anecdotes. The story of the Resurrection, the words from the Cross, the narrative of the Last Supper—in these we might have expected all our authorities to agree, even in detail; but they do not agree. On the other hand, the parentheses explaining that Jesus turned from addressing the Pharisees to say to the sick of the palsy, 'Aries,' is found in all three Synoptic Gospels (Mt 9¹⁸, Mk 9¹⁸, Lk 9¹⁸); all three insert at the same point the statement concerning Herod's alarm about Jesus (Mt 14¹², Mk 6¹⁶, Lk 9¹⁰); and Matthew and Mark go on to relate in a footnote, so to speak, the circumstances of John the Baptist's murder; all three inform us that the Pharisees, when they asked about the tribute-money, began by assuring our Lord that He taught the way of God in truth (Mt 22¹⁶, Mk 12¹³, Lk 20²⁰). These points are matters of secondary detail; an oral tradition which contained them must be held to have had singular consistency, and, if our Evangelists had worked upon a fixed oral tradition of this definite sort, we cannot imagine how they dared to take such liberties with it. A definite oral tradition is authoritative; can we conceive of an oral tradition which accurately distinguishes between the baskets (*κόφαι*, Mt 14¹³ 15³⁷, Mk 6⁴¹ 8⁸, Lk 9¹⁷) of fragments taken up after the feeding of the 5000, and the Acorn (*σκήλη*, Mt 15¹⁷ 16¹⁰, Mk 8¹⁹ 9¹⁰) taken up after feeding the 4000, but which left the details of the Crucifixion and the Resurrection vague?

A written source, on the other hand, is perfectly definite, but not necessarily authoritative. Where the Evangelists simply copy their common source they agree, whether the point of agreement be important or not, while at the same time the existence of the written document did not prevent the use of other documents or any oral information which might come to hand. There was nothing to compel any of our Evangelists to reproduce the whole of the documents upon which they worked, or to follow them exactly; if they had had such respect for their predecessors' work as never to alter it, they would not have dared to supersede these documents or traditions by their own new Gospels. They would have been mere scribes, or, at the most, harmonists like Tatian.

But we can go one step further. In the parts common to Mark, Matthew, and Luke, there is a good deal in which all three verbally agree; there is also much common to Mark and Matthew, and much common to Mark and Luke, but hardly anything common to Matthew and Luke which Mark does not share. There is very little of Mark which is not more or less adequately represented either in Matthew or in Luke. Moreover, the common order is Mark's order; Matthew and Luke never agree against Mark in the transposition of a narrative.¹ In other words, Mark contains the whole of a document which Matthew and Luke have independently used, and very little else.

This conclusion is extremely important; it is the one solid contribution made by the scholarship of the 19th cent. towards the solution of the Synoptic problem. The present writer believes that we may go on, and claim the Gospel according to Mark as itself the common source. According to this view, no written document underlies our Second Gospel, and the document which the First and Third Evangelists have independently used to form the framework of their narrative is St. Mark's Gospel itself.

Those who do not accept this conclusion fall back upon the hypothesis of an *Ur-Marcus*, an earlier recension or edition of our Second Gospel. This hypothesis presupposes an interest in the biographical details of the public life of Jesus Christ of which there is little trace elsewhere. In the extant remains of very early Christian literature we find the doctrines of the Crucifixion and the Resurrection; we find the arguments from prophecy; we find the ethical teaching of the Sermon on the Mount; and as early as the middle of the 2nd cent. we find copious references to the stories of the Nativity. But the details of the Galilean Ministry are hardly mentioned. It is the peculiar merit of St. Mark's Gospel, from the point of view of the historical investigator, that it deals mainly with a cycle of events quite foreign to the life and interests of the growing Christian community.

Nearly all the 'peculiarities' of Mark, i.e. those incidents and expressions which were not adopted into the compilations of Matthew and Luke, are of such a nature as to be unattractive or even offensive to the second and third generation of Christians.² And, in dealing with the irreducible remainder, it must never be forgotten that all our MSS of Mark go back to a single copy which breaks off at 16⁸. The so-called 'last twelve verses' (16⁹⁻²⁰) are a later Appendix, designed to supply the lacking conclusion. In other words, our MS tradition goes back to a single book or roll imperfect at the end, and not improbably torn or defaced elsewhere.³ But this mutilated copy was not the autograph, still less was it identical with the copies used by the First and Third Evangelists; and in a few cases the points where they agree against our Mark may represent the true texts of the Second Gospel. Yet it cannot be too strongly stated that such points are few and unimportant, and that the text, as we have it, appears to be unaltered in essentials. It should be remarked, however, that we do not know how much is lost at the end; it may have been much more than a

¹ First clearly formulated by the great classical scholar Lachmann in 1825, as Wellhausen has reminded a forgetful world in his *Einleitung in die drei ersten Evangelien*, p. 22. Lachmann's words are: "Narrationum synopticarum verba non solum in quibus plerisque vicibus divergent, maxime cum et aut hoc scriptoribus eadem compendiosa sententia aut Latina cum Matthaei compendiosa, origines aut Marcum cum utraque movetur." C. O. Wilke had independently come to the same conclusion (Wellhausen, p. 24).

² See Harnack, *Ueber Synoptiker*, p. 117 ff.

³ E.g. 'Barnabas' and 'Dalmatians' (Mk 9¹⁸ 9¹⁹) are surely primitive misreadings.

single leaf. Possibly a large part of Ac 1-19 (including the story of Rhoda, the servant at St. Mark's mother's house) may have been based upon the part now missing.

An estimate of the historical value of the Gospel according to St. Mark will be given below. All that has at present been alleged is that it is a main literary source for the other two Synoptic Gospels, and that it does not appear itself to be based on earlier written documents. It is important to notice that the establishment of the relative priority of Mark is based on the comparison of extant documents one with another, and is quite unaffected by the view we may take of the historicity of the Gospels or their ethical value.

a. Date and authorship of 'Luke' and 'Acts'.—The Third Gospel is not a book complete in itself. It is only the first portion of a larger historical work, which was apparently designed to be executed in three volumes. The third volume is not extant; in fact, there is very little reason to suppose that it was ever actually written; but the absence of an adequate peroration at the end of the Acts of the Apostles (which forms the second volume of the series) shows us that a further instalment must have been contemplated. The date of 'Luke' and 'Acts' was apparently determined within narrow limits. On the one hand, both the Gospel and the Acts contain details drawn directly from the *Jewish Antiquities* of Josephus, a work published in A.D. 93 or 94; on the other hand, the literary evidence indicates that the author of the Gospel and of the Acts is none other than that companion of St. Paul whose travelling diaries are largely quoted in the latter portion of the work. The Gospel and the Acts may therefore be assigned to the decade 93-103; we shall not be far wrong if we say in round numbers about A.D. 100.

(a) The evidence which supports the Third Evangelist of having used the *Antiquities* (not always with complete accuracy) is very well brought together by Schenkel in *Zeitsch. f. d. NT. Wiss.*, 1884, art. 'Theodotus' and 'Lysimachus'; see also Burton, *Gosp. Hist.*, pp. 105-110. The main points are (1) that the mention of Theodotus in Gamaliel's speech (Ac 18:15) is not only an anachronism, but further it is explicable if the author of Acts drew his information about Theodotus from Josephus (*Ant. 12. v. 1*). (2) the introduction of Lysimachus in Lk 12 as contemporary with the 14th year of Tiberius (A.D. 29) appears to be due to a similarly inaccurate use of *Ant. 12. vi. 1*.

(b) The evidence which tends to show that the whole of Luke and Acts is the work of one author, including the travelling diaries in which the writer speaks in the first person plural (Ac 16:10-17; 20:1-16; 21:1-18; 27:1-44), is very well marshalled in Sir J. Haverstick's *New Synoptics* (see esp. p. 169; also Harnack's *Luke the Physician*, 1897, pp. 97-101). There is an immense balance of internal and linguistic evidence in favour of the view that the original writer of these volumes (i.e. the 'We-sections') was the same person as the main author of the Acts and of the Third Gospel, and, consequently, that the date of these books lies within the lifetime of a companion of St. Paul (Harnack, p. 120).

The two conclusions here indicated are not incompatible. The traveller's diaries, of which the 'We-sections' in Acts consist, show that their author accompanied St. Paul from Troas to Philippi about A.D. 50; there is nothing to show that he was more than a young man of twenty. Thus he would have been born about A.D. 30. Consequently he would not be more than 70 years old when he published the two books dedicated to Theophilus which we possess. Is this really improbable? Does it not rather explain the very different degrees of accuracy which we find in the works of the accomplished writer, whom we shall still not hesitate to call St. Luke? Where he uses his own old diaries, made on the spot and at the time, he is full of information which surprises us now by its minute correctness. He gives the right title to the *Prætors of Philippi* and the *Feldmarschals of Thessalonica*. Yes; but he was actually there or in the immediate neighbourhood, and keeping a diary. When, on the other hand, he comes to describe the political situation in Palestine about

the time he himself was born, we find him falling into error—error none the less real for being excusable. We do not know under what conditions he had access to the works of Josephus; he may have had the opportunity for a rapid perusal only, with but little time to make notes or extracts for his future use. For the ordinary events of secular history a Christian writer at the end of the 1st cent. would be dependent on the ordinary channels of information. For the events connected with the rise of his own sect he might have special sources to draw upon. He may have conversed during the course of his life with those who had themselves seen the Lord. A comparison with Matthew makes it highly probable that St. Luke also used the document called Q (see below) in addition to the Gospel of Mark. At the same time, the fact that he uses Mark as his main source for the Gospel history seems to the present writer to make it unlikely that he had much personal intercourse with those who had been the companions of the Ministry, men who could themselves have supplied the skeleton of a narrative from their own reminiscences.

3. The composition of the Gospel according to Matthew.—The Gospel according to Matthew, unlike the Third Gospel, cannot be dated with precision, nor are we in a position to name the compiler. Something, however, can be gathered about the sources which he had at his disposal and the circle of ideas in which he moved. Like St. Luke, he was a competent writer; he treats the wording of his predecessors with entire freedom, rearranging and combining them into a well-faced whole. This makes the reconstruction of his lost hypothetical sources an extremely hazardous, if not impossible, task. There cannot be a greater error in Synoptic criticism than to treat the Evangelists as if they had worked like the harmonist Tatian, who made up a single narrative by piecing together the words of the several Gospels almost without alteration.

The happy circumstance that Mark, Matthew, and Luke have all survived, enables us to discover that Matthew and Luke are based on Mark; but, if Mark had not been actually extant, we very much doubt whether modern criticism would have been able to reconstruct it from the other Synoptics. This consideration should render us very cautious in making statements about the contents or arrangement of the other sources on which we may imagine Matthew (or Luke) to have been based. It is, indeed, practically certain that, besides Mark, another document was used in common by Matthew and Luke, of which the main contents were a collection of sayings of the Lord. This document is usually supposed to have been what Papias calls the *Logia* composed by St. Matthew; since Wellhausen (1906) it has been very generally called Q, i.e. *Quelle*.¹ But, before we attempt to reconstruct the lost materials out of which the Gospels according to Matthew and Luke may have been built, we ought to examine the demonstrable procedure of the First and Third Evangelists with regard to (a) the OT, and (b) St. Mark's Gospel.

(a) In the case of St. Luke the first part of the answer is simple. St. Luke uses the Septuagint, the ordinary Bible which the Church inherited from the Greek-speaking Jews. This is notably the case in Lk 1 and 2, where the LXX, and not some Hebrew or Aramaic document, has perceptibly coloured the style and language of the whole narrative.²

¹ About the same time Salmon and J. A. Robinson were also using the symbol Q. 'This notation leads us to nothing' (Robinson, *German Review*, 1897, p. 24); possibly Salmon wished to regard it as short for *Quelle*.

² Compare the use of *Septuagint* in Lk 10 and 24:44. But this is only one instance out of many.

The quotations peculiar to the First Gospel have wholly different characteristics. They are mostly based on the Hebrew, some of them showing curious inaccuracies, arising from a misconception of the Hebrew text, yet a few are clearly taken direct from the LXX. The Hebrew basis is particularly clear in such passages as 'Out of Egypt have I called my son' (Mt 2¹⁵), a quotation of Hos 11¹ that differs both from the LXX, which has 'Out of Egypt I have called back his children,' and from the Targum, which has 'Out of Egypt I have called them sons.' The quotation in Mt 27³², alleged to be made from 'Jeremiah the prophet,' but really based on Zec 11¹³, owes its presence to a confusion between the Hebrew words for 'potter' and for 'treasury.' This confusion exists in the MT, but the LXX has another reading, and the Targum turns the 'potter' into a Temple official. Thus the Evangelist must have derived his curious interpretation from the Hebrew, and not from the Greek Bible or from current Jewish exegesis. At the same time, seeing that in this passage (27³²) he assigns words taken from Zechariah to Jeremiah, and that in 12¹⁷ he appears to assign Ps 78² to Isaiah, it is improbable that he was quoting direct from a Hebrew copy of the Prophets. Equally clear is it that the words, 'In his name shall the nations hope' (Mt 12¹³), are taken from the LXX of Isaiah 45², and that *scripsit aliter* (Mt 21⁴²) is taken from the LXX of Ps 9¹. These last passages show that the Evangelist was after all not unfamiliar with the Greek Bible. This is not surprising; the surprising part is the influence of the Hebrew text in a Greek Gospel. This influence does not make the stories peculiar to this Gospel historical or even probable, but it does tend to show that they originated in Palestine.

(b) The way in which our First Evangelist has used the Gospel of Mark has been so carefully investigated that little more is needed here than a statement of results.

Mt. shortens the narrative of Mk., retaining the main features, but cutting down details and (like St. Luke) suppressing the mention of the various emotions of our Lord, e.g. anger, amazement, amazement.

Mt. freely transposes the earlier parts of the story, which thereby becomes a series of disconnected anecdotes. The confusion is still further increased by the interpolation of long discourses into the framework of Mk.; however interesting and authentic these discourses are in themselves, they completely break up the unity of the narrative framework. But very little of the Markan narrative is altogether omitted.

Besides the long discourses, Mt. introduces into the Markan narrative certain stories not known to us from other sources, such as Peter walking on the water, Judas and the pieces of silver, the earthquake at the Crucifixion, the guard at the Tomb. There are grave difficulties in making out a claim for considering any of these stories as serious history. At the same time, it should be remarked that their tone and language suggest a Palestinian origin, e.g. the story of the earthquake speaks of Jerusalem as 'the Holy City' (Mt 27⁵¹⁻⁵²).

In view of the Palestinian origin of the elements peculiar to Mt. it is worth while once more to emphasize the remarkable fact that the Passion narrative in the First Gospel, both in the selection of incidents and in their relative order, follows unquestioningly the corresponding narrative in Mark.

In striking contrast to all this is the procedure of St. Luke. He freely omits large portions of Mk., and in the Passion inserts Mt. for another

story of the last supper. But the sections of Mk. which are found in Lk. are given in the same relative order; and, although (as in Mt.) much is curtailed, yet there is not the same tendency to interpolate fresh incidents into the Markan stories. There are fresh incidents in Lk., but they are kept separate.

Thus in general plan and arrangement the Gospel according to Matthew is a *fresh edition of Mark*, revised, rearranged, and enriched with new material; the Gospel according to Luke is a *new historical work*, made by combining parts of Mark with parts derived from other documents.

4. Attempted reconstructions of Q.—From the way in which Mt. and Lk. have treated Mk. we may reasonably infer the way in which they have severally treated the lost source Q. We shall expect to find many fragments of Q preserved by Mt. alone, but the general plan and sequence of the work we must gather from the position that the various sections occupy in Luke. If we find certain of these sections occupying the same relative order in Mt., there is a strong presumption that this order is really the order of Q.

(a) In Lk 9¹⁻¹⁰, a non-Markan block, we find (1) Sayings of Jesus beginning with Beatitudes and ending with the House upon the Rock, (2) the Centurion's Lad, (3) the Widow of Nain, (4) Sayings about John the Baptist, (5) the Blind Woman, (6) the women who ministered to Jesus. Of these (1), (2), and (4) occur in Mt., and in the same relative order (Mt 5¹⁻⁷ 9¹⁻¹¹ 23¹⁻¹¹). We may, therefore, assume that (1), (2), and (4) formed part of Q, and in that order. Starting from this (it is the one thing about Q with regard to which there is reasonable certainty), we may infer from (2) that Q contained not only Sayings of Jesus but also narratives of wonderful cures, etc., such as are found in Mk., and we may infer from (4) that Lk 9¹⁻¹⁰ (= Mt 9¹⁻¹⁰) also had a place in Q, and very probably an account of the Baptism of Jesus also. This makes it likely that the Temptation narrative (Lk 4¹⁻¹¹ = Mt 4¹⁻¹¹) also comes from Q, and that it was followed by a mention of 'Nazareth' (Lk 4¹⁶ = Mt 4¹³).

(b) But when we have said this we have said almost all that has high probability about Q as a literary whole. Simply to refer to Q every Saying of Jesus found in Mt. or Lk., or both, which we may consider genuine is not to reconstruct the lost work, but to repeat our opinion that the Saying is genuine. Above all, we cannot base any valid argument upon the supposed likeness from Q of certain ideas or types of Sayings. At best, as conjecturally reconstructed out of Mt. and Lk., it resembles a composite photograph; and, like most composite photographs, it appears to us beautiful but unindividualised; if Q were really before us, it would probably show individual features, as individual as the Gospel of Mark—features which might surprise and even shock us. What do we know of Q? Simply this, that it was taken to pieces by Matthew and Luke, and the *disiecta membra* have been put together by modern scholars. It is not surprising that some of the individual features have suffered.¹

(c) Did Q contain a Passion narrative? We cannot tell. This is surely a more scientific answer than the confident assertion of Harnack and others, that it did not contain a Passion narrative. The theory of Harnack rests on the absence from Mt., in the story of the Passion, of any fresh material that has a place in Luke. But if we regard Mt. as our enlarged edition of Mk. rather than a new historical work, this is not so surprising. Many and important are the additions which

¹ As Lk. usually assumes the use of Mk. at the place where he has dropped it, he probably did the same with Q: we venture to suggest that Lk. 9:11 may have followed Lk. 9:10 directly.

Mt. makes to Mk., very few of them interrupt the actual course of the narrative. The 'Sermon on the Mount' occupies three whole chapters, but in time and place it merely corresponds to Mk 3²³. Mt 10 corresponds to Mk 6⁷⁻¹³. Mk 4² tells us that 'with such parables' Jesus spoke to them the word; Mt 13 exhibits half a dozen specimens. All through the Gospel the added Sayings and anecdotes are placed in the Markan framework: they have been torn from their original context and fitted into Matthew's revised edition of Mark, to serve as illustrations and enrichments. If Q did contain a Passion story, we need not be surprised to find that the fragments of it used by Mt. are to be found elsewhere than in Mt.'s Passion story, because Matthew is not so much combining Q with Mk. as enriching and illustrating Mk. with Q and other sources. The alternative view, that Q had a story of the Passion and that some of it is preserved in the peculiar sections of Lk 22-24 (notably in Lk 22¹⁹⁻²⁰ 24²⁶⁻²⁷), still remains open.

(d) A number of important Sayings and Parables are found only in Lk. or only in Mt., e.g. the Prodigal Son (Lk 15¹¹⁻²⁰) and the Labourers in the Vineyard (Mt 20¹⁻¹⁵). It is certainly difficult to see why the other Evangelist should not have incorporated them, on the supposition that they lay before him in a document which he otherwise valued. It seems better not to assign such pieces to Q and to suppose that the Evangelists derived them from some other source, written or oral, the contents and nature of which we are not in a position further to determine.

One very common misconception may be here conveniently noticed. Some writers speak of 'the Triple Synopsis' and 'the Double Synopsis', meaning by the former phrase the incidents or sayings found in all three Synoptic Gospels, and by the latter those found in Matthew and Luke. The phrases are somewhat misleading, as they inevitably suggest that the portions compared under the Triple or the Double Synopsis are better attested than those which are found in one document only. But to those who hold that Mt. and Lk. actually used our Mk. and another document besides, it is evident that the consensus of all three Synoptics resolves itself into the single witness of Mark, and the consensus of Mt. and Lk. is in many cases only to be regarded as the single witness of the last document discussed in the preceding paragraphs.

Then the story of the 'Gadarenes' swine runs really on no more evidence than the story of the blind men of Bethsaida, i.e. upon the witness of the Second Gospel. And similarly the parable of the Seed growing secretly, related only by St. Mark, is really no more attested than the parable of the Vineyard which is given in all three Gospels. The only real double attestation is to be found in those two passages, mostly short striking Sayings, which appear to have found a place in the last document as well as in St. Mark, e.g. Mk 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100. To these we should probably add the parable of the Sower. But even here the double attestation is merely accidental, and some of the sayings in the above list may very well have been spoken by Jesus on several occasions.

5. The historical worth of St. Mark's Gospel. —St. Mark's Gospel being our main source of information for the general course of the Ministry, it is important to determine its value as a historical document. It is obvious that what we have to rely on is internal evidence. If the picture presented in this Gospel be in essentials true, it will give an essentially reasonable account of the Ministry. But in this connexion 'reasonable' does not necessarily mean what is likely to happen at the present day. We must first become acquainted with the hopes and beliefs of the contemporaries of Jesus and His Apostles, before we are in a position to judge whether their reported sayings and doings fit into the history of the time.

It is only lately that the need of giving some demonstration of the general historical character of the picture of Jesus sketched in the Synoptic Gospels has begun to be recognized. Even now many professed theologians do not seem to realize how narrow is the channel by which the Gospel history has filtered down to us, or what the general rules are by which we may to a certain extent

discriminate between what belongs to the historical figure and what must rather be referred to the legendary clothing of it. A methodical discrimination is especially needed by the modern critical student of the Gospels. Such a man no longer receives them as history on the authority of the Church. Neither does he accept the narratives as they stand, for they are full of marvels which he thinks incredible. The Fourth Gospel, for various reasons, to be considered later, is put out of court as a narrative of fact. And literary criticism has shown that Matthew, Mark, and Luke, instead of attesting a general consensus of tradition, only go back, for the general framework of the narrative, to the single witness of Mark. What is there, we must ask, in the Gospel of Mark that compels us to regard the story there told as in any way historical?

P. W. Schmiedel, in his art. 'Gospels' in *EBR* (88 131, 132), answered this question by pointing out certain Sayings of Jesus which are at least superficially inconsistent with the beliefs about Him held by the Christians for whom the Gospels were written and by whom they were canonized. Schmiedel's method here is perfectly sound; the only question is whether some of his 'foundation-pillars' (as he calls them) are not rather insecure and whether others cannot be found more satisfactory to the historian.¹ We venture to suggest that sentences like Mk 9³¹, mentioning the secret passage through Galilee (to be explained as a precaution against premature arrest by Antipas), and 11¹⁹, which promiscuously disconnects the Entry into Jerusalem from the Cleansing of the Temple, show even more clearly than any of Schmiedel's passages that in the Gospel of Mark we are dealing not only with a historical Personage but also with real reminiscences of His career.

More than this, however, is required. We want something more than a collection of fragments, even if they be genuine; we want to discover how far the figure sketched in Mark may be taken for a historical portrait. Schmiedel's method shows us that Jesus was (as the Church also affirms) in some respects a man like ourselves. It is obvious, from the general course of history and the little space given by Josephus, that the public career of Jesus was not such as made a great impression upon unsympathetic contemporaries. If, then, the Gospel of Mark as a whole gives a historical view of this career, it will explain both the devotion of the few and the indifference of the many. If also this portrait of Jesus derives all its chief characteristics from the ideas and presuppositions of contemporary Palestinian Jewish life and thought, while the work itself belongs to the Greek-speaking Christianity of Europe, then we can hardly avoid regarding the portrait itself as in the main historical.

The great political event in Palestine during the first century of our era is that the Jewish nation dared to rise against the Roman dominion, and so was utterly crushed in A.D. 70. The Judaism which survived, and survives to this day, was able to do so only by organizing itself as a religious sect without direct political aims. To a philosophic or rationalistic observer the Jewish rebellion must have been from the first a hopeless enterprise. It is, therefore, certain that the ideas which swayed contemporary Palestinian Jewish life and thought were neither 'rational' nor 'philosophic,' as reason and philosophy were generally understood at the

¹ Schmiedel's 'pillars' are Mk 10²¹, Mk 12¹, Mk 16⁷, Mk 16⁸, Mk 16⁹, Mk 16¹⁰, Mk 16¹¹, Mk 16¹². Of these the second and fourth introduce technical terms of Jewish and Christian theology, and the last three are not convincing to those who on other grounds regard the Gospel history as mythical. The passages, indeed, seem to have been selected on theological rather than on strictly historical grounds: they would form, in fact, an admirable catena wherewith to construct the theory of Apollonius.

time. The Jews would never have gone to war, if they had not believed that the Kingdom of God would somehow be established for them; if the Gospel be historical, it should be dominated by the belief in the approaching Kingdom of God.

The special characteristic of the portrait of Jesus in Mark is His secret Messiahship. He comes before the world of Galileans and Jews in general as a herald of the approaching Kingdom of God, but He Himself is conscious that He will be the Christ or Messiah, i.e. God's anointed Viceroy, when the Kingdom comes. This is avowed publicly for the first time when He is being tried before the high priest; the avowal at once seals His fate, and the title in a secularised form is placarded up above His cross. Previously to this, no one beyond the inner circle of disciples had taken Jesus to be, or as claiming to be, the Messiah. The Evangelist believed that the secret was known to the demons, but it was not known to men. If the Gospel of Mark is to be regarded as historical, then the idea of the secret Messiahship ought to be historical also.

To discuss this properly would need a separate article; and only the heads of the argument can be indicated here. (1) The office of Messiah is essentially different from that of prophet or seer. Properly speaking, it cannot be 'claimed'; the Messiah, if he be Messiah, will be in some way evident King of Israel and Judge of the nations. Until Bar Cochba in A.D. 136, who lived in the full tide of Christianity, no Jew is known to have regarded himself as Messiah; when the crowds found out that Jesus, the Prophet of Galilee, had thought Himself to be Messiah, they lost interest and asked for Barabbas. (2) On the other hand, it is difficult to explain how the followers of Jesus ever came to think of Him as the Messiah, if He had not in some way so regarded Himself. The fact that Peter and others believed they had seen their Master alive again after the Crucifixion was no reason why they should draw the conclusion, for the first time, that He must have been the Messiah. It might very well have made them draw the conclusion that their Master was the Messiah *after all*, but that is a very different thing. It means that they, or some of them, had already regarded Him as Messiah, or, more accurately, as the destined Messiah. (3) But this exactly corresponds with Mk.'s presentation of Jesus as one who was to the people the Herald of the Kingdom of God, but to the inner circle of disciples the Christ—a secret they were expressly ordered not to divulge (8⁹). This notion, though it is the only way in which the historian can really conceive the genesis of the doctrine of Jesus' Messiahship, was foreign to the thought of Gentile Christians, for whom the Lord Jesus was 'Christ' from the moment they first heard of Him. That it forms the leading feature of Mark's portrait is, therefore, a strong claim upon us to regard the portrait as historical, i.e. as derived from real reminiscence, and not from mythic fancy.

But this is all that can be claimed for the Gospel of Mark—that it gives us an impression of Jesus derived from one who had been with Him. As regards external events, the kind of information given varies in different parts. The scene in Gethsemane reads like the account of an eye-witness—possibly in this case the Evangelist himself (14³²⁻⁴²); hardly any one would say the name of the story of the Gerasene Demoniac (5¹⁻¹³). Further, the first part (1^{1-8⁹}) is little more than a string of anecdotes, loosely connected together, not always perhaps in relative chronological order. From 8⁹-10⁴ the narrative is continuous, the only real break being at 10³³. From 11¹ onwards the narra-

tive is divided into days, and we see very little reason to doubt the substantial accuracy of the reckoning, except that for some reason—possibly liturgical—the Last Supper is regarded as the Paschal Meal, against internal probability and all other strains of Christian tradition.

A feature of the Ministry which must rest on real reminiscence is the long period spent out of Galilee (8¹³ 7²⁴ 31¹¹⁻¹²)—a period spent neither in controversy with Jews nor in evangelising Gentiles, but in waiting in safe retirement till it was time to go up to Jerusalem for the Passover.¹

A picture of Jesus as first having been the Herald of the Kingdom, and then choosing the time to go to Jerusalem in the full expectation of being killed there, and as being somehow an acceptable ransom to God (who will then be reconciled with His Elect and bring in His Kingdom), is more 'orthodox' than a view which regards Jesus as primarily an ethical teacher; but it is also more in accordance with what we know from elsewhere of Jewish contemporary ideas, and it explains better the enthusiasm and the devotion with which the inner circle of Jesus' disciples continued to regard Him. This is the view set forth in the Gospel of Mark; we may reasonably regard it as the historical view, and the Gospel as a document of historical value.

The Gospels of Matthew and Luke, taken by themselves, may also fairly be regarded as documents of historical value. If we derived our knowledge of the Gospel history from either of them alone, we should still possess in essentials a historical view of our Lord. But we find on investigation that this is the case, so far as the general outlines are concerned, only in proportion as Matthew or Luke has preserved the framework given by Mark. To this framework Mt. and Lk. have added many details, many of them no doubt genuine, drawn from Q and the other sources; but all these sources (including Q) are for us mere collections of fragments. Indeed, so far as any construction can still be traced in them, they seem inferior, and not superior, as historical documents, to Mark. Of course, if we really possessed Q, it might prove to be equal or superior to Mark; but we know Q only by the bits which Mt. and Lk. have selected for incorporation—often, it may be (especially in Mt.), out of their context and out of the order in which they were arranged in Q itself.²

6. The Fourth Gospel.—It will not be necessary here to investigate in detail the external evidence for the Fourth Gospel. The belief that it was written by the Apostle St. John was fully established as early as the decade A.D. 170-180, and clear indications of its use, especially among some of the Christian 'Gnostics,' can be traced back to a period some fifty years earlier. It is true that these indications are weak just where we might have expected them to be most potent.

¹ See R. W. Ramm, *Beginnings of Gospel Story*, p. 126.

² On que Marc raconte à ce sujet s'd gaire pu être inventé' (Lohy, *Jesus et la tradition évangélique*, p. 46).

³ For instance, Albert Schweitzer lays great stress on Mt 10²³ ('Ye shall not have gone over the cities of Israel, till the Son of Man be come'). It is quite legitimate to argue that this remarkable saying must be genuine, and therefore, as it occurs in a Q-context, that it must have stood in Q. It is further arguable that it shows that Jesus at one time expected the public manifestation of the Messiah (possibly, therefore, not Himself) to take place during the first itinerant journey of the 'apostles,' i.e. during the period indicated by Mt 9¹⁻¹³. At the same time, when we remember that Q is for us a series of fragments, and that even in Mt 10 there is a section (vv 17-23) taken from Mk 16, i.e. from sayings of the very latest period, it must remain equally, if not more, probable that Mt 10²³ belongs to the latest period, and that it refers to Jesus' own expected manifestation in glory after His Passion. What seems not quite legitimate is to assume that Mt 10 was spoken in historical sequence just before Mt 11 and before Mt 9¹³ (Schweitzer *Quest.* 226-228)—because they occupy just this relative position in Matthew. Schweitzer (p. 227) actually quotes Mt 10²³ without noting his readers that this verse is in Mt 10²³, torn out of its context.

¹ See the present writer's *Earliest Sources*, pp. 35-75, and esp. in *AJTh* vi. [1911] 180-192, esp. 185.

Polyeary, according to tradition a disciple of St. John at Ephesus, does not quote at all from the Fourth Gospel, either in his Epistle or in the prayer which he is said to have offered at the stake; and the utmost that can be claimed is that certain phrases in a single passage in his Epistle are parallel to some leading phrases in 1 John.¹ This passage in Polycarp is certainly important as showing that Johannine watchwords, like 'antichrist' and 'confessing Jesus Christ to have come in the flesh,' were actually used by orthodox circles in Asia Minor. But it is remarkable that Polycarp should exhibit no further trace of the influence of the Johannine theology.

The external testimony to the traditional authorship of the Fourth Gospel is, in a word, indecisive. It is not absolutely unfavourable to the genuineness of the tradition, but it is quite insufficient to prove it. We may therefore go on to examine the internal evidence. And here the first question which must be asked is whether this Gospel is really a historical work. We have seen that St. Mark's Gospel has a very good claim to be so regarded; how does the Fourth Gospel compare with St. Mark?

The comparison of the Synoptic narrative with that of 'John' is an old and very simple study. The details are all familiar, and the problems do not depend upon the niceties of Hellenistic Greek or the various readings of MSS. It is a matter of historical discrepancy in two perfectly clear and definite accounts. The fact is that the narrative in 'Mark' and the narrative in 'John' cannot be made to agree, except on the supposition that one or the other is, as regards the objective facts, inaccurate and misleading.

To name the most striking single instance, it is impossible to insert the story of the raising of Lazarus into the historical framework preserved by St. Mark. It is not a question of the improbability or impossibility of the miracle, but of the time and place and the effect upon outsiders. And, if the narrative of the Passion in Mk. and of the events immediately leading up to it (Mk 9¹¹⁻¹⁵) be historical in its general outlines, as maintained in the previous section, then it is surely impossible to regard the story of the raising of Lazarus as in any way a narrative of facts.

The Crucifixion and Resurrection narratives in the Fourth Gospel do not differ essentially from the story as told in Mk. or Luke. There are many variations and discrepancies, but all four Gospels agree in the main facts, as may be realized by comparing them with the apocryphal *Acts of John*. But in other parts of the Gospel story the differences are acute. The Evangelist makes John the Baptist testify to the descent of the Spirit upon Jesus, but the central incident, the actual baptism of Jesus by John, he leaves out altogether (19⁴⁰). He tells the story of the Last Supper without alluding to the words 'This is my body.' And yet it is not for want of sympathy with high Sacramental doctrine. In Jn 6, after the story of the Feeding of the Five Thousand, we read a long discourse of Jesus on this very subject. Jesus here says, 'I am the bread of life' (v. 48), and, 'Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you' (v. 53). It is true that a peculiar turn is given to these very strong expressions by the explanation made afterwards to the disciples that it is the spirit that gives life, and that it is in the words of Jesus that are spirit and life (v. 63). But the Sacramental expressions are

not otherwise qualified. And, as regards Baptism the Evangelist tells us that the disciples of Jesus baptized their converts (4²⁻³), and gives us the conversation with Nicodemus in which Jesus declares that except a man be born again he cannot see the Kingdom of God (3³). If we are to regard the Fourth Gospel as a narrative of events, we can only say that the Evangelist has given a false impression of what actually occurred.

It would be easy to go on to criticise the history and geography of the Fourth Gospel. As Matthew Arnold said, "'Bethany beyond Jordan'" (1²) is like "Willenden beyond Trent."² But the most serious count against the work from the point of view of objective history is the attitude assigned to Jesus in His discussions with the 'Jews.' Taking the narratives as they stand, the sympathy of the non-Christian reader of the Synoptic Gospels naturally goes with Jesus against the Pharisees or the Sadducees. We feel that the adversaries of Jesus are narrow, unkind, unintelligent. To such an extent is this the case that protests have been raised by more than one distinguished and learned Jew, to the effect that the Synoptic Evangelists misrepresent the teachings of the Rabbinic religion. But in the Fourth Gospel it is quite different. Here the present writer cannot but think that the sympathy of the non-Christian reader must go with the Jews. To heal on the Sabbath was considered to be a breaking of the Sabbath. According to Mark (3²), Jesus defends His action by saying that the Sabbath was made for man, not man for the Sabbath; but, according to John, He further exasperates the Jews by a disquisition about the Father and the Son, asserting to His adversaries that whosoever did not honour the Son (i.e. Himself) did not honour the Father (5²³). On a similar occasion, when accused of 'bearing witness of himself' He is made to say that He has two witnesses in His favour, viz. Himself and the Father (8¹⁷). Can we wonder that the Jews replied, 'Where is thy Father?' It is quite inconceivable that the historical Jesus of the Synoptic Gospels could have argued and quibbled with opponents, as He is represented to have done in the Fourth Gospel. The only possible explanation is that the work is not history, but something else cast in a historical form.³

From this point of view the question of the authorship of the Fourth Gospel is a matter of secondary importance. It is of the highest importance to ascertain the authorship and date of a chronicle, of a narrative of facts, because there the value of the work depends upon the nature of the traditions or sources to which the writer had access. But for a work of philosophy or philosophical history the qualifications required in the writer are mental, rather than local or temporal. We do not need to ask how near he stands to the events, but whether he sees them in their true proportions.⁴

For we have not done with the Fourth Gospel when we have made up our minds that neither the narrative nor the discourses are to be regarded as objective history, as matters of past fact. The question remains why the Church adopted this Gospel into the NT Canon, when so many rivals were excluded. In the answer to this question lies, we believe, the reason which gives a permanent value to the work. It was not the prestige of an Apostolic name that made it canonical, for the 'Gospel of Peter' was rejected. Great antiquity and respectful quotation by learned Church writers did not avail to include the 'Gospel ac-

¹ Polycarp, ad Phil. vii.: 'For whosoever doth not confess Jesus Christ to have come in the flesh is antichrist, and whosoever doth not confess the witness of the cross is of the devil, and whosoever perverteth the oracles of the Lord to his own desire and says there is neither resurrection nor judgment, he is the Son of Satan'; cf. 1 Jn 2²².

² See the admirable remarks of Loisy (*Jésus et la tradition Synoptique*, p. 172) upon the difference between Lk 10¹ and Jn 4⁴.

³ See W. E. Bury's Essay on 'The Theology of the Fourth Gospel,' in *Cambridge Biblical Essays*, esp. p. 164.

according to the Hebrews,' nor did philosophical thought avail the document commonly called the 'Oxyrhynchus Logia.' What was it that the 'Gospel according to St. John' had that these had not?

We believe the answer to be that the doctrine of the Person of Christ set forth in this Gospel expressed the general conviction of the Church adequately, while the Gospels which failed to become canonical failed mainly because the doctrine of the Person of Christ which they contained failed to satisfy the requirements of the Church. The Christ of the Fourth Gospel is not the Christ of history, but the Christ of Christian experience. Like St. Paul, the Fourth Evangelist did not care to know 'Christ after the flesh' (2 Co 5²), because he saw both his Lord and his Lord's adversaries *sub specie eternitatis*.

It is because the Evangelist views the Gospel history from this subjective standpoint that he allows himself such freedom in remodelling the external events. 'The old disciple needs no documents. . . . The whole is present in his memory, shaped by years of reflection, illuminated by the experience of a lifetime. He knows the Christ far better now than he knew Him in Galilee or Jerusalem half a century before.' The adversaries of Jesus have become his own doubts and unfaithful oppositions; the questioners of Jesus, such as 'Nicodemus' or 'the Woman of Samaria,' are his own questions, his own ignorances, which receive their solution at the hands of the Lord who has come with His Father to make an abode with him. He knows his Lord to be true, and the knowledge of Him to be life eternal; and therefore all opposition, however specious, is unjustifiable and blind. The Son of God is a Lamp to him who beholds, a Mirror to him who perceives, a Door to him who knocks, a Way to the wayfarer. The true meaning of life could never have been revealed to man, if Jesus had not been sent as the Word from the Father. Who He was could only be seen after He had gone away; what He had been seen to be was nothing in comparison with the underlying reality. It was no mere man that the Evangelist was preaching, but God unchangeable, God invincible, God higher than all authority and all power, and older and mightier than all angels and creatures that are spoken of, and than all ages. If those who heard would abide in this, and in this be builded up, they would possess their soul indestructible.¹ It is all a different order of thought from the Synoptic Gospels or objective history.

The substance of the last few sentences has been picked out of the work which above all other surviving fragments of early Christian literature has the closest similarity to the peculiar elements of the Fourth Gospel. This work is the apocryphal *Acts of John*, or rather, we should say, the doctrinal section of that unequal piece of writing. But near as the 'Gospel of John' and the 'Acts of John' are in many ways, their differences are also fundamental, and it is in great part because of these differences that the 'Acts of John' was condemned and forgotten, while the 'Gospel of John'

survived to be the spiritual food of many generations.

For, although the Fourth Evangelist is no chronicler of events, although his Christ is the *Logos*, the Word of God, whom to know is eternal life, yet he firmly holds all the while that this Christ was manifested in time as a human being, a real man of flesh and blood, who really felt as we feel, and, above all, really suffered and really died, before He rose again from the dead. As we have seen, the Evangelist is careless of events; but to him the Death of Jesus on the Cross was not a mere event, but a something essential, a thing which really came to pass in the eternal order of things. The apocryphal 'Acts of John' sets forth the doctrine that the Crucifixion was a delusion—the Jews gather round the Cross and mock, but Christ is not really there; similarly also, the 'Gospel of Peter' tells us that Christ felt no pain, and apparently His Spirit is somehow caught up at the last. By a true instinct this specious teaching was rejected by the Church of the 2nd century. The Passion of Jesus Christ must be real, not a stage-play; and, if it was to be real, Jesus Christ must have been a real man.

In no early Christian document is the real humanity of Jesus so emphasized as in the Fourth Gospel. That Jesus was a real man is an obvious inference from the Synoptic narrative, but in the Fourth Gospel it is a dogma. It is the Fourth Gospel that tells us that Jesus was tired, and asked for water to drink (Jn 4⁷); and that He wept at the tomb of Lazarus (11⁵). If we ask what proof there is that Jesus really suffered, the answer is ready, that the Fourth Gospel declares Him to have said, 'I thirst' (19²⁸). Furthermore, we are told, with the most solemn protestations of accuracy to be found in the whole work, that the corpse of Jesus presented a truly human appearance (19⁴⁰⁻⁴²).² It was no phantom.

This is the element which differentiates the Jesus of the Fourth Gospel from the Jesus of Gnostic speculation. It was the Fourth Gospel which pointed out the sin marks along which alone the Church could walk. On the one hand, the Church was not prepared to surrender historical reality to a philosophical speculation. The devotion of the first disciples had been kindled by Jesus of Nazareth. It was the belief that their dead Friend had become alive again, and that He had really appeared to them alive after death, which gave the earliest Christians the will and the power to combine on earth into a society, and afforded them enduring hope for the future. It was essential that the Living Christ whom they continued to serve and to wait for should have been a real man who had lived and died. Otherwise He was no firstfruits of the human race, but another species altogether. On the other hand, Christianity is essentially monotheistic, and it was so all the more consciously and passionately while the whole world outside was given over to the heathen cults and the deified Emperor. Whatever else Jesus Christ might be, the Church refused to make Him a demi-god. Here the various forms of speculation which we generally denominate 'Gnostic' were ready with terms and conceptions that should bridge the gulf. More than one school of thought, both Jewish and Greek, were teaching that the Word which proclaimed the truth to man was in the beginning with God and was itself Divine, that it would come or had come to those

¹ According to 1 Jn 5⁶⁻⁷, the living personality has in it three elements, viz. spirit, water, blood. From the 'water' we are begotten, by the 'blood' we are sustained, and the 'spirit' or breath is the immaterial element that enters at birth and leaves at death. The spirit quitted Jesus when He died (Jn 19³⁰), leaving behind the water and blood of a human body, the existence of which was demonstrated to the sceptics by the spear-thrust of the soldier.

¹ J. A. Robinson, *The Study of the Gospels*, 1902, p. 148. It may be added that this way of envisaging the Evangelist is the best explanation of the inconsistencies and omissions that have been detected in the Fourth Gospel, notably by Wellhausen. (2) Jn 18 was intended originally to follow immediately after 14¹, so 15-17 is a later addition. No doubt the Gospel took many years to write, and the Evangelist may have inserted many additions and modifications from time to time. Every author knows how hard it is in such cases to avoid minor contradictions, and to cover up the errors between new and old. *Logos* (Jesus at His trial, *Evangelist*, p. 18) pronounced much the same judgment on Wellhausen's theory as our criticism. ² See *Acts of John*, ed. Bonnet, 1891/12 175 ff. 200² (or Jesus, *Apocrypha Apocrypha*, 11, 1924-25 146 ff. 247², from whom the English translation here given has been adapted).

stood to receive it. But the Fourth Evangelist alone makes this Word become an actual human being, one who really lived on earth and died under torture as other men would have died in similar circumstances. Whether this conception is really credible to us or not, it is a matter of history that it forms the central idea of the Fourth Evangelist's theology. We believe that it was by virtue of this central idea that the Fourth Gospel won its way to a position of permanent authority in the Christian Church.

Moreover, the doctrine of the Sacraments set forth in this Gospel is the doctrine of the Church. This has been so well expressed by Schweitzer in his *Gospel der Passion. Forschung* (1911, p. 189) that we need only quote his words:

'The alive and substantial view that Jesus had instituted the Sacraments is not part of the Gospel of the Johannine theology. According to this theology, He did not institute them, but He created them and prophesied them. . . . Through His institution came the possibility of the communication of human nature and spirit (evangelium), the communication upon which the working of the Sacraments rests. By His actions with food and drink at the Feeding of the Five Thousand and by the words He used in connection with these actions He indicated a mystery which was to be manifested when the appropriate materials were ready: through Death, Resurrection, and Ascension He created His earthly nature, and set the Spirit free for the new method of operation, by virtue of which it was able to prepare men for resurrection. So Jesus came into the world to inaugurate the era of the Sacramental Church. In virtue of this He is the Servant.

The Johannine theology thus rests on the two dogmas: (1) that the Spirit can only set men in communion with God; and (2) that, this being the case, it is only available on the ground of the Incarnation, and even then not until the glorification of the Lord had taken place. Whoever has once grasped these presuppositions will never attempt to search the Fourth Gospel for primitive elements which are to be explained from natural religion. But, on the other hand, it is clear that from this point of view Christianity exhibits itself as the most perfect Greek mystery-religion that it is possible to conceive.'

7. The Gospel Canon.—The actual process by which our Four Gospels arrived at their present rank of pre-eminence is quite obscure. From about A.D. 170 onwards the Gospel Canon enjoys practically unchallenged supremacy, as we see from Tatian, from the Muratorian Canon, and from Irenaeus. Somewhat earlier than Tatian must be placed an interpolated edition of the Four Gospels, which seems to have been set forth in Rome, and from which the greater 'Western Interpolations' in Greek and Latin Biblical MSS are ultimately derived. This brings us back to about A.D. 180; but the literary history of our Gospels during the first half of the 2nd cent. is unknown. Justin Martyr doubtless used all the Four in Rome about the middle of the century, and Marcion certainly used Luke about 130-140. Earlier still are the allusions which indicate a use of Matthew by Ignatius. But there is nothing to show that Marcion was acquainted with any other of the Canonical Gospels than Luke, and very little to show that Ignatius used any other Canonical Gospel than Matthew; while the verbal inaccuracy of Justin's quotations suggests that even in his day the 'Memoirs of the Apostles' had hardly yet taken their place beside the Law and the Prophets as part of the written Word of God. At the same time Trypho, Justin's Jewish opponent, is quite aware that the way to become acquainted with Christian doctrine is to read what is written *ἐν τοῖς λεγόμενοις εὐαγγέλοις* (Trypho, § 10). Thus 'The Gospel' has already become the name of a book.

It is fairly certain that the formation of the Gospel Canon was a process rather of exclusion than of inclusion. Of the works of many who took in hand to write of Jesus Christ (Lk. 1), the Four Gospels alone remained in favour. The rest either failed altogether to attract, or were discovered to teach heresy. Whether the Church made the ideally best choice, from the point of view of the modern historical investigator, is a matter

that cannot be scientifically demonstrated, for the simple reason that the rivals of the canonical Four have not survived in full. But the abiding interest which each and all of the Four have excited during eighteen centuries is enough to show that the Church chose well. And it should not be forgotten that these of the non-canonical Gospels which we know enough of to pass judgment upon show a sensible inferiority. Marcion's Gospel is in every way inferior to Luke, and the Gospel of Peter is inferior to any of the Synoptic accounts of the Passion. It is, in fact, because the Canonical Gospels paint such an eternally fascinating portrait that we welcome every scrap that may claim to give another view, however inadequate.

In one respect, we venture to think, the modern historical investigator is more fortunate than from general considerations he might have expected. It is fortunate indeed that the Gospel according to Mark should have been included in the official Canon. Many of the special ideas and tendencies of the First and Third Evangelists are in close touch with the ideas and tendencies of 2nd cent. literature. The theology of the Fourth Gospel met the wants of the Church; it pointed out the way along which the conflicting currents of Christian thought and feeling might run together. In any case, the Fourth Gospel is unique. But it is difficult to understand what attraction was offered to Christians of the 2nd cent. by the Gospel of Mark which the Gospels according to Matthew and Luke did not offer, either singly or taken together, in a more eminent degree. Probably its traditional connexion with St. Peter may have had a determining share in recommending it, and the appeal of Irenaeus to historical tradition against Gnostic theorizing may help us to understand how such an old-fashioned book as the Gospel of Mark, St. Peter's 'interpreter,' should have survived. It is, we find, very little quoted before it became part of the official fourfold Canon, that is, before the time of Irenaeus, and it is certain that it ran a very serious risk of being forgotten altogether. As every one knows, the genuine text ends at Mk 16, in the middle of a sentence describing the terrified departure of the women from the empty tomb. There is no reason to doubt that the Gospel went on to describe some of the appearances of Jesus to the disciples after the Resurrection. The narrative is incomplete as it stands, and it is much more likely that the mutilation was accidental than that it was intentional. In the latter case, the break would never have been made where it is, at *ἀποβήκεν αὐτόν* . . . ; even the sentence seems incomplete. But all our MSS ultimately go back to this mutilated text; it is therefore evident that at one time no more than a single mutilated copy was in existence, or at least available. The work had dropped out of circulation, it had lost its public, and we can only guess at the reasons which led to its resurrection.

The fact, however, remains. By its inclusion in the Canon we are to-day in possession of a document in warp and woof far more primitive than the Churches which adopted it. The fine instinct which reserved a place for the Gospel of Mark among the books of the NT shows the Catholic Church to have been wiser than her own writers, wiser than the heretics, wiser, finally, than most Biblical critics from St. Augustine to Ferdinand Christian Baur. It is only in the last half-century that scholars have come to recognise the pre-eminent historical value of that Gospel which once survived only in a single tattered copy.

8. Chronological summary.—From what has been said above, it will be evident that no very definite date can be assigned to any of the Gospels, except St. Luke's. The Destruction of Jerusalem

by Titus in A.D. 70 is an event that might have been expected to influence the language used in documents later than that date. Lk 21²⁰ does appear to allude to the siege. Mk 13¹, of which Lk 21²⁰ is an adaptation, does not fit the historical details of the siege, nor indeed does anything in Mk. imply acquaintance with the Jewish War. We may therefore put Mk. before A.D. 70.

Mt. is difficult to date because of its dependence on Mark. Mt 27¹ merely indicates the existence of a Christian community at Jerusalem, but Mt 17²⁴ might be held to imply the continued collection of the Temple-tax. Yet a Palestinian Gospel earlier than 70 would hardly have been based upon the Greek Gospel of Mark; Mt. was probably compiled when the Church of Jerusalem became a Greek-speaking community, i.e. in the generation that grew up after the war. Q is earlier than Mt.; it may have been compiled about the same time as Mk.

We may distinguish four periods of 30 or 40 years each, reckoning from the Crucifixion.

I. A.D. 30-45. Oral Period. No written 'Gospel' appears during this period, nor any formal shaping of the Gospel history as a whole. St. Paul's accounts of the Lord's Supper (1 Co 11²³⁻²⁶) and of the Resurrection (1⁵) do not appear to have any literary connexion with what we read in our Gospels.

II. A.D. 45-115. Period of the writing of the Gospels.

Gospel of Mark, A.D. 65-75.

" Luke (and Acts), A.D. 100.

" Matthew, A.D. 80-100, in any case before A.D. 135.

" John, A.D. 100-115.

III. A.D. 115-150. Period of the catholic reception of the Gospels.

IV. A.D. 150-180. Period of the canonization of the Gospels. By the end of this period the idea of the Fourfold Gospel (Iren. 1¹⁰) is fully established.

g. The influence of the Gospels on the Church. —The fact that the Church came to accept the Four Gospels is a proof that each of these works satisfied in a general way the Church's requirements. Had it been otherwise, the Gospel in question would never have attained to canonicity. At the same time, it would be absurd to regard the Church's requirements as being in any way occupied with details; these the Church has learned from what the Evangelists have supplied. The Church's picture of Jesus Christ is not unfairly summarized in the so-called Apostles' and Nicene Creeds; it is the written Gospels that have preserved for us the winning personality of the Son of Man.

The history of Christology was not a simple advance from an original unitarian 'pseudepiphany' to the ultimate recognition of the Deity of Christ. Naturally it took many generations of Christian thought to evolve a form of words which should satisfactorily define the exceptional nature of the Founder of the new religion in terms of current philosophical conceptions. But from the first there existed the sentiment of devotion, the temper of mind which was assured that no title was too high to give, no homage too high to pay, to the Son of God, who had been sent from Heaven to overcome death and open the gates of everlasting life to those who believed on Him. For the first thirty years or so all Christians were converts; those who doubted how far the message was true did not become Christians at all. And, unless the extant literature gives a totally false impression of the general state of mind among Christians, the interest of the nascent Church was not in the least directed towards the past. In the words of the earliest written Christian document that we possess, the converts had 'turned unto God from idols to serve a living and true God, and to wait for his Son from heaven, whom he raised from the dead, even Jesus who delivereth us from the wrath to come' (1 Th 1¹⁰). Those who had entered the Church by baptism were to set their mind on the things that are above, 'where Christ is, seated on the right hand of God' (Col 3¹). It was true

that the Christians, in consequence of their belief, submitted to new rules of conduct; and that these rules consisted in great part of reminiscences of the words of the Lord Jesus who had taught 'sweet reasonableness' and long-suffering (*φειλέτης καὶ μακροθυμὸς*), rules such as: 'Pity, that ye may be pitied; forgive, that ye may be forgiven.' But the Gospel was not a formal code, still less a biography. No pictures of early Christianity have been conceived more fundamentally false, both to the spirit and to the letter of historical fact, than those which represent St. Matthew or St. Peter as delivering catechetical lectures on the 'Life of Christ.'

The actual course of events was very different from what the first generation of believers had anticipated. The End, so confidently awaited, was not yet. One by one the companions of the Ministry went to their graves, and, when the cataclysm of the Jewish War broke up for ever the one community in which there could have been common first-hand knowledge of how our Lord had lived and moved among men, the great majority of Christians were Greek-speaking inhabitants of the Levantine cities, a population far removed in spirit and in culture from the provincial Judaism of Galilee. What wonder that Christianity began to mix with alien elements and to appear in forms which alarmed the more conservative believers?

To the average Gentile Christian in the 1st cent., Christ was the *rah šed*, the messenger from God, who had come down to earth with tidings of immortality, and now was waiting till the appointed Day when He should appear in glory in the clouds of heaven. It is not surprising that to many a believer the melancholy story of Jesus the Nazarene was a stumbling-block, and that His sufferings were incredible. All the more was this the case among those who had attempted to find an appropriate place for Jesus Christ in the various philosophical theories of the Cosmoes, which thoughtful men had devised and were devising. Christian sentiment and learned speculation alike welcomed what we call Docetic heresy. Docetism (q.v.) is not the name of a sect. It is a theory of the Person of Christ which takes many forms, and which has entered into the theology of many schools of thought. Some, like the writer of the *Acts of John*, denied that our Lord had any material existence; others were content to deny that He felt the pains of crucifixion; others, like Marcion, denied His birth; but all were alike in this, that they regarded Jesus as having been in no sense a real human being. It is a theory incredible, almost inconceivable, to us; but we have learned to know Jesus Christ through the written Gospels.

In the earlier sections of this article we have attempted to sketch what we conceive to be the literary origins of the several Gospels. What we wish to emphasize here is the private, individual character of the earlier documents. That St. Luke's Gospel was a private venture is sufficiently indicated by the Preface. That St. Mark's Gospel was so is sufficiently indicated by the narrow escape it ran of being lost altogether. The Gospel we call St. Matthew's has a more formal, official tone; and it bears marks of a Palestinian origin, i.e. it comes from the one region where we have a right to expect independent reminiscences. Yet in structure and much of its wording and material it is based on Mark—a clear proof that even in Palestine no regular effort had been made to hand down a summary of the outward events of the Ministry.⁶

¹ Clem. Rom. ad Cor. 9 12.

² The last 'Gospel' according to the Hebrews seems to have been very similar in general plan to our Matthew, in other words, it also had its ultimate basis in our Second Gospel.

To some pious Christians the biographical accounts of the life and words of the Lord may very likely have seemed unnecessary and unspiritual. But the rise of Docetic theories gave these 'Memoirs of the Apostles' a new and theological value. This is mirrored in the Ignatian Epistles. To Ignatius, writing in the middle of the first quarter of the 2nd cent., the Gospel history was immensely important, because it furnished the proof of the real humanity of Christ. If Christ was not really human, His sufferings were not real, or really akin to human suffering; and, if His sufferings were not real, why should Ignatius be willing to endure martyrdom? (*Trid.* § 10). But, to make the acquaintance of the human side of Jesus Christ, a biography was necessary.

Ignatius was 'fully persuaded as touching our Lord that He is truly of the race of David according to the flesh, but Son of God by the Divine will and power, truly born of a virgin and baptized by John that "all righteousness might be fulfilled" by Him, truly nailed up in the flesh for our sakes under Pontius Pilate and Herod the tetrarch, and, further, that "after His resurrection He both ate with them and drank with them (the Apostles) as one in the flesh, though spiritually He was united with the Father" (*Smyra.* § 1, 3). Even this short summary of Christological doctrine goes beyond any known *Ode* in its literary dependence on a biographical Gospel, for the conception that Jesus was baptized by John, that all righteousness might be fulfilled by Him, is thoroughly characteristic of 'Matthew,' and, as far as we know, it is found in 'Matthew' alone of all the Gospels that ever were written. With this agrees the circumstance that Ignatius uses several phrases like *patris verba*, 'the Father's planting,' which indicate the literary use of the Gospel according to Matthew. It seems likely also that he had read the Fourth Gospel, and it is almost certain that he once quotes from an 'apocryphal' work called the 'Preaching of Peter' (*Ἐκτείνον Πέτρον*), a document which appears to have been a very early rival of the Canonical Acts of the Apostles. But we are not now concerned with the reconstruction of Ignatius' library; the important point is that this representative of the Catholic theology of the beginning of the 2nd cent. tends to base his doctrine of Christ on a Gospel which is biographical in form. This point of view was not at first accepted by all. 'If I find it not in the charter (*τὸ ἀρχαῖον*, the 'archival,' i.e. the OT), I believe it not in the Gospel,' said his opponents; and when he said, 'It is written,' they answered, 'That is the question' (*Smyra.* § 8). But Ignatius had no doubt, and the Church was with him, that the Gospel record was necessary, as the guarantee of the real humanity of Jesus Christ.

The Church of Antioch, if we may judge from the Ignatian writings, took its knowledge of the Gospel history from our 'Matthew.' The Church in Pontus, a little later, if we may judge from Marmon, who left it in A.D. 188, used our 'Luke.' When and where our Four Gospels were gathered together into a Corpus, we do not know. Traces of it are first found in Rome, and, indeed, the conservative character of the early Roman Church makes it a little easier to understand how so ancient a document as the Gospel of Mark came to be included in the Canon. The process seems to have been very nearly complete in the time of Justin Martyr (*Apol.* I. 67; *Tryph.* 108), and it is certain that Justin's disciple Tatian constructed his *Harmony* out of the Canonical Four.

¹ One point deserves special notice in passing. Ignatius is the earliest witness to the belief that Jesus was born of a virgin. He is most emphatic in asserting this, but the importance of the doctrine for him is not that the miracle occurred so that the man Jesus was Divine, but that the Christian God was only born of woman (*Apol.* § 18).

Thus the Gospels fell into their place as the charter of the Christian religion, a fixed standard open to the inspection of friend and foe. And the earliest criticism on the Gospels from outside hits the mark from more than one point of view. 'I well know,' says Trypho, the Jewish opponent of Justin Martyr, 'that your Christian precepts out of what is called the Gospel are great and admirable, so admirable indeed that I doubt if any one can keep them—and I speak from personal knowledge of these writings. Moreover, we non-Christians specially wonder why you expect to get any favour from God when you set your hope on a man who was crucified' (*Tryph.* 10).

This simple and obvious piece of criticism touches the essential point. The real humanity of Jesus who was crucified in Judaea, and the soaring ethical principles that He taught, as it were by the way,—these are the obvious characteristics of the Gospels, and it is to the Gospels which secure these things as an inalienable possession of the Christian Church. Moreover, Trypho's criticism is unanswerable, if the Gospels be regarded as mere law-books, as a code of morals. The Pentateuch is a law-book; it is possible to obey it to the letter, and those who compiled it intended it to be obeyed to the letter. But he who exchanges the Pentateuch for the Gospel does not exchange one code for another, as actually happens in the case of a Jew turning Muslim. He who reads the Gospel finds on the one hand that eternal life is promised for the observance of the Decalogue (*Mt.* 19²⁹), on the other that the remuneration of every earthly life is demanded (*Lk.* 14²⁶), and that, unless the righteousness of the Christian exceeds the legal requirements, he cannot enter the Kingdom of Heaven (*Mt.* 5²⁰). This discrepancy is not an affair of divergent 'sources' or of rival schools of Christian ethics; it is essentially characteristic. The Gospel is not intended to introduce us to a code by which all men should regulate their conduct; it is intended to introduce us to Jesus Christ, whose commands differ for each age and for each individual because He dealt with principles and not with rules. The love of God and the love of our neighbour were the ethical principles of Jesus; but to turn His sayings into a fixed code of rules would produce a course of life harmful to our neighbour and displeasing to God. We do not get rid of the real difficulties of the Gospel, if we make jettison of all the miracles but leave the Sermon on the Mount.

The Gospel ethics needs criticism more, not less, than the Gospel miracles; and for this reason, that it is more for the ethics than the miracles that the Gospels are permanently valuable. We need to put the Gospel morality into its due relation to time and place; if Christ said, 'Give to every one that asketh thee,' and, 'Unto him that smiteth thee on the one cheek, offer also the other' (*Mt.* 5⁴², *Lk.* 6²⁹), we need to understand the social conditions of Christ's day, and those of our own also, before we can turn these maxims into a rational command for fellow-believers. It has ever been a mark of true Christianity to seek to apply the words of the Gospel to the changing needs of the time—a task which is none the less incumbent upon the Church because it is always difficult.

But the Gospel morality is not the Gospel, any more than the *Dednake* is the Gospel. Christianity stands or falls, lives or dies, with the personality of Jesus Christ; and the Gospel is our introduction to Jesus Christ. From the Gospel according to Mark we may learn who Jesus Christ was and what part He played on earth in human history. From the Gospels according to Luke and Matthew we may learn something of what Jesus Christ taught. From the Gospel according to John we

may learn what His followers declare to be the real significance of His life. It is the great charm of Christianity that its innermost doctrine is incarnate in the person of its Founder, rather than crystallized into a set of propositions or ordinances. The propositions and the ordinances may be necessary deductions; one of them, as we have seen, forms the ground idea of the Fourth Gospel. But they are exhibited in action; like the Laws of Nature themselves, the Doctrines of Christianity are human deductions from the course of events.

LITERATURE.—I. THE LITERARY PRIORITY OF MARK.—C. Lachmann in *JR*, 1835, p. 470 ff.; W. G. Rushbrooke, *Synopsis*, Lond. 1880; J. C. Hawkins, *Hebr. Synopsion*, Oct. 1908.

II. ON THE RECONSTRUCTION OF Q.—A. Harnack, *Apocrypha und Reden Jesu*, Leipzig, 1907 (Eng. tr., *The Sayings of Jesus*, Lond. and N.Y. 1908); V. H. Stanton, *The Gospels as Historical Documents*, pt. II., Camb. 1909; E. H. Streeter, *Essays IV*, and vi. in *Studies in the Synoptic Problem*, Oct. 1911; F. C. Burkitt, *The Earliest Sources for the Life of Jesus*, Lond. 1910, pp. 37-44.

III. ON THE FOURTH GOSPEL.—The best defence of a genuine element in the sayings of the Fourth Gospel still appears to the present writer to be that in Matthew Arnold, *God and the Bible*, chs. v and vi, popular ed. Lond. 1904. For the modern view, see B. W. Bacon, *The Fourth Gospel in Research and Debate*, New York, 1911. For the theory, see W. R. Inge, in *Cambridge Biblical Essays*, Lond. 1884, pp. 281-78. On the literary value of the Gospel, see J. Wellhausen, *Kritische Studien und Vorträge zum vierten Evangelium*, Berl. 1897, and *Das N. Testament*, 80, 1908.

IV. GENERAL MEANING AND HISTORICITY OF THE SYNOPSIS.—*HEBRÆA*—Albert Schweitzer, *Von Reimarus zu Wrede*, Tübingen (Eng. tr. [by W. Montgomery], *The Quest of the Historical Jesus*, Lond. 1910), is apart from Schweitzer's own very interesting views, the most instructive introduction to the general trend of Gospel criticism during the 19th century. See also A. Leisy, *Jésus et la tradition évangélique*, Paris, 1880 (an admirable short survey of the whole question from the 'eccehological' point of view); J. Wellhausen, *Kritik in der deutschen Evangelienforschung*, Berl. 1911, *Das Evangelium Marci* 1908; *Matthäus*, 1904, *Lucas*, 1904 (four books forming one short Commentary on the Synoptic Gospels, with introd. prefixed—'liberal' and stimulating); W. Wrede, *Das Messiasgeheimnis in den Evangelien*, Göttingen 1901 (the book with which Schweitzer's survey closes, but well worth study for its own sake—anti-eccehological and historically sceptical of the outline given in Mk.); A. Drews, *The 'Aids Myia*, Eng. tr. by C. D. Burns, Lond. 1910 (the most noteworthy expression of historical disbelief in the historicity of Jesus compelling the future investigator to examine the reasons for treating any part of the Gospels as actual history); B. W. Bacon, *The Beginnings of Gospel Story*, Yale, 1909 (a Commentary on Mk., the most scientific exposition in English of the anti-eccehological point of view); F. C. Burkitt, *Earliest Sources*, etc. (eccehological), also *The Gospel History and its Transmission*, Edinb. 1911 (this book, as first published in 1906, was an expansion of the first draft of the present article).

F. C. BURKITT.

GOSPELS (Apocryphal).—2. Importance.—The most important problem to the student of religion is the character and teaching of the Founder of Christianity. Since He wrote nothing, we can discover this only by reading what others, near to the events, wrote about Him. It was natural that many of His followers should 'take in hand to draw up accounts of their Lord'; on the face of it, it is improbable that the four Gospels 'received' by the Church contain the whole authentic tradition on the subject. Moreover, St. Luke in his preface (*Luke* 1¹⁻⁴) expressly declares that his work is based on many earlier writings, and implies the existence of others which he has not scrupled to pass by. Such fragments as remain to us, purporting to give an account of these events, claim to be judged on their own merits, without fear or favour derived from the decisions of Church Fathers in succeeding centuries, and the whole story can be rightly understood only when a searching study of them remains has taken place. See preceding article.

a. Name.—The name 'Apocryphal,' originally a title of honour given to writings for a select circle, 'hidden' from the multitude, is used in analogy with the OT Apocryphal books to describe these remains. It was only by degrees that it became a term of reproach, as implying exclusion from that public reading in churches which was reserved for the canonical books ('quidquid est extra hoc, inter *Apocrypha* esse ponendum' [Jerome, *Proleg.*

Galatæe, end of 4th cent., after giving a list of the canon]). Down to the end of the 2nd cent. the process was not complete, for Serapion (A.D. 190) found the 'Gospel of Peter' (see below) used in public reading in the church at Rhossus near Antioch (Euseb. *HE* vi. xii. 3); and in 419-450, Bishop Rabban of Edessa discovered more than two hundred copies of Tatian's *Diatessaron* taking the place of the Four Gospels in the churches of his diocese. But, once the exclusion was confirmed, it began to act more and more disastrously upon these books, and the name 'Apocryphal' came to possess a more and more ominous significance.

3. Difficulty.—The study of these pieces is still in its infancy, for fresh discoveries are continually being made which alter the whole horizon; e.g. the *Logia*, discovered in 1897 and 1903, and fragments of the 'Gospel of Peter,' unearthed in 1898, have overturned some old theories, while the translation of the Italian 'Gospel of Barnabas' (1907) has illuminated a forgotten chapter of Church History. It is thus as hard to lay down conclusions as to write a history of the politics of the current year, for the scenery is always changing. Moreover, the evidence at present, both external and internal, is very fragmentary and must be used with caution. Though we know by name nearly fifty of these 'Apocryphal' Gospels, not one-tenth of their contents is extant.

4. The evidence.—The external evidence consists of statements of Church Fathers, and cannot rightly be regarded as impartial. To know its worth we must examine it in the light of the knowledge we possess concerning the special characteristics of the witnesses who give it. For instance, no one can read the works of Clement of Alexandria without perceiving at once his credulity and curiosity, his versatility and liberality. Unlike his contemporaries, he showed an almost modern striving after tolerance. In his search for truth he found it in most unlikely places. Nothing came amiss to his craving for knowledge and sunny optimistic outlook. Where Christ was not before, Clement's tender imagination translated Him. Papias' credulity was of a more naive and crude sort. It is strange to find those who would base their whole case for the existence of a Hebrew original of the First Gospel on one of his tales, rejecting, with hardly an apology, others like the prophecy which he ascribed to Christ (*Iren. adv. Hæc* v. xxviii.), or the account of the martyrdom of 'James and John' (quoted by Georgios Hamartolos [see Moffatt, *Introd. to Lit. of NT*, 1911, p. 803 f.]). Jerome, inquisitive and inquiring as he was by nature, was ready to go to any length to avoid the suspicion of heresy, and to this he sacrificed his own reputation by his attack on Origen's memory. Origen's daring criticism and profound love of truth for its own sake are tempered, as a rule, with a scrupulous caution and desire to avoid offending 'weaker brethren,' or marring the splendid unity of the Church he lived to serve. Eusebius is the safest guide; but even he was writing from a later standpoint, and for a public to whom the canon of the Gospels was soon to be a sacred and established fact. If men object to the bias of 30th cent. critics, it is surely needful to remember that prejudice is not only of to-day, but played a large part in the estimates of the early Fathers and Councils of the Church, and nowhere more than in the subject under discussion. Some of the chief witnesses cited were plainly speaking from hearsay, and had no personal acquaintance with the facts related; e.g., there is no evidence that Irenæus of Lyons knew anything at first hand of Syrian Christianity; and all scholars admit that Epiphanius' zeal and curiosity were surpassed by his credulity and bigotry. (*Epiph. Hæc* xlv. 1

actually confuse Tatian's *Syriac Diatessaron* with the Hebrew Matthew; yet many would rely on his authority to discuss the nature of the latter Gospel.) To find the origin, date, and value of the Apocryphal Gospels, we are thrown back upon the internal evidence afforded by the extant fragments; and our estimate of this must depend largely on our view of the history in question, though we are able to correct our results by a critical view of the external evidence.

5. Value.—Even if it were proved that the Apocryphal Gospels have little claim to originality or antiquity, they would possess great negative value, as reflecting the excellence of the collection of which the NT is the result. They must also throw much light on the earliest notions of Christians, on the earliest history of the Church and Canon, and, most of all, on the intricate problems connected with the date and origin of the 'received' Gospels. Their contents are too fragmentary and their value too disputed to solve such problems; often they rather complicate them further (Harnack, in *TÜ* ix. 5) by suggesting new possibilities and upsetting old conclusions.

6. Origin.—The Apocryphal Gospels embrace all writings claiming to describe the words and acts of Christ outside the canonical Four; they are a very mixed collection, and owe their existence to very various motives. Some writings, e.g. 'The Preaching of Peter' (see below), though containing words put into Christ's mouth, are hardly to be ranked as 'Gospels'; others, e.g. Tatian's *Diatessaron*, or Marston's revised and abbreviated version of St. Luke, are hardly to be called 'Apocryphal'.

7. Classification.—The rest are divided for convenience into four classes: (A) Parallel Gospels, (B) Transition Gospels, (C) Supplementary Gospels, and (D) Lost and Hostile Gospels. But, in any classification, a cross division is inevitable; and, strictly speaking, no exact lines can be drawn between the four classes. The class D (see below) has always been the most numerous; and the tendency, ever since the canon was fixed and the living fount of tradition dried up, has been to assign all unauthorized writings to this class. Origen's 'Quattuor Evangelia habet ecclesia, haec omnia plurima' (in *Loc. l. 1*) has been the rough and ready verdict of many since his time; but, while tradition was fluid and Scripture meant 'the Law and the Prophets' (as in *Clem. Alex. Strom. vi. xli. 58*, from 'Preaching of Peter'), and while codices were still unknown (before A.D. 200)—since only separate rolls were used—many pieces were not reckoned 'Apocryphal' which subsequently were condemned. This came about the more readily at a time when 'heresy' had become a moral and spiritual menace to the existence of the Church, and walls had to be built to keep out the wolves in sheep's clothing who devoured the flock. Even when it became a definite practice to manufacture 'Gospels' in defence of particular tenets, the first essays were rather partial harmonies of earlier sources, written and oral, and quite unlike the barefaced forgeries of later days. Such are those belonging to class B. Class A, the earliest and most important, is parallel in time and object with our canonical Gospels, and akin to these we reckon the fragmentary sayings probably belonging to an authentic tradition, whether oral or written, and possibly the first stones on which some later Gospels, e.g. 'of the Egyptians' or 'of Thomas', were built. Class C illustrates the difficulty of any division, for the Gospels belonging to it contain pieces of hostile Gnostic productions as extravagant as any in class D. This group is by far the best known, and, for a study of early Christianity, the least important. Between classes D and A the gap is far wider than between B and the earliest canonical sayings.

8. Contents.—(A) PARALLEL GOSPELS.—(a) Gospel according to the Hebrews—*κατ' Ἑβραίων Ἐβραίων*—*Ἰουδαίων* (Cod. Tisch.) (Euseb. III. xiv. 5, 6, xvii. 4, xxxix. 6, iv. xxii. 3, Theoph. in *Matt.* xiv. 14, and *Syriac Theophania* [iv. xiii. 234, ed. Lee, London, 1845]; Origen, in *Joh. ii. 6*, in *Matt. xv. 14*, in *Jer. xv. 4*; *Clem. Strom. ii. ix. 25* [PG viii. 288]—Jerome's 'Gospel of the Nazarenes,' called by many the 'Authentic Matthew' [*authenticum Matthaei*, Jerome, ad *Matt.* xii. 17]; cited by Jerome, *de Vir. Illust. ii. iii.* [A.D. 392], in *Isai. xl. 1*, xviii. 1, xl. 9, in *Euseb. xviii. 7*, in *Matt. xii. 13*, xvii. 16, also *adv. Pelag. iii. 2* [A.D. 412], and some ten other citations; perhaps also Ignatius, *Smyrn. iii. 2*.—It is ascribed by Jerome to orthodox Jewish Christians (*Nazareni* = *Nasareni*). It is said to have been written in Aramaic words and Hebrew letters (Hegesippus [A.D. 160], in *Euseb. HE iv. xxi. 6*; *Euseb. Theoph. in Matt. xiv. 14*; Jerome, *adv. Pelag. iii. 1*) and to have quoted the OT from the Hebrew text (Jerome, *de Vir. Illust. iii.*). Probably a Greek translation was known to Origen and Eusebius, whence came its present name. Perhaps the original was anonymous, like so many of the Hebrew sacred writings (e.g. the Epistle to the 'Hebrews' in NT). Such a translation was probably confined to a few, and had disappeared in Jerome's time. He translated it himself from a copy at Beirut, and he knew of another at Caesarea, which 'Pamphilus had studied'—perhaps the same that was seen by Origen. Eusebius (III. xiv. 5) places it among the 'disputed' books. Like Origen, he implies that many reckon it 'canonical,' while Jewish Christians make use of this Gospel and 'take small account of the others.' The first saying in the Oxyrhynchus Papyrus, published by Grenfell and Hunt in 1905, contains a longer version of a saying (*ὁ θεσφωρος προσέειπεν, καὶ ὁ προσέειπεν ἀποκριθεὶς*) derived by Clement (*Strom. ii. ix. [xiv. 4, ed. Stählin, Leipzig, 1905]*) from this Gospel. Of some thirty fragments extant, Nicholson regards ten as independent of the canonical Gospels. Handmann thinks that twelve are nearest to St. Luke, eleven to St. Matthew, and six to St. Mark. This is against the view advocated by many since Lessing (1784)—the first to realize the importance of the Gospel of the Hebrews—who find here the original 'Hebrew Matthew' mentioned by Papias in A.D. 110 (*Euseb. HE iii. xxxix. 16*) and the primal source of all the other Synoptic Gospels. The Gospel of the Hebrews has been described as a 'phantom ship' or a 'haunting shadow' ever dogging the footsteps of this primal Gospel, but it is not unlikely that the reverse is really the case, and that the 'Hebrew Matthew,' which is never quoted save as a name, is merely the orthodox reflexion of a confused report of the Gospel of the Hebrews, which was all that reached the ears of Western Christendom, through the agency of Papias in Phrygia, and his disciple Irenaeus, Bishop of Lyons (cf. *Iren. adv. Haer. i. 26* and *Euseb. HE iii. xxxix.*). Hegesippus, Eusebius, Origen, and Jerome had all been in Palestine and had seen the Gospel according to the Hebrews, but none of them, even in their commentaries on St. Matthew, give any indication of knowing more than the name of the original 'Hebrew Matthew.' Jerome, who at first (A.D. 392) tried to identify the two, grew more sceptical as he proceeded, though the attacks of his enemies, who accused him of trying to bring in a fifth Gospel by translating the Gospel of the Hebrews, made him so cautious and ambiguous in his language that it is easy to mistake his meaning. Epiphanius (*Haer. xxix. 9, xxx. 3*), who regards the Ebionite Gospel as a forged and 'very full' (*ὡλεπρότερον*) version of 'Hebrew Matthew,' had never seen either, and confused both with the Greek

'Gospel of the XII Apostles.' Gospel criticism to-day leans steadily to a disbelief in a Hebrew Gospel underlying our St. Matthew, though admitting that one of the sources employed may have been a Greek collection of discourses (from the Aramaic) with narrative links. It is probable, then, that neither Hilgenfeld, who calls it the 'punctum Arahumedis' of the whole Synoptic problem, taking the place usurped by St. Mark, nor Rensch, who regards it as a 'tertiary' production several times removed from its original (the *Logia* of St. Matthew in Hebrew), is right.

Internal and external evidence alike point strongly to the view that the Gospel of the Hebrews is an independent parallel version of the events described in the Synoptics (esp. in St. Matthew), and possibly formed one of the sources in the hands of St. Luke. The style is lifelike, Jewish, and primitive. Sometimes the *naïveté* borders on the grotesque and draws near to the methods of current Jewish Apocalyptic, as in the famous saying ascribed to Christ, 'My Mother the Holy Spirit took me by one of my hairs to the great Mount Tabor' (Jerome, *de Vir. Illust.* II; Origen, *de Joh.* II. 6; cf. Bal and the Dragon¹²), which is perhaps the foundation for the later unlikely story that Mt. Tabor was the scene of the Transfiguration. The words ascribed to Christ at His baptism, 'What have I sinned unless this be ignorance?' (Jerome, *adv. Pelag.* III. 2; cf. *Jn* 8¹²), are certainly very ancient. The context of the tale of the rich young man and the reference to Peter as 'Simon his disciple sitting near him' (Origen, *de Matt.* xv. 14) have all the marks of genuineness, and many of the sayings peculiar to this Gospel bear the proof of their origin on their face—e.g. 'Never be happy save when ye behold your brother in love' (Jerome, *de Eph.* v. 4). Even where the author seems to correct the tradition preserved in the canonical Gospels, it is often a moot point whether his version is not to be preferred; e.g., in the Lord's Prayer, instead of Matthew's and Luke's obscure reading *tribulation*, the Gospel of the Hebrews has *yo* = 'to-morrow's bread'; instead of the Parable of the Pounds, it has another parable in which the third servant does not bury his pound, but squanders it in riotous living, and is the only one punished by more than the loss of the share entrusted to him (Euseb. *Theoph.* *de Matt.* xxv. 14). Of the two Resurrection 'appearances,' that to Peter and his friends (Origen, *de Princ.* Pref. viii; quoted also in Ignatius, *Smyrn.* III. 2, and 'Preaching of Peter' (see below)) is probably an older version (see Euseb. *Apographa*, 412-416) of that recorded in Lk 24³⁶. The other (Jerome, *de Vir. Illust.* II.), to 'James the Just,' treated as the *first*, contains a number of legendary details (e.g. giving the shroud to the priest's servant), and is probably secondary; but, in Harnack's view, its date must be before A.D. 100. This is the more probable since the title 'Son of Man' (used by Christ of Himself) appears here alone outside the NT. When Eusebius (*HE* III. xxxix. 17) says that the story of a woman taken in sin mentioned by Papias comes from the Gospel of the Hebrews, this does not prove that Papias knew that Gospel or took it from there.

The Gospel of the Hebrews contained, according to the Catalogue of Nicophorus (A.D. 509), 2800 *etichai*, and was thus longer than Mk., but shorter than Mt.; but Zahn thinks it may have been written in a smaller hand. It dates undoubtedly from the 1st cent. and was known in Egypt, probably in a Greek translation, very early in the 2nd cent. (it is possible that Pantenus saw it in India (= Ethiopia) in A.D. 180 [Euseb. *HE* v. x. 3]). It is thus a late contemporary of Mk., and earlier than our Mt., although its author was neither so

critical nor so orderly in his use of the traditional material.

(b) *Gospel of Peter* (Origen, *de Matt.* x. 17; Euseb. *HE* III. xxv. 6, vi. xii. 2; Jerome, *de Vir. Illust.* II.; Theodoret, *Har. Fab.* II. 2; *Decret. Gelasii*).—For the story of Serapion's discovery of this Gospel, see § 2. Previous to 1898 our only knowledge of this work was derived from this story, and from a statement of Origen, who remarked that the Gospel of Peter, like the 'Book of James' (see 'Protevangelium' below), contained the information that the 'brethren of Jesus' were sons of Joseph by a former wife. Eusebius further informs us that it was generally condemned as the Apocryphal work of heretics, along with the Gospels of Thomas and Matthias. In 1898, Boerhaave discovered a number of precious fragments (8th cent. MSS) in a monk's tomb at Akhmim (the ancient Panopolis), Upper Egypt; among these was a large torn piece of the Gospel of Peter, giving a continuous account of the Passion, Crucifixion, and Resurrection, but beginning and ending abruptly in the middle of a sentence. On the publication of this piece in 1903, a wholly new light was thrown on this mysterious Gospel and on the history of the literature of which it formed a part. The most remarkable feature is the strong anti-Jewish bias (which induces the author to make Herod 'judge' in place of Pilate). The strong Johannine flavour, and the absolutely unique version of the Resurrection appearances, present a startling contrast to all other accounts.

In these respects, as in many others, it closely resembles the narrative in the Gospel used by the author of the Syrian *Didache* (A.D. 215-280), with which Harnack identifies and Rensch compares it. Though entirely parallel with the Synoptic accounts of the Passion, it contains no fewer than 29 additions to the Markan narrative (some of these are early attested in MSS of Mk.), and both in its verbal and in its historical variations it is largely (Harnack gives eight examples) influenced by the corrections found in the Fourth Gospel; e.g. the date of the Crucifixion is Nisan 14, as in *Jn* 19¹⁴. After Mk 16⁷ the author forsakes the Synoptic account altogether, and presents a version of the Resurrection which cannot be paralleled from any of our Gospels, though it has more in common with the scenery of the Fourth Gospel than with Mt. or Luke. The fragment ends with a story of an appearance to 'Peter, Andrew, and Levi, son of Alphaeus,' who have gone fishing on the Sea of Tiberias; but this and all other appearances of the risen Christ are supposed to take place on one day, and that a week after Easter (Nisan 21), when all the disciples have gone to their own homes, disbelieving the news of an empty tomb, brought by Mary Magdalene and the other women. Save in the description of the first opening of the tomb in the 'garden of Joseph' and the preaching of Christ to the 'spirits in prison' (cf. 1 P 3¹⁸) which is implied in a question addressed to 'the Cross,' which follows the risen Lord from the tomb, there is little fantastic or legendary matter in this work. The heretical, Docetic element, too, is in the background, though it appears in the remark concerning Christ's being 'silent, as having no pain,' and in the significant change in the only sentence ascribed to the crucified: 'Power, my Power, why hast thou forsaken me?' (but cf. 'at the right hand of power,' Mk 16⁷). It contains the germ, but not the fruit, of the later Docetic heresy, as seen at the full in the Qur'an and the 'Gospel of Barnabas.' This is just what we should expect from Serapion's account of it.

Harnack seeks to prove, not only that the *Didache* uses this Gospel as the principal au-

thority and derives all its citations from its contents, but also that the story of the sinful woman in *Apost. Const.* ii. 14 (a work based on the *Didache*), now included in Jn 7^m-8^m, but found only in late MSS, and entirely unlike the style of the Fourth Gospel, is really taken from the Gospel of Peter—whence Papias, who had not seen the Gospel according to the Hebrews, where Eusebius found it, also borrowed it. The undoubted mixture of Johannine and Synoptic elements, which forms so marked a feature in the Gospel of Peter, the peculiar style of this fragment, and the Syrian origin both of the Gospel of Peter and of the *Didache*, undoubtedly lend a very strong testimony to the truth of this brilliant conjecture, especially if we accept Harnack's dictum that D gives us by far the best text of the Johannine passage, and that the glosses in D—e.g. to Lk 6^m (the story of a man working on the Sabbath)—are taken direct from our Gospel of Peter, hence their anti-Jewish tone. Certainly the style of Jn 7^m-8^m is far more closely akin to that of the Gospel of Peter than to any other extant writing.

Whether this be so or not, the most interesting fact about the Gospel of Peter, as about the 'Logia of Jesus,' is undoubtedly the proof it gives that the so-called peculiar language and attitude of the Fourth Gospel were not so peculiar as is commonly believed. The author of the Gospel of Peter, writing in Syria during the first decade of the 2nd cent. (a *sempar* = 'the Lord's day' twice in the Gospel of Peter [cf. Rev 1st] forbids a 1st cent. date), did not scruple to correct all four Gospels, and, while making no use of the Gospel according to the Hebrews, is constantly found employing terms far more akin to the Fourth Gospel than to any of the others, though he treats Mark always as his principal authority. He wrote, therefore, when the Gospel tradition was still fluid and the Canon by no means fixed, but already the special attitude and tone associated with our Fourth Gospel were well known and popular among his hearers. When Harnack supposes that Justin used the Gospel of Peter under the name 'Memoirs of Peter,' he is stating a view which cannot, in the present state of our knowledge, be disproved.

Two other writings ascribed to Peter must be carefully distinguished from this 'Gospel.' Neither is strictly a Gospel at all, though the first did place words in the mouth of the Master Himself. This is the 'Preaching of Peter,' quoted by Clement (*Strom.* i. xxix, ii. xv., vi. v. vi. viii.) and Origen (*de Princ.* Prof. viii., and in *Joh.* xiii. 17, as cited by the Gnostic Heracleon), and condemned by Eusebius (*iii.* iii. 2 and xxv. 6) and Nicéphorus (*HS* ii. 46). Other quotations, as in Greg. Naz., *Orat.* i., are uncertain. This was the work of a cultured Gentile Christian of Alexandria, who wrote before Justin or Aristides composed their Apologies (A.D. 140-180). The attitude towards miracles is Alexandrian; that towards the Jews and the Scriptures, which include no NT, is akin to the *Ep. of Barnabas*; that towards 'faith' is Johannine, not Pauline. The book is thus a near contemporary of the Gospel of Peter, but it has no direct connexion with it. Here, as in the Gospel of Peter, the Apostle is made to speak in his own person. Von Dohmstötter thinks it was written for mission preaching, as a supplement to Mark's Gospel, by one who did not know Mk 16th, and saw the need of completing it by carrying on the Memoirs of Peter, which Mark had been privileged to transcribe.

The *Judicium Petri* or *Deo Vis* (described by Rufinus, *Symbol. Apost.* i. 38-39, and identified by Hilgenfeld with the ecclesiastical 'Canons of the Apostles' [3rd cent.] and by Harnack with the *Didache* [2nd cent.]) cannot be described from the

existing evidence, but it has no claim to be called a 'Gospel.'

(c) *The Sayings and Words of Jesus* (*Logia* 'Iscariot of Oxyrhynchus' [1897]; *Logia* 'Iscariot of Oxyrhynchus' [1903]; *The New Fragment of a Gospel* [1903]; and *The Fayum Gospel Fragment* [1905]).—The first three were discovered and published by Grenfell and Hunt, from torn fragments of papyrus in the rubbish-heaps outside the city of Oxyrhynchus; the last from a MS in Archduke Rainer's collection at Vienna, first discovered and translated by Bickell (*ZNTA*, 1895).

The first has eight sayings, called by the discoverers 'Logia.' They have, on the whole, a mystic, ascetic tone, especially the famous 6th saying: 'Lift the stone, and there thou shalt find me—cleave the wood, and there am I.' Logion 8 has a very Johannine sound: 'I stood in the midst of the world, and in the flesh was seen of men....' Harnack ascribed these sayings to the Gospel of the Egyptians. Taylor, perhaps more plausibly, suggests a connexion with the Gospel of Thomas in its original Gnostic form; which is the more probable, since the new fragment of 66 broken lines, found in 1903, has an introduction, describing its contents as 'The (Marvellous) Words (*Logia*) which the Living Lord spoke to . . . and to Thomas.'

The problem is further complicated by the fact that the first of these 'Words' (1903) appears to come direct from the Gospel according to the Hebrews; and a fragment of a Gospel found near by contains a passage, 'When wilt thou manifest thyself to us?' (cf. Jn 14th), followed by the answer, 'When ye shall be stripped and not be ashamed'—an idea dependent on Gn 22nd, and akin to, if not taken from, that in the Gospel of the Egyptians (see below), with which also the dialogue form here and in no. 6 of the Logia of 1903 and in a new fragment of a conversation on purity between Jesus and a Pharisee (found in December 1905) corresponds. These and other indications, which give a Johannine colouring to several of the sayings, even in the verbal sense, seem to point strongly to the conclusion that the Logia of 1903, and probably also the Logia of 1897, in spite of the 'Hebraic rhythm and sound,' which many have noted, belong to an anti-Jewish and ultra-spiritual Gospel or Gospels, related both to the original form of the Gospel of Thomas and to the Gospel of the Egyptians, the latter of which borrowed some of its material from the earlier 'Gospel according to the Hebrews.' This was already the view of Jewish critics (e.g. Joseph Jacobs) in 1897, and the evidence is greatly strengthened by the new finds. All are agreed in placing these collections in the 2nd cent., and it is quite probable that some of the remarkable 'Words of Jesus' therein contained may be genuine sayings of the Master.

The Fayum fragment contains a much mutilated version of Mt 20th, Mk 14th, Lk 22nd-24th, Jn 13th-16th. The whole is well restored by Zahn, who thinks it a scrap of a homily on Lk 22nd. New words are introduced for 'cock' and 'crow.' Others ascribe it, with less reason, to the Gospel of the Egyptians. It may be dated with confidence before A.D. 220.

(B) *TRANSITION GOSPELS*.—(a) *The Gospel of the Egyptians* (Clem. *Strom.* iii. vi. 46, ix. 63, xiii. 91, 93, xv. 97; Origen, *in Luc.* i. 1; Hippolyt. *Philos.* v. 7; Epiph. *Har.* i. xii. 2; *Or. Sib.* ii. 1, 63; II Clement [Soter, A.D. 140], xii. 2, 6, perhaps also iii. 2, iv. 2, 5, v. 2, 4, vi. 1, 2, viii. 5, ix. 1), xi. 7: cf. Oxyrhynchus Log. 6 [1897]; New Gospel Fragment [1903]).—Despite confident assertions to the contrary, the state of our knowledge at present hardly justifies a decided conclusion concerning this mysterious writing. The history of its criticism is a study of the employment of the dangerous 'argu-

ment from silence.' It is regarded by Origen as the first of the heretical Gospels, and is treated by Clement apart from other Apocryphal Gospels, though it is true that he adds 'I suppose' (*scilicet*). This does not imply serious doubt. Hippolytus says that it was used by the Naemenes to support their speculations on the transmigration of souls. Epiphanius had only heard that it supported Sabellian erroneous notions concerning the essential unity of the Trinity. Clement found that Caelian's Ebionite and ametic followers misinterpreted it to support their extreme views on the sinfulness of marriage. Lightfoot (*Apostolic Fathers*, London, 1890, I. II. 228) and most other modern critics have concluded that Soter of Rome (A.D. 140) had this Gospel before him in writing our II Clement, and quoted largely from it. We have seen that the discoveries of 1908 and 1909 point strongly to a relationship between this Gospel and the Logos of Oxyrhynchus. Clement's quotations imply that the Gospel was largely composed of dialogues, in which Salome took a large part; and Celsus (before A.D. 180), in joining at Christian divisions, remarked on the existence of a sect which gave high honour to this otherwise secondary figure. Harnack seeks to prove it the earliest of all the Gospels. His chief argument lies in the same *sort* *et* *Abysso*, which he regards as synonymous originally with 'the Gospel of Egypt,' only later superseded by the importation of the foreign Gospels of Mark, Matthew, and Luke. The other proof he finds in its use at Rome in A.D. 140. But it is not probable that the Alexandrian Fathers, who alone quote it, reckoned themselves as Egyptians at all; and this Greek Gospel was as foreign to the 'people of the land' as any of the others. Moreover, it is not certain that Lightfoot and others are right. It is quite possible that we may have to accept Harnack's view that Soter quotes, as a rule, only the sources on which the Gospel of the Egyptians was based, which existed in the form either of oral tradition or of a written collection like the Egyptian 'Logos' to which we have referred. The stumbling block to Harnack's view lies in the internal evidence of the fragments themselves. They bear no resemblance to the naive tales and clear-cut sayings of the Gospel of the Hebrews, but, on the contrary, have all the appearance of being the product of long reflection upon the inner meaning of the Saviour's teaching, as read in the light of current Alexandrian speculation, revealing the unsubstantial nature of present differences and distinctions, which are to vanish in the larger world to come. It is implicit Gnosticism; and, if contemporary with any of the four Gospels, it is only with the Fourth. But, by the common consent of critics, it must have been written before A.D. 180.

(b) *Gospel according to the Apostles* ('*Evangelium Apostolorum*'), or 'of the XII.' (Origen, in *Luc.* I. 1; Theophylact, Proem. in *Luc.*; Jerome, *adv. Pelag.* III. 2; Epiph. *Har.* xxix. 1; cf. Zahn, *Geach.* NT Kan. II. 736).—It is only recently that portions of this Ebionite work, condemned by Origen and Jerome, have been recognized in the fragments of a Greek Gospel, confused by Epiphanius with the Aramaic Gospel of the Hebrews. The Venerable Bede (on Lk. 11) and Fabricius (1719), 1000 years after, had differentiated the two; but modern criticism seemed at first inclined to injure itself by identifying and confusing them as Jerome once did. Nicholson, Harnack, and Zahn have all aided in averting this disaster. The Gospel known to Epiphanius was a Greek 'tendency writing,' put in the mouth of Matthew and the Apostles, and intended as a Gospel for the Judaizing Christians, who aimed at winning converts among the Gentiles. This party was nearly related to the ancient Naemenes (q.v.), and the Gospel before us gives us an

idea of the Christ as Naemenes would have pictured Him. He denounces sacrifice and the eating of flesh; even John the Baptist is made to eat 'honey cakes' in place of 'locusts' (*synthesis* for *synthesis* proves a Greek original). Christ is invented with the Spirit at His baptism, and takes of His early life and miraculous birth are passed over in silence. The Gospel uses all the Synoptics, especially Lk., and possibly also borrows words (e.g. 'Tiberias') from St. John, who appears at the head of the Twelve. It dates, probably, before A.D. 180, and uses some old traditions; it is the 'worst kind of Gospel harmony,' and has no relation with the Gospel of the Hebrews, which is unknown to the author.

(c) *SUPPLEMENTARY OR HAGGADIC GOSPELS* (condemned as a whole by Euseb. III. xiv., and Decret. *Galat.*; also by Pope Leo XIII. in 1884).—These fall into two cycles: (1) those dealing with the Infancy; and (2) those dealing with the Trial, Death, and Resurrection of Christ.

None of these Gospels exists in its original form, but only in orthodox recensions of late date. Though most are of heretical origin or contain heretical tendencies and sources, they are not written to compete with orthodox Gospels, but to satisfy curiosity, where these are silent. They are not intended, therefore, primarily to mislead opinion, and are not rightly to be classed with the heretical Gospels, whose aim was to modify history in the interests of a theory. These Gospels, in various versions, are so much the best known that they have often been taken as the type of Apocryphal Gospels in general, and what applies to them only, or mostly, has been indiscriminately applied to the whole class. Eusebius (III. xiv. 7) spoke of them as 'altogether absurd and impious' (*de deorum vray et faux*); and his verdict has been re-echoed through the centuries down to our own times, and reappears in a violent attack by Bishop Elliott (*Cambridge Essays*, 1896, p. 103) and many other orthodox divines, whose words apply well to such as the Gospel of Thomas, but are apt to be very misleading when used of the whole series of Apocryphal Gospels.

(1) *INFANCY CYCLE*.—The numerous versions of Infancy Gospels fall into two groups, which spring from two distinct sources—the first orthodox, the second Gnostic—while the two have been combined to produce a third.

(a) *The Protevangelium of James*, now extant in Greek and Syriac, has passed through many changes. The name is of the 10th cent. (M. H. James), but the original form of the work (chs. 1-17 = 'Book of James' [Origen, in *Matt.* x. 17]) was probably known to Clement of Alexandria and almost certainly to Justin (Tischendorf, *Zahn*, Harnack)—i.e. it was written before A.D. 140 by a Jew not of Palestine. To this was added the Gnostic *Apocryphon of Joseph* (chs. 18-21), in which Joseph is the speaker. It was probably composed in A.D. 200 (Lipman). A further addition was the *Apocryphon of Zacharias* (chs. 22-25) in A.D. 300-310. In A.D. 378 the whole book was probably known to Epiphanius (*Har.* lxxix. 8, lxxviii. 7), and perhaps also to Gregory of Nyssa. The so-called Latin Gospel of pseudo-Matthew (1-17) is merely an orthodox edition of the 'Book of James,' which took its place in the West, probably about A.D. 480. The *de Nativitate Mariae* is descended from this Latin Gospel; on this, too, the 'Golden Legend' of the 13th cent. is based, and a later recension of it, with many additions and Gnostic touches, appears in the Arabic *History of Joseph the Carpenter*, a translation of a 4th cent. Coptic original; while another version of this legend, transformed by the new doctrine of the efficacy of prayers to Mary and the teaching of the Assumption and Exaltation,

appears in the *Transitus Mariae*, a Syriac Gnostic work of 380-390, recast by a Catholic Christian in 410, extant also in Greek, Latin, Arabic, Ethiopic, and Sahidic—'the firm foundation,' as Ewald calls it, 'of all the unhappy edification of Mary.'

(b) *The Gospel of Thomas* (Origen, in *Luc.* i. 1; *Ench.* iii. 26).—Cyril (*Catech.* iv. 28 [A.D. 380-390]) condemned this Gospel as heretical; he reckoned it Manichean. Hippolytus gives quotations from it, not in our version. The catalogue of Nicephorus (A.D. 398) shows that it was a long piece of 1300 stichoi, which proves that our text is but 'a meagre abstract of the original' (Lipsius, art. 'Gospel Apocryphal,' in *DCEB* ii. [1880] 704), from which Hippolytus quoted and which Cyril denounced. This Gospel was probably composed in 180-190, though it used some old traditions, one of which appears in Justin (*Dial.* 88), while another is referred to in Iren. (*adv. Hæc.* i. xii. 1, xvi. 2 [A.D. 180]). The original was set down and altered by Catharism in order to 'omit the miraculous stories of the Childhood on the Catholic side' (Lipsius, p. 706); but very much remains to testify to its original character. The story deals with the life of Christ only until He reaches the age of 12, and then never runs parallel with the canonical narratives. The object is to show that Jesus was and knew Himself to be the Logos from His birth (in the dependent Arabic *Gospel of the Infancy* we find the Babe declaring this in His cradle; probably this comes from the original Gnostic *Gospel of Thomas*). Hence the need for miracles to show His power, hence the invention of such wonderful displays of sheer wilfulness as characterize the Child here and make His story so repellent to all reverent minds. Our *Gospel of Thomas*, a 4th cent. version, is extant in two Greek editions, and also in Latin and Syriac. The *Gospel of pseudo-Matthew* (chs. 18-end) is based upon it, and of this the Arabic *Gospel of the Infancy*, full of bizarre extravagances, is merely an expanded version of the 6th century.

(c) *PASSION AND RESURRECTION CYCLE*.—The second cycle of these Supplementary Gospels circles round the crisis of Christ's departure from the world. Like the first, they have no historical value, and exist in many versions, in a much altered and very late form. The *Evangelium Nicodemus* (the 15th cent. title of a Latin version of the Greek *Ἐβανγέλιον τοῦ Νικόδημο* *ἡμετέρου* *ἐκ τῆς ἱερᾶς ἱστορίας* *ἐν ἧς ὁ Νικόδημος* *ἐκτίθηται* *τὸν Νόμον* *τοῦ Θεοῦ*), like the *Infancy Gospel*, became very popular. Like the 'Book of James,' it is a composite work. All known texts go back to A.D. 435. The original was possibly a Christian reply to the forged *Gnostic Pistis*, invented to slander the Christians by the Emperor Maximian Dam (A.D. 311-317). The idea was based on the Roman custom of drawing up official reports, and the first hint of the existence of such a record of Christ's trial appears in Justin (*Apol.* i. xxv., xxviii.; cf. Tertull. *Apol.* v., xxi.). It was natural that an account purporting to fill this place should be drawn up, and the book in question appears first in Epiph. *Hæc.* i. 1. The author was a Jewish Christian who knew some Hebrew; to his work was attached a Gnostic account of the *Descentus ad inferos*, added by the editor of A.D. 435 from an older collection ascribed to Leucius Charinus (? = Leucan of Antioch); also a forged letter of Pilate to the Emperor Claudius—probably of early date. The Coptic version dates from 361-363, and sees Ensenius. It exists also in Latin, Greek, and Armenian; and many other additions to this collection appeared in the Middle Ages—for instance, the *Mors Pilati* and *Ep. Herodis* (see E. Hofmann, in *PRE³* i. 655-660).

(D) *LOST AND HOSTILE GOSPELS*.—These are 'tendency writings' of little historical value.

(a) *Gospel of Philip* (Epiph. *Hæc.* xvi. 13), referred to incidentally in *Pseudo-Sophia* (A.D. 100-200), and used later by the Manicheans (mentioned in Leontius of Byzantium [500-540]); cf. also F. W. K. Müller, *ARA W.* 1904, Anhang, p. 108).—It was the work of Egyptian Gnostics during the latter half of the 2nd century.

(b) *Gospel of Matthias* (Russek, *NE* iii. xiv. 8).—Hippolytus (*Refut.* vii. 8) says that Basilides (A.D. 140) appealed to *Abrys* 'Apocryphos Morchos.' Zahn identifies these with the *evangelion Morchos* quoted by Clem. Alex. (*Strom.* vii.; cf. ii. ix., iii. iv.), and containing an identification of Matthias with Zacchæus (*Strom.* iv. vi. 36), who as head-publican is set up to contrast the authority of Matthew, his subordinate! Harnack doubts this ingenious theory.

(c) *Gospel of Basilides* (Origen, in *Luc.* i.; Jerome, *Proem.* in *Matt.*) was perhaps a Gospel-harmony in Docetic spirit (composed in Egypt 130-140).

(d) *Gospel of Valentinus* (Tertull. *de Præscript.* xlix.), possibly identical with *Evangelium Veritatis* (Iren. *adv. Hæc.* iii. xi.), was probably a treatise on the Gospels written in A.D. 140.

(e) *Gospel of Apelles* (Epiph. *Hæc.* xlv. 2) contained Russek's Logion 43 (cf. i. Th 5th). Apelles was a friend of Marcus (140-160).

(f) *Gospel of Eve*, or 'of Perfection' (retranslated) (Epiph. *Hæc.* xvi. 2; Philaster, *Hæc.* xxxiii.), an Ophite, Gnostic, and pantheist Gospel. The scene here, as elsewhere in class D, is laid 'after the Resurrection.' Eve is described as seduced by Satan, the father of Cain.

(g) *Gospel of Judas Iscariot* (Iren. *adv. Hæc.* i. xxxi.).—The betrayal is treated as a meritorious action, delivering man from the power of the Demiurge (Epiph. *Hæc.* xviii. 1). Judas is thus the 'perfect Gnostic'!

(h) *Gospel of Matthias* (Epiph. *Hæc.* ii. 7).

(i) *Gospel of Thaddæus* (condemned with others in *Decret. Gelasii*).—Thaddæus is perhaps regarded as one of the 70 disciples, who went to Edessa.

(j) *Gospel of Bartholomæus* (Jerome, *Proem.* in *Matt.*; *Decret. Gelasii*).

(k) *Gospel of Andrew* (*Decret. Gelasii*), perhaps identical with the Gnostic *Περίαν* 'Ankpeon,' attacked by Augustine (*de Adv. Log. et Proph.* xx.).

(l) Augustine (*de Adv. Log. et Proph.* ii. 14) quotes an unknown Marcionite Gospel as making Christ say to the Jews: 'Ye have sent away the living who is before you, and ye prate (fabulamini) about the dead!'

(m) Besides these we possess a Mahomedan *Gospel of Barnabas*, based on a Gnostic Docetic Gospel (condemned in *Decret. Gelasii*), now extant in an Italian MS at Vienna. A Spanish version once existed, but is now lost. This book is mentioned by Toland (*Nazaræus*, London, 1719); it was found by Cramer, and purchased by Prince Eugene of Savoy. The stories of an Arabic original are probably mythical. A wide spirit of tolerance and charity pervades this astonishing production of a Christian mystic who became a Muslim. It probably dates from 1300-1350. The death of Judas Iscariot, substituted for Christ on the cross, is described here in detail, and is probably a feature of the original Gnostic *Gospel of Barnabas*.

LITERATURE.—Only a collection of the most important works is given.—I. *GEN.* 41.—J. A. Fabricius, *Cod. NT Apocryph.*, Hanburg 1783. 217b. J. C. Thilo (*Cod. NT Apocryph.* Leipzig, 1832). C. J. Orr, *Apocryph. NT* (London

the *Āśvins* *Brāhmanas* *Sātra*,¹ the Vatas invoked Agni as Bhārgava, Chyavana, Apasvāna, Aurva, and Jāmadagnya; the *Āryis* *Brāhmanas*, as Bhārgava, Chyavana, Apasvāna, Āryisapa, and Āntya,² and so forth.

The Kṣatriyas and the Vaiśyas, according to the Brāhmanical theory, were required to pronounce the *prayers* of their *parāśita* (domestic chaplains). Similarly, if sacrifice was offered by a king, the officiant named not the king's ancestors, but those of his *parāśita*; though the king's *rājāryi* forbears might also be named.³ According to other sources, however, the *prayers* were firmly established among both the Kṣatriyas and the Vaiśyas—Mānava, Aila, and Pārāśara being named as the *āryas* of the former, while Agni was invoked by the latter as Bhālandana, Vātapri, and Mānkila.⁴

To the above-mentioned *prayers* lists are annexed specific discussions regarding the *gotras* between which intermarriage was permitted or forbidden. In general, persons belonging to the same *gotra*, or having the same *prayers*, are not allowed to marry one another. The recognised rule is that individuals are regarded as *gotras*, i.e. belonging to the same *gotra*, if they have in common even one of the *rits* invoked in the *prayers*.⁵

A Kṣatriya, for instance, must not marry the daughter of another Kṣatriya; but he is likewise prohibited from marrying the daughter of a *śūdra*, as the *prayers* group of the Kṣatriya (Kṣatriya, Vātapri, and Āntya) and that of the *śūdra* (Kṣatriya, Āntya, and Dairya) contain a common ancestor, Āntya. The *gotras* of the *Śhrigus* and the *Āgiras* are in part exempt from the rule. To the seven *gotras* tracing their descent to *Śhrigus*, the *Śvinitas*, *Mitrayas*, and *Sunakas* may be tennary; and, similarly, the *Prāmadāyas*, *Mudgalas*, *Vaśiṣṭhas*, *Kaśyapas*, *Agastyas*, *Haritas*, *Sākyas*, *Kapilas*, and *Yasas* may all marry with one another, as also with the *Jāmadagnyas*, etc.⁶

2. The data regarding the *gotras* in ancient India.—It is hardly possible to decide how far the legendary and theorising traditions of the Brāhmanas, and more especially the *prayers* lists, contain historical elements corresponding with the actual facts of genealogy. The proto-ancestors of the *gotras* must be regarded, not indeed as real personalities, but certainly as eponyms whose existence was taken for granted, and to whom the entire spiritual heritage of the priestly tribe was ascribed. We must assume that the hereditary character of the priesthood was already recognised in the Vedic period; such songs, religious traditions, and moralistic customs as had come to be linked with the name of a particular *gotra* were in the post-Vedic age vested in the *gotra*.⁷ The determining condition of joint-membership in any given *gotra* was spiritual connexion and inheritance, mere physical descent being of less importance; for, though the *gotra* was transmitted from father to son, yet not all members of a *gotra* were blood-relations.

Many a Brāhman, when asked by his guru to what *gotra* he belonged,⁸ could only answer, like Rātyahna, the son of Jābāli: 'I know not, teacher, of what *gotra* I am.' In such cases the teacher gave his pupil a name taken either from a deity or from a constellation, and also, as some writers say, the name of a *gotra*,⁹ and we must suppose that the pupil thenceforward regarded himself as belonging to the *gotra* thus imposed.

The dubiety as to physical descent made it necessary to formulate the rule that, if the *prayers*

was not certain, then—even in the case of a Brāhman—the only ancestor to be named was Manu, the common progenitor of all.¹⁰

But, although the purely spiritual relationship took precedence in the *gotras*, the system of relations based upon community of ancestors, whether assumed or real, was not without influence on practical life. The above-mentioned regulations of the Brāhmanical ritual literature, enjoining that the Brāhmanas, after completing their period of study, should, on kindling the sacred fire, perform the *prayers*—i.e. the rite of calling upon Agni under the name of three or five ancestors—doubtless correspond with actual practice. And, while many a mythical ancestor might be foisted into the *prayers*, yet those elements of the ritual in connexion with which father, grandfather, and great-grandfather had to be mentioned by name forced the members to keep alive the knowledge of their ancestors from generation to generation,¹¹ and thus tended to give a certain fixity to the genealogical relations of the various families. There were several other circumstances which intensified the exclusiveness of the families already fused into a unity by belonging to the same *gotra*, and thus separated the different *gotras* more or less rigorously from one another.

An external indication of membership in a particular *gotra* has been found in the mode of wearing the hair. The Brāhman had the head shaven, the *Āgiras* were five braids, the *Āris* three curls, and the *Vaśiṣṭhas*, according to the *Āgiras*, wore a plait on the right side of the head.¹² An injunction referring to the ceremony of hair-cutting, found in the *Āśvins* *Brāhmanas* *Sātra*,¹³ viz. 'Let him have his hair dressed according to the custom of the family,' points to a family custom that was, no doubt, connected with the practice of designating the *gotras* by the mode of dressing the hair. In the *Śhrigus* *Sātra* it is stated that the style of wearing the hair is determined by (family) custom, or *gotra*.¹⁴ The commentators explain the expression *gotra* as signifying that the number of curls worn corresponds to the number of *rits* named in the *prayers*; thus, one for those who had one *rit* in their list of ancestors, two for those who had two, and so on.¹⁵

The deep-seated antagonism between the Vāśiṣṭhas and the Vīśvāmitras, which, according to tradition, arose out of the famous conflicts between their respective ancestors, but which was in reality an expression of the struggle for supremacy between the nobility and the priesthood,¹⁶ is frequently referred to in the literature.

According to Kātyāyana, a Vīśvāmitra and a true Vāśiṣṭha cannot both take part in the same *sutra*, i.e. in a *soma*-sacrifice which has more than twelve days of soma-pressing.¹⁷ Similar differences with respect to the ritual are to be met with elsewhere; thus the Vāśiṣṭhas and the Śūnatas recognised *Manu* as their common *prajāpiti*, while most of the *śūtras* invoked *Manu*. The *śūtras* (propitiary hymns) were different for each *gotra*, thus, e.g., that of the Śūnatas was 'Agni is kindled,' that of the Vāśiṣṭhas 'Enjoy our food,' etc.¹⁸ There was also diversity among the *gotras* as to the manner of cutting the sacrificial object (*havis*), the *rit*-*śūtra*. Among the Jāmadagnyas the rule was to cut the cake in five pieces, among the other *gotras* in four. The position of the Jāmadagnyas was followed by the Vatas, the Vīśas, and the *Āryis*, who are likewise referred to as *pañcāśvins*, 'making five cuts.'¹⁹

As to the question how far these differences among the *gotras* affected their participation in the sacrifices, the Brāhmanical tradition varies. According to one view²⁰—the more rigid—only those Brāhmanas who observed the same ritual, i.e. were *śāśvats*, could take part together in a *sutra*.

as to the desire of complying with the rules formulated by the theory.

Among the lower Hindu castes and the indigenous hill-tribes, and especially among the Dravidian peoples of S. India, we find almost universally a system of subdivision into small exogamous groups—in part also known as *gotra* (= *gotras*)—akin to that of the Brāhmanical *gotras*.¹ They resemble the Brāhmanical clans in recognizing descent in the male line, so that children belong to the father's *gotra*, not the mother's, while a woman passes by marriage into the *gotra* of her husband, and persons of the same *gotra* cannot marry one another. These groups are distinguished from the *gotras* of the higher castes, however, by their undignified adherence to totemism. Each of the exogamous clans bears the name of an animal, tree, plant, or some other natural or artificial object, and the members of the clan are not allowed to eat, to cultivate, to burn, to carry, or in any other way to make use of that particular object. Thus—to give a few especially characteristic examples—all the Bhīle venerate totem, and avoid injuring or using them, and, when they pass their totem, they make a ceremonious bow, while the women veil their faces. Of the Bhīle, the Ava clan takes its name from its totem, the moth, and its members do not injure moths. Among the Gollas, a large shepherd caste of the Telugu people, the members of the *gotra* called Raghindala (*Ficus religiosa*) are prohibited from using the leaves of the sacred fig-tree as plates for their food. Of the exogamous *gotras* of the Karabes—a caste of peasants, shepherds, weavers, and masons—who are said to be of totemistic origin, and retain their totemistic character to the present day, the Arisāna *gotra* is of peculiar interest. The name 'Arisāna' means 'safran' (turmeric), which was originally tabu to them; but, as this led to much inconvenience, they substituted the *horra* grain for safran, though still retaining the original name of their *gotra*.²

4. Origin of the *gotras*.—The sociological sense of the term *gotra* has been derived from the Vedic usage ('cow-stall') as follows. In ancient times the Indian family, even when—in consequence of its numerical increase—its property had been greatly subdivided, would still continue to use and occupy jointly the land reserved for grazing cattle; and we may therefore conclude, it is said, that the Brāhmanical *gotra* was in its origin simply a community of this kind, i.e. a family whose members enjoyed joint-rights in a particular pasture.³ But this hypothesis does not in any degree account for the most characteristic features of the *gotra*, which, in fact, can be explained only by comparison with the *guts* of the aboriginal tribes of India.

In view of the remarkable correspondences which, notwithstanding fundamental differences, exists between the eponymous Brāhmanical *gotras* and the totemistic *guts* of the inferior castes, the question naturally arises whether, as in the case with caste,⁴ the structure of the *gotra* system, too, is in some degree the result of an inner connexion, a process of reciprocal influence, between the higher and the lower races. It is certain, for one thing, that the Brāhmanical theory—the desire on the part of the lower races to observe its regulations, and in this way to invest a particular caste with a higher dignity—has tended to assimilate the *guts* of the lower castes and the native tribes to the Brāhmanical *gotras*. But, conversely, the latter seem to have acquired their peculiar character only by contact with the Dravidian tribes; for, as the practices of exogamy is the common

feature of all *gotras*, whether of the higher or of the lower castes, and as it finds no mention in the Veda,⁵ it must have come to prevail only after centuries of development, and possibly as a result of the fusion of Aryas and Dravidian tribes. Now, exogamy is intimately related to totemism, and might gain ground even among the Brāhmanical *gotras* all the more easily because totemistic ideas, whether inherited from remote ages or adopted from the aboriginal peoples, were not unknown among the Brāhmins themselves. Among the names of peoples found in the Veda, a number are taken from animals and plants, as, e.g., the Matsya (fishes), the Aja (goats), Sigrū (horre-radii), etc. Of the Brāhmanical *gotras*, the Kāśyapa, whose name signifies 'tortoise', trace their origin to a being closely connected, or even identified, with Prajapati; their tribal ancestor was Kūrma—another word for 'tortoise'—in whose person Prajapati formed all created things. The legendary progenitor of the Śagarid *gotra*, King Ikāvāka, whose name means 'goat',⁶ and seems to point to a tabu relating to this fruit, is a descendant of Kāśyapa. The *gotra* of the Kaundīnyas, which traces its descent from Vasiṣṭha, and to which belonged, as we saw above, the wife of Mahāvra, the founder of the Jain sect, takes its name, as does the *gotra* of the Kapila, from the ape; and in the passage of the *Kacchapaśāstrā*⁷ where it is said to the tortoise which had fastened upon the genital parts of an ape, 'Tortoises are Kāśyapas, apes are Kaundīnyas; Kāśyapa, let go the Kaundīnya, thou hast effected copulation, we have an allusion—in terms of the beast-fable—to the matrimonial relations subsisting between the two human families.' If, then, as seems probable from the foregoing, totemistic ideas were not unknown among the ancient Indian *gotras*, it becomes quite intelligible that ancestor-worship and exogamy, as found among the less civilised aborigines, should have come to prevail in these *gotras* as well. For, while the dissemination and pervasive influence of Brāhmanical culture in the conquered country is a fact beyond dispute, we must nevertheless not forget that, on the other hand, the primitive usages and ideas of the native races did not fail to operate profoundly upon the culture and development of the conquerors themselves.

GOVERNMENT.—In the treatment of this subject, attention has usually been directed to three main problems: (1) What is the origin of government? (2) In whose hands may the authority be vested, and in what way may its machinery be best exercised? Or, more shortly, What are the forms of government, and which is the best? (3) What is the sphere of government, or when is State interference justifiable? The last of these is a question comparatively new in the history of political discussion.

1. The origin of government.—Since, in the light of modern historical criticism, men like Lycurgus, Solon, and Numa Pompilius appear, not as the inventors of new laws, but rather as the

¹ The passage of the *Śatapatha Brāhmaṇa* already cited, in fact, directly implies the practice of marriage between blood-relations.

³ G. Sarkar, *Hindu Law*, p. 80.

⁴ E. Frazer, op. cit. p. 212.

reformers and codifiers of laws and customs already existing, we may set aside as legendary the accounts which the celebrated States of antiquity have given of their constitutions (wherein they ascribe these to the work of a single individual); and we find that three main theories, not very rigidly separated from one another, have been suggested of the foundation of sovereignty and the origin of government, or, in more general terms, the establishment of civil society. Of these, the first (a) traces government to the Deity. Of a State created by God and under His direct supervision this theory obviously affords a complete explanation, but it also applies to States which were only in an indirect sense thought of as founded by the gods and governed by them. Another form of this theory bases temporal sovereignty on a Divine right. The second main theory (b) founds government and sovereignty on the consent of the people expressed in an unwritten contract between them and their chosen sovereign, wherein they have reserved to themselves the right of resistance should he abuse the authority they have entrusted to him. According to the third and more modern view, (c) government is based upon expediency, and may be traced through different stages of development.

(a) The typically theocratic State (the word 'theocracy' first appears in *Jos. c. Apion*, II. 17) is that of the Jews, which in the narrowest sense was the work of God's hand, and, by the conditions of its existence, was wholly sacred and inviolable. Founded by Jahveh and directly governed by Him, its kings were no more than His servants, who, being guided by His prophets, enjoyed no personal right of initiative. In this attitude, however, to their Creator, and in respect of the covenant which they had made with Him, the Hebrew people stand practically alone in history,¹ so that theirs may be looked upon as a State of a unique kind. With the Greeks and Romans it was different. There seems to have been a tendency to ascribe a supernatural descent to kings in Hellenic, while in Rome they were usually chosen by popular election; but the people of both races, while believing in a Divine guidance, and seeking habitually by various rites and sacrifices to know the will of the gods and to propitiate their favour, yet looked upon this government as indirect and the State as a human institution, which men had great power to make or to mar. It cannot be said to have been otherwise regarded in the Middle Ages, although the tendency of mediæval opinion was to trace all power to God. For this was done in a spirit of piety, with no suggestion of a political theory: Church and State were held to be separate as Christ had separated them. After the Reformation it became common to read into certain lines of the NT a glorification of temporal sovereignty (1 P 2nd). St. Paul required that every soul should be subject to the higher powers, for these are ordained, he said, of God (Ro 13th). Forgetting that the Apostle referred to Nero, an Emperor of Rome who owed his election to a section of the people, forgetting, too, the words of Christ Himself (Mt 22nd), the theologians of the time based upon this and similar passages, which exhorted the converted to good citizenship, a doctrine that kings and rulers were the anointed representatives of God, divinely appointed and responsible to none. See art. DIVINE RIGHT.

(b) Political absolutism, in the form in which it brought sorrow and misfortune to the Stuart kings, was defended as a philosophical theory by Hobbes,

who incorporated with these principles the celebrated doctrine that civil society owes its existence to a contract. The social compact theory was supported later by Locke and Rousseau, their version of the theory differing in some minor points from that expounded by Hobbes. The latter held that the covenant to form a society was between man and man, and not between the people and the sovereign they chose to govern them. This left the way open for the assertion of a Divine right in the king, which necessarily implies passive obedience in the people. But absolutism like this, said Locke, is no form of civil government at all (*On Government*, II. § 90). 'No man in civil society can be exempted from the laws of it' (§ 94). The original contract was between sovereign and people, the latter giving up their natural liberty and submitting themselves to a chosen ruler, who, on his side, agreed to rule justly, and in accordance with fixed laws publicly established; only so long as he did his part were the subjects bound to give obedience and loyalty (§ 181). Finally, in the people there lay a supreme ultimate power to alter the legislature.² The principle of the contract is sometimes put in another way, as by Locke (§ 97), and in the general tenor of the *Contract social*: every man on joining a society tacitly promises to submit to the determination of the majority—the only condition on which the original contract can have any meaning. Hooker puts it thus:

'Men know that . . . stripes and troubles would be endless, except they gave their common consent all to be ordered by some whom they should agree upon: without which consent there were no reason that one man should take upon him to be lord or judge over another' (*Hooker*, *Pref.* c. 2).

The contract theory, in the form in which it asserts the sovereignty of the people, dominated political thought during the 18th cent., and has in its time furnished argument and backbone for several successful revolutions. No one would now attempt to claim for this contract any historical justification whatsoever. The compact is not a fact, but an idea of reason—one of those ideas which we read into things to explain them (Kant, *Works*, ed. Rosenkranz, Leipzig, 1838-42, ix. 180). No State of whose history we have record is known to have been founded in any such manner; and the farther back we go the less the consent of the people would seem to have been sought and their wishes regarded in questions of a political nature. Consent has, of course, rightly been called one of the most sacred foundations of government. Physical superiority being usually on the side of the numerical majority, the many are controlled by the few, only because public opinion supports the rulers. Without the consent of the people no government can stand; by force alone no society can be held together. The stronger is never strong enough to be always master, if he does not transform his force into right and obedience into duty' (Rousseau, *Contract social*, I. III.). In this sense society really does depend upon a contract of a kind.

(c) While neither the theory of Divine right nor the theory of contract affords in itself any satisfactory explanation of the origin of government, the second is built upon what seem to be facts concerning the beginning of society. On these facts is based also the third theory, which founds government on expediency. Whether we follow Aristotle in thinking that man is by nature a social being, or held with Hobbes that his disposition is anti-social, whether we suppose that the state of nature was one of peace (as Rousseau asserts) or a war of all against all, in the fact of the establishment of society there seems to be sufficient proof that this state of nature was one

¹ This statement is not substantially affected by the analogies between the religious conceptions of the Hebrews and their Semitic neighbours which are pointed out by W. B. Smith (*Prophecy of Israel*, London, 1881, p. 22).

² On the question of a moral right or a moral duty of resistance, see *REVOLUTION*.

not satisfying to primitive man. Where there is perfect freedom, all are equal and subject to nobody; one man is king as much as another (Locke, II. § 122). But the individual stands alone against the world; his property and person can be ill defended. Thus, as Locke says, 'government is hardly to be avoided amongst men that live together' (§ 106); it arises, since no human being is self-sufficient, 'out of the needs of mankind' (Plato, *Rep.* II. 369).

We find man, then, being drawn into union with his fellows either through love of his kind or through love of himself. Outside of society certain instincts of man's nature, good and bad, remain unsatisfied, and only within it can his various powers be developed and his love of approbation, his desire to excel, be gratified. Historical inquiry has made it clear that no proof can be brought forward of any contract having been drawn up at this time; on the other hand, its results throw some light on the beginning of government. The statement is found in Aristotle that primitive society shows us nothing but kings and monarchies, and that for this reason all nations represent the polity of their gods as monarchical (*Pol.* I. II.). He tells us, too, that at an earlier period still, before the State was established, patriarchal government was universal, and that this institution was generally the result of military necessity. The first of the needs of primitive man is the means to defend himself against attack. Thus, we may conclude that the father of a family or head of a tribe was at first chosen by his kinsmen as a leader in battle against other tribes. In times of peace he was its judge, and at all times he acted as priest to discharge the religious duties of his tribe. People grew accustomed to this exercise of authority, and the office was made perpetual. The leader was now called king.

The course of this development has been observed in many savage tribes. Aristotle saw it even among his own race:

'Kings of Lacedaemon are merely military commanders in competition beyond the frontiers, and enjoy also at their prerogative the superintendence of religious observances. This form of kingship may be described as nothing more than an absolute and perpetual generalship' (*Pol.* II. IV.).

It was not kingship at all according to medieval ideas, for it conveyed the power of life and death only in the field. But, in this incomplete sovereignty of the Lacedaemonian State, and in the organization of other polities lower in the scale of civilization, we have historical proof that government, in the case of these States or tribes, was indeed a question of pure expediency, arising out of man's first necessity—that of defending himself against attack. It needs the exercise of no great credulity to conclude that, in the case of States of whose early existence we have no record, government has been evolved in a similar manner.

2. The form of government, or the manner in which the sovereign powers of the nation are vested and exercised.—On the question of the various forms of polity there has been comparatively little difference of opinion since the time of Plato and Aristotle. The latter (*Pol.* III. VII.) makes the following classification, based upon the discussions of his predecessor. There are, he says, three pure or normal forms of government— *kingship, aristocracy, and polity* (or, to adopt Sidgwick's tr. of the term *politeia*, constitutional government)—all of which have regard to the good of the community, and use the sovereign power for that end. To these correspond three perverted forms, or corruptions of normal politics, viz. *tyranny, oligarchy, and democracy*, in which the power of the State is used in the private interest of the rulers. Thus, in oligarchy, the rich, usually a wealthy minority, rule in their own

interest; in democracy this is done by the poor (VIII.). In like manner, a tyrant uses his power only for his own ends. The government of a State is called a monarchy, an oligarchy, or a democracy, according as the supreme authority is vested in one person, in a few persons, or in many (VII.).

A government, however, is not always consistently in spirit what it is in name. Frederick the Great regarded himself as a servant of the State; in democratic Athens, Pericles ruled as a king. Where the government of a republican country slips, as it often does, into the hands of some one leading man, or, perhaps, of a few leading men, we have no longer pure democracy, but rather an aristocracy or monarchy. Hobbes seems to deny the possibility of a pure democracy when he says (*de Corpore Politico*, II. 6): 'A democracy in effect is no more than an aristocracy of orators interrupted sometimes with the temporary monarchy of one orator.' Indeed, in every polity it is in effect the strongest who rule. But the Aristotelian classification still holds good, although the further objection has been made to it that it takes for granted a distinction between governor and governed which has not always been very clearly marked. In a democratic State the power is constantly changing hands; in an aristocracy, too, the same men may now rule, now fall back into the ranks of those who obey. Considerations like these have caused several writers—Rousseau among them—to give to the word 'republic' a very wide meaning indeed. For Rousseau it signifies not 'an aristocracy or democracy only, but in general all governments directed by the public will which is the law,' the necessary condition being that government should be regarded, not as identical with the sovereign power, but as the administrator of that power, in which case monarchy itself becomes a republic (*Contrat social*, II. 6, footnote). Distinctions are thus sometimes lost sight of, both in theory and in practice; still, the form of the supreme power does give a distinctive stamp to the political life of a State, because, if for no other reason, it determines to a great extent the limitations of a State's activity.

The familiar terms which are employed by Aristotle in classifying the various forms of government refer to conditions which have long seemed to exist—to the small city-States of Greece, and a society based upon the slavery of a large part of the population. But in other respects too they no longer bear precisely the same meaning which they had for early Greek writers on political philosophy. By monarchy, for example, we understand limited or constitutional monarchy—a conception, by the way, not wholly unfamiliar to Plato, who, in the *Statesman* (302), selects for special praise 'monarchy, when bound by good prescriptions or laws,' and also, in the *Law* (693), says that it is wise to combine the monarchical and democratical. A monarchy not so limited by fixed laws we should call despotism; but despotism, again, we do not identify with tyranny. Then our modern representative democracy is something altogether different from the government of the whole people by the whole which Plato and Aristotle held in the strongest detestation, while seeing it to be the form of government towards which all systems at that time tended.

Plato thought that political knowledge must always be confined to a few (*Statesman*, 297). His favourite polity was monarchy, and the government of the philosopher-king is the ideal of the Republic. Tyranny he thought the worst government of all, and the tyrant the worst of human beings. Aristotle's discussion of this question differs little from what we find in Plato, as regards either the subject-matter or the opinions expressed. Kingship he too

considered 'the primary or most Divine form' of government (Pol. VI. II.); aristocracy the next best. To an individual of pre-eminent virtue 'all should render willing obedience . . . he and his like should be perpetual kings within their States' (III. xiii. and xvii.). But a person, and, still more, persons, of such virtue are rarely to be found; hence kingship and aristocracy, in its true sense of a government of the best people or for the best ends, are unattainable ideals. Aristotle was alive to another difficulty in the greatly increasing size of States, in view of which he confessed that in his own time it was perhaps no longer easy to establish any form of polity but democracy (III. xv.). As a practical substitute for the ideal State, he recommends constitutional government as the polity 'most generally attainable and most desirable' (VI. II.). The true end of equality, he says, is that neither rich nor poor should have the supremacy (VII. II.). Hence the best practical, political constitution is one in the hands of the middle class (VI. xi.). They are the arbitrators between rich and poor (VI. xii.), and they are more conformable to reason, more capable of constitutional action, than any other section of the population (VI. xi.). In this democracy, political privileges were to be given to men of moderate means, the poorest class in the community being excluded. But Aristotle did not see a polity of this kind fully put into practice. His was an age in which enormous power had got into the hands of demagogues, and all citizens were admitted to an absolute equality—a system resulting in the practical supremacy of the masses. In this state of affairs the commons were, he complains, 'superior even to the laws' (VI. xiv.); and he expresses himself by no means confidently with regard to the popular opinion that individual liberty is exclusively, or even necessarily, a fruit of these democratic institutions (VII. II.).

We come now to the question, Which is the best form of government? Many persons hold with Samuel Johnson that forms of polity have little power to influence happiness, and that it does not matter a straw that we should live under one kind of constitution rather than another. On more philosophic grounds, Kant thought that the form of the State did not matter, if the spirit of right and freedom were there (*Perpetual Peace*). Pope's well-known solution of the difficulty—'Whatever is best administered is best'—is only verbally satisfactory, and leaves us still face to face with the problem, Which constitution is likely to be best administered? Which will be most helpful to progress? And to this question no cut and dried answer can be given, because the stages of political progress and degrees of intellectual and moral capacity depend upon varying conditions, and require institutions so different that in a primitive state of society even despotism can be, and has been, justified. There is, accordingly, no ideally best polity; but most writers on the subject think with Aristotle that the question is one which every statesman and student of practical politics ought to consider. It is his business not only to know the best constitution under actual conditions, but to ask what form of government most nearly approaches the ideal (Pol. VI. I.).

Monarchy came first in the history of politics, and has been the most widely recognised of all governments. Nor is it difficult to understand how this should be. The rule of one is obviously the most suitable form of polity in a rude state of society, where the political consciousness is undeveloped. Even under more advanced conditions, there is something to be said in favour of absolutism. The autocratic monarch is unhampered by the necessity of securing the assent of minister or people; under no other constitution can the execu-

tive act with such force, consistency, and rapidity. Unfortunately, however, as Aristotle pointed out, hereditary kingship is exposed to great peril, owing to the frequent incapacity of kings (VIII. x.). Whatever powers the exigencies of ruder times may have called forth, it is certain that nowadays exceptional administrative skill or general capacity rarely shows itself in royal families. There are few States, however, at the present day in which this constitutes a danger. Modern monarchy is limited to such an extent as to tend, in the opinion of many observers, more and more in the direction of democracy. In those cases where the sovereign power remains autocratic, it is generally limited by a bureaucracy.

In aristocracy, if it be a true form of that polity, the government is in the hands of a class who are morally and intellectually superior to the rest of the community, and have the wealth and leisure to enable them to acquire special knowledge. They have been properly called governors by profession. Hence some of the most remarkable administrations in history have been aristocracies, at least in name. Looked at from our modern point of view, they are rather to be called bureaucracies, with the virtues and defects of bureaucracy—experience and a more or less mechanical energy on the part of the governors; on the side of the governed a certain passivity of the kind which is produced in a people by despotism.

John Stuart Mill criticises aristocracy and monarchy from one point of view. A great minister, he remarks with some truth, is almost as rare a phenomenon in modern Europe as a great king (*Representative Government*, p. 46). This is, of course, the difficulty which confronted Aristotle, and was declared insuperable by him—the problem of finding persons pre-eminent in both talent and virtue. It is a difficulty which time has removed in its own way. The aristocratic classes have lost their former sovereign position in the State. In every country they are now subordinate either to monarch or to ruling people. No example of this polity has survived to the present day; still less do we see a modern government of the best people, in the old sense of a pure aristocracy.

As to the merits of democracy there is considerable difference of opinion. It suffered a good deal in reputation during the excesses of the French Revolution. So great a statesman as Burke stigmatised it as the most shameful thing in the world (*Reflections on the Revolution in France*, 1790). But, in the judgment of unbiased persons, there is no necessary connexion between democracy and violence, and popular government in its higher aspects is now generally admitted to exert a stimulating influence upon education, and to foster in a striking manner the growth of patriotic spirit. These results, indeed, were seen in ancient Greece, in the high intellectual standard attained by the average Athenian citizen, and the sacrifices he was willing to make for the State from a sense of duty. None the less, Plato decided against democracy, on the ground that such a polity was 'unable to do any great good or any great evil' (*Statesman*, 203). His criticism draws attention to a serious defect under which this form of government labours. Its executive is often weak, its conduct of foreign affairs timid, and, if there be frequent changes of administration, ever open to the charge of inconsistency. Indeed, on all questions the difficulty of pursuing a continuous policy results in a lack of vigour in republican authority, which has been ascribed partly to the absence of the pomp and splendour which surround royal thrones, and partly to the fact that presidents and ministers are regarded rather as servants than as heads of the republican State.

John Stuart Mill was so convinced that large assemblies are unfitted, not only for administration, but also for the direct work of legislation, that he advocated the formation of a legislative committee to which the business of drawing up bills might be entrusted. But a democratic government is not troubled by doubts of this kind; it goes to the task of making laws with zeal and self-confidence. Here its strength is supposed to lie. The chief defect of government by a majority of the people is not a paucity of laws but the danger of class legislation, or what is called the tyranny of the multitude. It is, of course, true that ill-considered legislation is not an evil peculiar to government by a majority, and that the numerous interests represented tend to counteract this danger in a democratic State. At the same time, in all large assemblies ignorance and incapacity are likely to be more common than knowledge and administrative skill, and self-interest will be found a more powerful motive force than the love of justice. For this and other reasons, Rousseau held that pure democracy was a government which might do for gods, but was too perfect a government for men.

It is agreed nowadays that enlightenment, education, and progress are not necessarily the fruit of popular government more than of other forms of polity. Aristotle too, many centuries ago, decided against the vulgar belief that liberty is to be enjoyed only under a democracy. Indeed, there is nothing to prevent freedom from existing in any State not despotic, although, in the nature of things, it is to be sought rather under a representative government than any other—a system, that is, in which the supreme authority lies with the representatives of the people. What is to be found here, and not under other forms of polity, is 'an open field for natural talent.' This, as has been well pointed out by D. G. Ritchie, is the true defence of democracy. Men being equal neither in capacities nor in character, and their respective merits being ascertainable only by actual trial, democratic institutions are defensible in so far as they offer the best means of obtaining a genuine aristocracy or government of the best (*Philosophical Studies*, p. 338).

To what extent may the form of government be said to be a matter of choice? According to the old dictum that constitutions are not made but grow, there is no choice at all. But the truth behind this dictum and its converse seems rather to be that constitutions are made, that they are the work of human reflexion and contrivance, and that at the same time they also grow, and in directions which men cannot always either influence or foresee. Institutions are, in fact, a matter of choice within the limits left by the circumstances and aptitudes of a people. Their permanence depends on the manner in which they are adapted to the requirements of the people, and continue with the lapse of time and the growth of the nation so to adapt themselves. Even within these limitations, however, the choice of the form of polity is not one wholly dependant upon human foresight; nor is the task of adapting it to peculiar needs entirely achieved by the skill of statesman or legislator. Not a little must be attributed to chance. Plato hits upon this truth in the *Leves* (700): 'Destinies and accidents happening in all sorts of ways legislate in all sorts of ways.'

The importance of the kind of polity has been differently estimated by various writers. Rousseau believed that institutions are all-important, and that, as men are naturally virtuous, they will show themselves to be so under just and suitable government. Montesquieu, while laying great stress on the necessity of institutions being in conformity

with the spirit of a nation, held, on the other hand, that these institutions are moulded by the character of the people and by such conditions as climate, employment, and general environment—influences upon which government, whether of one kind or another, can have little effect. On these views, which obviously represent opposite standpoints, little need be said by way of criticism. Rousseau's position will be generally characterised as extreme, while at the same time it must be admitted that there are few modern writers who would seek to minimise or ignore the influences which the form of government undoubtedly has on a people.

Every polity, says Aristotle, comprises three departments (*politeia*)—the *deliberative*, the *executive*, the *judicial* body (VI. xiv.). These three functions of the State were not kept distinct, save in name, until comparatively recent times. In Greece and Rome they were frequently exercised by the same persons, as, for instance, by the Athenian *eclesia*; and the mediæval State was not more differentiated. Only in the 18th cent. did people begin to feel that at least the judicial function should be exercised independently, and that kings ought not to administer justice in person. This judiciary faculty does so stand apart in every carefully organised modern State. The name which it bears and the names given to the other two functions of the State are practically the same as those used by Aristotle. They are: (1) the legislative, which Locke calls 'the soul which gives form, life, and unity to the commonwealth' (II. §212), and which stands above the other two functions, as laying down laws which they must obey; (2) the executive or administrative power; and (3) the judiciary faculty.

In early monarchical government the sovereign was entrusted with unlimited power, and it was in the interests of individual liberty that attempts were made from time to time to impose limitations on this authority. In modern times it is by the method of separation of functions that nations seek to put checks upon the supreme authority and establish a balance of power within the State—a device of which perhaps the best illustration may be seen in the constitution of the United States of America, where the legislature and executive are in a sense pitted against each other. Kant and other philosophers have held that, where there is not a complete separation of the legislative and executive functions, there must be despotism (*Perpetual Peace*). Executive functionaries are not usually appointed by popular vote, nor in the opinion of many authorities should they be so appointed. In the case of the Presidency of the United States of America, the effect of this manner of election is to make all questions party questions.

3. The sphere of government.—Within what limits is the exercise of governmental machinery legitimate? The Hellenic State is generally considered to have possessed too much power. Looked at from our modern standpoint, a State is not an end in itself; it can never be more than a means—the only means, it is true—by which the liberty and welfare of men can be secured. As an end in itself, however, the Hellenic spirit idealised the State. Its citizens endured, without murmur, interference of the most minute kind with their private life and liberty, the sacrifice often of their interest as individuals, the non-recognition of their rights as men. They accepted this condition of things willingly, without question or criticism, because they regarded themselves as a part of the corporate whole, as one with the State in spirit and in will. The *Spoudaia* antithesis of man and State, or man and government, would have conveyed no meaning to the Athenian citizen. Moreover, the distinction had not yet been formulated between the sphere of law and that of morality or

private life, the region in which we can legislate, and that in which legislation is useless or pernicious. The standpoint with which the Greek was familiar was that of Plato's *Lysis*, which is permeated by the principle that law can make people virtuous—the direct contrary of our modern maxim that one cannot make a man moral by Act of Parliament.

In Great Britain, political theory, owing to various causes, is strongly individualistic in character. It ignores our obvious debt to society. In the extreme form of individualism, found in Bentham, Mill, and Spencer, the State is regarded as nothing, the individual as everything. For these writers, for Spencer especially, all restraint is an evil, while the sole function by which government may justify its existence is that of protecting individuals from aggression and punishing criminals—of acting, as Huxley says, the part of chief policeman (*Administrative Nihilism*). This theory, which Ritchie traces to Lycophron, the sophist, we have in a somewhat similar form in Hobbes and Locke. The office of the sovereign power, says the former, is in the procuring of the safety of the people and their enjoyment of the contentments of life (*Leviathan*, p. 222, Molerworth's ed.).—'contentments' being a very comprehensive word. At the beginning of the first *Letter on Toleration*, Locke defines the term 'commonwealth' in very similar language.

Nothing is suggested, in individualistic theory, of any action and reaction between the individual citizen and the State, or of any relation between sovereign and subject other than that of force and obedience—an external contractual relation in the opinion of Hobbes and Locke. According to Bentham, the principle of utility ought to govern society, whose business it should be to secure the greatest possible amount of happiness to men; law for him is a necessary evil, government a choice of evils (*Principles of Morals and Legislation*, p. 46). For Bentham, as for Mill and Spencer, society is no more than an aggregate of individuals, and the last of these writers says frankly that the liberty a citizen enjoys is to be measured, not by the nature of the governmental machinery, but by the relative paucity of the restraints it imposes (*Man versus State*, p. 18). From this point of view the presumption must always be that the government is in the wrong, and can be called upon to justify itself on every occasion where it actively interferes with the liberty of individuals. The cry of Emerson is not less unambiguous: 'The less government we have the better,' he says, 'the fewer laws, and the less confided power' (*Essay on Politics*). This is a fair conclusion from the premises that all coercion is immoral and destructive to freedom; but the logical outcome of principles like this is a return to the struggle for existence—in other words, anarchy.

The reasoning of Mill and Spencer is based upon the hypothesis that every increase in the power of the State necessarily implies a corresponding decrease in the liberty of the individual citizen: State action, according to this view, being always opposed to the action of the individual. It is clear that any such statement of an inverse ratio as existing between governmental power and individual freedom depends upon an erroneous conception of liberty. Freedom from restraint and from the meddling of government is not liberty. It may be more safely defined as the privilege of living under fixed standing laws, formed in the interest of the people, adapted to their needs, and capable of affording them the fullest opportunity of self-development and progress. The more just the constitution, as Kant saw, the greater the amount of freedom which can be left to the citizen. Formed to make life possible, the State exists, as

Aristotle said so long ago, to make life good. It is not characteristic of liberty that every citizen should act as he chooses. Rather 'the citizens should live, and live gladly, in the spirit of the polity'; such a life is not to be regarded as a bondage but as a means of preservation (*Pol. VIII. x.*).

This is sound doctrine. Aristotle saw that security and personal liberty were blessings which no man can conquer for himself; he saw that they were to be found only in the State, and that liberty is something different from license. The distinction is one of which Locke, too, was fully aware; even the state of nature, he says, is not without law, having the law of nature to govern it (ii. § 6). Political power he defines as the right of legislating for the public good (ib. § 3): 'Where there is no law there is no freedom' (ib. § 57).

The theory was advanced by Mill that the liberty of an individual should be limited only by the equal liberty of every one else. This principle has been proved by Huxley and later writers to be absurd and incapable of application. By almost universal consent it is held that all desires harmful to society should be as much as possible stamped out; while, on the other hand, it should be the object of constant endeavour to encourage those favourable to progress. The question arises, however, how far this can be done, and here there is some difference of opinion. To-day, in the energy of legislatures, we are face to face with a new phenomenon in the history of politics. Looking back on the last fifty years, we find the sphere of governmental activity enormously extended. The State has interfered with matters concerning the preservation of health and the prevention of disease; it has made education and insurance compulsory, and striven to encourage the pursuit of the higher kinds of knowledge and the cultivation of art; through its picture galleries and public buildings it offers not only an intellectual but an æsthetic training to its citizens. In these endeavours, which have had the support of the people, its object has frankly been the public good. But there are no limits to the extent to which this well intentioned interference could conceivably be carried. How far, then, given the most exalted motives, is State interference justifiable? Bentham gives an answer recommending caution, and so does T. H. Green. They are agreed that not every act beneficial to the individual is to be enforced by legislation (Bentham, *Principles of Morals and Legislation*, ch. XIX. viii.); or, as Green more definitely put it, only such acts should be made compulsory as had better take place from any motive than not take place at all (*Philosophical Works*, II. 344). Well-meaning patriotic legislation is confronted by a real danger—that of deadening the sense of personal responsibility, and of causing that to be done through fear of legal consequences which ought to be done from a feeling of duty.

It is interesting to note that Locke, whose *Essays* contain the first systematic attempt to investigate the limits of State action, applied in a very broad-minded spirit his maxim that the end of government is the good of mankind. In the first *Letter on Toleration*, speaking of the washing of children, he uses these words: 'If the magistrate understand such washing to be profitable to the curing or preventing of any disease that children are subject to, and esteem the matter weighty enough to be taken care of by a law, in that case he may order it to be done.' The view expressed in this passage would justify modern laws of sanitation and other laws not justifiable on old-fashioned individualistic principles of liberty.

The functions of a government vary with differ-

ent stages of political development, its power being necessarily far-reaching in a backward State, which can often be best served by so-called paternal legislation. Hence, generally speaking, the sphere of government cannot be determined from theoretical considerations; nor can this administration or that be judged except by the results of its activity. In a well-ordered society it is not likely that State interference will be carried too far. As Samuel Johnson said of tyranny, 'mankind will not bear it.'

See also art. STATE.

Legislation.—Frequent reference has been made in this art. to the *linguæ* of Plato (especially the *Republic*, the *Statesman*, and the *Law*) and to the *Politics* of Aristotle. The origin of government, the theory of contract, and such questions are discussed in the works of Hobbes. In Mosher's *Statistical Policy*, Lecky's *Essay on Government*, Rousseau's *Contract social*, Hume's *Science*, and the political writings of Kant. Among theological works, Butler's *Analogy* must not be forgotten. On the Divine right of kings, see the *Remarques historiques de Louis* (Paris, 1884, vol. 1.), and Bonquet's *Politique (sur des principes généraux de l'histoire)* (Paris, 1884, vol. 1884, 2nd ed., 1884); also B. L. Meier's *Martha's Statute de France* (various ed.). Among classical works mention must also be made of Montesquieu's *Spirit of Laws* (Eng. tr., London, 1880-87). A book which is of great value to the student of politics is J. C. Mansel's *Theory of the State* (Eng. tr., Oxford, 1884). Another, bearing a similar title but treating the subject from a purely philosophical standpoint, is B. Bonquet's *Philosophie Theory of the State* (London, 1884). Reference may be made, on general grounds, to M. Meier's *Elements of Politics*, 1887. An admirable statement of the advantages and disadvantages of democracy is found in J. Bryce's *American Commonwealth*, 1888 (rev. ed., 1915). For a description of sovereignty which has greatly influenced the philosophy of English jurists, see J. Austin's *Lectures on Jurisprudence* (1885). This theory is examined in the *Early History of Jurisprudence* (1874) of M. S. Maine, whose treatise on *Popular Government* (1885) may be also mentioned. A mass of literature has grown up round the question of the limits of State authority. Among the contributions of older writers to this subject are Wilhelm von Humboldt's *Sphere and Duties of Government* (Eng. tr., 1884), J. Bentham's *Principles of Morals and Legislation* (various ed.), J. S. Mill's *Liberty, and Representative Government* (various ed.), H. Spencer's *Man versus State* (1884). In the first volume of his *Collected Essays* (1880-84) see T. H. Huxley's *Administrative Efficiency, and Government. Authority or Responsibility*. T. H. Green's *Lectures on the Principles of Political Obligation* may be found in his *Works* (ed. Nettleship, 1884-85). See also the political writings of D. G. Ritchie, especially his *Principles of State Intervention* (1881) and some of the essays in the volume entitled *Desires and Hope, with other Political Studies* (1887). P. C. Montague's *Limits of Individual Liberty* (1884), as may be 'Liberty and Legislation' in B. Bonquet's *Collection of Christianity* (1888). S. Macneil's *Journal of Social Philosophy* (Glasgow, 1888) traces of the subject briefly.

M. CAMPBELL SMITH.

GRACE.—I. HISTORY.—1. Ethnic.—The Christian thought of grace is heralded in ethnic religions by the wide-spread feeling that the gods are kindred and friendly beings, guardians of morality, and, up to a certain point, able to help men. From the earliest times a corresponding confidence and trust—a few anthropologists even say love—differentiate religion from magic or sorcery. In Scandinavian, Egyptian, and Greek sources there are faint suggestions of a Divine representative sacrificed for human good, and this marked a positive advance beyond the mere culture-hero who averts peril and brings in civilisation.

2. Jewish.—In the OT the relevant terms are mainly two—*grace* (more general), and *love* (lovingkindness) (mostly used of the Divine attitude to Israel). Such grace is the free outflow of Divine love, irrespective of the worth of its object. Grace at first relates to Jehovah's anger, often represented as a capricious and uncalculating passion, the effects of which grace removes. But, chiefly, grace is the fount of every blessing. The bond which unites Jehovah and Israel is one of grace *ab initio*, for He chose Israel freely, being influenced neither by its sin nor by its righteousness.

¹ This art. being written from the Protestant point of view, a full statement of the Roman Catholic doctrine of grace will be found in the following article.

ness (Dt 7⁹⁻¹⁰); and to this spontaneously selective love OT writers trace the promise to Abraham (Gn 12¹), the covenant of Sinai (Ex 33¹⁷), and the oath to David (Is 55³). The moralisation of the idea—which to the end savoured of national privilege—owed much to Amos and Hosea; grace is moral love, and includes righteousness; yet for Hosea righteousness does not put God far away. He is the nation's tender Father, and 'His love is sovereign, pure, unselfish, free from all impatience and all variableness as the love of an earthly father can never be' (W. Robertson Smith, *Prophets*, Edin. 1882, p. 168). In their arraignment of the people, the prophets adduce Jehovah's acts of guidance and protection in the past. Prominent even in Deut. (7²³), grace is supreme in Deutero-Isaiah and the Psalms, the Exile having quickened a poignant sense of need. Then once for all the idea took an eschatological colour (Is 64¹, Ps 60¹, Jer 39¹⁴). Jehovah's grace is sovereign and wonderful, His invincible power to pardon the guilty is mentioned in exulting tones, and it is anticipated that by a special gracious act He will gather His people from among the heathen. Towards the close of the OT literature, the relation of grace to the individual comes into view. But no trace exists of a material or quasi-material view of the Divine favour or its operation. Always it is an attitude or active disposition of Jehovah to persons. To those who keep His commandments and show loving consideration to their fellows, His grace is a possession for ever.

3. Christian.—(1) *In the NT.*—In the NT the two Heb. terms already mentioned are embraced in *χάρις*. Classical writers mean by *χάρις* that which gives pleasure or delight, and so loveliness or charm. Beauty in motion is very much the sense. The profounder meaning of the word in primitive Christianity—viz. the unmerited Divine love which stoops to pardon and bless the guilty—is, in part, a heritage from the OT, but it draws its characteristic intensity from the felt presence of redeeming love in Jesus Christ. The word is not found on Jesus' own lips, but His message and personality are laden with the thing. Thus in the Sermon on the Mount the Father makes His sun to rise on the evil and the good (Mt 5⁴⁵), the Kingdom is promised to the poor in spirit (v. 3), comfort to the mourning (v. 4), perfect satisfaction to those who long for righteousness (v. 6). In the Lord's Prayer, the grace of the Father in heaven is assumed. Apart from very explicit utterances like the parables in Lk 15, the attitude of Jesus to the needy—to the paralytic (Mk 2), to the woman that was a sinner (Lk 7), to the dying malefactor (Lk 23)—conveyed to them and to bystanders the blessed sense of a Divine love mightier than sin. The Kingdom, into which He calls men, is not something they are to earn or make; it is a gift pure and simple, and with the conditions of entrance human wisdom or riches or righteousness have nothing to do. Even the conception of reward, though employed frankly, is placed in a light which reveals its inadequacy to set forth the principles of Divine action, for the reward is pictured as an hundredfold what men have merited (Mk 10²⁹). Jesus is conscious of being the medium of grace, and in Mt 11²⁸ He puts Himself forward explicitly in this character. He must eventually die to ransom many (Mk 10⁴⁵). Thus to His mind the central fact of the world is the dying of the Christ of God in order to establish in a sinful world the great expected Kingdom—the new world-order which shall fully express Almighty Love.

Throughout the NT, grace is the first thought and the last—the atmosphere in which Christians live and move. Their message to the world is one of grace, and missionaries setting out to preach are

recommended to the grace of God (As 16th). When believers pray, it is at the throne of grace (He 4th). As they survey the past or anticipate the glorious end, everywhere they see grace preparing, executing, and pervading all (1 P 1st 2nd).

It is especially by St. Paul that the conception of grace is elaborated. By grace he means the free love of God, visiting men even when unsought, more particularly as opposed to all demands of law or claims of merit. It was grace, as he is vividly aware, which called him personally, made him an apostle, and vouchsafed to him abundant missionary success (Gal 1st, Ro 15th, 1 Co 15th). But it is also the supreme causal agency by which Christian life everywhere is evoked, sustained, and augmented. The Apostle contemplates it for the most part from two points of view.—(a) Grace is the active disposition in God to which everything that can be called salvation is traceable (Ro 11th, Eph 1st, Gal 5th). The sending of God's Son and the acceptance of His obedience as availing for the guilty are both due to grace alone. Because of Christ's death, in which the Divine righteousness was manifested once for all—for grace contains wrath at evil as a subordinate element—God in His mercy is able to forgive freely. In St. Paul's view there is no antagonism between grace and righteousness. So far from making righteousness superfluous, grace actually bestows it by way of gift; for, if righteousness could be obtained by the works of the Law, God were debtor to man, and grace were made of none effect. The gift of grace can be received only by faith (Ro 4th), i.e. by the willing and humble appropriation of the proffered boon, which places sinners in a right relation to God, and evokes an obedient love by which fear is banished. It is not that God has ceased to demand works and henceforth demands the believing temper as the price of salvation; faith is receptive, not meritorious, and grace is equally its received content and its producing cause. Since Jesus, indeed, grace and faith constitute an indissoluble unity. There is the closest bond between past historical events and the mercy of God thus apprehended by the believer. Grace is bound up with the person of Christ; apart from this reference to the historic Figure, and His experiences of life and death and resurrection, it would have no tangible or permanent significance for the Apostle's mind. The grace of which he speaks or writes is that of Christ as well as God; Christ is its eternal subject (2 Co 5th), its medium and pledge, and its present all-sufficient source (15th). There is no ground in St. Paul for describing grace as acting on the lines of a natural force in the production of the religious life; it is simply another name for the operation of the Spirit, and to him the Spirit, as it has been put, 'meant the gracious power of God which evoked faith in Jesus as the crucified and risen Christ and then mediated to the receptive, obedient life all that the Lord was and did for his own people' (J. Moffatt, *Paul and Psephism*, London, 1910, p. 37 f.). The relationship of free access to the Father, into which men are thus introduced, is one which *ipse facto* can have no end; as grace is the basis of election (Ro 11th), so, too, it reigns through righteousness unto eternal life (Ro 5th).—(b) In a derived fashion, the word is also employed to designate the fruit of grace in redeemed lives, whether this be the spiritual status into which Divine love lifts men (Ro 5th), or particular gifts of an ethical or pneumatic character (cf. 2 Co 8th). Generally speaking, grace is felt to be the death of legal religion, for in trust responsive to God's bestowal of Christ men now serve Him not for wages, but in faith and love and hope. It is thus clear that in Jesus and Paul alike the thought of grace implies the complete fusion of the moral and the religious ideal. The writer

of the Fourth Gospel, while he prefers to speak of the Divine *love* (3rd 15th; and Ep. passionis), declares grace to be the new specific feature of the Christian religion as contrasted with Messianism (1st). It is further noticeable that the NT does not fail to warn Christians of the unspeakably grave consequences of neglecting the Divine grace or receiving it in vain (2 Co 6th, He 6th).

(3) *In the Early Church.*—The early centuries exhibit a marked process of tension between Eastern and Western thought. For the Greek Fathers, who took free will for granted, morality and religion lay parallel with each other—did not abrogating freedom but expressing it, grace not displacing freedom but encouraging its independent activity; it consisted not in an inner transformation, but in the objective facts, external to man, of providence, revelation, incarnation, and redemption' (O. Kirn, *PRF* vi. 719). Grace saves by illuminating the intellect and reinforcing the resistant and autonomous powers of human nature. The Western mind resumed the Hebrew thought of man's complete dependence on God; but, as early as Tertullian, we find predominant a view of grace which regards its action as the inspiration of a higher Divine quasi-physical energy or force, 'by which the *liberum arbitrium* is aided in a meritorious working for the rewards of eternal life' (F. Loofs, *De Augustinus*, Halle, 1906, p. 164). The antagonism came to a head in the Pelagian controversy. It was argued optimistically by Pelagius and his group that free will is the inalienable prerogative of man; sinners are in no sort of bondage, but can choose either way. His is only a momentary self-determination, which leaves the nature intact and can always be successfully resisted. In religion it is useful to have our will guided, though renewal is not essential, and such guidance comes from the Law or from Christ's personal example or instruction. 'Grace, in short, is the external help which makes easier the realization of the natural possibility, together with the natural possibility itself' (Robinson, *Christian Doctrine of Man*, Edinburgh, 1911, p. 182). If Pelagius thus lowered grace to the plane of nature, Augustine (s.c.) held passionately that it liberates from a nature which is sinful through and through. Though as psychological determinist (man is free within the range of his ability), he taught that men have utterly lost the *liberum arbitrium* to good. Salvation, therefore, comes exclusively through grace—that replenishment with the Divine life which anew creates in us the good will—for Christ the God-man has brought down to earth the powers which give us back liberty to express freely the new nature. To grace, then, with the action of which in restoring moral power we cannot co-operate, or, in Augustine's significant phrase, to *gratia gratis data*, is due everything that can be called salvation—faith and love, freedom from concupiscence, the good will, and, very especially, the gift of perseverance (granted only to the elect). Grace is the affecting in time, and within the Church, of God's eternal predestinating will, whereby He resolved to save a certain (but to us unknown) number out of the 'mass of perdition.' It works *preveniently*, apprehending men and lifting them out of sin; *co-operantly*, producing in them good volitions and good action (this is justification, for the primary effect of grace is to make righteous); and *invariably*, for the Divine will is omnipotent. *Ut solimus, operatur dominus, volentibus cooperatur perfectio.* Saving grace is distinguished from the *adiutorium gratiae*, lost through the sin of Adam, by this quality or irresistible efficacy. This might seem to leave no room for merit, but Augustine teaches unequivocally that the final destiny of individuals is solely

dependent on their acquired merits, though it is added that these are gifts of God. He is undoubtedly true to experience in his conviction that man needs Divine salvation and cannot save himself. But a fundamental strain of Neo-Platonic mysticism renders him in the last resort unable to link salvation to the historic Christ by more than a loose connexion, so that the religious dynamic (grace as infused love) consists rather in a 'secret, wonderful, and ineffable' Divine energy than in the impression of Christ, living, dying, and risen for His people. The *gratia inspirationis* is really a communication of the Divine essence, and its ethical and personal character is still further overlaid by its being referred exclusively to the Divine omnipotence. See, further, the following article.

Augustine's doctrine of merit left a door open to Semi-Pelagian conceptions. Before his death, predestination and the bondage of the corrupt will had been rejected by those who feared their moral effect. The Semi-Pelagians (Loofs has pointed out that they might with nearly equal justice be called Semi-Augustinians, since they held that man requires Divine grace for good action) taught that God aids the will, sin having impaired freedom but not destroyed it. In 529 the Synod of Orange defined a position which is Augustinian on the whole; but it was silent as to the irresistibility of grace, and anathematized the defenders of predestination to evil. Unconditional predestination seemed to make the Church's means of grace superfluous, and this could not be borne. In the 9th cent., Gottschalk's advocacy of a logical Augustinianism was firmly put aside. Nor can we ignore the growing tendency to fix on sacraments as the proper vehicle of grace. Cf., further, art. PELAGIANISM and SEMI-PELAGIANISM.

(3) *In the Middle Ages*.—In medieval Scholasticism, no writer is so Augustinian in tone as St. Thomas Aquinas, who, however, combines the older thought of predestination with an Aristotelian and deterministic idea of God. God alone, he holds, can convert the sinner, as being the Prime Mover of all things. *Gratia increata* and *gratia creata* are distinguished, the first being the freely-imparted movement of God, the second a supernatural 'habit' infused into the soul's essence and constituting the new nature. Conversion comes through free will, which yet cannot turn to God except as, by the *auxilium gratiae*, He turns it to Himself. *Gratia operans* is grace from the standpoint of Divine causation, *gratia co-operans* the same grace from the standpoint of human consent or volition (*Summa*, II, I, qn. 108-111). Acts are meritorious only as they issue from co-operating grace, in accordance with the secondary causation of the human will. What infused grace (*gratia gratum faciens*) does is to heal the soul, give power to will the good, grant perseverance, and finally conduct to eternal glory. The remission of sins follows on moral renovation. There is a sense in which man can prepare himself for grace, though not by merit; but, after the will has regained through grace the capacity of self-movement, it can acquire merit (*meritum de congruo* or *de condigno* according as it is considered as proceeding from free will or from the grace of the Holy Spirit). In this scheme the Augustinian conception of *acta gratia* (*infusa*) and the old Western idea of merit limit and supplement each other. Aquinas fails to bring out clearly any connexion between grace and Christ save that He exclusively merits for us the *gratia prima*, or original impartation; thus its action on the soul is in no sense psychologically mediated, and it appears most characteristically in the sacraments, as a Divine force impinging on or imparted to the soul.

Duns Scotus criticizes sharply the notion of a 'habit' produced in the soul by grace, and tends to evaporate grace as such into a co-operant principle which renders free moral action well-pleasing to God. The absolute freedom of God and man are placed in unconditional opposition. Grace heightens the privately achieved goodness of man; hence the scope of merit broadens out indefinitely. The Nominalists followed Duns in teaching that sin has left the natural freedom of man intact, and that merit is requisite even for the initial gift of grace. Bradwardine and Wyclif raised an Augustinian protest. The anthropology of the Council of Trent, on the other hand, may be described as 'the combination of a Thomist scheme of sin and grace with such modification of its statement as would allow a Scotist interpretation' (Robinson, p. 210). Contrary to the Augustinian and Thomist tradition, it is declared that the *gratia prima* does not justify, but only disposes to justification, so that justification is the fruit of a Divine and human co-operation. See, further, the following article.

(4) *From the Reformation*.—Luther (q.v.) broke definitely with the conception of grace as a quality of the soul, a Divinely caused inward 'habit,' and identified it for good and all with the mercy of God presented in Jesus Christ, which sinners experience primarily and essentially as forgiveness. To have faith is to have grace: *per gratiam, deus agit*. The Divine favour in Christ is brought home to us by the gift of the Holy Spirit, working in and through the Word or Gospel, in which God Himself deals with us and gives Himself in Christ to be our own. Grace is this loving will of God. The sacraments are efficacious signs of it. It is true that Luther's sacramental doctrine partially deserts this great conception, in so far as he teaches that sacraments present a peculiar additional grace over and above that which is made ours in Christ as the embodied love of God. At bottom, however, 'the certainty of forgiveness in Christ was for him the sum of religion' (Harnack, *Grundriss der Dogmengeschichte*, Freiburg, 1891, p. 286). For Calvin also (see CALVINISM) grace and faith are vitally correlative, although his underlying deterministic philosophy of unconditional predestination led him at times to equate grace with 'the good pleasure of God.' In both Reformers, an end is made of human merit as contributory to salvation. We cannot here discuss the later Calvinistic and Arminian controversy as to whether grace is or is not particular, irresistible, and inalienable (see, further, art. ARMINIANISM).

II. The NT message and its echo in Reformation preaching both imply a conception of Divine grace wholly drawn from and determined by the felt redeeming influence of Jesus Christ. Disregard of the fact of moral personality, as though religion could be passed into the soul like a stream of electricity, is invariably caused by or causes the thought of grace as a secret Divine energy, due solely to omnipotence, and acting on the human will with irresistible pressure—a quasi-physical force, stored within the Church, and applied to the soul-substance in its subconscious depths. But a coercive force, for which the will is only a medium of transmission, cannot ever be one with human experience, or fulfil itself in volition as our act and possession. We must seek, then, to regard grace as that which produces faith in accordance with the laws of an ethical and rational nature, and at the same time resolves the native tension and conflict of the moral life. 'Only by relating grace to personality and personality to grace is it possible to have a spiritual conception of either. Grace is grace and not a force precisely because it is the success of our moral personality' (J. Omen, *Espeirer*, 1912, p.

sis—a supernatural and godlike perfection, the effect of which was to confer on the soul of man a kind of 'deiformity,' mysteriously aroused in it by the all-powerful agency of God. That permanent supernatural quality Divinely infused in the soul of man, to make him durably proportionate to his Divine destiny, by raising him permanently to the Divine plane, is called 'habitual' or 'sanctifying' grace.

Of course, it might have been in itself sufficient to grant to man a supernatural help, an 'actual grace,' whenever it was necessary for him to perform supernatural actions—to raise him 'each time' above his natural capacity, in order to make him produce Divine acts meritorious of the Divine reward; but it was more harmonious, more consistent, permanently to divinize man, to raise him, once for all, to the supernatural plane. The Scripture texts, as the Catholic Church always understood them, indicated that such had been the course selected by God, and so she always expressly held by the primitive traditions, from which the Church could not possibly recede. When, therefore, the early Protestant Reformers, making light of all traditions, and boldly sweeping aside all the theological development of the past ages, came forward, denying the existence of any internal supernatural quality infused by God, which should be called 'habitual' or 'sanctifying' grace, and maintaining that the state of grace was characterized by nothing but an 'external' imputation of justice, made by the Eternal Father, of the merits of the Redemption of Jesus Christ, the Church could not refrain from defining as a dogma of faith (Trid., sess. 6, can. 11) that habitual grace must be understood as an 'inherent' Divinely infused perfection.

2. The state of innocence (*status innocentie*).—Accordingly, when the first human couple were created, they were endowed, over and above their natural organism, with a second, a 'supernatural organism' made up of the following elements:

(1) *Sanctifying grace*, the Divinely infused supernatural quality which permanently divinizes the human nature to make it proportionate to its Divine end.

(2) But sanctifying grace does not come alone. Somewhat as the boughs of a tree will branch from its stem, from that fundamental and basal perfection, habitual grace, a number of complementary and dependent supernatural perfections concomitantly branch out, in the various faculties of the soul. They are the virtues: three 'theological,' viz. Faith, Hope, and Charity; four 'cardinal' or moral, viz. Prudence, Justice, Fortitude, and Temperance, together with their dependent subsidiary virtues, and the 'seven gifts' of the Holy Ghost.

(3) Besides these fundamental perfections, they had been endowed also with several gratuitous privileges, essentially distinct and separable from the foregoing, as a kind of supplementary dowry, destined to emphasize the magnificence of the Lord. Those privileges were briefly: an infused and perfect knowledge of all things that pertained to the human sphere, freedom from any revolt of concupiscence, impassibility, and immortality of the body. It was commonly understood that the primitive plan of God was to let man live on earth a natural term of years, and, after having allowed him to perform some meritorious acts, without inflicting death on him to take him up to his infinite and Divine reward. Original sin destroyed the work of God; the effect of Redemption, on the other hand, was to restore it in a new form, by creating the state of reparation.

3. The state of reparation (*status naturæ reparatæ*).—In this new state of reparation, the

gratuitous privileges of omniscience, immortality, etc., remain irretrievably forfeited, but the whole of the supernatural 'organism' which we have described above is restored, through baptism, to infidels, and, through penance after mortal sin, to baptized Christians. This would be, therefore, the place to treat of the relation of sanctifying grace to the Sacraments, but we must refer the reader to the various articles on the Sacraments; it will be enough to say here that sanctifying grace is first generated in the soul by God through baptism, that it is mortified in it by mortal sin, restored through penance, and increased each time by each reception of the various Sacraments, especially the Holy Eucharist.

To sum up, therefore, in a few axioms the Catholic doctrine of sanctifying grace, we may say: sanctifying grace is an 'inherent' perfection (dogma of faith); it is understood to be 'subjected' (to labor) in the essence of the soul; it is more commonly regarded as a 'physical' entity, not a moral participation in the Divine nature, in the sense expounded above; more probably, it must be regarded as distinct from charity (although Duns Scotus and several others hold the contrary view); from it the various complementary perfections which we call 'virtues' and 'gifts of the Holy Ghost' branch out in the various faculties of the soul, either, according to some, 'physically'—viz. as a kind of concomitant exorcism or offshoot of it—or, according to others, 'morally' only, i.e. as purely necessary concomitants. Being of 'supernatural' via 'Divina' order, it can be produced primarily by God alone; it is generated in the soul through the instrumentality, either 'physical' (Aquinas) or 'moral' (Suarez and the Jesuit theologians), of the Sacraments, in and through which the Divine power acts as the primary cause.

4. Actual grace.—(1) *Its existence and nature*.—

Besides the supernatural superadded 'organism' (habitual grace, virtues, and gifts) which we have described above, the human soul, in order to produce supernatural actions meritorious of life everlasting, requires, each time, the help of actual grace, viz. some internal, transient, supernatural impulse from God, which enables it to perform now a supernatural action. The existence and immutability of this actual grace are emphatically asserted both by Scripture and by the universal Christian tradition; it is, moreover, a logical necessity of the philosophical system in which primitive Christian thought was immersed, and under the influence of which it made its theological evolution. Actual grace is rendered necessary by the existence of the supernatural organism of habitual grace and the virtues. 'Quantumcumque aliqua natura corporalis vel spiritalis ponatur perfecta, non potest in eam actum procedere, nisi moveatur a Deo' (Aquinas, *Sum. Theol. Prima Secundæ*, qn. 108, art. 1). At the same time, we understand also that, if the influx of actual grace is indispensable to the act of the free will, that influx must, if it is really meant to supplement, not to pervert, the nature of the will, be of such a nature as to leave the freedom of will unimpaired. In this way we are brought to formulate the two cardinal principles on which the whole problem of *Assistit* hinges: (a) the decree of God Almighty (in the present case, the decree of predestination) must infallibly be fulfilled; anything decreed by God must come to pass; (b) even under the present influence of actual grace, the human will remains always essentially free in its action.

(2) *Sufficient and efficacious grace*.—The maintaining of these two exigencies—the unfailing efficacy of the decree of God and the perfect freedom of the human will from any necessitating

impulse—has ever been and remained the dominant preoccupation of the Church throughout all subsequent controversy. The Pelagian quarrel, the first important one on record on the present subject, gave occasion for the emphasizing of the distinction between 'sufficient' and 'efficient' grace. That there are sufficient graces, offered by God to every human soul, may be termed, in fact, a Catholic dogma, and that some graces are prove efficacious may be said to be a fact of experience; nevertheless, that plain and obvious distinction was to acquire, through the discussion of the Pelagian tenets, a particular significance.

The real question at issue with the Pelagians was whether any internal grace of any description whatever ought to be considered as strictly or really necessary. God, who had called man to eternal happiness, had already, in the Pelagian view, given him, in his natural resources, as aided by the external graces of revelation and instruction, all that was essentially needed for that purpose. As original sin left in the soul no inherent blamish or untowardness, man, by making good use of his natural faculties, could work out for himself his own salvation. Internal graces (the habitual one perhaps, and the actual ones especially) might exist, did exist; but to assume more than their utility, viz. to assert their necessity, was to declare the will unfit for what it was given for, and consequently destroy its freedom. These graces ought rather to be considered as favours occasionally conferred by God as rewards for the good deeds performed with the sole natural resources of the free will, but none of them was, at bottom, indispensably necessary.

The disputations aroused by these new doctrines brought forward the towering intellectual personality of St. Augustine, who was to remain henceforth the supreme authority, among the Fathers, on all questions *de Aeternitate*. As the mouthpiece of the Catholic tradition, and the interpreter of the doctrines of St. Paul, he definitively established, against both the Pelagians and that body of otherwise orthodox doctors called Semi-Pelagians, among several others, the following principles:

(1) Those only will be saved whom God has gratuitously predestined from all eternity. (2) Original sin is a hereditary blamish inherent in the human soul. (3) As a consequence of these facts, and owing to the infinite disproportion between the Divine and the natural order, no human being is capable, by his natural resources alone, of producing any supernatural action; or (4) if in any way meriting the first grace (as that the said first grace might in any manner be legitimately understood as belonging to him). (5) Actual graces are absolutely necessary for every supernatural action. (6) The actual graces granted to man are the means by which God accomplishes the effect of His eternal predestination, some of them being sufficient only, while others are intrinsically efficacious. (7) Neither sufficient graces, which never carry the assent of the will, nor efficacious graces, which is never resisted, means any prejudice to the freedom of the will.

Thus, in the idea of Augustine, as ever afterwards universally understood and interpreted in the Church, practically without controversy, until the days of the Reformation, God provided both for the fulfilment of His decree of predestination and for the preservation of the freedom of the will, by granting to the unpredestined only sufficient graces, which they were sure always freely to disobey by their own fault, and by providing for the predestined efficacious graces, which they were sure always freely to follow; for those efficacious graces worked, not by overpowering, but by mysteriously inclining, the will, and causing it to give spontaneously its free assent.

How could it be that, on the one hand, a grace, truly and really sufficient, should never in fact carry the assent of the will, and, on the other hand, that a grace, infallibly efficacious, should always determine the said assent, without, how-

ever, in any way infringing upon the freedom of the will? It was a mystery, which Augustine asserted in the name of tradition and on the basis of the doctrine of St. Paul (in particular, Ro 9), but which remained otherwise unexplained. The attempt to solve that mystery was, at a much later period, to give rise to the various conflicting opinions, and to the endless theological quarrels, many of which have remained undecided even to the present day.

(3) *The system.*—(a) *Pre-Tridentine development.*—It was long, however, before the controversy *de Aeternitate* was to be resumed again, when it had been once brought to a temporary conclusion, by the definitive condemnation of the Pelagians, at the Council of Ephesus (431). It was the task of the schoolmen of the Middle Ages to endow the Church with a full and organized theological system, the most perfect monument of which—in fact, the standard systematic exposition of the Catholic doctrine—is to be found in the works of St. Thomas Aquinas (1225-1274), the prince and 'sum' of Catholic theologians, and especially in his *Summa Theologiae*. For those doctors, the problem of understanding how the unavoidable inefficacy of sufficient graces and, more especially, the infallible efficacy of efficacious grace could be reconciled with a genuinely free will appears to have been no puzzle or no particular worry; accepting the mystery as it was, they would all have said quietly with Aquinas: 'As it behoves Divine Providence to preserve, not to pervert, the nature of things, God will move everything according to the requirements of its nature . . . so God moves the human will in such a manner that its motion remains contingent and not necessary' (*Sum.*, prima secunda, q. x. art. 4). God 'knew' how efficaciously to incline the will, without infringing on its liberty; that was enough. All He had decreed about man did find its realization; nevertheless, man was and remained, at all times, perfectly free. This, however, is just what the early Reformers, Luther and Calvin, three centuries afterwards, began by denying, maintaining that the human will had been so hopelessly perverted and weakened by original sin, that, having lost its freedom, it had not the power to resist any more, in any case, either the inclination of corrupt nature or the inspiration of graces, both being irresistible in their action. Hence the obedience of the will to concupiscence or to grace—passive, according to Luther; free from coercion only, according to Calvin—was necessary and irresistible in either alternative. As this doctrine involved the denial of the freedom of the will, it was condemned by the Council of Trent in its sess. 6, where it was declared (can. 4, 5, 6) that original sin had not destroyed the freedom of the will.

(b) *Post-Tridentine controversies.*—It had been the work of the Council of Trent to reassert the dogma of the freedom of the human will; it was, however, reserved to one of the most distinguished theologians of the same Council, Michel le Bay, or Bafus (1513-1580), of the celebrated University of Louvain, to be the first to offer a solution of the mystery of the reconciliation of the freedom of the will with the infallible efficacy of the Divine decrees, which, being in many of its propositions a kind of forerunner of the later Jansenistic tenets, was, after several reproofs, finally condemned in 1580. The effect of that condemnation, pronounced by Gregory XIII., was to stamp out the Bafus doctrines in their original form; but they were soon after revived, by the middle of the 17th cent., in the celebrated heresy which, from its posthumous originator, Bishop Jansen of Yperon (1585-1638), whose *Augustinus* was published in 1640, was to retain in history the name of 'Jansenism' (q. v.). The substance of the system, as it can be defini-

tively gathered from the writings of its parent and adherents, is as follows:

Sufficient grace, which would have been sufficient indeed in the state of innocence, before original sin, is now, owing to the fallen state of human nature, really insufficient; for, as it is the ineluctable law of the will, in its present fallen condition, to follow the more powerful solicitation, if grace, in some cases, proves less attractive and delightful to the human soul, the will will necessarily follow the greater solicitation of sin, and grace will have been insufficient 'in fact'; although it may be called sufficient 'in name'; hence, in reality, there are only insufficient and efficacious irresistible graces.

This is not the place to dwell on the various phases of the quarrel, the substance of the system being what we are mostly concerned with; it is enough to say that, crushed, in spite of all evasions, by several successive condemnations, it was finally extinguished in its ultimate form by the bull *Unigenitus*, directed in 1713 against Jansenism Quenel.

The two fundamental notions, among others, in the Jansenist doctrine of grace, those which distinguish it from the orthodox systems tolerated in the Catholic Church, are therefore: the denial of the real and actual efficiency—practically of the existence—of sufficient grace, and the assertion of the impossibility of resisting efficacious grace, thereby acknowledging in man no other freedom but freedom from coercion, or forcible compulsion. As against these two cardinal assumptions, viz. insufficient and irresistible graces, the orthodox systems maintain, each in its own peculiar way, that sufficient grace is truly and really sufficient, so that it is intrinsically possible to obey it, although, in fact, man never follows its inspiration, and also that it is intrinsically possible not to obey the impulse of efficacious grace; although such a disobedience will involve *involuntarily de facto*.

In the interval of time which divides the condemnation of the Jansenist propositions from the rise of the Jansenist controversy, a Jesuit theologian, Luis Molina (1535-1600), published, in the year 1589, a book entitled *Libri arbitrii cum gratia donis, divina precepsione, providentia, predestinationis et reprobationis concordia*, in which he proposes the following solution of the problem of sufficient and efficacious grace (qu. 14, art. 13, disp. 60):

Sufficient grace gives to man all that is necessary for a supernatural action, by assisting to or dissenting from his impulse, man makes it efficacious himself, God contributing to the determination of the free will nothing beyond a simultaneous concurrence, without which no action of any kind would be possible. Hence, in the Molinist system, the 'determining' cause of the election of the free will was, in each case, that will itself, God being merely a co-operator, working together with the will, 'like two workmen carrying the same stone, or pulling the same boat'—an example, by the way, long before rejected by St. Thomas Aquinas, in the very words afterwards used by Molina.

This doctrine was, from the start, received with marked disfavour by the older Jesuit theologians, and with an outburst of indignation by the Thomistic school—up to that time considered the foremost authority in theological matters.

The Thomists argued that in such a system, the principle of the acquiescence of the free will in the inspiration of grace being the spontaneous choice of the will itself, the efficacy of the decree of God was thereby rendered uncertain, as depending on the arbitrary choice of man; that, moreover, the First Mover was excluded from at least the initial determination, by which the will desired to accept grace and to co-operate with it, which was a metaphysical impossibility, since not even the slightest element of motion or determination could possibly come to existence but from the agency and impulse of God, the efficacy of which must extend to everything, even to the initial determination of the free will; so that otherwise God would not be the universal Prime Mover, and therefore no God. Insisting, as a consequence, that the motion of God, in the case of the free election of the will, must be not only concurrent (viz. subordinate) but pre-determining, they clamoured for an examination and condemnation of these revived 'Semi-Pelagian errors,' as the Thomists called them.

At the instance of the Thomists was summoned the celebrated Congregation de Auxilium, which met from 1592 to 1607 without coming to any definite decision, the only result being a decree

of Pope Paul IV. in 1611, forbidding any further disputation on the subject. The Jansenists, however, who had come gradually to identify themselves, as a body, with the Molinist side in the quarrel, had been made to feel that the doctrine, in its primitive form, was neither safe nor sound enough to hold. Accordingly, in the year 1613 a decree of the General of the Company of Jesus, Claudius Acquaviva, ratified twice afterwards, in two congregations of the Company held in 1616 and 1661, forbade the teaching of sufficient grace as explained by Molina, the Jesuit theologian benedictine unanimously and officially adopting the modified form of Molinism expounded mostly by Suarez (1548-1617) and commonly known by the name of 'Congruism.'

According to this new presentation, what makes the difference between sufficient and efficacious grace is the fact that the former is incongruous, or inappropriate, the latter congruous, or appropriate. In any given case, owing to the disposition and circumstances in which an individual soul will find itself, some form of grace is sure to be incongruous or sufficient only, some other is congruous or sure to be efficacious. If the Divine eternal decree requires that some be given to grace, the congruous one will be provided, if not, the incongruous one only will be offered, which, being incongruous, although certainly sufficient, will, owing to the bad disposition of the subject, remain inefficient. Thus, the infallible efficacy of the Divine decree is preserved, and the freedom of the will remains safe, nothing happening but what God has decreed—and that through the spontaneous choice of the free will.

But, even in its new garb, the Molinist doctrine fared no better at the hands of the Thomists. They maintained the same objections to it as to the pure Molinist form.

(4) The other divisions of actual grace that are commonly proposed, viz. 'operative' and 'co-operative' (*operans* and *co-operans*), 'prevalent' and 'subsequent' (*preveniens* and *subsequens*), 'excitativa' and 'adjuvant' (*excitans* and *adjuvans*), are easily understood. They are merely designations based on the effect which the help of God is understood to exercise on the human soul, in the various different cases.

(5) The cause of grace, as being a quality of a Divine order, has always been understood in the Church to be the Deity alone, as first and principal Cause; although it has been the pleasure of God instrumentally to act through the human nature of Jesus Christ, or through the Sacraments, which, for that matter, are merely a prolongation of and a substitute for the said human nature. It is, however, understood also that 'virtus Dei non alligatur sacramentis,' that is to say, although God pledged Himself always to grant His grace through the Sacraments properly conferred and received in the right dispositions, nevertheless, He reserves to Himself the right to act and confer grace, even without them, for the benefit of those who are culpably prevented from receiving the Sacraments. Ministerial causes of grace are the angels through good inspirations, or men through instruction, prayer, and the Sacraments.

(6) The condition of the reception of habitual grace (through which alone justification is effected) in the individual soul is, according to the definition of the Council of Trent (sess. 6, can. 6), a conversion or motion of the free will towards God, which, of course, is the effect of efficacious grace; and anathema is pronounced (can. 9) against any one asserting that faith alone, without such a movement of conversion of the free will toward God, is sufficient for justification.

As for the question whether any one may have the certainty of being in a state of justification, the Council of Trent (sess. 6, can. 13 and 14) anathematized the Calvinistic and Lutheran contentions that any one ought to persuade himself that he is in a state of justification, and that that sole and very persuasion is the only cause of the said justification. Hence it may be legitimately

inferred that from a Catholic point of view only a moral and human certainty can, ordinarily, be entertained of that fact.

(7) *Another class of graces*, the very improperly so-called *gratia gratiae data* (gratuitous ones), embrace those supernatural privileges or 'charisms,' sometimes granted to a chosen few, to work miracles, to prophesy, to speak foreign languages, and exercise other miraculous powers of the same kind. With those graces we have nothing to do here, but merely remark that they are not more gratuitous than the ordinary graces (habitual and actual) with which we have been dealing thus far; any one of the latter, by the very fact that it is of a Divine order, is necessarily gratuitous and not due, at least as first grace; nevertheless it is always possible, by making good use of one grace to merit another, for, if Nature cannot, grace can merit grace. See art. CHARISMATA.

(3) To what kind of acts must the notion of efficacious grace be understood to extend, or what kind of effects can be obtained only through grace? This is the last question that we must now answer, briefly mentioning the definition of the Church or the decisions of the Catholic theologians on the various points.

Grace is not necessary—as is commonly admitted—for acquiring even a vast and extensive knowledge of natural truths, as such a knowledge is within the natural capacity of the human mind; but a complete and exhaustive knowledge of all the truths pertaining to the natural order of things could obviously not be understood to exist in any human mind otherwise than through a special favour of God. As for supernatural truth, although it is intrinsically possible for any one to recognize the truth of any doctrine or dogma of faith which is properly expounded and proved to him, an acceptance of it, through a supernatural motive, can be the effect only of a double actual grace both in the mind and in the will (2nd Council of Orange, can. 5 and 6; and Trid., sess. 4, can. 3). It is a dogma of faith that man, even in a state of sin, can do some good works, and therefore that the actions of sinners are not necessarily all *iniqua*. This dogma has been repeatedly asserted, against Wyclif and John Hus, by the Council of Constance (sess. 15); against Luther and Calvin, by the Council of Trent (sess. 6, can. 7 and 8); against Balaſus, by Pius v., Gregory XIII., and Urban VIII. (prop. 26, 28, and 40 of Balaſus); and against Quesnel, the last of the exponents of Jansenism, who was condemned by Clement XI. (prop. 44, 45 &c.). The same authorities condemned also the assertions of Jansenius and Balaſus (prop. 26) that all the actions of infidels are *iniqua*.

By the condemnation of the 36th proposition of Balaſus, it became a doctrine of faith that it is intrinſically poſſible to love God above everything, as Author of the natural order of things by natural love; ſuch a ſupreme natural love of God, however, could not be ſo efficacious, in the preſent fallen condition of man, as to entail a perfect fulfilment of all the precepts of the natural law; for, although in the ſtate of innocence ſuch a thing would have been within the natural, unimpaired reſources of human nature, after original ſin only a ſpecial aſſiſtance of God can enable the fallen man to realiſe the ſupreme perfection of non-corrupted nature. If, at the ſame time, we remember that for any precept impoſed on him man always receives a ſufficient grace, we ſee that it cannot be inferred, from the above doctrine, that ſome of the precepts impoſed by God are impoſſible to man—a doctrine condemned by the Council of Trent (ſeſſ. 6, can. 18), and by Innocent X., in the firſt of the celebrated 'five propoſitions' of Janſeniſm. Man, in a ſtate of mortal ſin, cannot for

over resist all other temptations and avoid all other mortal sins without a special assistance of God, for the very same reason that he cannot fulfill all the precepts of the natural law, as we have just stated above.

In a state of justification, man is capable, through ordinary grace, of avoiding each venial sin individually; but only through a special and distinct privilege will he be capable of avoiding them *all* for all his life (Trid. sess. 6, can. 23); that special privilege, however, is universally understood, *propter honorem Domini*, to have been granted to the Blessed Virgin.

The Pelagian doctrine that man may merit the first grace by his good works, performed without the help of grace, and the Semi-Pelagian contention that he can prepare himself for it, so as to create, on the part of God, some kind of obligation to confer it on him, were both condemned by the 2nd Council of Orange (can. 2, 4, 6, 7, etc.)—a condemnation reiterated by the Council of Trent (can. 6, can. 5 and 8)—because no one, except through the use of grace, can make himself in any way worthy of a gift of the Divine order, since by its very nature it infinitely exceeds every human capability. As a consequence, the only orthodox sense that can be attached to the axiom, '*Pacienti quod in se est Deus non denegat gratiam*,' is the following: to him that through the help of prevenient, supernatural grace does all he can God will not refuse the grace of justification. Impeccable, human, and natural honesty alone does not make any man, in any way, entitled to the gift of grace and of justification. That it should be impossible for man to rise without grace from a state of mortal sin is a doctrine that was limited by no one, not even by Pelagius; it was defined as a dogma of faith in the 2nd Council of Orange (can. 14 and 19).

Each supernatural action requires a corresponding natural motion of God on the free will, since no kind of motion can take place without the action of the Prime Mover; but, since the presence of grace, either habitual or actual, does not remove the inherent defectibility of the human will, a 'long' perseverance appears to be the effect of a special help from God (Orange, can. 10 and Trid. sess. 6, can. 2). Final perseverance, involving the conjunction of a state of justification with the last instant of life, is also certainly the effect of a very special favor of God, as the canons just quoted imply, in fact, it coincides with predestination itself, of which it is the necessary and inseparable effect; it does not, however, consist properly in a peculiar motion, or distinct impulse, but ought rather to be described as the result of an ensemble of circumstances brought about by the merciful Providence of God, as an effect of His Divine predestination—circumstances which, of course, will vary with each individual soul.

LITERATURE.—The literature on the subject of Grass is well-nigh inexhaustible, and we shall therefore limit ourselves to the mention of the most prominent names and works only (cf. *Orth. Europe*).

E. L. VAN BEOULDER.

GRACE AT MEALS.—The Christian practice of grace at meals has its roots in the religious instincts of the human race. It consecrates even the simple meal. It is a witness to the religious solemnity which is attached to every meal as an act of maintaining human life, and as a means of devoting the fruits of the earth to their highest use. Grace at meals consecrates at once the meal itself, the gifts which are consumed, and those who consume them, to God's service. An invitation to dinner in the 2nd cent. A.D. runs:

'Charonem rogatus per te ad cenam ad te domo de the Lord Serapion (sic) in the Serapeum to-morrow, the 15th, at 8 o'clock' ('The Oxyrhynchus Papyri', pt. 1, p. 177, *Egypt. Papyri*, Fund., Greek-Roman Branch, 1896).

Such a meal in the Serapeum witnesses to the religious character even of the social meal. And the custom of libations in pre-Christian times stamps the same religious character on every meal. The Homeric feast was not complete without the *crwth* or *κρητή*, the drink-offering poured out either on the hearth, the floor, or the altar, to the gods: *κρητήν τε γαστήριον τε καὶ ὀφθαλμοῖς, ἡ δὲ δαίμων δέρι* (Hom. Od. III. 45). It was a drink-offering and a prayer, in this case to Poseidon. The Romans practised similar rites. The *secunda coena*, or dessert, was separated from the earlier part of the meal by the offering of the *mola salsa*, the meal-offering of spelt and salt, and the *libatio* either to the Lares or to some one of the gods. Pliny witnesses to the early origin of the rite: 'Numa instituit deos fruges colere, et mola salsa supplicare' (HN xviii. 2). Vergil refers to the libations at the feast before the tomb of Anchises:

'Elic duo rite mero stans caribena saccha
Fecit humi, duo lacte novo, duo sanguine sacro'
(Aen. v. 774).

The Jews, like the Greeks and the Romans, consecrated their meals with the *brakka*, or blessing (EB, col. 2906). The sacrificial feast at the high place of the city in 1890 was delayed until the coming of Samuel to 'bless the sacrifice.' This is the earliest example of grace before meat. On the occasion of the reception of the Jewish scholars in Egypt by Ptolemy Philadelphus (285-247 B.C.), it is recorded in a letter of pseudo-Aristeus (a. 200 B.C.) that Elisha the priest, one of the delegates, was asked to say grace (*εὐχαριστία*), and that he said it standing. Josephus says of the Essenes:

'A priest says grace before meat, and it is unlawful for any one to taste of the food before grace be said (*εὐχὴν εἰπεῖν*). The same priest, when he hath dined, says grace again after meat; and when they begin, and when they end, they praise God, as him that bestows their food upon them' (AJ vii. 6).

The treatise *Berakhot* proves that this custom was established by the end of the 2nd cent. A.D. Women, slaves, and children were to say grace, though they were free from other religious duties. The blessing of the bread reads:

'Blessed art Thou, O Lord our God, King of the Universe, who bringest forth bread from the earth.'

The blessing of the wine is:

'Blessed art Thou, O Lord our God, King of the Universe, who createst the fruit of the vine.'

Among the forms of grace after meat is:

'Blessed be the Lord our God, the God of Israel, the God of hosts, enthroned upon the Cherubim, for the food which we have eaten.'

The NT witnesses to the grace before meat. Our Lord in the miracle of the Feeding of the Five Thousand blessed the loaves and fishes: *εὐλόγησεν αὐτὰς ὁ ἰησοῦς* (Mt 14¹⁹; cf. Mk 6⁴¹, Lk 9⁴¹). In the miracle of the Four Thousand, He gave thanks: *εὐχαριστῶνς ἑλάσεν αὐτὰς* (Mt 15³⁶, Mk 8⁶). St. John (8¹¹) uses the latter term, *εὐχαριστῶνς*. St. Paul refers to the practice of grace, and states clearly its spiritual meaning:

'Meals, which God created to be received with thanksgiving (*μετὰ εὐχαριστίας*) by them that believe and know the truth. For every creature of God is good, and nothing to be rejected, if it be received with thanksgiving: for it is sanctified (*ἁγιασμένη*) through the word of God and prayer' (1 Ti 4⁴⁻⁵).

The earliest witnesses to the practice in the 2nd cent. are Clement of Alexandria and Tertullian. Clement, in his *Pædagogus* (a. A.D. 100), referring to the matter of fasts, says:

'It is meet before we partake of food to bless (*εὐλογεῖν*) the maker of all things, and to sing (*ψάλλειν*) when drinking' (II. 4).

In the *Stromateis* (a. 200-202) he speaks of prayers and praises (*εὐχαὶ καὶ ᾠαὶ*), and readings (*διδακταὶ καὶ ψαλμοὶ*) before eating; and psalms and hymns (*ψαλμοὶ καὶ ᾠαὶ*) afterwards (vii. 7). Tertullian, in his *Apologétique*, ch. 39 (A.D. 197), refers to prayer before and after meals:

'Non prius discumbatur quam oratio ad deum paucis... Aque oratio convivium dirigit.'

St. Basil, writing a. 360, refers to the *εὐχὴ πρὸ*

the *propheta* and those *propheta* (*Ep. II. ad Greg.*). And both Tertullian and St. Chrysostom witness to the use of the sign of the cross on such occasions. Tertullian, in his treatise de Corona (c. 211), writes: '... *menens . . . frontem signaculo terimus*,' the sign being used on the forehead (ch. 3). St. Chrysostom says that even swine's flesh is not unclean when received with thanksgiving and marked with the sign of the cross (in 1 Tim. 4, hom. xii.).

Don Paul Cagin (*L'Eucharistie primitive*, Rome, Paris, Tournai, 1912, pp. 252-253) has shown that the prayers for the blessing of the cup and the blessing of the bread in the *Didache* (ch. ix.) are not Eucharistic. They may, therefore, be noted as among the earliest forms of grace at meals.

The Apostolic Constitutions (c. 400) gives the first example of the form in words:

'*Oratio in prandio: Benedicite deo, Domine, qui nostris nos a peccatis nostris, qui deus omni carni, imple prandio et lectulo corda nostra ut . . . abundamus in omni opere bonum in Christo Jesu Domino nostro, per quem . . .*' (vii. 46).

The Western practice appears in two monastic rules. The Rule of St. Benedict says:

'*Ad mensam autem, qui ante vestram non occurrerit, ut simul omnes dicant verbum et orant . . . corripitur . . .* Similiter autem postea, qui ad illam vestram non fuerit possumus, qui post cibum dicatur' (c. 48 [P.L. lvi. 674]).

And St. Columban says:

'*Si quis non venerit ad orationem super cibum et post cibum, dicens: Domine, deus tuus, qui deus tuus . . .*' (in *Psalm.* [P.L. lvi. 683]).

The earliest Western formularies are in the *Gelasian Sacramentary* (7th cent.). There are six 'orationes ante cibum,' and two 'orationes post cibum.' The first reads:

'*Requies, Domine, deus tuus, et spiritus sanctus tuus largiente cunctis. Per, etc.*

The fourth reads:

'*Benedicite, Domine, deus tuus, qui deus tuus largiente cunctis. Per, etc.*

The sixth reads:

'*Tua nos, Domine, deus tuus, et spiritus sanctus tuus largiente cunctis. Per, etc.*

These appear also in the *Leofric Missal* A of the first half of the 10th century. The second form 'post cibum' reads:

'*Sancti spiritus, Domine, deus tuus, qui deus tuus largiente cunctis, qui deus tuus largiente cunctis, qui deus tuus largiente cunctis . . .*' (*Gelas. Sacr.*, ed. Wilson, Oxford, 1894, p. 281.).

The *Leofric Missal* has forms also 'ad cibum benedicendum' and 'ad potum benedicendum.' Among the former is:

'*Quod nobis est apponitur dei illius benedictio;* among the latter:

'*Nos deus et nostra benedictio postea christus*' (*Leofric Missal*, ed. Warren, Oxford, 1894, p. 5).

Two prayers for use at meals occur in the Bobbio MS of the *Sacramentum Gallicanum*. The 'Benedictio ad mensam' is similar to the fourth in the *Gelasian Sacramentary*:

'*Benedicite nobis, Domine, deus tuus, qui deus tuus largiente cunctis, qui deus tuus largiente cunctis . . .*

The 'Benedictio post mensam levata' is the first example of the memento of the benefactors in the grace:

'*Gratias tibi agimus, omnipotens, aeternus Deus, qui nos deus tuus largiente cunctis, qui deus tuus largiente cunctis, qui deus tuus largiente cunctis . . .*' (*Gelas. Sacr.*, ed. Wilson, Oxford, 1894, p. 281.).

The order of grace at meals is fully given in the Customaries of St. Augustine's, Canterbury, and St. Peter's, Westminster. The shorter form occurs in reference to the meal of the Lector and the four Servitors:

'*Dicit unusquisque secretos sub silencio "Benedicite"; et . . .* *inter saltem ad cibum devote subjungat: "Oremus: Domine, deus tuus, qui deus tuus largiente cunctis, qui deus tuus largiente cunctis . . ."* (Henry Bradshaw Society, vol. xlii. p. 164; cf. vol. xlviii. p. 104). At the close: "Vernus: "ad cibum benedicendum in nomine Domini." Versus: "Sit nomen benedictum." Oratio: "Requiesce" et cetera. "Benedicite Domine." "Fidelium animae."

The fuller form of grace was used at the common meal in the refectory:

'*Et unusquisque . . . in ordine suae conversationis stare debet, priusquam a cantore incipiat "Benedicite". . .* *Aique cantor vel servitor in eodem loco statit post refectionem, inchoando "Confiteantur" sive "Memoriam". . .* *Incipio autem "Benedicite" ante refectionem, stabili presidens, sicut et veteri fratres, ad orientem intentus, atque ad "Gloria Patri" et domini benedictionem dicitur orare . . .* *et (si) sacerdos proferat benedictionem, stabili, sicut et alii, suppliciter inclinans. . .* *Sed, probata benedictione, quicunque eam (inclinans) sonaverit, cum pronuntiaverit sacerdos "Spiritus sancti, Deus," erigat se, et ad mensam superius intrabit. Ceteri vero stabili inclini, quousque dixerit sacerdos "Per omnia secula amen." atque tunc se erigant omnes in respondendo "Amen" (ib. vol. xlii. p. 164 f., cf. vol. xlviii. p. 104).*

Grace after meals is referred to in the Customary of St. Peter's, Westminster:

'*Incipiant omnes pariter sub silencio "Confiteantur tibi, Domine," vel "Memoriam tui," et postquam ad "Gloria Patri" et "Sicut erat" se inclinaverint, erigat se sacerdos qui prior est in ordine et dicat: "Agnus Dei, qui tollis, vel "Benedicite Deo in domo sua," ceteris interius inclinantibus" (vol. xlviii. p. 132).*

The Canterbury text (Brit. Mus. Coll. MS Faustina C. xii.) is dated 1230-1240. The Westminster text (Brit. Mus. Coll. MS Otho C. xi.) is of the latter part of the 14th century. They represent the Benedictine use at that period. The full grace occurs among the 'Gratiarum actiones' of another Westminster MS, c. 1500, Bodl. MS Rawlinson Liturg., g. 10 [N.C. 15832]. It is printed in vol. iii. of the *Westminster Manuscript* (H. Bradshaw Soc., vol. xii. pp. 1877-1879).

'*Ante prandium gratias:—Benedicite. Omni cunctis in te sperant . . . et implent omnes animas benedictione. Gloria patri. Kyrieleyson. . .* *Et ne nos. Oremus. Benedicite, Domine, deus tuus, qui deus tuus largiente cunctis, qui deus tuus largiente cunctis . . .* *Jesu, Domine (de), benedictio. Memento cunctis participes facies nos rex aeternae gloriae. Amen.*

'*Post prandium:—Deus pater et dilectionis munus semper nobiscum. Tu autem Domine. Confiteantur tibi Domine omni opere tuo: Et manet tui benedictio tibi. Gloria patri. . .* *Laude te Domine. . . Gloria patri. Agnus tui gratias, omnipotens Deus, pro universis benedictio tui qui vivis et regnas. Per omnia secula seculorum. Amen. Laude te Domine. . . Gloria patri. Sicut erat. Kyrieleyson. . .* *Pater noster. Et ne nos. . . Sit nomen domini benedictum. Retribuere dignare, Domine Deus, omnibus nobis bonis incalculabilibus propter nomen tuum vitam eternam. Amen. Benedicite Domine. Mater ora filium. . .* *Ane sanctus rex edwards inter celi filia. . .* *Pro defunctis:—De profundis. . . Requiem eternam. . .* *Oratio:—Absolve, quoniam, Domine, anima. . . Amen.*

This grace after meals explains the order in the Customary of St. Peter's, Westminster, and the reference to founders and benefactors in the later College graces (H. Bradshaw Soc., vol. xii. p. 1878 f.).

Hearne, under date 17th Oct. 1712, refers to a grace written in an old Roman breviary of 1590, and belonging to Norwich, used probably in one of the religious houses of Norwich:

'*Benedicite, Domine, creaturam istam (de), sicut benedixisti quinque panem in deserto; ut omnes praeantes ex eo (de) tam corpori quam animae recipient sustinent*' (Hearne's Collections, vol. II, Ox. Hist. Soc., vol. xlii. [1894], p. 473; cf. 'Benedictio panis' in *Rom. Brev.* of 1515 [H. Bradshaw Soc., vol. xlii. p. 314]).

The College use may be illustrated by the Brasenose College Graces:

'*Ante prandium:—Omni cunctis spectant in Te, Deus! Te deus ille omni tempore opportuno. Aperis manum Tuam et imple omnes animas Tuae benedictione. Memento cunctis nos participes facies, Deus, Rex aeternae gloriae.*

'*Post prandium:—Qui nos creavit, redemit, et parit, sit benedictus in aeternum. Deus, exaudi orationem nostram. Agnus tui gratias, Pater coelestis, pro Gulielmo Smyth episcopo, et Ricardo Sutton milite, Fundatoribus nostris, pro Alexandro Novel et Joannem Frankland, aliisque Benefactoribus nostris; humiliter Te precantes ut eorum videretur benignissime adaugere. Ecclesiam Catholicam, et populum Christianum custodi. Haereticos et errores omnes extirpa. Victorem Regiam nostram et subditos ejus defende. Pacem deus et conserva per Christum Dominum nostrum.*

Wickham Legg (Ox. Hist. Soc., vol. III. p. 215) compares this grace with those in the *Barum Manual* of 1501, and with the Latin graces in the early primers and the English in the later primers.

Wickham Legg writes (ib. p. 215): 'The idea of the commemoration of benefactors may have arisen from the commemoration of the faithful departed in the *Barum Manual*; the primers often have at end: "God save the Church, King, and Realm, and God have mercy on all Christian souls. Amen." But the practice is as early as the Bobbio *Sacramentum Gallicanum*, as quoted above.

'Agnus cœlestis'—Omnipotens et omnipotens Deus, sine quo nihil est dulce nihil odoriferum, misericordiam Tuam humiliter imploramus, ut nos cœlestem nostram benedictionem; ut corda nostra exultemus; ut quæ suscepturi sumus alimenta, Tu honor, Tuasque benedictiones acceptis referamus: per Christum Dominum nostrum.

'Post cœnam'—Quod corpus nostrum, Deus optime maxime, obis potius abunde refectis, agimus Tibi gratias, quoniam postquam maxime: simulque precamur, ut animas nostras verbo et spiritu deinde parcas; ut omnia male fugiamus; ut quæ sunt Tibi placitura perfecte intelligamus, diligenter meditetur, et ad ea præstanda tota impetu feramus: per Christum Dominum nostrum.

The first of these, but for the *et* between *omnipotens* and *omnipotens*, has the liturgical stamp in its rhythm and its language. The second is probably of later date; the language is academic, and the *Deus optime maxime* is not liturgical. Wickham Legg says that these two graces stand almost alone (*Ori. Hist. Soc.*, vol. liii. [1909], 'Bracton's Quatercentenary Monograph,' p. 211 f.).

There is reference to the grace in a roll describing the feast at the enthronization of George Nevill, Archbishop of York, in the year 1466.

Before the feast, the minister of the Church doth after the old customs, in saying of some proper or godly Carol. After the feast, and before the ale and wine are brought in, 'all the Chaplains must say grace, and the Ministers do sing' (*Leander's Collection*, ed. Haines, Lond. 1774, vol. vi. p. 12).

The French language has preserved the old name *benédicite* for 'grace.' To say grace is *dire la benédicite*, or *dire ses grâces*. The English phrase 'ask a blessing' seems a reminiscence of the *Jube, domine, benedicere* of the Church. The Italian has *benedizioni della tavola*, the Spanish *benedecir la mesa*.

The English grace at meals in common use is this:

Before meals—For what we are about to receive the Lord make us truly thankful, for Christ's sake. Amen.

After meals—For what we have received the Lord make us truly thankful, for Christ's sake. Amen.

The grace before meals has an echo of the 'sumus sumpturi' of the fourth form in the *Gelasian Sacramentary*.

Another English grace is an echo of the older benediction:

Before meals—Bless, O Lord, these gifts to our use, and ourselves to Thy service, for Christ's sake. Amen.

After meals—For these and all His mercies, God's holy name be praised, for Christ's sake. Amen.

A short Latin grace also used in England is this:

Before meals—Benedicite benedict, per Jesum Christum Dominum nostrum. Amen.

After meals—Benedicite benedict, per Jesum Christum Dominum nostrum. Amen.

French and English Roman Catholics have the following form:

Before meals—P. Benedicite. R. Dominus. Nos et ea quæ sumus sumpturi benedicti dextera Christi in nomine Patris et Filii et Spiritus sancti. Amen.

After meals—Agimus tibi gratias, omnipotens Deus, pro universis benedictis tuis, qui vivis et regnas in secula seculorum. Amen. P. Benedicamus Domino. R. Deo gratias. Fidelium animas per misericordiam dei requiescat in pace. Amen (*Ordo Missæ, ou l'Évangile de la Parole*, Rouen, 1878, p. 179).

The old College grace among English Roman Catholics is much the same:

Before meals—Benedic, Domine, nos et hæc tuis dona quæ de tua largitate sumus sumpturi per Christum Dominum nostrum. Amen.

After meals—Agimus tibi gratias, omnipotens Deus, pro universis benedictis tuis, qui vivis et regnas in secula seculorum. Amen.

These appear in English in the following forms of grace:

Before meals—Bless us, O Lord, and these thy gifts, which we are about to receive of thy bounty, through Christ our Lord. Amen.

After meals—We give thee thanks, Almighty God, for all thy benedictions, who livest and reignest world without end. Amen (*The Garden of the Soul*, ed. a. 1808, p. 233).

It used to be regarded as the duty of the head of the house to say grace at his own table, as is illustrated by a statement of Addison in no. 458 of the *Spectator*, Friday, 15th August 1712,

where he censures the false modesty of the English gentleman:

'Our Excess of Modesty makes us shamefaced in all the Exercises of Piety and Devotion. This Humour prevails upon us daily; inasmuch, that at many well-bred Tables, the Master of the House is so very Modest a Man, that he has not the Confidence to say Grace at his own Table. A Custom which is not only practised by all the Nations about us, but was never omitted by the Heathen themselves. English Gentlemen who travel into Roman Catholic Countries, are not a little surprised to meet with People of the best Quality kneeling in their Churches, and engaged in their private Devotions, tho' it is not at the Hours of Publick Worship. An officer of the Army, or a Man of Wit and Pleasure in those countries, would be afraid of passing not only for an Irreligious, but an Ill-bred Man, should he be seen to go to Bed, or sit down at Table, without offering up his Devotions on such occasions.'

At a public dinner, the Chaplain or the Rector or Vicar of the parish, or some other clergyman, is called upon to say grace. This is also an old custom in some private houses. There is also the custom of the younger children saying grace on behalf of the family. Is it in reference to our Lord's words: 'Yea; have ye never read, Out of the mouth of babes and sucklings thou hast perfected praise' (Mt 21¹⁶)?

The metrical graces in general use in schools were written by John Cennick, a friend of the Wesleys. They were first published in 1741 in his *Sacred Hymns for the Children of God, in the Days of their Pilgrimage* (London, 1741, p. 180).

Hymn cxxx. Before Meat—

'Be present at our Table, Lord;
Be Here, and Everywhere adored;
Thy Creatures bless, and grant that we
May feast in PARADISE with Thee.'

Hymn cxxxi. After Meat—

'We bless Thee, Lord, for this our Food;
But more for Jesus' Flesh and Blood;
The Manna to our Spirits giv'n,
The Living Bread sent down from Heav'n.'

There are four more lines in this latter grace, but they have not come into use. The Eucharistic character of Cennick's Grace after Meat is lost in the version published in Bickersteth's *Christian Psalms* (c. 1833). This more modern form reads:

'We thank Thee, Lord, for this our food,
But bless Thee more for Jesus' blood;
May Manna to our souls be given,
The Bread of life sent down from heaven.'

These metrical graces in their original form breathe in every line the inspiration of the Benedictions of the old Service Books of the Western Church.

GRACES.—See CHARITIES.

GRÆCO-EGYPTIAN RELIGION.—1. **Introductory.**—The Macedonian conquest of Egypt is, for practical purposes, the starting-point for any account of Græco-Egyptian religion. Before that time there had been little, if any, interchange of religious ideas between the two countries: such knowledge as the Greeks possessed of Egyptian gods and worship was of the most superficial nature, while there is no evidence, and no likelihood, that the Egyptians cared to make any inquiry as to Greek theology. There had been a commercial intercourse across the Levant which, so far as can be judged from archaeological finds, extended back to the period of the earliest Egyptian dynasties; and at least four centuries before the time of Alexander the Great a factory for Greek merchants was definitely established near the mouth of the Nile. But those who sojourned at Naukratis, though they doubtless reported to their friends in Greece such information as they were able to collect about the customs of the strange country

which they had been privileged to enter, would have little chance of learning more of its religion than could be gathered from observation of the native quarter of the town, in such external details as the forms in which the gods were represented or the manner in which the festivals were conducted. A certain number of Greeks penetrated further into the country as mercenaries in the Egyptian army; but it could hardly be expected that these soldiers of fortune would furnish any reliable account of the theology of their employers. Even after the Persian conquest of Egypt, when the valley of the Nile became more open to foreigners, a Greek traveller with some pretensions to training in the collection of facts was unable to add to the existing stock of information on Egyptian religion anything more than what filtered to him through guides and interpreters; and, if a Greek student actually went to live in Egypt, in order to learn something of the wisdom of the Egyptians, his lessons would appear to have been confined to secular sciences. Neither Herodotus nor Plato displays any kind of acquaintance with the philosophy of Egyptian religion.

While the Greek visitors to Egypt gathered little knowledge of the Egyptian gods, the Egyptians do not appear to have taken any interest in the Greek gods whom they might have studied at Naucratis. There were, in the Greek quarter of that town, a number of temples; if there existed a strong contingent of merchants from some particular Greek State, they erected a building in which they could worship the protecting deity of their home. Thus the Mænians had their temple of Hera in Naucratis, the Milesians theirs of Apollo, the Arginæans theirs of Zeus.¹ If the community was too small or too poor to maintain a separate temple, they could find a place in the precinct of the gods of the Greeks, and there make their dedications to their patron. But the very extensive series of objects connected with religious worship which has been found on the site of Naucratis yields no evidence whatever of Egyptian influence on the Greek cults which had been planted there, or of any notice of the Greek gods by the Egyptians.² So far as the Egyptians were concerned, Zeus, Hera, and Apollo remained as much strangers and foreigners in Naucratis as in their homes across the sea.

It is true that a few sporadic instances are recorded in which a member of one nation would appear to have recognized a god of the other. On the Egyptian side, however, the recognition is practically confined to cases in which a king of Egypt sent a gift to a Greek temple;³ and the motives of such actions were probably political rather than religious. The early Greek dedications to Egyptian gods—e.g. to Zeus Thebaïos (Ammon) or to Apis—were probably more genuine acts of worship, but they are extremely rare. The names of Greek visitors which are to be found scratched on the walls of Egyptian temples, so far as they date before the time of Alexander, may safely be disregarded;⁴ there is nothing to show that in any instances they were inscribed as an act of homage to the deity who dwelt in the temple, and they probably testify to the absence, rather than to the presence, of any feeling of reverence in the writers.

The conquest of Egypt by Alexander and its settlement under a Macedonian government which

developed into the dynasty of the Ptolemies placed the Greeks in an entirely new relation to Egyptian religion. They were no longer visitors or sojourners in the country; they became domiciled throughout its length and breadth, not merely as officials or in garrisons, but in every rank and occupation. In a few centres they formed more or less cohesive groups, as in the case of the colonists of the Fayum; and the towns of Ptolemais and Alexandria were actually organized on Greek lines; but there were a very large number of Greeks, or at any rate men bearing Greek names, scattered about the Egyptian towns and country districts, probably in a manner and position generally similar to those of the modern Greek settlers in the Egyptian villages to-day. These Greeks would hardly anywhere be sufficiently numerous to establish a centre for the worship of their own gods; but, if they wished to find facilities for invoking divine help, there were temples ready to hand. It is true that the names and attributes of the deities were strange; but the one practical result of the inquiries by earlier Greek travellers into Egyptian religion had been the formation of a catalogue of identifications of Greek and Egyptian gods, which is preserved in the account of Herodotus. These identifications were based on very superficial evidence; still, such as they were, they supplied a sort of traditional connexion, which was rapidly accepted, as may be seen from the names given by the Greeks to the more important Egyptian towns: in nearly every instance those were known to the Greeks as the cities of the accepted Greek equivalents of the principal Egyptian deities worshipped in the respective towns. And there was nothing foreign to the general religious theories of the Greeks in a synonymy of gods; so that it was without difficulty that the Greek settlers entered the Egyptian temples and made their offerings to the native deities on the strength of an identification which would be more or less real according to the degree of culture of the individual worshipper. The more educated might reason out, to their own satisfaction, the similarity of attributes between two different gods; to the ignorant, names were of little account, and it was safest to secure the protection of the accepted lord of the district.

The Egyptian priests, on their side, were probably nothing loth to adopt these new followers of their gods. It was no more alien to the Egyptian than to the Greek religion to identify one of their own deities with a foreigner. Indeed, the Egyptian theology was already a fusion of many systems, drawn from all the nations which had occupied or influenced Egypt throughout its history. From time to time fresh gods had been introduced, only to be absorbed into the general medley of Egyptian religion; and the various rises and falls of the power of the priests had tended to increase the complexity. When the priests held a commanding position in the country, it was all to their advantage to multiply the number of gods and secure fresh endowments for their new creations; when an unsympathetic ruler crushed them and took away their property, they amalgamated gods so that one worship could be supported by the revenues which were no longer adequate for two. It was a small matter to add a fresh set of identifications to those which had been formulated in the past. And the adhesion of members of the conquering race would be welcome to the Egyptian priests, not only on account of the material value of their support, but also as some guarantee that the native religion would receive recognition from the new rulers.

The general result of these tendencies was to produce throughout Egypt a popular acceptance of native gods as the equivalents of Greek ones,

⁵ See Sayce, in *P&BA* x. (1897-98) 570, on Greek graffiti at Abydos.

with a crude and imperfect fusion of religious ideas, which formed one, though not the most essentially important, element in Greco-Egyptian religion.

At one point, however, the circumstances were in every way different—at Alexandria. The old temples of the Egyptian village of Rakotis could not have been by any means adequate for the religious needs of the new capital, and fresh provision for worship was therefore necessary. The Greek population of the city would have been sufficient to maintain a cult of a distinctively Hellenic character; but it was drawn from sources too diverse to furnish a preponderating element in favour of any particular Hellenic deity. At the same time, there was too strong an intellectual element in Alexandria to permit of the crude equations which passed muster in the country being accepted for the capital. Above all, here was the residence of the king, who had to solve the problem of governing his mixed races of subjects without doing violence to the ideas of either Greek or Egyptian—to fit Hellenic improvements into the immemorial polity of the Pharaohs—and not the least difficult item in this problem was the religious question. Practically, it was imperative that a presiding deity for the new city and an official cult for the new dynasty should be found of a character which would be acceptable alike to Greek and to Egyptian. The genius of the first Ptolemy and his advisers was equal to the task: an effective solution was reached in the invention of Sarapis.

2. The trial of Alexandria.—(1) *Sarapis*.—The origin of the worship of Sarapis has been traced by different writers to various lands; and possibly every ascription is, in some degree, correct. As a matter of fact, Sarapis came into theological existence at Alexandria in an altogether unusual manner: he was virtually the result of the investigations of a body of philosophers and priests, who collected from all sources and fused together whatever ideas or attributes would be of service for their new conception; and the success which attended their work is shown not only by the wide acceptance of the deity whom they formed, but by the difficulty which subsequent students have experienced in discovering his origin.

The type under which Sarapis is represented is distinctively Hellenic; and there is no reason to doubt the statement of ancient historians that the great statue in the temple at Alexandria, which determined this type, and is well known from many copies, was imported from Sinope, and was originally a representation of Hades, made by Bryaxis.¹ There is more doubt as to the source from which the name of Sarapis was derived; probably it is not Egyptian, and it has been traced, on fairly strong evidence, to a Babylonian origin.² It is not necessary to suppose that it came, with the statue, from Sinope: the name, at any rate, would be learnt at Babylon by Ptolemy and his companions,³ and the statue certainly did not represent a Babylonian god, and would not have been thought by Ptolemy to do so. Ptolemy's committee may well have selected the Babylonian name and the Sinopian statue as suitable elements for their new eclectic deity, without the existence of any previous connexion between the two. Some of their reasons for the choice may be found. Though the name of Sarapis was not Egyptian, it had a superficial resemblance to Osorapis, the Greek form of the name under which the dead Apis-bull was wor-

shipped at Memphis;⁴ and the recognition of this resemblance influenced the acceptance of Sarapis by the Egyptians, as can be seen in the persistence of Apis-worship in association with temples of Sarapis, described below. This similarity of names may have been the starting-point for the identification of Sarapis with Hades, through the ethnionic attributes of the Osirian deity, and have dictated the choice of a statue of Hades to represent the new god: and, again, the statue may have been obtained from Sinope on the suggestion given in the name of the town compared with the Egyptian *sen-apt*, 'the house of Apis.' Trivial as these links may appear, they would be sufficient for their purpose of securing the common homage of Greek and Egyptian. Moreover, while the new god was presented to the Greek in an image fashioned according to a type with which he was familiar, and inherited the attributes of a member of the Homeric cycle, yet the chosen Greek divinity was one whose worship had been so little defined that there was no serious difficulty in the way of re-moulding the popular conception of him and enlarging the sphere of his powers. On the Egyptian side, the Osirian element brought into the Sarapis-worship through the medium of Osorapis rapidly led to the removal of Osiris himself from the commanding position he formerly occupied in Egyptian theology, and to his supersession by Sarapis. The summary of the chief records of Sarapis-worship in Egypt will illustrate the foregoing points.

According to the orator Aristides, there were in the 2nd cent. A.D. forty-two temples of Sarapis in Egypt.⁵ This number, which is approximately that of the nomes known to have existed about the same period, suggests that there may have been such a temple in each nome, probably in the chief city, which was regarded as the official centre of worship. This supposition is, to some extent, borne out by the notices of the Sarapeion at Oxyrhynchus contained in papyri, which show, incidentally, that it was a building of considerable size, almost as large as the temple of the special local deity Theoris, and larger than the theatre or the gymnasium, to judge from the number of guards assigned to each of these places.⁶ It is hardly likely that Aristides would include in his reckoning, or, indeed, be aware of, such out-of-the-way temples of Sarapis as that of which a dedication—later, indeed, than his time—has been preserved at Senekis near the emerald mines of the Eastern desert;⁷ many such local shrines may have existed. But, apart from Oxyrhynchus, the only nome-capital which has yet furnished any considerable body of documentary evidence concerning its temples in Greco-Roman times, there are only three places where Sarapis was worshipped, which are likely to have been included in the forty-two temples of Aristides, as to which any definite information exists. The most important of all was, of course, the temple at Alexandria, the first seat of the worship of Sarapis in Egypt, and the resting-place of the original image. It is unfortunate that excavations on what is unquestionably the site of the Sarapeion—the mound marked by the column of Diocletian, or 'Pompey's Pillar'—have failed to give any plan of the temple or of the surrounding buildings.⁸ If the representations on coins can be

¹ There may also have been a temple of Osorapis at Rakotis; an early Ptolemaic religious handbook (*Cairo Catalogue*, 'Demet. Papyrus,' no. 21100) mentions the House of Osiris at Rakotis. The name of Rakotis itself may have suggested a link in the chain of association, as *Spangberg* identifies the Rakotis of a *Cairo* inscription (*Cairo Catalogue*, 'Demet. Inscriptions,' no. 21110) with the Sarapeion of Memphis.

⁴ *CTG* III. 6000.

⁵ A description of the work on the site of the temple at Alexandria is given by G. Rott, *L'Arséne de l'Alexandrie et le Sarapeion*, Alexandria, 1906; additional details in *BSA*, 1906, v.

⁶ *Ariston*, *Demet. vii.* 22.

trated, the temple itself was of Greek architectural style;¹ and with this the scanty remains found on the spot agree. Besides the actual shrine, there must have been a great mass of other edifices round it, which were used for secular purposes, such as the library and the archives, though included under the general name of the Sarapeion.² The records of the worship have vanished with the walls; but one interesting discovery was made on the site, in the form of a statue of an Apis-bull dedicated to Sarapis in the reign of Hadrian,³ which shows that the connexion of ideas which had originally arisen from the similarity of the names of Sarapis and Ocorapis still persisted. At Memphis, a second great centre of the cult of Sarapis, the persistence of the Apis-element was even more marked, as was only natural in the home of the worship of Apis: by the side of the funerary temple of the bulls there arose a Greek Sarapeion, which seems to have been the chief in a considerable group of religious or semi-religious buildings, and to which the older shrines, such as those of Apis and Ptah, became subordinate. In this case, also, excavation of the site has provided little evidence of the nature of the temple or of the worship; the architectural remains are of a very obscure character, and the minor objects found have little connexion with Sarapis. Papyri show, however, that the place harboured, besides the priests of the temples, a number of *reclusi*,⁴ and provided an industry in dream-oracles; the sign-board of an interpreter of dreams was discovered.⁵ The cult of the sacred bull, however, lasted on until Roman times, and the name of Ouiris Apis, or Ocorapis, occurs regularly in demotic, and occasionally in Greek, documents.⁶ At the third great temple, that of Abydos, it was not Apis, but Ouiris, that Sarapis had supplanted; and here, in fact, Sarapis almost became a Greek translation of Ouiris. Thus the statue placed over the graves in the great cemetery of Abydos, which were commonly decorated with a scene of Ouiris seated in state to receive the dead man in the lower world, according to Egyptian tradition, when inscribed in hieroglyphs or demotic are addressed to Ouiris, when in Greek to Sarapis.⁷ Perhaps the clearest instance of the equation is to be found in a bilingual inscription, where not only is the name of Ouiris in the Egyptian version rendered by Sarapis in the Greek, but the name of a man *Pannuris* is translated as Sarapis.⁸

On the Egyptian side, therefore, it may be taken that the worship of Sarapis to a certain extent absorbed or coalesced with that of Ouiris and of Apis; and at the same time from the Greek point of view he was identified with several Hellenic gods. As the supreme deity of Alexandrian theology, he naturally took the place of Zeus; and the compound title of Zeus-Sarapis is a common one. This equation again reacted on Egyptian conceptions, and through the old form of Zeus

Ammon brought in the attributes of Amen-Ra from native traditions. Amen-Ra being a sun-god, Zeus Ammon Sarapis was further united with Helios—a union which was probably strengthened by the solar elements present in the worship of Ouiris and Apis. The traditional ascription of the type-statue of Sarapis linked him with Hades; and in this again the Ouiris idea would be another point of contact, in view of the chthonic powers of Ouiris. Finally, to emphasize the universal nature of his domain, over sea as well as over land, sky, and the lower world, Sarapis was joined with Poseidon. Assertions of these identifications are to be found not only in inscriptions bearing such titles as Zeus Helios Sarapis,⁹ or, carrying translation further into the Roman cycle of gods, Jupiter Neptunus Sarapis;¹⁰ or in types such as that found on Alexandrian coins, where Sarapis wears the horn of Ammon and the radiated diadem of Helios and carries the trident of Poseidon, to which attributes are added the staff of Asklepios and the cornucopiae of Nilus;¹¹ but, in the more emphatic statements of a graffiti, *ὁ Ζεὺς Σάραπις καὶ Ἡλῖος Ἰσχαριόφης*,¹² and of the emperor Julian, *ὁ Ζεὺς, ὁ Ἀδύς, ὁ Ἡλῖος καὶ Σάραπις*.¹³

There are two facts which appear to point to a marked individuality in the worship of Sarapis. Although he is addressed by compound names, it is very rare to find a distinctive epithet attached to these. Practically the only special title which is given to Sarapis is that of *Pollux*, which occurs in inscriptions at Kois¹⁴ and Koptos,¹⁵ and may be due to his identification with Zeus. This title recalls Julian's mention of him as *πολύβοτος θεὸς* of Alexandria. There is hardly any variation in the form under which he is represented; usually he appears in the type which is accepted as that of his statue at Alexandria, seated on a high throne, wearing on his head the modius, resting his left hand on a sceptre, and extending his right over a three-headed Kerberos before his feet; more rarely he is shown standing, with the same attributes. The only remarkable type, in addition to the compound one noted above, is one which is found on Alexandrian coins of the 2nd cent. A.D., and was also used on seal-rings, where a serpent is shown with the head of Sarapis, sometimes associated with a second serpent with the head of Isis.¹⁶ The popularity of this type may perhaps be ascribed to Gnostic influence; in origin it may be a reminiscence of the sacred serpent of Ra, or of the representations of some of the infernal deities as they appear in the royal tombs of the New Kingdom.

The wide-spread popularity of the worship of Sarapis may be deduced from records of many kinds. The official importance of his temple at Alexandria, as practically the centre of the State-religion, made it the home of the great library and the depository of the archives; and the neocorate of this temple was an honour accepted by Romans of high rank.¹⁷ A more interesting light on his position in the minds of the people generally is thrown by the papyri from Oxyrhynchus, in which are found invitations to banquet *ἐν ἀδύει καὶ ἐν Σάραπει* in the Sarapeion or elsewhere,¹⁸ with which may be compared the statement of Aristides, that men make Sarapis their companion at feasts and name him as guest and host:¹⁹ the idea of banquet-

ing with the gods has a Homeric flavour, which may be explained by the fact that the Greek-speaking population of Egypt was thoroughly soaked in Homer. Another proof of the importance of Sarapis may be found in the frequency with which his image was used as a device on signet-rings; particulars of the seals of witnesses to documents at Oxyrhynchus show six instances of figures of Sarapis out of a total of thirty-five signets, and in a collection of one hundred and ten types of sealing found at Karanis in the Fayum, twenty-two bear representations of him: in each case, the only god who occurs nearly so frequently is Harpokrates.¹ Perhaps the most noteworthy evidence, however, is given by private letters; if the writer expressed a prayer for the welfare of a friend, it was almost invariably addressed to Sarapis; other gods are found only in sporadic instances.

But, despite these constant invocations of Sarapis, and despite the statements of Aristides, it may be doubted whether this deity was really regarded either by Egyptian or by Greek as one who took an intimate part in human affairs. To the multitude, he was probably the official supreme ruler of the universe, to whom prayers might be addressed and offerings made; but he was not a domestic god, in the sense of one whose image would be placed in a house as its immediate protector. Statuettes of Sarapis in terracotta or bronze—the cheapest materials available in Egypt, and therefore commonly used for the production of representations of gods for the mass of the population—are comparatively rare; in this respect he did not inherit the position of Osiris, bronze figures of whom, in all degrees of workmanship down to the very rudest, are found in profusion among the remains of the period of the New Empire. He might be equated by theologians with Osiris and with Apis; but the former, as a deified man, and the latter, as a deified animal, alike possessed connexions with the visible world from which Sarapis was far removed. And it would appear that the real importance of the worship of Sarapis was due to the express sanction of the State, and that it was mainly followed in the great temples without exercising much practical influence on the daily life of the people.

(3) *Isis*.—In accordance with the religious ideas of Greeks and Egyptians alike, Sarapis had to be supplied with a consort; and for this purpose the choice of the Ptolemaic god-makers fell on Isis. To some extent, no doubt, their selection was guided by the fact that Isis was associated with Osiris as his wife by native Egyptian theology; but there were more important considerations than this. Probably the determining factor was the extent to which the worship of Isis had absorbed or overshadowed that of all other female deities during the New Kingdom period; and a further reason for her selection may be found in her identification by Greek writers with Demeter,² which gave her a connexion with a very popular Greek divinity. But the Alexandrian conception of Isis developed on very different lines from that of Sarapis. There was, of course, in her case no need for a fresh definition of powers; she was sufficiently well known throughout the land of Egypt, and her temples existed everywhere. She accordingly remained far more distinctively Egyptian than Sarapis; her equation with Demeter had practically no influence on her cult, and the Greek attributes and Greek ideas which were attached to the worship of Sarapis find no parallel in that of Isis.

The most famous centre of the worship of Isis was at Philæ, where extensive buildings dedicated to her and the gods honoured with her, and created

almost entirely in Ptolemaic and early Roman times, are still extant; and this was one of the last strongholds of the pagan religion in its struggle with Christianity. As late as the middle of the 6th cent. A.D. devotees still visited the shrine,³ and the importance of the goddess is more definitely shown by the fact that she became the subject of a special clause in a treaty between the Roman emperor and the barbarian Nobata, whereby the latter secured access to Philæ at stated times for purposes of worship of Isis.⁴ These temples must have possessed extensive property and revenue; the whole of the land bordering on the first cataract seems to have been dedicated to them, and it is probable that they also derived an income from the customs levied on goods passing the Egyptian frontier at Syene,⁵ while the priests collected offerings for Isis of Philæ at least as far away as Thebes.⁶ At the other end of Egypt, there seem to have been several temples of Isis at Alexandria and in the vicinity; probably her chief importance there, apart from her association with Sarapis, lay in her position as protecting deity of the Pharos, which brought her the homage of the sailors and others connected with the port. It is noteworthy that one temple of Isis represented on Alexandrian coins⁷ is of Egyptian style, whereas all the other religious buildings which appear in the coin-types are Greek in their architecture. Elsewhere in the Nile valley references to temples or shrines of Isis are numerous; but everywhere these temples, so far as can be judged, might be classed as secondary to those of the chief local divinities or of Sarapis. For instance, the temple of Isis at Tentyra, which was rebuilt under the Ptolemies and Augustus,⁸ is overshadowed by the neighbouring temple of Hathor-Aphrodite; at Oxyrhynchus the Isidion, which is mentioned on papyri, was assigned only one guard, as compared with seven for the temple of Theoris and six for that of Sarapis;⁹ and the frequent allusions to shrines of Isis in the villages of the Fayum suggest wayside chapels rather than important buildings.¹⁰

Isis was rarely identified in actual worship with any Greek goddess. It has already been remarked that her equation with Demeter, stated by Herodotus, had little influence on later belief, though it may perhaps be traced in some Alexandrian representations of her. Very occasionally, also, she was assimilated to Aphrodite: this was due to the fact that Hathor, who was regarded as the Egyptian representative of Aphrodite, had tended in earlier Egyptian theology to become identified with Isis.¹¹ This is one respect in which the development of the worship of Isis presents a marked contrast to that of Sarapis, and another is in the matter of epithets. While Sarapis, as has been seen, scarcely ever received any special title, Isis was constantly localized by distinctive names.

Thus at Alexandria she was known as Isis Pharia,¹² Isis Pharia,¹³ Isis Sothis,¹⁴ and Isis of Menuthis,¹⁵ at Memphis, Isis of Mahis is mentioned;¹⁶ in the Fayum, Isis Nephthys¹⁷ and

Isis Harpocratus¹ were associated with the cult of Soknopaios at Soknopaios Neos and Mithropolis, at the former of which a dedication to Isis Harpocratus² has also been found; and in the village of Nubia there was a temple of Isis Nubia;³ a dedication, the first-mention of which is not known, is addressed to Isis Harpocratus;⁴ there is a record of a priest of Isis Opbis at Hermopolis;⁵ at Akropolis she is invoked as Isis Mochis;⁶ at Pathyris (the name of Isis Pathyris,⁷ Isis Nemes,⁸ and Isis Rhankamie⁹ occur; most fitly of all, at Philis she was worshipped as Isis Myriophyllon,¹⁰ a title also used in the neighbouring desert and in Nubia. The address of a magical papyrus to Isis as *epithetis* was fully justified.¹¹

The form in which Isis was represented in art, while not so definitely fixed as in the case of Sarapis, shows little material variation, and naturally is more Egyptian in character. The crown of horns and disk and the vulture head-dress of the native goddess were usually reproduced in Græco-Roman figures; and, though the drapery often shows the influence of the Greek *chiton* and *peplos* in its treatment, it is not very different from that of older representations.¹² The ordinary types are a standing figure, fully draped, and Isis seated on a throne nursing the infant Harpocrates. On Alexandrian coins there are other types, which are more Greek than Egyptian in their conception, such as Isis Pharia holding a sail billowing in the wind, or Isis Sothis riding on a dog; as the city goddess of Alexandria also Isis is shown holding the rudder of Tyche.¹³ Terracotta or bronze statuettes of a nude female figure wearing the crown of Isis are not uncommon; these may be referred to the compound form of Isis and Aphrodite.¹⁴

The name of Isis, with or without epithets, singly or in conjunction with other gods, occurs far more commonly than that of any other deity in the written records of Græco-Roman Egypt. But her hold on the minds of the people generally was probably hardly so great as might be inferred. Her temples, apart from the great centre of her worship at Philis, and possibly at Alexandria, appear, as has been already noted, to have been of small size, though very numerous: thus in the village of Kerkiras in the Fayum there were two Isia, but neither of them owned any land;¹⁵ and their general status may be judged from the terms of a decree of Ptolemy Euergetes II., in which Isia are classed with animal-shrines as minor temples.¹⁶ So far as there is any mention made of resort to these village temples, it would appear to have been only for purposes of treatment in illness.¹⁷ At Alexandria, Isis Pharia was the protectress of sailors; but there is no evidence of her holding a like place anywhere in the Nile valley, unless the occurrence of a priest of Isis in the temple of the Dioskouroi at Oxyrhynchus is in this connexion.¹⁸ There are not many remains of monuments to testify to the worship of Isis; statues of her, of any size, belonging to this period are practically unknown; and, while Græco-Roman bronze and terracotta statuettes exist, they are by no means common, nor does her figure appear frequently on coins or signets. The most frequent type in these lesser representations is that of Isis suckling Harpocrates, and in this she may owe her popularity to the association with her child. The general impression derived from the references to Isis is that she retained a certain importance amongst the Egyptians as an old-established

deity, whose priests were much in evidence at her many wayside shrines, and who kept themselves before the public for the purpose of raising money, as was rendered necessary by their lack of endowments—in doing which they turned to practical use the traditional knowledge, especially of medicine, of which they were heirs; but that, so far as her personality actually appealed to the multitude, it was in virtue of her position as mother of another god—Harpokrates.

(3) *Harpokrates*.—Harpokrates, who was the deity selected to complete the Alexandrian triad, was, like Isis, distinctly Egyptian in origin; but the lines on which his worship developed were different from those taken in her case, as well as in that of Sarapis. Harpokrates did not, like Sarapis, absorb the powers and functions of other independent deities under one name and type; nor did he, like Isis, become localized by distinctive epithets. Originally he was a special form of Horus; and, starting from this point, he gradually took over not only the cult of Horus himself, but also those of all the other special forms which had been accepted in different districts.

There is no record of any temple in Egypt dedicated primarily to Harpokrates; where he is mentioned in connexion with any temple-worship, it is always in association with other gods, of whom Isis is normally one; for instance, at Philis the group is Isis, Sarapis, and Harpokrates;¹ at Koptos: Isis, Harpokrates, and Pan (Min);² in the Fayum: Isis, Sarapis, Harpokrates, and some form of Souchos;³ although individual priests of Harpokrates occur, and offerings might be made to him alone.⁴ It would appear that, to the priests, he was pre-eminently, as his name implied, Horus the child, and was not to be separated from his mother Isis.

The equation of Harpokrates with other forms of Horus involved many ramifications, which illustrate the complication of later Egyptian theology. Under the New Empire, Amen-Ra, the predominant deity, had supplanted, by a nominal identification, many local gods; thus at Herakleopolis Magna he was regarded as the equivalent of Har-shai; at Mendes and Heliopolis, of the sacred ram; at Saïs, of Sebek, the son of Neith; at Memphis, of Ptah; at Koptos, of Min; at Thebes, of Month. And, in his turn, Amen-Ra had been ousted by Horus in almost every place; so that, in the Ptolemaic period, while Sarapis took the name of Ammon from Amen-Ra, Harpokrates, as successor of Horus, secured the local attributes of the gods with whom Amen-Ra had been identified.

Thus at Herakleopolis Magna, where Har-shai had been translated by the earlier Greek victors into Herakles, there appeared the compound Herakles-Harpokrates,⁵ who is represented on some coins with the club of the Greek hero surmounted by the hawk of Horus, and wearing a lion's skin and a medusa.⁶ Another Alexandrian coin-type shows Harpokrates accompanied by a ram,⁷ which may refer to either the Mendes or the Heliopolitan form; and terracotta figures of Harpokrates seated on a ram are not uncommon.⁸ On coins of the Mendesite name there is a compound figure consisting of the head and shoulders of Harpokrates placed on the body of a crocodile,⁹ derived from the union of Harpokrates and Sebek. It is probable that the identification of Harpokrates, common in terracotta, points to his equation with Min. The type of Harpokrates with the goatee,¹⁰ formerly ascribed to Amen-Ra at Thebes, shows that he had taken over the attributes of the older god in the course of his worship. Other special forms are Harpokrates of Philis, whose emblem is a papyrus-bundle,¹¹ and Harpokrates of

Thoth and of Isis, squatting on a lotus-flower,¹ or seated on a sphinx,² all of which are found on Alexandrian coin-types, while the two latter also occur on signs and in statuettes.

The rarity of any record of the worship of Harpokrates in temples is more than compensated by the evidence as to his popularity among the inhabitants of Egypt generally, which is given by the minor representations of him. As has already been noted, his image seems to have been almost as common a device for signet-rings as that of Serapis; and the same may be said in respect of coin-types. Signets and coins, however, are mainly useful as records of the ideas of the trading classes; the religious preferences of the humbler ranks of the population can better be judged from the statuettes which supplied the household images and are found in the ruins of the Egyptian villages of the Græco-Roman period—more especially those of terracotta, the cheapest available material for such representations. Among the terracotta statuettes which occur in profusion on every Græco-Roman site in Egypt, those of Harpokrates, in all manner of attitudes, with varying attributes, and of every kind of execution, far outnumber those of any other god, showing him to have been pre-eminent the household god of the *fellahs*.³ Harpokrates was, indeed, the nearest to men of the Alexandrian triad; not only the traditional humanity which he inherited from Horus, as one who had once reigned in Egypt, but the necessary anthropomorphism of the idea of a child-god, made him more readily understandable to the common people than an almighty and omnipotent ruler of the universe such as Serapis; while there was none of the mystery attached to his worship which his priests, to magnify their position, had imported into that of Isis.

Briefly, the respective positions of the three Alexandrian deities may be summed up as follows: Serapis was the official god of the ruling class and the central object of the State-worship in the chief temples; Isis was the special property of the old priestly class, to whom was attached the traditional religious lore, whose stronghold was the way-side shrine; Harpokrates was the god of the lower classes and of the home.

3. The fusion of Greek and Egyptian gods.—While the influence of the Alexandrian triad was predominant throughout Egypt from the Greek conquest till the general adoption of Christianity, other gods, both of the natives and of the invaders, were not wholly absorbed or forgotten. So far as the cults of these deities remained unaffiliated by foreign ideas—so far, that is, as the Egyptian gods continued to be worshipped under purely Egyptian forms, and the Greek under Greek—it hardly belongs to the history of Græco-Egyptian religion to discuss the records concerning them. But the nominal identification of gods of the two races, which had begun as soon as Egypt was opened to the Greeks, was carried further in some cases and resulted in a fusion, more or less logical and more or less complete, of Greek and Egyptian ideas into what were so far new forms as to deserve separate treatment.

(1) This process of fusion perhaps went furthest in the case of *Hermanubis*. The name was a Greek adaptation of the Egyptian *Har-m-anub*, a compound of Horus and Anubis, the latter of whom, in later Egyptian theology, had enjoyed considerable importance as the messenger of the gods who guided the souls of the dead into the presence of Osiris. The sound of the first part of the name,

and the functions attaching to the second, would readily suggest to a Greek mind an identification with *Hermes Psychopompos*; and from this identification a type arose which represented *Hermanubis* in the form of a youth wearing Greek dress, crowned with a modius, and carrying a palm-branch and a caduceus.⁴ This type was almost entirely Greek or Alexandrian; but it was occasionally varied by the importation of an Egyptian element, the jackal-head of Anubis being placed on the human body of *Hermes*.⁵ Another variation was produced by the substitution of a radiated diadem for the modius, possibly with some recollection of the solar attributes of Horus derived from the original Egyptian name;⁶ this form is the *Helios Hermanubis*, whose identity with *Zens Serapis* is recorded in the graffiti already mentioned. But *Hermanubis* did not absorb the worship of Anubis; the compound name is rarely found, while invocations of, and dedications to, Anubis are fairly frequent; and it was Anubis, not *Hermanubis*, whose fame spread from Alexandria throughout the Roman world, and who was worshipped with Isis and Osiris by Roman devotees.

The equation of *Hermes* with Anubis, and their union in *Hermanubis*, did not prevent the further identification of *Hermes* with other Egyptian deities. The early Greek travellers had regarded Thoth, the god of learning, as the Egyptian equivalent of *Hermes*, and it would appear that, at any rate as late as 100 A.D., this equation was preferred to that with Anubis in the Fayum, as in documents from Kerkouris (*Ahorapion* and *Ressin*—shrines where *Hermes* was associated with the sacred ibis of Thoth—are mentioned as distinct from *Anubis*).⁷ The persistence of the same idea is seen in the later *Hermes Triamagistes*, the special depository of all magical knowledge;⁸ and in the magical papyri of the Roman period *Hermes* plays an important part in this connexion. It may, however, be noted that his identification with Anubis was remembered here also; the four shapes of *Hermes* in the four quarters of heaven are given as ibis, cynocephalus, snake, and wolf;⁹ and, while the first two of these are the sacred animals of Thoth, the wolf almost certainly represents the jackal of Anubis.

A further development resulted from the *Hermes-Thoth* equation. Thoth had been combined, in the local worship of some districts of Egypt, with Khonsu, in virtue of common lunar attributes; and, as Khonsu had been identified independently with *Herakles*, the Egyptian Thoth-Khonsu, or Khonsouthou, as the name appears in use for a personal one, became to the Greeks *Hermes-Herakles*.¹⁰ Such a combination is obviously foreign to the Greek spirit; although the spheres of influence of *Hermes* and *Herakles* might touch at one point, in the gymnasium, the two gods could hardly have been fused by any one who regarded them simply from the Greek standpoint. The same idea is traceable in a dedication to *Hermes* and *Herakles*, as well as to other gods whose names are lost, with Ammon, the head of the solar group.¹¹

It may also be noted that, at Elephantine, *Hermes* was identified with *Petensenis*,¹² and at Psakia in Nubia with *Pautnaphis*;¹³ but, as both of these names are purely local titles, as to the connotation of which nothing further is known, it is useless to conjecture the reasons for the identification. The name of *Harmopolis Parva* in the Delta,

also suggests that there Hermes was regarded as the representative of Horus, the old god of the city.

The case of Hermes is fairly typical of the confusion of names and ideas which arose from the mixture of Greek and Egyptian theology. As has already been seen, the identifications made between the gods of the two nations were based more on grounds of convenience and interest than on any carefully considered principle, and so they might vary locally according to the circumstances of the established cult of each district. It will suffice to summarise more briefly the principal equations which are recorded in the cases of other Greek gods.

(2) *Zeus* had been identified with Ammon by early Greek travellers in Egypt; both in the Libyan Oasis and at Thebes they became familiar with the god, whose priesthood, though declining in importance, still formed one of the most powerful corporations in the country; and, partly no doubt under the impression produced by this political influence, partly from the natural tendency to equate the god who seemed to be chief of the Egyptian deities with the one who held a corresponding position among the Greeks, Ammon was transformed into Zeus Thebaïos, to whom early Greek dedications have been found.¹ The type of Zeus wearing a ram's horn as Zeus Ammon is commonly found in Ptolemaic and Roman times, having been popularised by the local legend of the birth of Alexander. In a Latin inscription from a quarry near Philæ a third title is added, in the name Jupiter Ammon Chnubis,² the last obtained from the catenat-god Khnum, who had previously been identified with Ammon, and was similarly associated with the ram. The solar attributes of Amen-Ra of Thebes further led to the adoption of the form Zeus Helios in the Thebaid;³ and, as has already been seen, both Zeus Helios and Zeus Ammon were united with Serapis.

(3) *Hera*, on the other hand, rarely appears in Egypt. Herodotus states that she was one of the Greek deities whose names did not come from Egypt;⁴ in other words, there was no Egyptian goddess with whom she was popularly identified. At the first catenat, however, she was equated with the local goddess Sati, whose temple seems to have been known to the Greeks as the Heraion.⁵ Another Heraion is mentioned at Thebes,⁶ which was probably the temple of Mut, the consort of Amen-Ra; the equation of Mut with Hera would naturally follow that of Amen-Ra with Zeus.

(4) *Kronos* was identified with Geb by the early Greek students of Egyptian religion; but there is little later evidence in support of this identification, which was probably derived from a comparison of the theogony of Heliopolis with that of Homer. There is, however, a stele from Koptos, on which the Greek inscription gives a dedication to Kronos, while the scene above shows the emperor Tiberius making offering to Geb and Nut.⁷ At Elephantine, Kronos is called Petensetis⁸—obviously a purely local name; and at Tebtunis in the Fayum he was equated with Soknebtunis, the local form of the crocodile-god Sobek,⁹ who is known to have been identified elsewhere with Geb.

(5) *Apollo*, in the system of Herodotus, was the representative of Horus,¹⁰ the identification being

doubtless based on the fact that both were sun-gods. In pursuance of this idea, the town of Harbaitet became Apollinopolis Magna, and that of Har-nar, Apollinopolis Parva; and to the same cause may be ascribed the great popularity of 'Avalleides' as a personal name amongst the Greek-speaking inhabitants of Egypt, just as names derived from various forms of Horus were the commonest amongst those who adhered to the native language. The identification of Apollo with Haroeris occurs at Ombos¹ as well as at Apollinopolis Parva. An early Ptolemaic inscription from Naukratis gives an interesting triad in Serapis, Isis, and Apollo,² in which Apollo seems to take the place of Harpokrates as an equivalent Horus-form.

(6) *Artemis* was equated with Bast (Bubastis), according to Herodotus;³ and, as Bast was a cat-deity, Artemis seems to have been taken by analogy as identical with another goddess, Pakhot, who was worshipped in cat-form at the spot known to the Greeks as Spaea Artemidea. There are, however, no records on monuments to show that this identification had any practical recognition in actual worship.

(7) *Leto* is in much the same case: Herodotus states that she had an oracle at Buto in the Delta,⁴ which presumably means that she was identified with Uast, the tutelary goddess of that town; but there is no further evidence as to this, nor as to her apparent equation with Hathor as presiding deity of the town known to the Greeks as Letopolis.⁵

(8) *Athene* was perhaps the one of all the Homeric gods as to whose Egyptian origin Greek writers were most certain. The town of Sais in the Delta was declared to be the mother-city of Athens, and Athene to be derived from Naith, the goddess of Sais. But, though Athene was certainly worshipped at Sais by the Greeks, it was, so far as any extant evidence shows, under her Greek name alone, and in purely Greek form.⁶ At Oxyrhynchus she was identified with the local goddess Thooris (Taart),⁷ probably in view of their common warlike attributes, but the identification does not seem to have been carried very far; in name, at any rate, the Egyptian goddess held her own, as the chief local temple was known as the Thoorion,⁸ and references in papyri are, with only one or two exceptions, to Thooris simply.⁹ In art, however, it is the Greek type of Athene which is found on coins and signs of Oxyrhynchus;¹⁰ this is doubtless due to the fact that Thooris was a hippopotamus goddess, and the representation of such a type would not appeal to the Greeks.

(9) *Ares* was another deity for whom the Greeks found an Egyptian equivalent at an early date in Onouris, a warrior-god;¹¹ but in this case also the identification seems to have been a literary one merely, without any practical effect.

(10) *Aphrodite* was much more important in the popular than in the official religion of Græco-Roman Egypt, so far as extant evidence proves. Statuettes of Aphrodite, sometimes of purely

¹¹ Herod. II. 65.

Hellenic type, but more usually showing traces of Egyptian influence, are commonly found; and inventories of property suggest that these statues normally formed part of a lady's outfit.¹ Hathor, the Egyptian goddess of love, was the natural equivalent of Aphrodite, and at least two towns of Hathor—the modern Atfih and Gebelen—were re-named Aphroditopolis by the Greeks. At the latter, where Hathor was the consort of Sebek, Greek papyri mention priests of Aphrodite and Bouchea,² and she was worshipped in the same connexion at Ombos.³ At Dendera also, in the chief centre of the Hathor cult, Aphrodite took the place of that goddess, and the Greek dedication of the temple, rebuilt in the early years of Roman rule, is in her name.⁴

(11) *Pan* was identified with the Khyphallo Min at Panopolis and Koptos, as appears from the Greek name of the former town and from dedications at both places.⁵ The functions of Min as guardian of the desert roads were naturally transferred to Pan, and graffiti addressed to him are found at many points in the deserts, scratched on rocks or walls by travellers and hunters, as well as more formal dedications.⁶

(12) *Dionysos* furnishes perhaps the best instance of the divergence between literary and popular equations of gods in Egypt. Herodotus states very elaborately the identification of Dionysos with Osiris,⁷ but there is hardly any evidence that Dionysos inherited any part of the worship of Osiris, or took his place in the minds of the Græco-Egyptian population. As a matter of fact, Osiris, from the Alexandrian point of view, was absorbed by Serapis, as has already been shown, and the only religious records which mention Dionysos in Egypt refer to a purely Greek cult,⁸ except in one locality. At the first cataract, Dionysos is equated in inscriptions with Petampmentis,⁹ whose name suggests that he was a chthonic form of Osiris.

(13) *Demeter* similarly was identified by Herodotus with Isis;¹⁰ but the literary identification did not affect popular worship.¹¹ The position held by Isis in the Alexandrian triad rendered it both unnecessary and unlikely that she should take the name of any Greek deity.

(14) *Hephaistos* was commonly equated with Ptah, perhaps in view of the record of the latter as constructor of the universe; and the great temple of Ptah at Memphis is referred to in Greek documents as the Hephaisteion.¹² But this temple rapidly declined in importance. Ptah was worshipped there as Ptah-Sokar-Osiris; and, as Serapis absorbed the attributes of Osiris, the Serapeion grew at the expense of the Hephaisteion. It is therefore not remarkable that Hephaistos, not an important god in Greece itself, plays no part at all in Græco-Egyptian worship. A record of the mixed type is, however, given by a coin of Hadrian, on which the god is shown with Egyptian head-

dress and Greek robes, carrying the sceptre of Ptah and the tongue of Hephaistos.¹³

(15) *Asklepios* was provided with an Egyptian equivalent in the deified sage Imhotep, whom later generations had claimed as a son of Ptah and a god of healing. A chapel dedicated to Imhotep seems to have been attached to his reputed father's temple at Memphis, and this was called the Asklepieion by the Greeks.¹⁴ There was a similar chapel at Philæ;¹⁵ and the upper court of the temple of Hathor at Deir el-Babry, on the west of Thebes, was transformed in Ptolemaic times into a kind of manatorium, whose walls are scribbled over with invocations of Asklepios in his Græco-Egyptian association.¹⁶

(16) *Hestia* was, according to Herodotus, not Egyptian.¹⁷ Like Hera, however, whom he placed in the same class, she was equated with one of the cataract-deities—Anakis—of Elephantine;¹⁸ but the reason for this identification is not clear.

(17) *Herakles* shows more variation of form, due to his equation with two distinct Egyptian deities. It has been noted above that he was identified with the lunar god Khonsu at Hermopolis Magna and Apollinopolis Magna, and that in this connexion he was united with Hermes.¹⁹ At Herakleopolis, however, he was taken to represent the local form of Horus, Har-shes, and gave his name to the town; and then, by another confusion which has already been mentioned, his attribute, the club, was transferred to a second form of Horus—Harpokrates—as shown on the nome-coins; and a compound Herakles-Harpokrates is mentioned in a Greek dedication.²⁰

From a survey of the foregoing summary it will be seen that the identification of Greek and Egyptian gods proceeded on the most superficial lines, and was often purely academic. A certain amount of cross influence between the two systems of theology may perhaps be discerned in the cases of Zeus-Ammon, Apollo-Haroeris, Athene-Neith, Aphrodite-Hathor, Hermes-Thoth, Pan-Min, Hephaistos-Ptah, Asklepios-Imhotep, and Herakles-Khonsu; but the equations of Hera, Kronos, Artemis, Leto, Ares, Dionysos, Demeter, and Hestia with Egyptian deities do not appear to have been anything more than nominal so far as the actual worship either by Greeks or by Egyptians was concerned. In fact, the identification was practically a mere matter of convenience; the Greek section of the population, who clearly prided themselves on their race, and were soaked in Homer, preferred to address the gods whom they worshipped by familiar Olympian names rather than use the Egyptian titles even in a Hellenised shape, though the latter class of forms occur; and the priests of the Egyptian temples met the wishes of the Greek worshippers by the simple process of allowing their own gods to be invoked by the Greek names, which seemed at first sight most suitable. As this process was not based on any general agreement as to the identity of various gods, except in so far as accepted traditions, such as those recorded by Herodotus, were remembered, there arose cross-identifications according to local circumstances.

4. *Egyptian gods worshipped by Greeks without equation.*—There were a few Egyptian gods who had no recognized Greek equivalents, but were nevertheless so far accepted by the Greek settlers as to require mention in connexion with Græco-

Egyptian religion. These were such as offered no traits for ready identification with the Homeric gods, but possessed so much popularity among the natives that they attracted the attention and the worship of the Greeks.

(1) The most noteworthy example of this class of deity is to be found in the case of *Bes*, who, though he may have been introduced into the Egyptian pantheon at a fairly early period, did not attain a position of any importance until the time of the New Kingdom. Even then he does not seem to have received any official recognition, such as would be expressed by the dedication of a temple to him; but he was a prominent figure in popular magic. Similarly, in the earlier part of the Græco-Roman period, *Bes* is not mentioned in religious inscriptions or represented on the walls of temples;¹ but he must have been widely worshipped among the lower classes, as terracotta statuettes of him are common, and bronze figures not infrequent.² Later, with the resurgence of magic, he grew in importance, and even seems to have ousted *Sarapis* from the chief place in the temple of Abydos, where an oracle of *Bes* was established and flourished till its suppression in the reign of Constantine II.³ graffiti of homage to him still exist on the walls of the temple beside the earlier inscriptions to *Osiris* and *Sarapis*.⁴ At Memphis also *Bes* seems to have obtained a footing in the *Sarapeion* in Roman times, as a room has been found there decorated with figures of him and his worshippers.⁵ The graffiti of Abydos and magical papyri suggest that the oracles of *Bes* were given through dreams,⁶ and this may have smoothed his way into the *Sarapeion* of Memphis, where there was an old-established system of incubatory divination.

(2) The crocodile-god *Sobek* was also usually worshipped without equation to any Greek deity, at any rate in his chief seat, the Fayum. At Ombos he had been previously identified by the Egyptians with *Geb*; and so the equation of *Geb* with *Kronos* by the Greeks involved that of *Sobek* with *Kronos*, which is found at one spot in the Fayum—at Tebtunia.⁷ In the great majority of the references to *Sobek* which occur in the Fayum papyri, however, there is no trace of any Greek connexion; and the representations of him in the Græco-Roman period are always in purely animal form. There was no lack of Greek settlers in the Fayum, but they seem to have been perfectly content to offer their homage to this god in his Egyptian form, only softening his name to *Souchon*. How closely associated his worship might be with Hellenic ideas is shown by two late Ptolemaic dedications to him, probably from Crocodilopolis-Arinoë, which were set up to mark the enclosure appropriated to schools of ophidi of certain years.⁸ The temple of *Sobek* at Arinoë was the chief one of the nome, and in its precincts was a lake where the sacred crocodiles, his embodiment, were kept, and worshipped, providing one of the regular sights for tourists;⁹ and there were numerous other temples or colleges of priests of *Sobek* in the surrounding villages, such as Bahomereia,¹⁰ Nabla,¹¹ Tebtunia,¹² and Kerkessiria.¹³ Moreover, he was worshipped in many local forms in these villages.

Thus at Behnagadeu Nomon there was a great temple of *Sobek*—*Sobek*, lord of the island—in which he was associated

with his *Hedem*; the papyri from this town have furnished many references to his priests and his feast,¹⁴ while inscriptions record grants of care by Ptolemaic officials¹⁵ and of privileges by a Roman prefect.¹⁶ He is represented as a crocodile with a lion's head,¹⁷ which shows him to have been a deity closely connected with *Sarapis*, as in Upper Egypt *Sobek* had formerly been united with *Ra*. At the same town of Behnagadeu Nomon there was a second, apparently subordinate, form of *Sobek* worshipped as *Sokopalis* or *Sokopistos*.¹⁸ *Sokopistos* was the local type of *Sobek* as lord of Tebtunia, in the neighbourhood of which village his temple seems to have owned extensive property.¹⁹ In the same district another variant occurs in *Sokopenthis*; at Bouchie he appears as *Sokanobthemon* or *Sokanobthemon*; and at Crocodilopolis-Arinoë and Tebtunia as *Sokopichon*.²⁰ At Kerkessiria, where the temple has been excavated, and has yielded building dedications under a late Ptolemy, Nero, Vespasian, and Commodus, *Sobek* was known as *Prosmochon*,²¹ a name found also at Kerkessiria,²² and possibly applied to the god at his chief temple at Arinoë.²³ The crocodile-god might also be addressed by other titles than that of *Sobek* or compounds of it, for instance, *Phronemur* or *Phronemur* is described as belonging to this group,²⁴ and similarly *Phronemur* of Kerkessiria and *Thoudipha*,²⁵ but an catalogue of his local names does not throw light on his worship.

(3) The position of *Sobek* as regards the Greeks may be paralleled by that of the hippopotamus-goddess *Taurt*. As has been mentioned above, this goddess was nominally identified with the Greek *Athena*; but in actual practice she seems to have been worshipped independently. No Greek would be likely to associate *Athena* with a hippopotamus; and, if it seemed advantageous to him to pay homage to *Taurt*, he addressed her as *Theoria*.

It is very doubtful, however, whether in such cases as those of *Bes*, *Sobek*, and *Taurt* there was any influence exercised on the Egyptian worship by the Greek worshippers which would produce a result described as Græco-Egyptian. The utmost that can be traced is in the modification of the Egyptian names to suit the ear of the Greeks; and a similar modification, in rarer examples, might be cited in regard to a considerable number of purely Egyptian deities who happen to be mentioned in Greek documents.

5. The decay of the Greek element.—The attempt of the earlier Ptolemies to plant a new State-religion in Egypt, like their attempt to Hellenise the country, was doomed to failure; the imported elements in the gods and in the human population were alike absorbed and disappeared. By the 3rd cent. A.D. the descendants of the Greek colonists, except perhaps in Alexandria, had become practically indistinguishable from the mass of the natives of Egyptian race, and in the same way the old Egyptian deities had reassumed their position, and had obliterated the Greek equivalents who formerly shared their worship.

(1) The clearest illustration of the resurgence of native religious ideas may be found in the case of *Osiris*. He should, under the Ptolemaic system, have been entirely supplanted by *Sarapis*. But, as has already been seen, at Abydos, *Osiris* held his ground, at any rate amongst the Egyptian-speaking part of the population, and apparently his worship was so far recognized that *Strabo* records him as the god of Abydos;²⁶ his name appears in demotic inscriptions as the equivalent of that of *Sarapis* in Greek;²⁷ occasionally even Greek inscriptions of homage on the temple-walls are addressed to him instead of to *Sarapis*.²⁸ There are other indications that he was sometimes treated by the Greeks as distinct from *Sarapis*; thus a Ptolemaic

¹ See *Supra* do occur in buildings of this period, but they are architectural rather than religious in their purpose; e.g. at Tebtunia (Münch. *Stat. of Egypt*, v. 122, fig. 29).

altar is dedicated to Osiris with Sarapis, Isis, and Anubis;¹ at Oxyrhynchus in Roman times there was an Osirion as well as a Sarapeion, and a priestly college served Theotis, Isis, Sarapis, and Osiris with other gods;² and a late Ptolemaic inscription from Theadelphia in the Fayum shows that an Osirion existed there also.³ About the end of the 1st cent. A.D., however, Osiris appears to be recovering the honours taken from him by Sarapis; for instance, the old Egyptian formula of entreaty to Osiris to give water to the dead, which had been preserved in demotic texts, begins to occur in a Greek version also, without any translation of Osiris into Sarapis;⁴ and in the magical papyri of the next two or three centuries Osiris is a leading actor,⁵ while Sarapis is scarcely mentioned.

(3) A similar revival can be traced in the case of *Anubis* and *Horus* as against their Alexandrian equivalents *Hermanubis* and *Harpokrates*; and *Isis* had never been thoroughly Hellenized. In all three instances it is the Egyptian deity who recurs in the magical texts and remains a god of power long after the general acceptance of Christianity in the country: Isis and Horus are mentioned side by side with Jewish archangels and Jesus Christ.

The importance of this apparent revival of old Egyptian ideas in the Roman period may perhaps be somewhat exaggerated at present by the comparative paucity of records concerning the worship of the lower classes of the Egyptian population after the Greek conquest. There is a fair amount of documentary evidence as to the State religion and the gods who were preferred by the upper and middle classes. But there must always have been a large substratum of *fellahs* who did not speak Greek or write in any form, amongst whom the old traditional beliefs, as well as the old language, persisted. Demotic texts are few in number and usually unimportant in content, as compared with *hieroglyphs* in Greek, during the Ptolemaic and Roman periods; but they testify to a survival of the Egyptian tongue with sufficient vigour to enable it to recover its position not only as a national but as an official language when the external sanction of Greek was withdrawn. Similarly, there must have been a steady adherence to the old forms of worship among the peasantry, which is not recorded on monuments, but which caught the attention of Roman writers, and which the early Fathers of the Christian Church had to combat; for instance, the attacks of Clement point to a prevalence of animal-worship which would never be suspected from any Greek inscriptions; and it was this persistent belief which reappeared in the Egyptian magic of modern times.

Summary.—The official Graeco-Egyptian worship was based on the Alexandrian triad of Sarapis, Isis, and Harpokrates. Only in the first of these three deities was the non-Egyptian element of material importance, and all derived the greater part of their local acceptance by inheritance from the native religion. The Greek inhabitants of the country frequently offered homage in the Egyptian shrines, addressing the god by a Greek name chosen on a superficial system of equation; or, if the particular deity could not readily be identified with a Greek equivalent, they were ready to adopt the Egyptian name. Meanwhile the native peasantry adhered to their old gods, and their faith gradually purged the worship of the country of the Hellenic elements which had been introduced, and made it in the days of its decline once more distinctively Egyptian.

No attempt has been made, in the present article, to trace the development of the worship of Egyptian gods outside Egypt. The reason for this is that the cults of Isis, Osiris, Serapis, and Anubis, when transplanted to Greece or Italy, ceased to be Egyptian. The account of the festival at Ostia given by Apuleius contains hardly anything that would be recognizable as Egyptian, apart from mere names.

Incidentally, however, it may be noted as significant that at Rome, and in the West generally, Osiris rather than Sarapis was the usual object of worship with Isis. In the Greek parts of Asia, and to a certain extent in European Greece, Sarapis had been introduced under Ptolemaic influence; but, when the Romans had reached the stage of becoming Oriental gods, Osiris was coming to the fore again.

LITERATURE.—A standard summary account of Egyptian religion in the Graeco-Roman period is given in A. Erman, *Handbook of Egyptian Religion*, tr. A. S. Griffith, London, 1907. The fullest treatment of existing materials in regard to organization of worship is in W. Otto, *Priester und Pöbel im hellenistischen Ägypten*, Leipzig, 1904-05; J. Koenig, *Religion des hellenistischen Ägyptens*, Leipzig, 1908, has a very good review of the philosophical atmosphere in which the cult of Sarapis developed, in *ib.* v. ch. 6; see especially pp. 285-290.

For the worship of Egyptian gods outside Egypt, see G. Lefebvre, *Hist. du culte des divinités d'Alexandrie hors de l'Égypte*, Paris, 1904, and A. Reisch, *de Sarapide et Isis in Graecia cultis*, Berlin, 1908; also W. Drexler in *Fests. Künigl. xxi.* (1908) 1-224, on 'Isis and Sarapis in Asia Minor,' and the catalogue of *Monuments of Isis-worship abroad*, in *Bonneler, a.c.* 'Isis.' The chapter on Egypt in P. Coumte, *The Oriental Religions in Roman Paganism*, Eng. tr., Chicago, 1911, pp. 79-107, gives a valuable account of the influence of Egyptian beliefs at Rome.

J. G. MILLER.

GRAIAT.—The Graiai (Γραιαί, 'old ones'), or Phorikides, first appear in Hesiod (*Theog.* 270-273) as daughters of the sea-deities Phorkys and Keto, and sisters of the three Gorgons. They are beautiful (αἰσῆς in line 270 *καλλὴν ἔχουσιν* should be read, referring to their mother only), and well-dressed, one being *ἄφρονας* and the other *ἑσπέρωνες*. They are also white-haired from birth (*ἀπὸ γενεῆς ῥέχουσιν*; but lines 271-2 are commonly obelized by modern editors. It is, however, unlikely that this phrase is spurious; and it is simpler to consider the two lines genuine, removing all difficulty by reading *ἄφρονας* for *Γραιαί* in line 270). Two sisters only are named by Hesiod—Paphredo (v.l. Paphredo or Tophredo or, in other writers, Memphredo or Pephredo or Pephredo) and Enue; but it is probable that a third name—Dino or Dina—should be substituted for the word *ἄφρονας* in line 273. In the following passage, lines 274-280, Hesiod names the Gorgons, and gives very briefly the elements of the Perseus and Medusa legend; but he does not represent them as hideous (see art. GORGONS). In *Aeschylus* (*Prom. Fines* 793-797) both sets of sisters have become monsters (*ῥέφους*), living in the Gorgonian plains of Euboea, which was in the far West, or possibly in the far East.¹ His Phorikides are three aged maidens (*ἄφρονας αἰσῆς*), swan-shaped (*ῥέφους*), with one eye and one tooth in common, never shone upon by sun or moon. To this must be added a statement in the lost *Phorikides* of the same dramatist, recorded by the pseudo-Eratosthenes (*Catasterismi*, 22) and the poet Hyginus (*Astr.* ii. 12), that they were *σφαλαίαι* of the Gorgons; the same play also alluded to a cave (*Aesch.*, ed. Sidgwick, frag. 261 f.). *Aeschylus*'s epithet *ῥέφους* seems inconsistent with his *ἄφρονας*; and it is suggested that the resemblance to swans should be taken as partial or vague rather than exact, or that some lost word, such as *ἄφρονας* (swan-white), should be substituted; the paronomasia would be quite in *Aeschylus*'s manner. In *Aeschylus* the Gorgons too have become *ῥέφους*, not only winged, but *ἄφρονας* and *ἑσπέρωνες*; and the sight of them is fatal to life.

After this, though the Gorgons are frequently mentioned, their sisters disappear from extant Greek literature till the time of the mythologists. Apollodorus (ii. 4. 3), after Pherecydes, makes them in some way guardians of the Gorgons; Pausanias

¹ A scholiast in the *Od.* *Hes.* of *Aeschylus* says vaguely: *οἷον Ἀφροί & Αἰσῆς*.

snatches away the common eye and tooth while these are being passed round, and then restores them in exchange for instructions how to find the Nymphs, from whom he wishes to obtain the magic cap, shoes, and sword. Palaeophatus (*de sacrad.* 32) makes the Graial reveal to Perseus the way to the Gorgons. Bygones represents Perseus as already possessed of the cap and shoes; he takes the eye and the tooth while the holders are passing them on to relieve guard, and throws them into the Tritonian lake. There are unimportant variations of detail in writers such as Tzetzes, Ovid, Nonnus, etc. (see the references in Roscher).

The Graial very seldom figure in art. Miss Harrison describes (*Proleg. to Gr. Rel.*, Cambridge, 1902, pp. 104-96) and figures (fig. 25) a cover of a *pyxis* in the Central Museum at Athens, on which they are represented with dolphins, accompanied by Phorkys, Poseidon, Hermes, and Perseus (who is waiting to snatch the eye from two of them while the third holds the tooth); they appear to be young and lovely. Miss Harrison says this is the only known representation in vase painting. A. Rapp (Roscher, i. 1737 f.) is disinclined to accept Panofka's interpretation of an incised stone and an amphora (the latter in the British Museum) as representing 'Perseus and Graia'; but he attaches more importance to an Etruscan mirror as described in the sale catalogue of the Castellani Collection at Rome in 1884.

From the above facts it is clear that the myths of the Graial was conflated and possibly contaminated at a very early period; it probably varied to some extent with the attempts at interpretation. The details, therefore, may not admit of any single or consistent explanation. Their parentage, complexion, swan-shape or colour, and association with dolphins connect them with the sea; sea-gods are also credited with mysterious knowledge of secrets, and are frequently of venerable appearance. The Gorgons also have marine affinities, and in modern Greek folk lore have become mermaids (see J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion*, Cambridge, 1910, p. 138). Hermann (*Oxyrh. II.* [1897] 179) goes so far as to make the Graial of Hesiod tide-goddesses, translating their names as 'Aufurona' and 'Inferona,' apparently from *αἰψα* and *θε*. Similarly, ancient etymologists derived *Θεοὶ* from *θεός*; or *Θεοὶ* may be from *θεός*, and 'θεός' from *θεός* (of sound). Their whiteness is easily connected with sea-foam.

Swans, however, also symbolize clouds; and the epithets of Hesiod suggest that the Graial may represent the bright clouds of fine weather and especially the sunset (*εσπερινός*), while their sisters the Gorgons personify the dark clouds of storm and rain. This view was advocated by Roscher, and is apparently supported by Rapp, who sees in the transferable eye and tooth of the Graial, and still more in the baleful glance of the Gorgons, the flash of the lightning and its apparent passage from cloud to cloud. The Gorgons also seem to be credited with a single eye, possessed in common, by a scholiast on *Aesch. Prom. Vinct.* 708. Mannhardt (*German. Mythen*, Berlin, 1896, p. 217, ff. 1876) interprets the eye as the ray of sunlight; while Tyler (*Prim. Cult.*, 1906, i. 232) thinks that the Gorgons, one mortal and two immortal, may stand for the present, past, and future, their eye being the sun itself. With these theories we may also claim the suggested derivations of their names from the roots of *ripe* and *rough* and *de*. The *o.i.* *reppelē* would mean 'the sahen-coloured,' and might apply either to waves or to clouds. So might the third name *Αἰσά*, if from *αἰσά*, but it is more probably *Αἰσά* from *αἰσά*.

The suggestions that the Graial and Gorgons are volcanoes or gorillas seem fantastic, since it is now

generally held that the hideous head or mask of the latter—the *Γοργόεσσα* or *Γοργόεσσα* of Hom. *Od.* xi. 633—is not an original feature of them at all, but an *ἀνσπεράσμα* of Oriental, and probably Hittite, origin, introduced into Greece about the end of the 8th cent., and perpetuated in many various types. This conflation would not be difficult to account for if the Gorgons were originally storm-cloud goddesses capable of malignant glances of lightning; but it may well be due, in the first place, to some etymological confusion between names of similar sound. On these lines the latest mythologists, such as Miss Harrison (*op. cit.*), regard the Graial and Gorgons as originally triads of sea- or cloud-goddesses and as by-forms of each other, perhaps distinguished as causing good or bad weather. The eye and tooth symbolize their potency, which can be transmitted from one quarter to another; it is a similar conception to the common one of the 'external soul.' At an early period, probably long before Aeschylus, the Gorgons acquired alien characteristics, and their duplication, the Graial, were then worked into the Perseus legend in various ways. But some points in Aeschylus's description would still remain obscure, such as the swan-shape and the avoidance of light by residences in a hole or cave; and these may be inventions of his own to make them monsters (*τεφροδόντες*).

LITERATURE.—The article by A. Rapp in Roscher's *Lexikon*, i. 1736-1738, is full of references to obscure German dissertations on the Phorides and Gorgons, but does not contain the latest views. G. Glotz (*In Darmsberg-Beilage*, ii. 2) is more concise, but he explains the point about the *Γοργόεσσα*. Among older books, the most important are G. F. Schlimann, *de Phoroneo quædam familia*, Leipzig, 1886, and W. H. Roscher, *Gorgones und Perseus*, do. 1879. See also art. Gorgones above, and in other dictionaries, and E. S. Hartland, *Legend of Perseus*, London, 1889, passim.

H. E. D. BLACKTON.

GRAIL, THE HOLY.—I. Term and idea.—The most familiar use of the word 'Grail,' though probably not the most ancient or accurate, applies it to the cup used by our Lord at the Last Supper. There is more literary support for a different interpretation—the vessel in which Joseph of Arimathea collected the blood from the wound-prints of Jesus; this vessel is sometimes, though not always, identified with a chalice or dish used at the Supper. Sometimes, again, the Grail seems to be a platter; or a reliquary to contain the Host; or a stone, as in Wolfram; or a 'rich Grail,' undefined, but apparently a food-producing talisman. Derivations of the word vary as much as definitions of its meaning. The best authenticated traces it to the Latin *crater* (cup), through the forms *cratialis* and *gradalis*. A derivation suggested by the Grail romances themselves (e.g. Robert de Borron) is the root *grē*—the vessel being named from the pleasure it gives to those who behold it; cf. the much quoted sentences from Helinandus (Migne, *PL* cxxii. 815):

'Gradalis cratem dicit Gradale Calicis dicitur cratialis bibe, et aliquando profunda, in qua potissime dapes cum ore iure dicitur solent apponi gradalis . . . et dicitur vulgari nomine Grails, quia grata et acceptabilis est.'

Paulin Paris (*Les Romans de la table ronde*, Paris, 1896, i. 102) quotes an eighth-century story, which, if its authenticity could be established, would give a new derivation and definition together—of a *Liber Gradalis*, the adjective being akin to the Gradual of the Roman Church. The whole subject, alike in its ultimate origins and in its inner significance, like the Grail itself in Tennyson's poem, is 'all covered over with a luminous cloud,' and there is room for much variety of theory and interpretation. The Grail itself in its elusiveness and changeableness baffles the writer's quest to-day, as it baffled the knight's quest long ago; it flashes across his vision and is gone before he has time to question it; and he who sets forth to write of it

made more to describe in the quest than in the goal.

2. *Literary development.*—In the space of fifty years (roughly between 1170 and 1250) the great body of Grail romances apparently came into existence. But it was not until 1861 that complete texts began to appear, most of them merely 13th or 14th cent. transcripts of the 12th cent. MSS. These MSS are found in France, Germany, and Great Britain; and early printed forms are preserved also in Spain, Portugal, and Holland. The MSS are very confused as well as scattered—some fragmentary, and some suggesting interpolations by later hands. Parts of the story connected in one MS are found elsewhere separated and conjoined with other parts, so that the task of research has been one of very great difficulty. The Germans F. Zarncke (in H. Paul and W. Braune's *Beitr. zur Gesch. der deutschen Spr. und Lit.* III [Halle, 1876] 304 ff.) and A. Birch-Hirschfeld (*Die Sage vom Grail*, Leipzig, 1877) made praiseworthy attempts to introduce some chronological order into the chaos; and, while other scholars have not been able entirely to agree with Birch-Hirschfeld's analysis, it still supplies a basis for tabulation which is helpful. It must always, however, be remembered that the discovery of some hitherto concealed MS or some biographical fact might throw a flood of light on the whole subject, and re-arrange the knowledge now possessed by investigators. Meantime a very wide margin must be allowed in such dates as may be conjectured from internal evidence of the MSS. Much controversy still circles round the names of Chrétien de Troyes and Robert de Borron. Of the dated work, Chrétien's is the oldest of all, and by most scholars he was regarded as the undisputed head of the cycle. Birch-Hirschfeld, however, gave that place most emphatically to Robert de Borron, and of later years Miss Weston also has been inclined to take the same position. The decision is largely dependant on whether we may regard the *Prose Perceval* as representing de Borron's work, and thus much earlier than scholars have hitherto placed it. (For Nutt's division into 'Early History' and 'Quest' versions, and for the connexion with the Arthurian cycle as a whole, see art. ARTHUR in vol. II. p. 6.)

It is to be noted that the Celtic *Peredur* and the English *Syr Percyalle* do not deal with the Grail as such. But they cannot be omitted in an account of the Romance literature, because of their value in the matter of tracing origins.

FRANCE.—1. *Le Conte del Graal* of Chrétien de Troyes (1180-90): poem printed for the first time by Poivre from the Mss MS, and contained (along with the *Book of the Court*, *Manuel*, and *Gerbert*) in vol. II.-vi. of *Perceval le Galois*, or *le Conte del Graal*, Mss, 1855-71. Copies of this work are so rare as to render it practically inaccessible.

2. *Gautier de Digne* (or *Wanchier de Digne*, as he is called by Miss Weston, following M. Meyer) continues Chrétien's poem (1190-1215). A different version and interpolation given in another MS is referred to occasionally as *pseudo-Gautier*.

3. *Le parti du Graal* of Robert de Borron (1180-89): (a) the unique fragmentary MS, a poem of about 2516 lines dealing with *Joseph d'Arimatea*, and the remaining fragment with *Merlin*; (b) prose versions of the above: several MSS, of which the chief are the *Congé* MS (1240); the *Huth* MS (c. 1300), and the famous *Didot* MS which includes as well the *Prose Perceval* (see below). The whole is accessible in an appendix to vol. I. of Furnivall's *Suppl. Grail*, or *Book of the Grail*, London, 1891-93.

4. *Queste del Saint Graal*: prose; authorship unknown; the ascription to the MS to Map considered very dubious (1190, probably after Gautier); accessible in the form of Malory's *Le Morte d'Arthur*.

5. *Grand Saint Graal* (the fullest 'Early History'): prose; authorship unknown (c. 1300); accessible in *Book of the Saint-Grail*, or *le Joseph d'Arimatea*, *Le Morte d'Arthur*, or in Furnivall's *Suppl. Grail*, or *Book of the Grail*.

6. *Manuel* continues Chrétien's poem, adding 65,000 verses after Gautier, and so finishing *Le Conte* (1215-25).

7. *Gautier de Montbrevin* interpolates 15,000 verses chiefly between Gautier and Manuel (1220-25). Both 6 and 7 are printed as above in Poivre's *Le Conte del Graal*.

8. *Perceval ou Perceval le Galois*: prose; author unknown (c. 1225). First printed by Poivre in vol. I. of *Le Conte del Graal* (see above), now accessible in the form of *The Holy Grail*, or *the History of the Holy Grail*, in. by Sebastian Evans, London, 1892.

9. *The Prose Perceval* (1280-85?; see above), found in the *Didot* MS (1301), also in a *Modena* MS which Miss Weston thinks both an earlier and better text, accessible in *Book of the Saint-Grail*, or *le Joseph d'Arimatea*. Miss Weston also gives a comparison of the D and M MSS in her *Legend of St. Perceval*, vol. II., London, 1900.

WALES.—1. *Robyn of Rydow*, *Book of the Grail*: prose; probably a re-translation back from French into Welsh of an old Welsh story. It is found in the *Red Book of Harpert*, MS of end of 14th cent., also in MSS of 15th cent.; accessible in *The Mabinogion*, tr. by Lady Guest, London, 1893-95; also collection ed. by A. Nutt, do. 1910.

2. *The Welsh Grail*: collection from *Harper* MS (16th cent.); a Welsh 'Quest' story (with Eng. tr. by Robert Williams, London, 1875) slightly differing from other forms, consisting in its first part of a version corresponding to Parts III.-viii. of Malory's *Morte d'Arthur*, and in its second part of a version of the *Perceval*.

ENGLAND.—The metrical *Romance of Syr Percyalle* or *Syr Perceval of Galles* from the *Thornton* MS (c. 1440) in the Library of Lincoln Cathedral; accessible in the *Thornton Romances* (1884, ed. Halliwell).

GERMANY.—1. *Perceval*, by Wolfram von Eschenbach: a metrical romance (c. 1210); accessible in *Eng. tr. Perceval; a Knightly Epic*, by J. L. Weston, 9 vols., London, 1894.

2. *Der Grael*, by Heinrich von dem Türlin, who lived in the first half of the 13th cent.; accessible in vol. xvii. of *Deutsche Literatur*, *Perceval*, ed. G. H. F. Schell, Stuttgart, 1892.

3. *Der Jüngere Titurel*, by Albrecht von Schenkenberg (1370), written late for purposes of the study of the Grail, but interesting as a compilation and completion of fragments left by Wolfram and some unknown author, accessible as *Der Jüngere Titurel*, ed. E. A. Hahn, Gießen and Leipzig, 1905.

The three great names in connexion with this literature are those of Chrétien de Troyes, Robert de Borron, and Wolfram von Eschenbach. Chrétien was the poet of the court. His story is told with a charm of style and a sense of chivalry which give it a very high place in medieval literature. But he does not explain the Grail, nor does he give any suggestion of realising its deeper meaning. Whether this was merely the art of the skillful romance, who intended to explain and deepen his theme, we have no means of knowing. His death broke the poem off abruptly, to be finished by those who may or may not have grasped his ideas. Robert de Borron was a much less skilled and polished workman. But there was a completeness about his work—especially if we may claim the *Perceval* as part of his idea—which puzzled scholars. He evidently had a definite and comprehensive plan. He viewed the Grail as a Christian symbol, and made his story carry out that conception. To him, for this reason, some have ascribed the fusion of the Grail story with the Saga. But the exact point of contact with the Arthurian cycle is very difficult to fix (see art. ARTHUR). To Wolfram v. Eschenbach it was left to give the legend its most spiritualised form. 'Wolfram,' says A. Nutt (*Studies on the Legend of the Holy Grail*, London, 1893, p. 267), 'makes his hero win salvation by steadfast faith.' The Grail is here certainly not the Cup of the Last Supper. But the field of Grail attainment is the field of Christian endeavour, and its banner is charity, the charity which for Wolfram changed the unmeaning question, 'What does it (the Grail) serve?' into 'What allest thou?'

3. *Subject-matter.*—It is quite evident that hundreds of stories were floating about, and that the Romance writers could pick and choose according to individual temperament and desire. To this is probably due the welding of entirely different stories. These stories were, however, based on myths of the world's early days, and were, therefore, near enough akin to be constantly suggesting each other, while differing enough in detail to

make a strange confusion when brought together. Thus we get a loosely-connected mass of incident and at least three heroes—Perceval, Gawain, and Galahad. We may set Galahad on one side as quite probably a late invention. He appears in the *Queste* and *Grand St. Graal*. To this fact is perhaps due the theory that he was invented by Walter Map—possibly as a tribute to the son of Henry II.; more likely in order to detach the story from its early somewhat pagan associations and make the claim of the Church to the story more plausible because of the saintliness of the knight. Gawain and Perceval are both early heroes. In the *Conte de Chrétien*, Gawain is an understudy to Perceval. But close investigation has led Miss Weston to the conclusion that these are the heroes of two different stories which have fused, and that Gawain is the earlier of the two. It is worthy of note how much closer the connexion between Gawain and the rest of the poem is in Wolfram than in Chrétien de Troyes. Persistent features—in addition, of course, to the Grail itself and the question 'Cui on servit?' associated with it—are:

- (a) *The Vengeance Quest*: the hero sets out with the desire to avenge the fate of his father or uncle—a quite human and, therefore, primitive note.
- (b) *The Unspelling Quest*: the hero visits a hapless castle, where he finds either simply supernatural beings such as the maidens or those—neither gods nor men—who linger under a spell from which only a mortal who has attained a certain heroic level can release them. The hero, therefore, must know or do certain things. If he fails, the castle vanishes or he leaves it unnoticed and unhelped. This is obviously a contribution from the childhood of the world, when mortals were half-aware of supernatural powers, with whom magic alone enabled them to deal.
- (c) *The Great Fool Tale*: this is a primitive story found among all peoples. It takes various forms, but, apart from incidental details, it is generally the story of a youth (son of a god or hero) who in consequence of certain events grows up away from the world and in ignorance of its ways; he returns to that world and, in spite of his want of knowledge, finds his way back to the hero-band to which his father belonged; and, in time, proves himself to be the greatest of them all. The appropriation of this well-known folk-tale for either simple or complex forms of the story is easy to understand, whether the writer had in mind a merely charming romance or one laden with inner meaning. And so this is either the Perceval of Chrétien's courtly poem or the Parzival of Wolfram's spiritual allegory.
- (d) *The Fisher-king*: the wounded king of the Grail castle is found fishing while he waits for his deliverer. Apart from the Grail itself, and the 'question,' this has been probably the most perplexing feature of the cycle. Attempts have been made to account for the king's occupation in various ways; but all are acknowledged to be not entirely satisfactory. There is, for instance, a possible link with the fish as the Christian symbol, the fish itself appearing in the 'Early History' as that which, caught and laid on the Table, divided the pure from the impure among those who were fed by the Grail. There is also the Salmon of Wisdom of Irish folklore. And, most remote of all, there is even the Babylonian story of Adapa, the wise one and fisher (cf. W. Stark, *Über den Ursprung der Graillegende*, Tübingen and Leipzig, 1906, p. 86).
- (e) *The Lance, the Sword, and the Dish*: of these the lance is supposed to be the weapon which pierced the side of Christ, and ranks next to the Grail in importance. The sword is sometimes the weapon of the Vengeance Quest, but elsewhere it is sacred. The meaning of the dish is very uncertain. Indeed, there is some

reason for suspecting that the romancers had taken over the sword and the dish with little conception as to what they were or might signify.

4. Sources.—As has been indicated, there is no primary form of the literature now known to be extant; and there has been much speculation as to sources and originals. It may be taken as fairly certain that the *Evangelium Nicodemus* or *Gesta Pilati* (A.D. 438) is an early source of the Joseph of Arimathea stories. Surmises based on internal evidence suggest among sources that have disappeared: (a) a possible lost Latin original from which Chrétien, Gautier, and Robert de Borron may have drawn, and which Walter Map (to whom the MSS ascribe the *Queste*) may have compiled; this, it is even thought, might have been the *Book of Philip of Flanders*, which is spoken of in the Prologue to Chrétien; (b) a lost poem by Kyot or Guiot, to whom Wolfram, assuming Chrétien's version, ascribes his version of the story (the rare North French poem, the *Sauve de Neusey*, has been used in evidence of the existence of some such poet); (c) a lost Brutus: Robert de Borron in his *Martin* refers to an 'estoire de Brotagne que on appelle Brutus, que Messire Martin de Rochester translate.' As has been shown above, all these problematic sources would again be dependent for their ultimate origin on a mass of traditional tales preserved and passed on by the bards of the time, of whom Master Bihis or Biehoris, referred to in 'the Elucidation,' may possibly have been one. The contact between East and West, and the especially close touch between England and France, in the century from which these stories come, makes the field of investigation a very far-reaching one and the search for origins extremely perplexing.

(1) *Celtic theory*.—In 1839 the publication of Lady Guest's *The Mabinogion*; from the *Llyfr Coch of Heryest* and other ancient Welsh MSS called attention to the marked similarity of incident between the three Welsh tales (*The Lady of the Fountain*, *Gereint the Son of Erbin*, *Peredur the Son of Eborac*) and three Romanes of the French *trouvère* Chrétien de Troyes (*Yvain, le chevalier au Lion*, *Erec*, and *Le Conte del Graal*). The bearing of this similarity on research into the history of the Grail story was at once seen by scholars, who divided themselves into partisans of either (a) the Insular or (b) the Continental school; the one holding that the Welsh tales were the earlier, and the other that the birth-place of the tales was not Wales but Armorica, whence they reached Chrétien de Troyes. Among the leading exponents of the Insular school were Gaston Paris and A. Nutt; and of the Continental school, Foerster and Gölther. In the main, the Insular Celtic theory has prevailed. The essence of that theory is that the stories—a *proto-Mabinogion*—passed from the Welsh story-tellers to France through the medium of the Breton *lais*, and were seized upon and given literary form by Chrétien de Troyes. Some of the stories, retranslated, returned to Wales, and these we have in the *Mabinogion*. A. Nutt, in his *Studies on the Legend of the Holy Grail* (London, 1889), has given many instances of what he regards as conclusive proofs that the *Mabinogion* were very near to the myth roots in their primitive simplicity, and that many of the most curious incidents in the French cycle have affinities so close with Celtic folklore that they cannot be overlooked.

(2) *Oriental theory*.—The names of Gaster and Wassilofsky are associated with the hypothesis that the sources of the story are to be found in the East. By them it is connected with the famous Alexander-romance literature and other Eastern myths. There are, of course, characteristics which lend themselves to this theory. Rich Eastern colouring appears in most of the stories; there is

also an Oriental conversion legend; and Wolfram's *Parzival* has many features of this kind, including the introduction of Prester John and the Knights Templar. Most scholars, however, have rejected the theory on the ground that the mere existence of kindred myths proves little. The Crusades, too, with their continual movement between East and West, while explaining many Eastern features, make it impossible to base any origin-theory simply on Oriental colouring. W. Stenck, in his treatise (cited above), p. 44 ff., deals with the connexion between the sacramental cup and the wonder-dispensing vessel, and points out, with many interesting examples, the place of Babylonian myth in shaping 'the ground-tone in that Gnostic-Oriental circle of ideas out of which Judaism and Christianity equally have drawn deeply' (p. 47).

(3) *Nature-cult theory*.—One special ingredient among those suggesting an Eastern origin is very clearly marked—an apparent affinity with elements in the cult of Adonis or some similar Nature-cult. This becomes more important when one notices that this resemblance is plainest in forms of the story adjudged by criticism on other grounds to be the oldest. There is the persistent feature of the wasted land, partly or wholly restored to fertility, especially in combination with the wounded king restored to health: there is an obvious suggestion of 'Tammuz yearly wounded,' and of observances of Nature's annual decay and resurrection, which were not only wide-spread but, on the whole, travelled westwards. The parallel becomes still more suggestive when one notes the prominence of weeping in the Grail legends—sometimes a weeping maiden or maidens, sometimes the weeping of all in the Grail castle; in the *Percival* there is the weeping and lamenting even without the Grail itself.¹ These affinities were first noticed by Simrock and Martin, but have been more completely worked out by Miss Weston in an article on 'The Grail and the Rites of Adonis' (*FL* xviii, Sept. 1907), and in her second vol. on *The Legend of Sir Percival*.

(4) *Initiation theory*.—Blended with these elements there are others which suggest affinities with religious mysteries and initiation ceremonies. There is almost always in the Grail story a question to be asked by the hero; he fails to ask it, and draws upon himself the curses of the people of the wasted land; or he asks it partially, and his blight is but partially lifted; by and by he comes again to the Grail castle, and asks it fully and successfully. The same mystery-note is suggested by the 'secret words' which in some of the later forms of the story are confided to the successful Grail winner; and by 'the changes of the Grail,' beheld by King Arthur, 'in five several manners that none ought to tell, for the secret things of the sacrament ought none to tell openly but he to whom God hath given it' (*High History*, li. 119). The theory has been suggested that here we have the remnants of an initiation legend—the failure to ask the question representing an *initiation mangelé*. The theory is difficult to prove: vagueness and mystery are of the essence of the incident; but it is difficult to account otherwise for the fact that the question-element is so central and so persistent.

5. *Christianisation*.—The Christian element in the Grail stories now remains to be considered. This includes the whole 'Early History' material—the story of Joseph of Arimathea and his descendants and their connexion with the Grail, also the conversion of Britain through Joseph's kinsman Brons or his son Josephus. It also includes the Christianised details, which vary in quantity in different forms of the story. Sometimes this

element is very scanty: in the *Dieu Ordre* it is practically absent; in the *Thornton Syr Percival* there is nothing except that the Knight goes at last to the Holy Land. Sometimes, again, the documents abound in Christian symbolism or allusion: even in the *Mabinogion*, one comes across nuns, paternosters, baptism, Good Friday; in the *Percival* there is a strong tincture of asceticism; in Wolfram, though the Grail itself takes its least ecclesiastical form, there is the dove, the Host, and the order of virgin knights, and the Grail vision is denied to a heathen. It may now be taken as an accepted result of scholarship that these Christian elements represent transformations or fusions comparatively late in the history of the Grail idea, and do not give an indication of its ultimate origin, which is much more likely to be found among the elements alluded to in the preceding paragraphs. It is conceivable that a talisman in the form of a vessel or otherwise,² and already revered on other grounds, might be changed into the Chalice of the Last Supper by contact with Christian influences, just as the shrines of certain pagan goddesses were absorbed into the cult of the Virgin. But it is inconceivable that the process should work the other way—that a vessel hallowed by immemorial Christian tradition could degenerate into a mere food-producing talisman; it is unthinkable that the Holy Chalice and the lance of Longinus should be turned to the uses of a mere vengeance-quest, as would be the case on the hypothesis of a purely Christian origin for the Grail idea.

The problem remains of the time and place at which the Christian influences definitely touched the non-Christian traditions and accomplished the great fusion. Something of this must have been due to the Gospel of Nicodemus (see above; also *HDB* iii. 544 ff.), which had been known in the West for some hundreds of years. Much was also due to the Crusades; in Miss Weston's words (*Legend of Sir Percival*, li. 267),

'all eyes were turned to Jerusalem; and the effort to visit the Holy Places, the site of the Death and Burial of the Redeemer, from the hands of the infidel captured the imagination of all Christendom. Relics of the Passion, fragments of the Cross, the nails, the Crown of Thorns, were making their way in a continuous procession to Europe; the Holy Lance had been discovered at Antioch; numerous places boasted the possession of the Holy Host.'

It was very natural that a story of a lance and cup should take on a new colouring from the things which were moving Christendom, and that a hero whose primal quest had been for vengeance on an enemy or for the removal of an evil spell should have his goal transfigured, without always losing all trace of its former character. One of the spots where the Joseph legend was first localised, and where the 'sang real' was believed to be preserved, was Pécamp.³ It is possible and probable that this was one of the most definite points of contact between the Christian and non-Christian traditions. But if that was so, a re-colouring of the whole matter in the interests of Glastonbury must have taken place when the Christianised story crossed the Channel and touched again the borders of the Wales from which, before its baptism, it had emerged. The reign of Henry II. (1154-59) coincides with three noteworthy things: the climax of the 'sang real' interest at Pécamp; the attempt to utilise the Arthurian tradition in the conciliation of wild Wales; and the ecclesiastical assertion of Britain against Rome, resisted by Thomas à Becket. There was thus a strong inducement to Christianise the cup of Celtic legend and to glorify Glastonbury as the home of the sacred Chalice;

¹ The much discussed scene in Wolfram may have been a vessel cut from stone. The scene earlier at Glaston was said to have been cut from an emerald.

² In 1171 the relic was discovered in a pillar, and exhibited above the High Altar of the Abbey. See *Le Livre de Lancelot*, *Revue sur l'abbaye de Pécamp*, Rouen, 1865, p. 79 ff.

³ Cf. *Rek* 24; J. G. Fraser, *Adonis, Atith, Ostia*, London, 1897, p. 62; *The Dying God*, 1911, p. 282 ff.

are used as a prayer before retiring to rest. The morning service of the Sikhs consists in the recitation of the *Jappi*, followed by the *Ast M War*, which was composed almost entirely by Guru Nanak, though it includes some stanzas by Guru Angad. *War* meant originally a dirge for the brave slain in battle, but the term came to mean any song of praise. *Wars* were composed in stanzas called *psuris*, 'ladders,' which were chanted by professional minstrels. The *Granth* of Guru Govind Singh contains his *Jappi*, the *Ast M War* (or praise of the creator), the *Vachitar Nafak* (or Wonderful Drama), in which the Guru gives an account of his parentage, his Divine mission, and the battles in which he had been engaged. His militant character is illustrated by the inclusion of three abridged translations of the *Dev Mahatmya*, an episode in the *Mahabharata Puran*, in praise of Durga, the goddess of war. Then follow the *Gyan Parvadi* (or awakening of knowledge); accounts of 24 incarnations of the Deity, selected because of their warlike character; the *Bandra de shabd* (quatrains in praise of God and in reprobation of idolatry and hypocrisy); the *Shikhar Nām Mala* (a list of weapons used in the Guru's time, with special references to the Creator's attributes); the *Tris Charitar* (or tales illustrating the qualities and descent of women); the *Zafardana* (an epistle of the Guru to Aurangzeb); and several metrical tales in Persian. According to Trumpp, the body of the *Granth* comprises 30 original *Rāgs*, including those from which extracts are inserted in the foregoing parts, and a 31st *Rāg*, called the *Jaisvanti*, which was composed by Teg Bahadur. Among these *Rāgs*, or modes, are distributed the verses of the various *gurus*, and to each *Rāg* sayings of one or more *bhagats* are appended, but without any system or order. The first four *Rāgs* are the most important. Macauliffe's account agrees in essentials. He describes the hymns of the *gurus* and salutes as arranged according to the 31 *Rāgs* in which they were composed, and adds (vol. I. p. 11):

'The first nine *Gurus* adopted the same *Beeth* as their own *dharmas*, and their compositions are distinguished by *Maheles* or quarters. The *Granth* is divided into a city, and the hymns of each *Guru* to a ward or division of it. Thus the compositions of Guru Nanak are styled *Maheles* one, that is, the first ward, the compositions of Guru Angad the second ward, and so on. After the hymns of the *Gurus* are found the hymns of the *bhagats* under their several musical measures.'

But, despite its varied origins, the *Granth* is to the Sikhs the embodiment of their *gurus*.

The *Granth* is concluded with a *Bāg*, which comprises a number of *Shloks*, and minor pieces by various *gurus* and *bhagats*. Owing to the diversity of its origins, the book is not written in any one language, but in various vernaculars of modern India. Thus Nāmadēva wrote in an old form of Marāṭhī; and the Brāhman Trilochan closely resembled him in style. Jaideo used a curious mixture of Sanskrit and the modern vernacular, while Rāmānanda's idiom is the old Hindi, differing little, if at all, from that of Kabir and his disciples. It is curious that, though Nānak and his successors were all natives of the Panjāb, they used an idiom closely resembling the Hindi, doubtless in imitation of Kabir and the other *bhagats*, to whom they owed so much as religious teachers. The result is that parts of the *Granth*, e.g. that of Govind Singh, which is in pure Hindi, are unintelligible to the modern Sikhs.

The metres of the *Granth*, which is wholly in verse, are either old Prakrit metres or of a later type, the verses being measured by quantity only and always rhyming.

¹ The ten *gurus* are regarded by the Sikhs as only one person, the light of the first *Guru's* soul having been transmitted to each of his successors in turn. Cf. with this the Br's teaching of the devolution of the office, or light, of the Prophet upon his descendants.

LITERATURE.—Trumpp is quoted in the art. though it deserves much of Macauliffe's criticism. The manuscript prepared by a Sikh scholar is now in the possession of the British Museum. His notes on the *Granth* are in the margin of the manuscript. He published a *Granth* in 1881, and a *Granth* in 1881. Macauliffe's work is a valuable contribution to the study of the *Granth*, and is a valuable contribution to the study of the *Granth*, and is a valuable contribution to the study of the *Granth*.

GRATIE.—See CHARITY.

GRATITUDE.—There are many human emotions that can be understood only if taken directly in connexion with the social nature of man. They presuppose the fact that men dwell together in communities—have common interests, share common experiences, run common risks, and find unity to be power. To this class belong the tender emotions—those that are excited by concern or regard of one person for another, and that are essentially of a comforting and benedict kind. Supreme among these is love, which carries along with it parental, filial, and similar affections—love of kinsfolk, love of country, and the like; next are friendship and the allied feelings of esteem and admiration; then come the benevolent affections or affections of good-will, including sympathy, compassion, pity, and so forth; and last of all may be instanced gratitude, which has distinct relations to all the others just enumerated.

1. Nature and origin.—Gratitude has been defined as 'that delightful emotion of love to him who has conferred a kindness on us, the very feeling of which is itself no small part of the benefit conferred' (Thomas Brown, *op. cit.* *infra*, lxi.). The definition, though correct so far as it goes, is not adequate; it does not reach the real centre of the conception. We wish to know what is the nature of the emotion, whence it originates, and how it manifests itself.

(1) First, then, we observe that what arouses the emotion is not the magnitude of the benefit conferred (although this may react upon it), but the display of friendliness, affection, and good feeling on the part of the benefactor—such manifestation of good-will and kindly consideration for the recipient as cannot be claimed or exacted. There is no claim, properly speaking, in true gratitude: giver and receiver both gain, but neither claims. Hence, gratitude is not, as the cynic has so frequently represented it to be, mere 'bread and butter' affection; nor is it the prudential 'regard for favours to come.' These are purely selfish considerations, marks of an unworthy calculating egotism, which debase the emotion and transform it into what is mean and ignoble. Gratitude is an unselfish joyous response to kindness—a response that is immediate and spontaneous; the ultimate meaning of which is that human nature is so constituted that affection and unity between persons is the foundation of it, ill-will and enmity (all indications to the contrary notwithstanding) being abnormal and depraved. Hence the biting force and odious character of ingratitude. 'Blow, blow, thou winter wind, thou art not so unkind as man's ingratitude' (*As You Like It*, II. vii. 174 ff.). Now, why? Not simply because the ungrateful man does not fully value one's gift (that would be a small matter), but also because he throws back one's good-will with coldness and thereby cuts one off from a place in his affections: in him, as Kant puts it, 'the duties of philanthropy are inverted, and the want of love is transmuted to a title to hate those by whom he has been first beloved' (*Metaphysics of Ethics*, II. J. W. Sempie, Edinburgh, 1836, p. 306).

The nature of gratitude is not obscurely indicated in the fact that 'grace' and 'gratitude' are at root one and the same term, and represent the

reverses and the obverse side of the same fact—more clearly expressed, perhaps, in Greek, where the one word *χάρη* is expressive of both. The Greek term shows that the emotion is essentially a social one, and works in the atmosphere of unity and love, and is, therefore, a species of 'brotherly affection.'

(2) On all hands it is allowed that gratitude is a joyful and pleasant emotion, though there may be in it an element of pain—more especially when it begets solicitude for the object of it. But, though this is granted, the source of the joy is matter of dispute. It has sometimes been maintained that gratitude arises either from our appreciation of the value of the benefit received, or from recognition of the fact that the benefactor has sacrificed something for our sake. This needs examination. There is no doubt that the value of the gift frequently comes in to augment the joy which we experience, especially when the benefit takes the form of freeing us from pain or from an embarrassing situation. It is equally indisputable that a well-balanced nature esteems sacrifices that are made on its behalf. But, although these facts may be necessary to the full explanation of the intensity of the joy that some cases of gratitude exhibit, they do not account for the essence of the emotion itself. For example, a pecuniary gift that brings a man domestic comfort, where pecuniary and pinching hold sway before, necessarily affords pleasure; but he will not be grateful for it unless, with greater or less consciousness, he realises that it was the embodiment of benevolence, and that, in bestowing it, the giver was also bestowing himself. Relief from pain or suffering necessarily exhilarates and satisfies us; but the exhilaration and satisfaction become gratitude only when our heart goes forth to the person who has conferred the boon, and we desire his welfare. Moreover, one is frequently grateful, and that in a very marked degree, for benefits that cost the giver little, or that are in themselves of a trifling nature. Why in that case we are gratefully affected is because we recognise that the heart of the giver is embedded in his gift. Still further, a benefit is a source of gratitude to a man only so long as he believes that the person who confers it means his good. Let us suspect that he has a sinister object in view in helping us, and immediately our gratitude is turned into indignation and resentment; he has not been giving himself to us in his gift, but has been using us as a tool, a means to an end, thereby making us his slaves and his inferiors.

(3) From all this it will be at once apparent that, in gratitude, there is an element of admiration—admiration, by the recipient, of his benefactor as a man who finds it in his heart to bestow what cannot legally be claimed of him, and who is moved by non-selfish or altruistic regard. Generosity and disinterestedness are by their very nature impressive, and admiration is conditioned by mutual respect.

(4) From this it will be apparent, also, that gratitude is near neighbour to sympathy: it is not sympathy, but it involves it. Unless the recipient could place himself in imagination in the position of the giver and realise his kindly feeling and good intention towards him, gratitude could not arise; nor could the benevolence that actuates the giver have birth, did he not, in like manner, take home to himself the situation and the responding goodwill and tender affection of the recipient. What sympathy does is to enable us to realise; whereas gratitude is the result of the realisation.

a. Feeling or sense of inferiority.—It has often been a question keenly debated, whether gratitude does not place the grateful person in a position of inferiority hurtful to his self-respect, and, consequently,

quantly, whether it should not be looked upon as a cringing and undesirable emotion. At any rate, in old Greek days, it was very much regarded in this light; and one of the characterisations of 'the high-minded man' (*μεγαλόθυμος*) of Aristotle is that, if he has to receive a favour, he hastens to pay it back with a greater, so as to escape from the disagreeable feeling of indebtedness.

'It is his nature,' as we read (*ETH. NIC. IV. 3, 24 f.*), 'to confer benefits, but he is ashamed to receive them; for the former is the part of a superior, the latter of an inferior. And, when he has received a benefit, he is apt to confer a greater in return; for thus his creditor will become his debtor, and he is in the position of a recipient of his favour. It is thought, moreover, that such men remember those on whom they have conferred favours better than those from whom they have received them; for the recipient of a benefit is inferior to the benefactor, but such a man wishes to be in the position of a superior. So he likes to be reminded of the one, but dislikes to be reminded of the other.'

In like manner, Cicero, in the Latin world, discourses rather coldly on the topic of benefits—when they should be received, and how and in what manner they should be conferred. As might be expected, he views the matter from a shrewd, practical, common-sense standpoint, and indulges in sage counsel of the prudential stamp, delivered from the moralist's platform, without much feeling and with little sympathetic interest (see *de Officiis*, I. 14-17). And even Seneca, in his *de Beneficiis*, does not get rid of this feeling of inferiority in the recipient—subtle, stimulating, and suggestive though his treatise be.

Now, that 'giver' and 'receiver' indicate two different relationships cannot be denied; and the situation is a delicate one as between recipient and bestower; it may, further, be allowed that 'it is more blessed to give than to receive.' But, when the gift takes the form of a token of goodwill, in which, therefore, the giver imparts himself, and when the responding gratitude in the recipient is the offer of his self in exchange (which even sincere 'thanks' always implies), there is no galling inferiority involved—certainly not such as would infringe on one's self-respect—but an exchange of love, generous and free, in so far as each self is given and each is accepted or received. Surely, if it is not derogatory to our dignity to learn of a person wiser or better than ourselves, it is not derogatory to our dignity to receive a benefit from one who is friendly to us and who has both the power and the will to confer it. As finite beings, we are naturally limited in our ability to supply our own needs; and, as members of the human race, we are bound to each other in mutual obligation from our birth to our death, nobody being accepted. Thus, favours conferred, where all need help, impose no derogatory inferiority on any. On the other hand, if the gift bestowed were accepted simply because of its extrinsic value—simply because, for example, it is a certain desirable sum of money—then disparaging inferiority would, indeed, be implied in gratitude (we have demeaned ourselves); but, inasmuch as the real origin of gratitude is to be found, not there, but in the gift of the giver's own self, it is altogether different. Hence, paying back the benefit or favour at the very earliest moment, so as to rid oneself of a distasteful obligation, becomes an irrelevant consideration here, and the thought of it vitiates, if it does not actually destroy, the noble emotion. The idea of paying back, so far as it really enters into the situation, is simply readiness on the part of the person benefited to befriend the benefactor, should necessity arise and the ability be present—the response, then, of love to love. It is the characteristic of gratitude that it links the recipient to his benefactor in the bonds of love, and the goodwill in the case is mutual. If the recipient believed that the

gift was not a true expression of the giver's self, or if it was bestowed grudgingly or ungraciously, then, while he might accept it (stern necessity being laid upon him), he certainly could not feel himself bound to the giver in true gratitude: heart has not gone forth to greet heart—the commercial idiom has intervened to spoil the tender emotion. It is then that the recipient longs to pay back the gift at the earliest moment—to free himself of a galling burden: he has never had the gift as more than a loan; and the longer he keeps it, the more, he feels, are the interest and debt accumulating.

The process in gratitude might be expressed in physiological language, after the analogy of reflex action. In order to a reflex action, three things are necessary—a central nervous cell (C); an incoming impulse from a sense surface (A), along a sensory or afferent nerve, liberating energy at the centre; an outgoing current (B), consequent on the discharge of energy, along an efferent or motor nerve, to a motor and organ, resulting in movement. Precisely so, with a certain difference, is it in the case of gratitude. If the conscious recipient be regarded as the nerve centre (C), then the incoming current from the benefactor (A) creates an immediate response, which, however (and here is the distinctive difference), in the first instance, traverses the path of the outgoing current in the reverse order, back to the benefactor (A), and then, secondarily, manifests itself in active outflow (B)—in readiness to serve.

3. Religious and theistic bearings.—(1) The true nature of gratitude is strikingly exemplified in the realm of religion. In Scripture, God's 'grace' ($\chi\acute{\alpha}\rho\iota\varsigma$) is represented as poured down on man—it comes as expressive of the Father's love, unsolicited and unmerited; it is the Father's affection taking outward beneficent form in relation to His earthly sons. The result is that, immediately on recognition of this, man's 'gratitude' ($\chi\acute{\alpha}\rho\iota\varsigma$ also) springs up towards God—it is the cheerful and spontaneous response to the request, 'My son, give me thine heart': in other words, love has begotten love, and a willing dedication of the creature to the Creator is the consequence—'The law was given by Moses; grace and truth came by Jesus Christ' (Jn 1⁷). Here, in especial, the joy of gratitude is associated with awe, as all deep joy is.

(2) Again, the place of gratitude among the emotions is a very important one, and its worth for human life and in the interests of religion is inestimable. It is but a phase of the solidarity of the race, on the one hand—'none of us liveth to himself, and no man dieth to himself' (Ro 12⁵); and, on the other hand, it is the basis of man's true relationship to God and to Jesus Christ. In the Christian religion, it means not only the willing up of affection towards the Heavenly Father and the Divine Redeemer, but also the dedication of the believer to the service of the Divine: as the writer of the Epistle to the Hebrews puts it, 'Wherefore, receiving a kingdom which cannot be shaken, let us have gratitude ($\theta\upsilon\mu\omega\varsigma$ $\chi\acute{\alpha}\rho\iota\varsigma$; EV 'grace,' RVm 'thankfulness'), whereby we may offer service well-pleasing to God with reverence and awe' (12²⁸). This service of the Divine is the equivalent in religion of the good-will and readiness to benefit a benefactor in the sphere of the human.

(3) Hence, lastly, gratitude has a distinct religious value in relation to theism and theistic argument. When the evidence or testimony to God's existence, in Natural Theology, is laid (as it so frequently is) in human nature, one part of that evidence is placed in the emotions (the other sources being the intellect and the conscience), and, of the emotions, gratitude is not the least impressive for the purpose. Indeed, man's 'feeling of dependence' has often been represented (as by Schleiermacher) as the supreme source of theistic belief. And, certainly, feeling of dependence has so to do with it, whether in an eminent degree or not.

Yet, feeling of dependence is only the other side of gratitude—the Creator giving Himself freely to the creature, and the creature responding to the significance of this by dedicating himself unreservedly to the Creator. Love craves for love, and rests in it when found.

GREECE, GREEK RELIGION.

[L. R. PARFELL.]

The foundation of a serious and scientific study of Greek religion, as distinct from the mere mythology of Hellas, may almost be said to have been an achievement of the last generation of scholars. And at last the Hellenic spirit, so creative and imperial in the domains of literature, art, and science, can be recognized as manifesting itself not unworthily in the sphere of religion.

The history of Greek religion means, partly, the account and the interpretation of the various rites, cults, and cult-ideas of the various Greek families, tribes, and communities; partly, the statement of the religious temperament both of the masses and of the individuals who emerged from among them and of whom some record has been preserved. Now, as the Greek world in the long period of its independence was never organized as a single State, the attempt to give a summary and general account of its religion is confronted with the perplexity arising from the often incalculable diversity of religious forms and ideas in the different centres of its social life, which was in the highest degree centrifugal. Nevertheless, as will be shown, we find in the midst of manifold local variation a certain uniformity of religious psychology, making for uniformity of practice, which enables us to deliver certain general pronouncements about the whole.

ANCIENT SOURCES.—1. *Literary.*—Our real knowledge of any ancient religion depends obviously on the copiousness and variety of our records. And it is likely to be more luminous if the society in question expressed its religious life not only in surviving literature, but also in surviving art. Of both these kinds the student of Greek religion has an unusually rich material.

For, in spite of its secular freedom, which is its salient achievement, Greek literature in its highest and most popular forms, as well as in its narrower and more special, is deeply infused or preoccupied with religion and religious myth. In fact, it reflects the vivifying penetration of religion into all parts of Greek activity and mental life. This is obviously true of the Epic period, which produced the two types of the chivalrous and the theologic Epic, and which has left us most valuable material

for the religious history of the 10th and 9th centuries B.C. in the Homeric poems, and of the 8th and 7th centuries in the poems of Hesiod and in the 'Homeric' hymns; it is none the less true of the great Lyric movement which followed upon that, when the greatest poets devoted themselves to the composition of songs for festival-religious occasions or of hymns for the service of temple or altar. Besides these, whose great names and fragments of whose great works survive, there was another less distinguished group of special 'hieratic' poets, who composed hymns for the service of certain mystery-cults, and whose compositions were preserved as liturgical documents by the priestly families that administered them. The sententious ethical political poetry of the 6th cent.—the elegiacs of Theognis and Solon—is instinct with religious emotion and reflection. And the greatest product of the poetic genius of Hellas—the tragic drama—is of a religious character in respect both of its origin and much of its subject-matter. Finally, the later learned poetry of the Ptolemaic period—the *Cassandreia* of Lykophron, the hymns and other works of Callimachus, the Epic poem of Apollonius Rhodius—is full of antiquarian religious lore. At the same time, our knowledge is much indebted to the great prose-writers of Greece, the philosophers, historians, and orators: among the philosophers, especially to Plato, who more optionally than any of the others reveals to us, however much he idealises, the religious psychology and cult-phenomena of his period; among the historians, especially to Herodotus, who is the intellectual ancestor of the modern anthropologist and student of comparative religion, and whose presentation of the facts of history is coloured with religious conviction. The works of the Attic orators are of special value for our purposes, first because the classical orator was more apt than the modern to dilate on religious themes and appeal to religious sentiments, as religion was far more closely interlarded with political and social life; secondly, because we are more sure of the orator than we can be of the poetic or philosophic writer that his words are attuned to the average pitch of popular belief and sentiment.

It is true then that all the great fields of Greek literature make their several contributions to the material of our subject. And besides the works of the great masters, the student has to reckon with the secondary and parasitic work of the later scholiasts, compilers, and commentators, which is even more replete with the special information upon which the history of Greek religion can be built. The study of it is, in fact, almost co-extensive with the study of Greek literature.

But amidst this profusion of material we must specially mark the works of those ancients who wrote direct treatises on the various religious phenomena—on the gods, the cult-practices, the theologic and mythologic systems of the Hellenic societies. The earliest of such works that have come down to us are the poems of Hesiod and the Hesiodic School—the *Works and Days* and the *Theogony*—while of parts of the 'Homeric' hymns the special theme is the attributes and functions of the various divinities. But it was not till the period of scientific activity after Aristotle that definite treatises in prose on different departments of the national religion began to be written. A chapter on sacrifices by Theophrastus is mainly preserved for us by Porphyry. The writers of 'Attic' or Attic history and antiquities, who belonged mainly to the 3rd cent., were special workers in this field; Philochorus, the chief of them, wrote 'on Festivals,' 'on Sacred Days,' 'on Divination,' 'on the Attic Mysteries'; Iktos, the slave and friend of Callimachus, on the 'Manifestations of

Apollo' and on 'the Cretan sacrifices'; while the *Agyneta* of Kleidemos was, if we may judge from the fragments that remain, occupied with the problems of religion and mythology. Outside this circle we hear of other contributions to the history of Greek religion, such as the treatises of Heraclides, probably the pupil of Aristotle, usually called 'Pontikos,' on 'the Foundations of Temples,' and 'on Oracles'; and a work by an unknown Sokrates of Kos on the important subject of 'Invocation-titles of the gods.' Lastly may be mentioned here a treatise of Apollodoros, *peri theon*, which, if he is to be identified with the author of the *Bibliotheca*, was probably a learned account of the popular religion rather than a metaphysical inquiry.

Of nearly all this scientific post-Aristotelian literature only isolated fragments survive in quotations by later writers, lexicographers, and scholiasts, who were, no doubt, more deeply indebted to it than they always acknowledged; but it is some compensation for our loss that the work last mentioned, the *Bibliotheca* of Apollodoros, has been preserved—a rich storehouse of myth and folklore with some infusion of actual cult-record. Among the later writers our subject is indebted to the geographer Strabo for many incidental observations of local cults and ritual, still more to the philosophic moralist and *littérateur*, Plutarch, a man of earnest religious interest and some power of original thought, who knew the religion of his country at first hand and at a time when it was yet alive, and who devoted to it much attention and some literary industry; hence we must rank high among our ancient authorities his *Questions Grecques* and his treatises 'on the Pythian Oracle' and 'on the Cessation of Oracles.' Again, much desultory but varied information is afforded by the compilers Athenaeus (in his *Deipnosophistae*) and Stobaeus (in his *Florilegium*). But of higher value than all these, or, in fact, than any work that has been bequeathed to us from antiquity, is the *Descriptive Greece* by Pausanias, composed about A.D. 180; for he travelled somewhat as a modern anthropologist, relying partly on earlier literature, yet using his own eyes and ears and his own notes. His ruling passion was the study of the folk-religion and the religious monuments; so that it is due mainly to him that we know something of the village-religion of Hellas as distinct from that of the great cities, and can frame working theories of the evolution, through immemorial ages, of various growths of the polytheism.

The lexicographers Harpokration, Hesychius, and Suda contribute facts of value, especially in their citation of cult-appellatives, which, owing to the magic value of the special name or title whereby the deity was invoked, throw a revealing light on the significance and power of many a worship, and help to frame our conception of the complex character of many a divinity. Again, the various collections of *scholia* on the classical texts are a rich quarry for our reconstruction of the fabric of Hellenic religion. Of chief value among these are the scholia on Homer, Pindar, Aeschylus, Euripides, Aristophanes, and Theocritus, while Servius' Commentary on Virgil tells us even more about Greek cult and mythology than about Roman; and high in this class of our authorities we must rank a work of late Byzantine learning, the commentary of Testam on Lykophron's poem *Cassandreia*, for his scholia are charged with remote antiquarian lore derived from good sources.

Finally, we gather much of our knowledge from the controversial treatises of the early Christian Fathers, written with propagandist zeal in the heat of their struggle against paganism. They reveal to us much of the religion that they strove

to overthrow by the exposure of its violence and its absurdities. But their statements must be used with cautious criticism. Their knowledge was by no means always at first hand, unless—which we rarely know to have been the case—they were, like Clement of Alexandria, converted pagans who had been bred up in the Greco-Roman polytheism. Their statements, for instance, about the Greek mysteries are often vague and unconvincing, while in their desire to include them all in one general condemnation they confuse Anatolian rites with Eleusinian. And they are pardonably blind to the often beautiful ritual, the nobler ideas, and the higher moral elements in the older Mediterranean religions. Nevertheless, if we make due allowance for prejudice and exaggeration, works such as the *Protrepticus* of Clement, the treatise of Arnobius *adversus Gentes*, of Firmicus Maternus *de Erroribus Profanarum Gentium*, Eusebius' *Preparatio Evangelica*, Augustine's *de Civitate Dei*, Athanasius' *Legatio*, must be ranked among the primary sources of our history.

A special but very important chapter in the later history of Greek religion is the account of the growth and diffusion of the religious brotherhoods, especially the Orphic Dionysiac societies. For these we have something of direct liturgical evidence in the collection of Orphic hymns, mainly the products of the later theosophic period, but throwing light on the theology and ritual of these sects. But our knowledge of this mystic religion which was engrafted upon Hellenism has been in recent times enriched by the priceless discovery of an ancient poetical Orphic liturgy engraved upon gold-leaf found in tombs of Crete and South Italy, and probably a product of the 5th cent. B.C.

3. Monumental.—The above is a sketch of our more important literary sources. The knowledge to be derived from them would on the whole and in many important details remain vague and uncertain, were it not supplemented and secured by the evidence coming from another source which we may term monumental or at most semi-literary—the evidence from inscriptions. These have been accumulated in vast profusion during the last thirty years; and have been and are still being reduced to order for our special purpose. The public inscriptions, being dry State documents, do not reveal to us the heart of any mystery or the religious soul of the people, but rather the State organization and the exact minutiae of ritual and sacrifices from which we can sometimes reconstruct an image of the inward religious thought. And many a local cult of value for our total impression that was unrecorded by any writer is revealed to us by these monuments. But the needs and aspirations of the private man are better attested by the private inscriptions attached to *ex voto* dedications or commemorating Divine benefits received.

Yet, amidst all this wealth of evidence, there seems one thing lacking. Of actual temple-liturgies, of formal prayers proffered round the altars, of the hymns chanted in the public service, of all that might constitute a text of Greek church-service, there is comparatively little preserved. One or two hymns, and a few fragments of the religious lyric of the 7th cent.—to which we may now add the important recent find of the poems of Pindar; a strophe of an ancient hymn to Dionysos, sung by the Elean women; a 4th cent. poem to Dionysos, composed for the Delphic service; the newly discovered hymn of the Kourtes in Crete; a few formulae of prayers quoted or paraphrased by later writers—all this appears meagre material when we compare it with the profusion of documents of the public and private religion that are streaming in from Babylon.

But, in respect of another source of the history

of religion, namely, the monuments of art, our Greek material is unique. For the greatest art of Hellas was mainly religious, the greatest artists working for the religious service of the State. And the surviving works of sculpture, painting, and glyptic, wrought for either public or private purposes, present us often not only with facts of religion and ritual unrecorded in literature, but also with an impression, hard to gain otherwise, of the religious consciousness of the people, and serve also as witnesses to the strength of the religious feeling. Therefore the study of Greek religion is concerned as much with the art and archaeology as with the literature.

A summary sketch of so manifold a theme as that with which this article deals will be of more value if it can present the facts in some kind of chronologic sequence. We may conveniently distinguish four periods: (1) the pre-historic, falling mainly in the second millennium B.C., and closing with the epoch marked by the Homeric poems; (2) the period extending from 900 to 800 B.C., beginning with the colonial expansion of Hellas, and ending before the Persian invasion; (3) the period from 800 to 338 B.C., including the greatest century of Greek history, and closing with the battle of Cheronea and the establishment of Macedonian supremacy; (4) the Hellenistic and Greco-Roman period. The chronologic statement is embarrassed by the absence of any record of date for the institution and diffusion of most of the cults, and for the growth of certain religious ideas; nor can we safely date a religious fact by the date of the author who first mentions it: a detail of ritual, a myth, a religious concept attested only by Pausanias or a late scholiast may descend from an age far anterior to the Homeric. And our earliest inscriptions do not as yet reach back to a period earlier than the beginning of the 7th century.

1. THE PRE-HISTORIC PERIOD.—For determining our view of Greek religion in the second millennium B.C., when Hellenism was in the making, the poems of Homer and Hesiod are of priceless value, if they are used with cautious and trained criticism. We depend greatly also on the general inductions of comparative religion and anthropology, which may sometimes guide us rightly in this matter, especially if the anthropological comparison is drawn from the more or less adjacent communities rather than from the Antipodes. We depend also on the evidence of the monuments of the Minoan-Mycenaean religion, revealing glimpses of the practices and faith of a people of high culture, whom no one would dare now to call, at least in the earlier stage of their life, Hellenic, but from whom the earliest Hellenes doubtless adopted much into their own religion.

2. Sketch of Homeric religion.—The poems of Homer present us with an advanced polytheism, a system in which the divinities are already correlated in some sort of hierarchy, and organized as a divine family under a supreme god. These divine beings are not mere *daimones* or *numina*, such as were in the main the old deities of Rome, vague and dimly-outlined forces, animate yet scarcely personal; but rather concrete and individual *deities* of robust and sharply-defined personality, not spirits but immortal beings of superhuman substance and soul, conceived in the glorified image of man. The anthropomorphic bias is dominant in the poems, plastically shaping the figures of all the divinities, except occasionally some of the lower grade, such as the river-god Skamandros. Even the vague group of nymphs, female *daimones* of the hill and the mountain, while lacking individual characterization, bear the anthropomorphic name, 'Brides' or 'Young Women,' which is the root-meaning of *Númpes*. Though the gods and goddesses

are a-spo-shifters, and may manifest or disguise themselves in the form of any animal,—birds by choice,—yet their abiding type is human; nor has Homer any clear remembrance of a 'cow-faced' Hera, still less of an 'owl-faced' Athena, since for him at least Hera *pefus* was Hera 'of the large ox-eyes,' and Athena *phasgōn* the goddess 'of the flashing eyes.' And his divinities are moralized beings with human passions, and ethical as well as artistic emotions. The highest among them are not imagined as Nature-powers, bound up with or immanent in the forces and departments of the natural world, for such a description applies only to his wind-gods, and nymphs and gods of river and sea; also, though more loosely, to his Helios, the god of the sun; to beings, in fact, that count little in his religious world. It scarcely applies to Poseidon, though his province is the sea; it does not describe at all his mode of imagining and presenting Apollo, Hera, Athena, Hermes, and others. There is no hint that these divinities were conceived by him as Nature-powers, or as evolved from any part of the natural world. The high god Zeus, though specially responsible for the atmospheric and celestial phenomena, is not identified with the thunder or even with the sky, though a few phrases may reveal the influence of an earlier animistic conception of the divine Sky. His religious world, in short, is morphologically neither a system of polydeism nor one of pantheism in which a divine force is regarded as universally immanent in the world of things, but is constructed on the lines of personal theism.

Again, in spite of one or two frivolous and licentious passages, the religious tone is serious, and in many important respects accords with an advanced morality. The deity, though jealous and revengeful of wrongs or slights to himself, is, on the whole, on the side of righteousness and mercy; his displeasure is aroused by those who spurn the voice of prayer, who injure the suppliant, the guest, or even the beggar; and besides Zeus and the other 'Olympians,' who are general guardians of the right, there loom the dark powers of the lower world, who are specially concerned with the sanctity of the oath. Much also of the religious reflection in the poems strikes us as mature and advanced: notably that passage at the beginning of the *Odyssey* where Zeus declares that it is not the gods who bring evil to men, but that it is the wickedness of their own hearts that is the cause of all their evils.

Finally, the Homeric ritual appears as on the higher level of theism. We can detect in it no trace of savagery, and but little contamination of religion with magic. The sacrifice is more than a mere bribe; it is a friendly communion with the divinity; and the service is solemn and beautiful with hymn and dance. The cult is furnished with altar and occasionally with temple and priesthood, but not yet, as a rule, with the idol, though this is beginning to appear.

This slight sketch of the Homeric theology is presented here in the belief that the Homeric poems enable us to catch some glimmer of the religion of the centuries preceding the first millennium. This belief is based on the conviction that the poems represent a Greek society existing near the date 1000 B.C. It is, of course, opposed to the view still maintained by some scholars that they are—in their finished form—a product of a much later period, and that the religion which they enshrine may be such as was in vogue in Attica about the epoch of Peisistratos. But the evidence of Homeric ethnology and sociology is fatal to this theory, and still more so are the arguments that may be drawn from the history of Greek religion; for, at the period of Peisistratos, certain religious forces

were rife, and certain religious phenomena prominent, about which Homer is entirely silent.

Still less reasonable is it to imagine that Homer constructs a religious world out of his own brain. We must suppose that he reflects something real and contemporary. Only we must guard ourselves against the serious error of supposing that he reflects the whole. Much is, doubtless, missing in his account, which we may be able to supply from Hesiod and other sources by means of reasonable hypotheses.

The assumption is, then, that the Homeric poems present us with a partial picture of the religion that prevailed among some of the leading Greek communities before the Dorian invasion of the Peloponnese and the Ionic colonization of Asia Minor.

2. Pre-Homeric period of religion.—Now, when we consider how slow of growth and unduring are the forms and the moral and metaphysical concepts of religion, we have the right to believe that part of what Homer records on these matters is the inherited tradition of an age some centuries earlier than his own. It is probable that those earliest Aryan immigrants from the north—Achaean, Dryopae, Minyans, and others—who, by mingling with peoples of aboriginal Mediterranean stock and of the Minoan-Mycenaean culture, constituted the happy blend that we call the Hellenic race, had already arrived at the stage of personal theism, and that Hellenic religion proper does not start with a 'godless period,' when the unseen powers were only dimly outlined in the vaguer and more fleeting characters of what is called 'Animism.' We now know, from the valuable discovery of a cuneiform inscription, that the Iranian people had evolved such personal deities as Mithra and Varuna before 1400 B.C.¹ And we have the right to suppose that their Western kinsfolk, who were forcing their way through the Balkans, perhaps only a century earlier, were at least at the same level of religious imagination. We can best understand the picture of the religious world of Homer, and also the later cult-records, if we believe that the kindred tribes coming from the north brought in certain personal deities, some of whom were common to more than one stock, and one at least may have been common to them all. This would best explain the supremacy of Zeus, the Sky-god, and the diffusion of his name Olympus, derived from the mountain that dominates the northern frontier, near to which the peoples that were to lead the history of Greece had at one time temporary settlements, and which they regarded as the throne of their high god. The wide geographical area of his cult cannot be naturally explained on the assumption that at any period in Hellenic history he had been merely the special deity of one particular tribe. And, as regards two other high gods at least, Apollo and Poseidon, we may be reasonably sure that, already in the pre-Homeric period, certain tribes other than the Achaeans had these cult-figures; in the Hyperborean ritual, which reflects at points the earliest days of Hellenism, we can follow the track of Apollo's invasion from the north; and the evidence is fairly clear that Poseidon was equally a northern immigrant, being the special tribal deity of the Misyae.

We must not then apply to the pre-Homeric period of Greek religion the formula 'one tribe, one god,' but must imagine that religion had already surmounted in some degree the tribal barriers; for, though the spirit of tribal exclusiveness was strong throughout the earlier periods of

¹ As Kauten assumes in his *Outline of Greek Religion*, § 2.

² See E. Meyer, 'Die erste Ausbreitung der Arier in der Geschichte,' in *Monatsh. d. d. Arch. Ges.*, 1890, p. 12.

this polytheism, certain families and certain tribes having the special prerogative of certain *loai* and jealously excluding strangers, yet the fact of the common possession of certain worship by various tribes contained the germ of religious expansiveness. Moreover, at some age indefinitely earlier than the Homeric, the conception of the high god had expanded both cosmically and ethically. Zeus had become more than a 'departmental god': the deity of the sky was also in the first period—so far as we can reconstruct it—Zeus Chthonios, the Lord of the life of earth and of the world under the earth, and it is likely that Hades was only an emanation from him. We may also regard the Homeric appellation of Zeus, *πατὴρ ἀσπερὶ τε θεῶν*, as a conventional and crystallised phrase descending from an older poetic tradition, and we are justified in interpreting it as a phrase belonging to the higher plane of theism.¹

We must also suppose that the anthropomorphic view of the personal deity, of which Homer is so attractive a spokesman, had asserted itself in the period before him. Unlike the early Roman, the early Hellenic divinities could be regarded as married, and ideas derived from the life of the family could be applied to them, although we can often discern that many of the myths concerning divine relationships—the sisterhood of Artemis to Apollo, for instance—do not belong to the earliest Hellenic epoch.

3. Minoan-Mycenaean religion.—But any account of the Hellenic polytheism of the second millennium demands a critical study of the Minoan-Mycenaean religion as well, and, before we can decide what part of the Homeric and later systems belongs to the aboriginal Aryan Hellenic tradition, we must know what the northerners found indigenous in the lands that they conquered or occupied. We know now that they found in many centres a culture superior to their own and a religion of an advanced theistic type with elaborate, though mainly aniconic, ritual, devoted predominantly to a great goddess, by whose side a god was only the subordinate partner. It has then been pointed out that, where we find in historic Greece the goddess-cult predominant² and especially the prevalence of a virgin-goddess, we should recognize the Minoan-Mycenaean tradition in antagonism to the Aryan, the latter invariably maintaining the predominance of the god. We may, therefore, believe the cults of Artemis in Aroëdia and Attica, of Athena in Attica, of Hera in Argos³ and Samos, to have been inherited from the former rather than to have been brought in by the latter. And sometimes linguistic sciences will be able to assign the different personalities of the polytheism to its different ethnic strains by determining the group of languages to which the divine name in question belongs. That philology has not yet brought us nearer to the solution of these problems is due to the lacunae in our knowledge of the pre-Hellenic Mediterranean languages, and especially to our ignorance of the Minoan script, for which we have masses of material but as yet no interpreter. Finally, the evidence of the early geographical area of a certain cult may sometimes be decisive in itself: this is the case in regard to the cults of the 'Mother of the gods' and of Aphrodite, who are aboriginally connected with Crete and Cyprus respectively, i.e. with the centres of the Minoan culture.

But the ethnic decision is at present impossible on a vast number of details in this composite polytheism, in respect both of ritual and of the

divine personalities; and the student of Hellenic religion must often abandon temporarily the quest of origins in his investigation of the composite whole.

4. Proto-Hellenic period.—The very high development of this Mediterranean civilisation from which Hellenism drew so much of its own life is in itself sufficient reason for the belief that the advanced picture that Homer presents of his contemporary polytheism affords us a true estimate of the progress that had been achieved in the centuries before him. And this is corroborated by a careful analysis of the later cult-records.

(1) *Family religion*.—Society in the latter half of the second millennium had already reached the higher agricultural stage and had evolved the monogamic family. Demeter—whose Aryan descent is proved by her name—was generally recognized by the various Hellenic tribes as the Earth goddess of corn, and the festival of the *Thesmophoria* was commonly associated with her. Certain forms of the religion of the family, which was the life-source of much of the private ethics of later Greece, can be traced back to the earliest period—the worship, for instance, of Zeus *Enkelos*, 'the god of the earth,' around whose altar in the courtyard of the old Aryan house the kinsmen gathered for worship. Another sacred centre of the family life in the pre-Homeric society was doubtless the hearth and the hearthstone in the middle of the hall; there are allusions to its sanctity in the Homeric poems, and the cult-records attest the great antiquity of this religious fact; although the development of the personal goddess Hestia in a later phenomenon (cf. *HEARTH* [Greek]). The curious Attic rite of the *Amphidromia*, wherein the kinsmen of the new-born child ran with it round the hearth, thereby consecrating it to its holy power, may have descended from a very ancient tradition.⁴

Again, the wider kinship-groups of the *φύλας* and *γῆναι* are obviously pre-Homeric, and doubtless these had been consecrated by aboriginal religion, though we cannot date precisely the emergence of such cult-forms as Zeus *Φυλαίος* and Athena *Φυλαία*.

(2) *Political religion*.—Further, it is fairly clear that already in this first stage the religion had become closely interfused with the higher political and social life. Although the greater part of the population lived still under the tribal system in scattered villages—*κοινότητες*—yet the *πόλις* had already arisen; and in certain cases we may surmise for it a religious origin, where its name—such as *Ἀθήνη*, *Περσία*, *Ἀλαργονήσι*, perhaps *Μεγάλη*—is derived from the personal name or the shrine of some divinity. In these cases the temple must have been the nucleus around which grew up the secular habitations; and the deity of the temple would become supreme in the political religion. Athens had won this position at Athens and probably elsewhere in the immemorial pre-Homeric past; and this explains her character in the Homeric poems as the divinity who more than all others inspires political wisdom and counsel. Various indications point, in fact, to the belief that the earliest development of the city-life was closely bound up with the cults of Zeus and Athena; for no other divinity was ever styled *Πολεύς* or *Πόλις* by any Greek State; and this agrees mainly with the presentation of them in the Homeric poems. The unanimity of the tradition points back to the second millennium as the period when this political characterization of the two deities was determined. And this view is strikingly confirmed by the records concerning the ritual and the establishment of the cult of Zeus *Polieus* on the Athenian Akropolis, an institution attributed to Kekrops.

¹ See Parrell, *The Higher Aspects of Greek Religion* (Oxford, 1912), p. 62.

² See Parrell, *Greece and Babylon*, Edinburgh, 1911, pp. 66–68.

³ The name *Hera* is probably Aryan-Hellenic, but applied to Argolis to the pre-Hellenic goddess.

⁴ See CGO v. 306.

and marking probably the Hellenisation of Attica. The singular features of the ritual and the association, preserved in its legend, of Attica with Crete indicate a high antiquity, when agriculture was the economic basis of the political as well as the religious life.

We may believe that other cults besides the two just mentioned played their part in the political growth of the pre-Homeric world. The marketplace, the cradle of political oratory, had become sacred ground, as Homer himself attests; and this consecration was probably marked by the presence of some *δῶλον*, a sacred stone of Hermes, for instance. Apollo, also, had early divested himself of the aboriginal character of the god of the wood and of the homeless migratory host, had become a builder of cities, and had established himself in the city's street with a change in the meaning of his title *ἄγυιός*, once an appellation of the Way-god who guided the host through the wild, now of the deity who guarded the ways of the city; and already, before Homer, his shrine at Pytho was beginning to acquire wealth and political importance as an oracular centre of consultation.

3. Earliest ethical religion.—The theistic system had been turned to good account in other directions than the political, before it appeared on the canvas of Homer. The whole morality of early social life had been nurtured and protected by it; for we may maintain that the ethical religious spirit of Homer—unless we regard him as a man or as a group of men to whom a special revelation had been made—must reflect in some degree a tradition that had grown up in the centuries before him. We see then that current conceptions about the gods had ceased to be inspired merely by fear; a milder sentiment had come to infuse religious thought; the deity was regarded not only as a righteous god of vengeance, but as loving mercy and compassion, and a protector of the weak and destitute. The cult of Zeus *Xiños*, the guardian of the stranger and the wanderer, had already arisen; and the sanctity of the oath taken in the name of the deities of the upper and the lower world was the basis of much private and communal morality.

4. Art an aspect of religion.—Other parts of the higher activity of man had been consecrated by the polytheism of which Homer inherits and develops the tradition. The earliest imagination of the Hellenes appears to have perceived a daemonic potency—a *nemesis*, as we may say—in the arts of song and music, and this had sometimes crystallised into the personal forms of divinity, into such interesting embodiments as the Muses or the Charites, who must have belonged to the pre-Homeric popular theism. The latter group had grown up at the Boeotian Orchomenos, an old centre of the Mycenaean culture. It may be that at one time they had no other than the purely physical significance of vegetation-powers; but we understand their value for Homer only if we suppose that before his time they had come to be associated with the arts and the delight of human life. We discern also that the higher deities, Apollo and Athena, though by no means merely 'functional' or 'departmental' powers, had acquired the special patronage of song and art.

5. Proto-Hellenic ritual.—It seems, then, that even in the earliest period the polytheism was no longer on the most primitive plane; and we gather the same impression from what is revealed to us of the earliest forms of Greek ritual. The Homeric and Hesiodic poems are full of information concerning the liturgy or cult-service with which the poets were familiar; what they tell us then avails for the period of the 11th to the 8th century. But ritual takes long to develop, and, once fixed, is the most abiding element in religion. It is not too

bold then to take the Homeric account as vouching for a tradition that goes back at least to the later centuries of the second millennium. The sacred place of worship might be a natural cave, or a *réposoir*, a fenced clearing in a grove containing as the *δῶλον* of the deity a tree-trunk or holy pillar or heap of stones, whence gradually an artificial altar might be evolved. The latter had become, some time before Homer, the usual receptacle of sacrifice, and was a prominent feature in the Minoan-Mycenaean religion, which usually associated it with a sacred tree or pillar, the token of the deity's presence or a magnet for attracting it, but not with any iconic statue or idol. Theistic religion could content itself with such equipment, but, if the anthropomorphic instinct is strong in it, it prompts the construction of the temple or the house of God. And temples must have been found in the land in the pre-Homeric period; the few that have as yet been revealed in the area of Minoan-Mycenaean culture were built, with one exception,¹ within the royal palaces, and must be regarded as domestic chapels of the king, marking his sacred character as head of the religion of the State, the character with which the legends invest king Minos and king Alakos. The earliest that have been excavated on free sites are the temples of Hera at Argos and Olympia, and these are now dated not earlier than the 9th cent. B.C. But the traditions of the earliest temple at Delphi and of that of Athena on the Athenian Akropolis suggest a greater antiquity than this.

With the multiplication of temples special priesthoods must also have multiplied. But the professional priest had already arisen in pre-Homeric times: Homer knows of the brotherhood called the *ἑλλήες*,² who tended the oracular oak of Zeus at Dodona, 'who slept on the ground and never washed their feet'; and he mentions others who were attached to special deities, and two of these at least administered cults without a temple, the priest of Zeus of Mount Ida³ and the priest of the river Skamandros,⁴ each of whom he says: 'he was honoured like a god among the people.' These words suggest a high and sacrosanct position. Yet these two priests are also warriors fighting in the ranks, which is the mark of a secular priesthood; and there is no legend or any hint of evidence suggesting that a professional priesthood enjoyed a political and social power in the pre-historic, that we know was never achieved by them in the historic, period of Greece. For the evolution of many of the earliest Hellenic institutions evidence is almost wholly lacking. But on general comparative grounds we can surmise that the religious character of the monarchy was most prominent in the earliest times; and that, as its secular power and functions developed, the priest-expert was attached to the *βουλεύς* to assist in the national cults, over which he retained a general supervision. We have scarcely a hint, either in the earlier or in the later days of Greece, of any conflict between Church and State; we know that at least historic Greece escaped monodotism; and its earliest societies, whatever their danger or their struggles may have been, had escaped it by the days of Homer.⁵ Bearing on this point is the other negative fact that for this earliest age we have little or no evidence of the prevalence of what is called 'shamanism,' divine ecstasies, ecstatic outbursts of wild prophesying, by which a society can be terrified and captured. The professional *adivēs*, the prophet or soothsayer, existed as distinct from the priest; but his methods generally—so far as

¹ At Gourni (see *Excavations, Guide to the Excavations of Greece*, London, 1909, p. 101 f.).

² *Il.* vii. 326.

³ *Il.* vii. 326.

⁴ *Il.* v. 77.

⁵ He is aware, however, that a *θεός ἄνθρωπος*, an oracular man, might be delivered against the royal house (*Od.* iii. 215).

our earliest witness informs us—were cool and quasi-scientific.¹

The ritual at the altar in the early period, with which we are at present dealing, consisted of an oblation to the deity of an animal victim or an offering of fruits and cereals; the sacrifice might be accompanied with wine or might be wineless—a 'sober' sacrifice which was called *sphodra*, the latter being perhaps the more ancient tradition. We may interpret the earliest form of Hellenic animal-sacrifice as in some sense a simple tribal or family communion-meal with the deity, whereby the sense of comradeship and clan-feeling between man and god was strengthened and nourished. This is the view that Homer has inherited, and it endures throughout the later history of the ritual; it expresses the general genial temper of Hellenic religion—a trait which Robertson Smith marked as characteristic of other religions of the same social type.² Similarly, the description given us by Theophrastus and Pausanias of the ancient ritual of Zeus Polieus on the Athenian Akropolis reveals to us a typical example of the civic communion feast.³ Such a sacrifice is merely a transference into the divine circle of the practice of the common feast of the tribesmen. But we can also discern a mystic element in the Homeric ritual text, which is evidently based on a tradition indefinitely older than the poems: the sacrificers are specially said 'to taste the entrails' invariably before the real sacred meal begins; as the entrails are the inner seat of the life which has been consecrated by the hallowing contact of the altar, we are justified in supposing that the object of this solemn act was to establish the real and corporeal communion of the worshipper with the divinity.⁴

Chthonian worship.—The important distinction which is well attested of the later ages between the 'chthonian' and the 'Olympian' ritual—to use these two conventional terms for convenience—may already have been in vogue in the earliest period of the polytheism. In the first type of sacrifice, where the offering was made to the nether divinities, the victim's head was held down above a hole in the ground—a *phagos*—and the blood from the severed throat was shed into it. In the second, where the upper powers, whose region was the air or the sky, were the recipients, the victim was held up erect off the ground, his face lifted towards the sky, and in this attitude his throat was cut. Homer shows himself aware of this form of sacrifice; and that the other, the chthonian, was also in vogue in his time is to be inferred from his account of the ritual performed by Odysseus in honour of the shades, where he mentions the *phagos*, the sacrifice of black sheep, and the triple libation of honey, wine, and water.⁵ For the ritual of the dead in the Greek religious tradition was closely modelled on the service of the nether divinities. The triple libation is known to have been part of Minoan-Cretan cult, as the altar table found in the cave of Mount Dikte attests.⁶ And a shrine with a *phagos* in the middle of the cella has been found at Prinia in Crete, consecrated to a chthonian goddess, the foundation of which is ascribed to the 9th century.⁷

From these indications and from the great prevalence attested by later records of chthonian cults in which we can discern features of great antiquity, we can gather that the earliest period of Greek religion was not wholly characterized by

the brightness of ritual and geniality of religious feeling that appear on the surface of Homeric poetry. Homer himself was aware of the dark world of powers who avenged the broken oath and punished sinners even after death. Long before his time, we may suppose, gloomy worship, such as that of the *Erinyes* described by Pausanias⁸ at Myonia in Lokris, of which the rites were performed by night, was in vogue in parts of Greece. Mother Earth, prophesying through phantom-dreams, had held rule at Delphi before Apollo came, and that was long before Homer's work began.⁹

There are strong reasons also for believing that the cult of hero-ancestors was already a part of the pre-Homeric religion, as it was a prominent part of the post-Homeric. The elaborate tendance of the dead attested of the Mycenaean period by the graves discovered at Tiryns and Mycenae might easily develop into actual worship, when it was maintained through many generations, as it was at Menidi in Attica. Doubtless, the common and promiscuous worship of the dead was a morbid development of the later polytheism. But Homer, who is generally silent about such cults, and, in a well-known passage about the Twin Brothers,¹⁰ seems to ignore deliberately their divine or semi-divine character, almost reveals his knowledge of the worship of Herakles,¹¹ and certainly was aware of the Attic cult of Erichonius, unless the passage that refers to it is the work of an interpolator.¹²

It is a difficult question how we are to estimate and how far we can trust the Homeric evidence on this important point of religion. Even if we trust it so far as to say that the Achaeans at least practised no real worship of the dead, it yet remains probable that they found it existing here and there in the lands in which they settled (see *HEROES AND HERO-GODS* [Gr. and Rom.]).

It is important to emphasize this gloomier side of Greek religion; but it is detrimental to exaggerate it, as has been the tendency of some modern writers in a pardonable revolt against the old shallow theories of orthodox criticism. We have reason to suppose that at no period of his history was the ordinary Hellenic ghost-ridden, worried and dismayed by demonic terrors, or by morbid anxiety about the other world or his destiny after death; at least he will not appear so, when we compare his religious and mythologic records with those of Babylon, Egypt, and Christendom.¹³ Nor dare we affirm that the pre-historic Hellenic was weaker-minded and more timorous in such matters than the later. He may even have been stronger-minded, and at least as willing to eat a sacramental meal in company with the *Erinyes* or with the nether-Zeus or the nether-Earth-Mother and with his departed family-spirits as were his descendants at Lokris, Mykonos, and many other places.¹⁴ The earliest myths have little of the goblin-element. Homer, indeed, himself was cognizant of such forms of terror as a black *eris*—Penelope likens Antinoos to one;¹⁵ the ancient folklore of Argolis was aware of a had spirit, called a *Phaistos*, that once ravaged its homes.¹⁶ The early popular imagination was sure to have inherited or to have evolved such creations of fear; and a black earth-goddess with a horse's head and snake-locks who lived in a dark cave at Phigaleia, almost certainly in the pre-Homeric period, was a sufficiently terrifying personality.¹⁷

But, happily for the Greek imagination, the divinities of the world of death, abiding below the earth, tended to take on the benign functions of the powers of vegetation. The god of the lower world is scarcely called by the ill-omened name of Hades in cult, but Plouton or Trophonios or Zous Chthonios—names implying beneficence; for the Homeric and Hesiodic world Demeter is a goddess of blessing, not of terror. And, although in the earliest period certain demoniac personages such as Medusa—identical in form and perhaps in character with the snake-headed, horse-headed Demeter—may have loomed large and terrible in popular cult, afterwards fading wholly from actual worship or surviving in the lower strata of ineffectual folklore, yet the more civilizing imagination had also been operative in the religion of the second millennium. The monuments of the Minoan-Mycenaean religion reveal scarcely an element of terror. And at some period before Homer the kindly deity, Hermes, has assumed the function of the leader of souls. As regards the eschatological views of the pre-historic Greek, we can say little, unless we believe that Homer was his spokesman; and such belief would be very hazardous. The earliest communities may have had no special hopes concerning the departed soul; we have no reason for thinking that the Mysteries which later offered some promise of happiness in the world to come had as yet proclaimed such a doctrine; the earliest form of the Eleusinia may have been that of a secret society organized for agrarian purposes. At any rate, there is no proof that the primitive mind of the Hellene brooded much on the problem of death, or was at all possessed with morbid feeling about it; and in pre-Homeric times he must have been freer from care in this matter than he was in the later centuries, if we accept the view of certain scholars that the elaborate ritual of *ekphora*, or purification, which was mainly dependent on the idea of the impurity of death, ghosts, and bloodshed, was wholly the *invention* of post-Homeric days.

6. Earliest ritual of purification.—It has even been said that the very idea of the need of purification on special occasions was unknown to Homer. This is demonstrably false. It is enough to mention one passage alone: at the close of the first Book of the *Iliad*, the *Achaeans*, at Agamemnon's bidding, purify themselves from the plague, and throw the infested media of purification into the sea; this is a religious instruction. And, when Hesiod mentions the rule that a man returning from an 'ill-omened' funeral could not without peril attempt to beget a child on that day,¹ he happens to be the first literary witness to the Greek tabu of death; but we may be sure that he is giving us a tradition of indefinite age, and that 'Achaean' society, of which Homer is supposed to be the spokesman, had some of the eschatic rules and superstitions that are found broadcast in later Greece. It may not have elaborated or laid marked stress on them; it may have had no strong sense of the impurity of homicide, nor devised any special rite for its expiation. But, if it was entirely without any instinctive feeling for the impurity of birth and death, and for the danger of the *phospha* arising from certain acts and states, it was almost unique among the races of man. Only, a progressive people does not overstrain such feelings.

7. Cruder religious conceptions in the earliest period.—So far, the religious phenomena discoverable with some certainty or some probability in the earliest period of Greek history indicate a theistic system of a somewhat advanced type. But doubtless we must reckon with the presence

of much else that was cruder and more savage. When we find in the later records ample evidence of the lower products of the religious imagination—the products of 'animism,' 'fetichism,' 'theriomorphism,' or 'polydaimonism'; more inarticulate and uncoherent embodiments of the concept of divinity; or darker and more cruel ritual than that which Homer describes, such as human sacrifice, the driving out of the scapegoat, blood-magic for controlling winds or finding water—no reasonable critic will call all these things post-Homeric because they may not be mentioned in Homer, or suppose that the pure-minded Hellenes were seduced into borrowing them from the Orientals, or that they were spontaneous products of a later degenerate age. The view taken of them by those who have in recent times applied comparative anthropology to the study of Hellenism is the only one that is possible on the whole: these things are a surviving tradition of a mode of religious thought and feeling proper to the aboriginal ancestors of the Hellenic race, or immemorial indigenous products of the soil upon which that race grew up. There is no cataclysm in the religious history of Greece, no violent breach with its past, no destruction of primitive forms at the advent of a higher enlightenment; no fanatic prophet arose, and the protests of philosophy were comparatively gentle and ineffectual. Only a few religious forms of an undeveloped society that might shock a more civilized conscience were gradually abandoned; most of them were tolerated, some in a moribund condition, under a more advanced religion, with which they might be said to clash if any one cared to reason about them. Therefore a chapter or a statement in Pausanias may really be a record of the pre-Homeric age; and in this way we can supplement the partial picture that has been given above.

10. Animal-gods and animal-worship.—The anthropomorphic principle, which is not necessarily the highest upon which a personal theism could be constructed, is the main force of the higher life of Hellenic polytheism. We may believe that it had begun to work before Homer, but not predominantly or with sufficient effect to produce a stable anthropomorphism in religion. Some worship of animals, which is called 'theriolatry,' some beliefs in the animal-incarnations of the divinity, were certainly in vogue. A few of the more ancient cult-titles would be sufficient evidence, apart from the later records. One of the most significant and oldest is *Arctos*, an epithet of Apollo marking his association with wolves. We find also that in many legends, and even occasionally in ritual, the wolf appears as his sacred animal. These facts point back to a period when Apollo was still the hunter-god of the wild wood, and was regarded as occasionally incarnate in the beast of the wild. We have also a few indications of direct reverence being paid to the wolf, apart from its connexion with any god.² Another salient example either of theriolatry or of theriomorphic god-cult is snake-worship, proved to have existed in the earliest epoch of the Delphic religion, and in vogue, according to later records, in Epirus and Macedonia. The snake may have been revered in its own right, or as the incarnation of some personal divinity or hero, as we find it later attached to the chthonian deities, to the Earth-Mother, Zous Krónos and Medúsa, Asklepios, and to the buried hero or heroine, such as Erechthon, Kychron. We have also reasons for assuming a very early cult of a bear-Artemis in Attica³ and Arcadia; and many other examples of similar phenomena will be found

¹ *Od.* iv. 118-120.

² See Nilsson, in *J. Hellen. Stud.*, 1906, p. 170.

³ *Od.* ii. 464-468.

³ *Op.* 76.

in a treatise on the subject by De Visser.¹ Later Arcadia was full of the products and of the tradition of this early mode of religious imagination; besides the horse-headed Demeter at Phigaleia, we hear of the worship at the same place of a goddess called Eurynome, represented as half-woman, half-fish; and bronze figures belonging to the Roman period have been found at Lykoura in Arcadia, apparently representations of divinities partly theriomorphic.²

The first anthropologists who dealt with the primitive forms of Hellenic religion interpreted this special set of phenomena in the light of totemism; but progressive students have now abandoned the totemistic hypothesis on the ground that there is little or no trace of totemism in any Greek or any Aryan society, and that theriolatry, or the direct worship of animals, needs no such explanation. Also, as recently pointed out elsewhere,³ the theriomorphic concept of divinity can, and frequently does, coexist at certain periods and in certain peoples with the anthropomorphic; nor can we say with assurance that in the mental history of our race the former is prior to the latter, or that generally the anthropomorphic was evolved from the animal-god.

11. Functional deities: polydaimonism. — In attempting to penetrate the pre-Homeric past, we have to reckon with another phenomenon, which, though revealed in later records only, has certainly a primitive character, and has been regarded as belonging to an age when the concept of definite complex personalities such as *dei* had not yet arisen. It was Usener⁴ who first called attention to a large number of local cults of personages unknown to myth or general literature, and designated, not by what are called proper names, such as Hermes, Apollo, Zeus, but by transparent adjectival names, expressing a particular quality or function or activity, to which the essence of the divine power in each case was limited; such, for instance, are *Hygieia*, *Hygieia Agria*, *Kuastria*, *Eleutheria*, being nothing more than 'the bare of the ploughshare' at Marathon, the 'here who makes the beans grow' on the sacred way to Eleusis, 'the here who gives the good return of corn' at Tanagra; for these he invented the term *Sondergötter*, meaning deities of a single function only; and to those of them to whom only a momentary function, and therefore only a momentary existence, seemed to appertain, he applied the term *Ausgangsgötter*, 'momentary gods'; an example of this type might be *Idaeus*, 'By-chaser', in Arcadia and Elis, who at the sacrifices to Athena or Zeus was called upon to chase away the flies that would worry the sacrificers, and who existed only for the purpose and at the time of that call. We may compare also for vagueness and inchoateness of personality certain aggregates of deities having no definite single existence, but grouped by some adjectival functional name, such as *dei Arorephoroi*, 'the deities that avert evil,' at Sikyon;⁵ *dei Terephoroi*, the goddesses of birth in Attica;⁶ the *dei Hekatomboi*, the goddesses of just requital, at Halimartos.⁷ Such forms seem to hover on the confines of 'polydaimonism,' and to be the products of an embryonic perception of divinity, grayer and dimmer than the robust and bright creations of the Hellenic polytheism, to which so rich a mythology and so manifold a personality attached. Another fact seems to fall into line with these: in some cult-centres the dæty, though personally and

anthropomorphically conceived, might only be designated by some vague descriptive title like *Idæus* and *Idæa*, as occasionally at Eleusis; or *Arorephoroi*, 'the Mistrem,' the goddess of Arcadia; or *Hekatomboi*, 'the Virgin,' on the coast of Caria and in the Chersonese: even as late as the time of Pausanias the men of Boulis in Phokis never called their highest god by any other name than *Idæus*, 'the Greatest.'⁸ And it has been thought that the well-known statement of Herodotus, that the Palaegians had no names for their divinities, was based on some such facts as these.

The importance of these phenomena would be all the greater if Usener's theory were true, that they represent the crude material out of which much of Greek polytheism has grown.⁹ But in any case they claim mention here, because they are the products of a mental operation or instinct that must have been active in the earliest period of Hellenic religion.

12. Animism or Animation. — In another set of facts, also attested by later records, we may discern the surviving tradition of an animistic period. A large part of the Hellenic as of other religions reflects man's relation and feeling towards the world of Nature, his dependence on the fruits of the earth, the winds, the waters, and the phenomena of the sky. The trend of the higher polytheism in the Hellenic mind was to set the personal divinity above and outside these things, which he or she directs as an intellectual will power. But we have sufficient evidence of another point of view, which is that of more primitive religion, from which the deity is imagined as essentially immanent in the thing, not as a distinct personality emerging from it. The Arcadians who worshipped Zeus *Karadæus*,¹⁰ or 'Zeus Thunder,' at Mantinea, or the people at Gythion in Laconia who called a sacred meteoric stone Zeus *Karadæus*, 'the fallen Zeus,' or the Athenians who worshipped Demeter *Idæa*, 'Demeter Green Vardara,'¹¹ reveal in these strange titles an attitude of mind that is midway between 'Animism,' that religious perception of each striking thing or phenomenon in Nature as in itself mysteriously alive and divine, and 'Theism,' which imagines it controlled by a personal deity. At the stage when Demeter could be named and perceived as *Idæa*, 'Vardara,' the anthropomorphic conception of divinity, though certainly existing, was not yet stable.

But there are other cult-facts reported to us of a still cruder type that seem to reveal Animism pure and simple and the infancy of the Hellenic mind. The Arcadians, always the most conservative and backward among the Hellenes, in their colony of Trapesus 'offered sacrifices to the lightning and thunder and storms';¹² it seems that for them these things were animate and divine directly, just as the Air-*Bede*—was for the Macedonians. Again, through all the periods of Hellenic religion, the worship of rivers and springs only at certain points approached the borders of Theism; sometimes offerings were flung directly into the water, and prayer might be made 'into the water'—we must not say 'to the river-god,' but to the divine water.¹³

¹ *Paen. II. 37. 2.*

² The present writer has criticized this theory of evolution in *Anthropological Essays* presented to E. B. Tylor, Oxford, 1907, 'The Place of the "Sondergötter" in Greek Polytheism,' where he has taken the view that some of them are products of the same religious instinct that produces theism or polytheism, and that some appear to be late offshoots of the polytheistic system.

We discern these two different ways of imagining divinity in the worship and ideas attaching to 'Hæos,' 'Sun,' and 'Hestia,' 'Hearth.' As regards the former, we have reason to surmise that his religious prestige was higher in the pre-Homeric than in the later age, and that the exalted position as a great political and cultured god which he enjoyed in the later history of Rhodes was a heritage from the Minoan religious tradition.¹ In Homer's poems we find him personal and anthropomorphized; but we may well doubt if he was so for the average Greek, who merely kissed his hand to him every morning, or bowed to him on coming forth from his house, and who, regarding him mainly as animate or 'Living Sun,' found it difficult to develop him into a free and complex individual person.

As regards Hestia the facts are still clearer.² In her worship, which belonged to the aboriginal period of Greek religion, she was at first, and in the main continued to be, nothing more than 'Holy Hearth,' the Hearth felt as animate; nor was the attempt to anthropomorphize her into a free personal goddess ever wholly successful, for reasons that will be considered later (p. 404).

13. Magic.—Now, that which is here called 'animation' is a religious feeling which may inspire real worship, but is more liable than pure theism to be associated with magic; and it is reasonable to believe that magic was in vogue in pre-historic Hellas, not necessarily in antagonism to religion, but practised for purposes of the community as well as for private ends. It is true that the records which tell us about these things are all of a period much later than Homer's, and that he is almost silent about such matters.³ But we know now how to appreciate Homer's silence; and general anthropology compels us to believe that some of those records reveal facts of immemorial antiquity in Greece. The *Thesmophoria*, one of the most ancient of the Hellenic ceremonies, was partly magical; that is, it included rites that had a direct efficacy, apart from the appeal to any divinity—such as the strewing of the fields with the decaying remains of the pigs that had been consecrated to the earth-goddesses and thrown down into their vault.⁴ So also in the *Thargelia* of Attica and other Greek communities, the ceremonies connected with the smoothening and the ritualistic whipping and transference of sin belong to the domain of magic rather than to religion.⁵

We have also direct evidence of a magical dealing with the elements in the titles of officials at Athens called the *Ephoroi*,⁶ and of those at Corinth called *Agonothetæ*,⁷ both words denoting 'wind-fellers,' 'those who charmed the winds to sleep'; and again in the description of the rite performed by the magicians at Eleusis, who, according to Clement,⁸ 'averted the sky's wrath by incantations and sacrifices'; or in Pausanias' account of the operations of the priest of the winds at Titane in Sikyon,⁹ who endeavoured to assuage their fierceness by 'singing over them the spells that Medea used.' Doubtless these officials were only maintaining the practices of an indefinitely remote past, such as are also reflected in legends of the ancient Balmeonæ, of Thessalian and possibly Minyan origin, who drove about in a chariot imitating thunder and, while merely practising a well-known type of weather-magic,

was misunderstood by the higher powers and later moralists.

The few records that may avail for an opinion concerning the early period with which we are at present concerned entirely fail to suggest any such prevalence of magic as might obstruct intellectual progress or the growth of a higher religion. They reveal generally a type that is harmless, or even philanthropic.¹⁰ Doubtless some black magic existed in the earliest as in the later Hellas, directed against the life or the property of individuals, and worked by evil means; the more ancient literature is entirely silent about this; but a late record of Pausanias testifies to a barbarous magic practised at Haliartos to discover a water-supply;¹¹ a son of one of the chief men was stabbed by his own father; and, as he ran bleeding about the land, springs of water were found where his blood dripped. But at no time, we may judge, was the religion or the intellect of Greece so clouded with magic as was the case elsewhere in the ancient civilisations, notably in Egypt and Mesopotamia.

14. Human sacrifices.—This attempted presentation of the first era of Greek religion must raise the question as to the practice within it of the ritual of human sacrifice. For we are apt to associate this with a primitive society and with a crude or savage religion. But this association is not borne out by the religious history of mankind. The practice has been found in societies highly developed both in morality and in civilization; and the *a priori* argument is dangerous, whether we apply it in one way or the other.

It has been said that the Homeric poems show no consciousness of the existence of the cruel rite in the Greek world of the period; and it has been argued on this ground that the Achaean society of which they are the voice was innocent of it.

A doubt may arise concerning the slaughter of the Trojan captives at the pyre of Patroklos,¹² an act of ferocity for which Homer outspokenly blames Achilles. The passage certainly suggests that the poet was aware that such things were occasionally done at contemporary funerals. In Mycenaean tombs at Argos and Mycenæ human remains have been found before the entrance-door, that point to an offering of slaves or captives.¹³ But this need not have been an act of worship or strictly of religion. The dead might be imagined as needing slaves; and to kill slaves to accompany the departed, just as to kill horses over the pyre, may only imply 'tendances,' and no worship of the spirit. But Homer's silence concerning human sacrifice as a rite of religion is of no value as evidence for our present question, as has been argued elsewhere.¹⁴ How are we to account for the fairly numerous records of actual human sacrifice or of the semblance or reminiscence of it in later Greek worship—records that are found sporadically among most of the leading Greek stocks? The old shift of attributing to Oriental influences everything in Hellenic religion that clashed with our ideal of Hellenism was naively unscientific. That the practice should have sprung up spontaneously and suddenly in the later society, when civic life and morality were advancing, is hard to believe. It is more natural to suppose that it was an immemorial and enduring tradition of the race, which was only with difficulty abolished, and which lingered here and there till the end of paganism. It has been found among many other Aryan races, and it was specially in vogue among the Thracian-Phrygian stock of near kin to the Hellenes. These

general grounds for believing that it was a feature of the earliest Greek religion are confirmed by some special evidence derivable from the legends and cult-records. It is generally impossible to date the birth of legends; but some can be discerned to belong to an earlier stratum than others: such are the legends concerning the human sacrifices to Zeus Aetnaeus on Mt. Lykaion in Arcadia, to which is attached the story of King Lykaon and the banquet he offers to Zeus on the flesh of his own son;¹ the Achaean or Minyan story of the sacrifice to Zeus Anapton, 'Zeus the Ravening,' of the king's son of the house of Athamas;² 'Kyklops' sacrifices of pilgrims and the dedication of their skulls to Apollo on the Hyperborean pilgrims' way at the Achaean Pagae;³ the sacrifice of a boy and a maiden to Artemis Tauropolia by the Ionians on the southern shore of the gulf of Corinth.⁴ A careful study of the legends of these various rites will convince one that they belong to the earliest period of Greek religion. The last example is specially illuminating; the human sacrifice is here practised by the Ionians in their ancient settlements in the land afterwards called Achaia; and its cessation is connected with the arrival of the cult of Dionysos and the return of the heroes from Troy.

The purpose and significance of the rite differed probably in the different cult-centres. In most cases we may interpret it as placatory, the dedication to an offended deity of a valued life, the life of a king's son or daughter, as a substitute for the life of the people, such vicarious sacrifices being a common human institution; in a few cases we may discern an agricultural motive, the blood being shed as a magic charm to secure fertility;⁵ finally, in the ritual of Zeus Lykaion we may detect a cannibal-sacrament, in which the holy flesh of the victim, whose life was mystically one with the god's and the people's, was sacramentally devoured. This ghastly practice is only doubtfully disclosed by legends and by interpretation of later records; a faint reminiscence of it may also have survived in the Argive story of Harpalyke and Klymenos.⁶ But a close parallel to it will be noted in the Thracian Dionysiac ritual.

Summary account of the first period.—A detailed account of the pre-Homeric religious age must at many points remain doubtful and hypothetical; but certain definite and important facts may be established. Anthropomorphism, in a degree not found in the earliest Roman religion, was already prevalent, even dominant, and nearly all the leading personal divinities of the later polytheism had already emerged; only Dionysos had not yet crossed the border from Thracian; Asklepios, dimly known to Homer, was merely the local deity of a small Thessalian community, Pan merely the *daimon* of flocks in remote Arcadia. Cretan religion, also personal in its imagination and mainly anthropomorphic, had left its deep imprint on the mainland; and its divine personalities, such as Rhea, the mother of the gods, and Aphrodite, were soon adopted by the northern immigrants, but not at first into high positions.⁷ The deity was generally imagined, not as a spirit or a vague cosmic force, but as glorified man, and therefore the religion became adaptable to human progress in arts, civilisation, and morality. But much in the animal world still appeared sacred and weird; and the deity might be at times incarnate in animal form. At the same time the religious imagination was

still partly free from the bias of personal theism, and produced vague divine forms, of some force and power, but belonging rather to 'animatism' or polydaimonism than to polytheism.

Finally, a study of all the facts and probabilities may convince a careful student that the origin of Greek polytheism as a whole from simpler forms cannot be found in this earliest period. In the second millennium, which is the starting-point for Hellenic history proper, we cannot discern the 'making of a god' (unless we mean the building-up of his more complex character), nor do we start with a godless period. We may well believe that in the history of mankind theism was evolved from animism or polydaimonism; we may believe the much more doubtful theory that anthropomorphism arose from a previous theriomorphism; and there may still be some who are convinced that theriomorphism implies a totemistic society. But, at any rate, these evolutions had already happened indefinitely before the two strains, the Northern and the Mediterranean, had blended into the Hellenic race. The higher and the lower, the more complex and the simpler, forms of religious imagination operate together throughout Hellenic history; and the higher, though dominant, never wholly absorbs the lower, both being an intellectual tradition of an indefinite past. Much work on the origins of Greek religion has been wasted because its chronology is anachronistic; and the attempt to unlock many of its mysteries by the key of totemism has been abandoned by those who recognise that many of the views concerning this social phenomenon and its religious importance, prevalent in a former generation, were erroneous.

We can now pursue the inquiry nearer the border-line of the historic period, as it is conventionally termed.

Introduction of worship of Dionysos.—As early as the 10th cent. B.C., and probably earlier, a new religion with a new and imposing divinity was intruding itself into the Hellenic lands from Thracian and Macedonian.¹ Dionysos and the Thracian ritual-legend of Lykourgos are known to Homer; but the poems suggest that he was not yet definitely received into the Hellenic pantheon. Yet there are reasons for believing that Boeotia had received the alien worship in the 'Minyan' epoch, before the incoming of the 'Dakotai'; and Attica before the Ionic migration; while in the Peloponnese the Argive legend associates the advent of the god with the names of Perseus and the Proetid dynasty. In spite of local opposition and its natural antagonism to the nascent spirit of Hellenism, which was now tending to express itself in certain definite and orderly forms of mood, thought, and feeling, the new religion won its way victoriously, taking Thebes for its Hellenic metropolis, and some time afterwards securing its position at Delphi, where the priesthood and the Apolline oracle became its eager champions. It was distinguished from the traditional Hellenic in regard to its idea of divine personality, its ritual, and its psychic influence, that is to say, the mood that is evoked in the votary. In the first place, the figure of Dionysos belonged indeed to personal theism, certainly in Hellenic cult and probably in the Thracian; but he was less sharply defined as a concrete individual than was, for instance, Apollo or Athena; he was vaguer in outline, a changeable power conceived more in accordance with daimonistic, later with pantheistic, thought, incarnate in many animal-shapes, and operative in the life-processes of the vegetative world; and an atmosphere of Nature-magic accompanied him.

⁷ Homer's prejudice against Artemis and Aphrodite may reflect the feelings of the northwards towards these Mediterranean deities whose cult they had not yet wholly absorbed.

The central motives of this oldest form of ritual were the birth and death of the god—a conception pregnant of ideas that were to develop in the religious future, but alien to the ordinary Hellenic theology, though probably not unfamiliar to the earlier Cretan-Mycenaean creed. But the death of this god was partly a fact of ritual; he was torn to pieces by his mad worshippers and devoured sacramentally, for the bull or the goat or the boy that they rent and devoured was supposed to be his temporary incarnation, so that by this savage, and at times cannibalistic, communion they were filled with his blood and his spirit, and acquired miraculous powers. By such an act, and—we may suppose—by the occasional use of intoxicants and other nervous stimulants, the psychic condition that this worship evoked was frenzy and ecstasy, which might show itself in a wild outburst of mental and physical force, and which wrought up the enthusiastic feeling of self-abandonment, whereby the worshipper escaped the limits of his own nature and achieved a temporary sense of identity with the god, which might avail him even after death. This privilege of ecstasy might be used for the practical purposes of vegetation-magic, yet was desired and proclaimed for its own sake as a more intense mood of life. This religion preached no morality, and could ill adapt itself to civic life; its ideal was supernatural psychic energy. The process whereby it was half-captured and half-tamed by the young Hellenic spirit forms one of the most interesting chapters in Hellenism.

II. **SECOND PERIOD: 800-500 B.C.**—It is convenient for the purposes of religious study to mark off the period between the 8th cent. and the 6th as the second period of Greek religion, in which we can observe the working of new forces and the development of older germs into new life. By the beginning of this period the fusion of the Northern and the Mediterranean populations was mainly complete, and the Hellenic spirit had acquired its definite instincts and bias. The 8th and 6th centuries witnessed the diffusion of epic literature, the rise of lyric poetry, the emergence of the *skoloi*, or *skoloi*, in religious art, and, generally, the development of cities and civic life; and it is essential to estimate the religious influence of these forces.

1. **Influence of epic and lyric poetry.**—That the contribution of Homeric and of the later Hesiodic literature to the shaping and fixing of Hellenic religion was most fruitful and effective cannot be doubted. Only, we must not accept the exaggerating view of Herodotus¹ that these two poets were really the founders of the anthropomorphic religion, creating the orthodox Hellenic theogony, and determining the names and functions and shapes of the special divinities. By such a statement some scholars have been misled into regarding the Homeric poems as a kind of Greek Bible, which in respect of religious matters it might be hardy to disbelieve. We know that local temple-legend and local folklore could always maintain their independence of Homeric or Hesiodic authority, in respect of the titles of the gods, their relationships, and genealogies; Artemis was not everywhere reputed to have the same parentage or Zeus the same spouse. The early epic poets gathered many of the *lopoi* *doxa* of shrines, but there was much that they did not gather, and which survived. There was a noticeable particularism in Greek theology, and no orthodoxy and no heterodoxy in the sense that it was moral to believe or immoral to disbelieve any sacred book.

The chief religious achievement of Homer and his fellows was to intensify the anthropomorphic trend in Greek religion, to sharpen and indi-

vidualize the concepts of divinity, and to diffuse throughout the Hellenic world a certain uniformity of religious imagination. To their work partly, as well as to the higher synthetic power of the Greek mind, we may ascribe the fact that, in spite of local varieties of myth and cult-titles, in spite of the various elements that the divine personality may have absorbed from earlier cult-figures and cult-forms in the various cult-centres, the sense of the individual unity of person was not lost so long as the same name was in vogue; hence Apollo Lykeios of Argos could not be a different person from the Apollo Patroos of Athens, nor could hostility arise between them. That is to say, the higher religious literature imparted a certain precision and definiteness upon the personal names of the leading divinities and endowed them with a certain essential connotation; for example, the dogma of the virginity of Athena and Artemis, always presented in the highest poetry, prevailed so far as to suppress the maternal character that may have attached to them in the pre-historic period, and of which we can still discern a glimmering in certain local cults.² To this task of shaping the divine characters the rising lyric poetry, which was growing up with the decay of the Epic, and which, in obedience to the Hellenic passion for disciplined form, was developing fixed types of song and music appropriate to special festivals and worship, must have contributed much. The 'spondaic' metre was adapted to the invocation or hymn sung at the libation—the *orekhe*—to Zeus; and the solemn gravity of the spondaic fragment attributed to Terpander fittingly expresses the majesty of the high god, 'the primal name of all things, the Leader of the world.'³ The *paian* and the *nomos* became instinct with the Apolline, the *ditagmos* with the Dionysian spirit.⁴ The earlier Greek lyric was, in fact, mainly religious, being composed for public or private occasions of worship; its vogue was therefore wide, and in some communities, as in Arcadia, the singing of these compositions formed part of the national training of the young.⁵

2. **Idolatry.**—Another phenomenon of importance at the beginning of this second period is the rise of idolatry, the prevalence of the use of the *skoloi* in actual worship in place of the older aniconic *agalma*, which had sufficed for the Minoan and the Homeric world as a token of the divine presence or as a magnet attracting it to the worshipper. This important change in the object of cult may have been beginning in the 10th cent., for we have one indication of it in the Homeric poems, and recently on one of a series of vases of the early geometric style found in a grave of the post-Minoan period near Knossos, the figures of an armed god and goddess are depicted on low bases, evidently idols, and perhaps the earliest of any Hellenic divinity.⁶ Henceforth, although the old fetish-object, the aniconic *agalma*, lingered long in certain shrines and holy places, the impulse towards idolatry became imperious and almost universal, exercising a mighty influence on the religious sentiment of the Hellenes both before and after the triumph of Christianity. The worship before the idol intensified the already powerful anthropomorphic instinct of the polytheism, and was at once a source of strength and a cause of narrowness. It brought to the people a strong conviction of the real presence of the concrete individual divinity; as it gave its mandate to the greatest art of the world, it evolved the ideal of divinity as the ideal of humanity, expressible in

forms of beauty, strength, and majesty. On the other hand, it was a force working against the development of a more mystic, more immaterial religion, or of a consciousness of godhead as an all-pervading spirit, such as might arise out of the vaguer religious perception of those half-personal *daimones* or *numina*, which never wholly faded from the popular creed.

3. Progress of anthropomorphism.—It is interesting to mark within this second period the various effects of the new regnant anthropomorphism. Those functional *daimones* tend to leave the emorphous twilight of religious perception, in which the Roman *indigetes* remained, and to be attracted into the stronger life of personal theism. *Kosmoploides*, once perhaps only a vague functional power that nurtured children, becomes identified with Artemis or Gē; *Σάβη*, 'Divine Verdure,' when the cult was introduced from the Marathonian Tetrapolis to the Akropolis of Athens—*if this, indeed, is a true account of its career*—could maintain herself only as *Ἀφροίτη Σάβη*. Again, the name *Ἥρην* comes to be applied to even the most shadowy of these functional powers, to *Μυλαίππος*, 'the Fly-chaser,' the most limited and momentary of them all; to *Ἠσέως*, the *daimon* of good harvest, about whom a very human tale is told; and to call them *ἥρην* implies that they were imagined as semi-divine men who once lived on the earth. Even the most immaterial forces, some of those which mark mental phases or social conditions, such as *ἔρως*, Love, *φιλία*, Friendship, *ἡσυχία*, Peace, became often for the religious imagination personal individuals with human relationships; ¹ thus *Ἥρην* emerges almost as a real goddess with the traits of Demeter, *φιλία* on a relief in the Jacobson collection is individualized as the mother of Zeus Philos, in defiance of the traditional theogony.² Others such as *αἰδώς*, 'Reverence' or 'Compassion,' remained in the border land between animating forces and personal deities.

But we observe in many cases that the name itself was an obstacle to the emergence of a convincingly personal god or goddess; and, where this is the case, the personality never could play a leading part in the advanced religion. Thus *Ἥρην* bore a name that denoted nothing more than 'the Hearth,' considered as animate and holy; Greek anthropomorphism did its utmost for her, but never or rarely succeeded in establishing her as a fully formed personal goddess. The same phenomenon is observable in regard to Gē, Hekē, and Selene; it was easy to regard them as animate powers, and as such to worship them; such worship they received throughout all periods of Greek religion, but they exercised no direction of the moral, social, and spiritual progress of the race; for their names so obviously connoted substances unlike and alien to man that they could not with conviction be imagined as glorified men or women.³ It was otherwise with such names as Apollo, Hera, Athena, which could become as real and individual as Miltiades or Themistocles; and it is these humanized personalities that alone dominate the higher religion of Greece. The spiritual career of Demeter began only when men forgot the original meaning of her name and half forgot that she was only Mother Earth. The *Ἀργεῖν*, being more 'Winds,' were scarcely fitted for civic life; but Boreas, having a personal name, could become a citizen and was actually worshipped as *Πολίτης*, 'the Citizen,' at Thourioi.⁴ A curious and unscientific distinction that Aristophanes makes

between the religions of the Hellenes and the Barbarians⁵ has its justification from this point of view.

4. Influence of the *Poieis* on religion.—The spirit of the *Poieis*, the dominant influence in Greek religion throughout this second period, worked in the same direction as the anthropomorphic instinct, giving complexity, varied individuality, and an ever-growing social value to the idea of godhead. The deities of the wild enter the ring-wall of the city, and shed much of their wild character. Apollo Lykeios, the wolf-god, enters Argos and becomes the political leader of the State, in whose temple a perpetual fire was maintained, symbol of the perpetual life of the community.⁶ And the advanced civic imagination tended to transform the primitive theriostasy or theriomorphic ideas that still survived. Proofs of direct animal-worship in the later period are very rare and generally doubtful; for the ancient writers employ the term 'worship' carelessly, applying it to any trivial act of reverential treatment.⁷ In the few cases where we can still discern the animal receiving cult, we find the anomaly explained away by some association established between the animal and the anthropomorphic deity or hero. Thus the wolf became no longer sacred in its own right—if, indeed, it ever was—but might be revered here and there as the occasional incarnation of Apollo, or as his guide or companion. The primitive population of the Troad may once have 'worshipped' the field-mouse, though the authority that attests it is a late and doubtful one. And when Apollo becomes in this region the civic guardian of the *Æolian* and the protector of their crops, he takes a title from the mouse (*Μαῦρος* from *μαῖς*), and the mouse is carved at the side of the anthropomorphic image as a propitiatory hint to the rest of the species not to injure the corn, or as a hint to the god that mice needed regulating.⁸ The serpent worshipped in the cavern, or in some hole or corner of the house—vaguely, in 'Aryan' times as the Earth-demon or House-gemma⁹—became interpreted as the embodiment of the ancestor Erechtheus of Athens, or Kychreus of Salamis, or Zeus Krates, the guardian of the household possessions, or Zeus Malixos, the nether god. When the very human Asklepios came to Athens towards the end of the 5th cent., he brought with him certain dogs who were ministers of healing; and the Athenians offered mortifical cakes both to the god and to his dogs, which partook of his sanctity.¹⁰ This may appear a strange imbecility; but at all events we discern in these facts the prevalent anthropomorphism dominating and transforming what it could not abolish of the old theriostasy; just as we see the coin artist of Phigaleia transforming the uncouth type of the horse-headed Demeter into a beautiful human form of a goddess wearing a necklace with a horse-hoof as its pendant. The sacred animal never wholly died out of Hellas; but it could maintain its worship only by entering the service of the human gods.

The expansion of the civic system in this second period, due to extended colonization and commerce, induced a development of law and an expansion of moral and religious ideas. One of the most vital results of the institution of the *Poieis* was the widening of the idea of kinship. For in theory the city was a congregation of kinsmen, a combination of tribes, phratries, and families,

wider or narrower associations, framed on a kinship; and it gradually evolved the belief, pregnant of legal and moral developments, that every citizen was of kin to every other.

In consonance with the conception of the State as an extended family, we find certain ancient family-cults taken over by the religion of the Polis. As the private family was knit together by the worship of the hearth in the hall and of Zeus *Hestia*, 'the god of the hearth,' in the courtyard of the house, so the city had its common Hestia, or Holy Hearth, upon which often a perpetual fire was maintained in its *prytaneion*, or common hall; and the cult of Zeus *Hestia* was established in ancient days on the Akropolis of Athens. The great divinities of the State, Zeus, Hera, Aphrodite, and—perhaps later—Demeter, consecrate and regulate the monogamic rite of marriage, in which the Polis was directly interested. The organization of the 'phratries' was also consecrated to the high deities, Zeus, Athena, and, among some Ionic communities, Aphrodite; and the decisions of the *epheboi*, or 'brothers,' on questions of adoption and legitimacy of citizens were delivered from the altar of Zeus *Ephebos*; while the names of the local districts, or 'demes,' was sanctified by the cult of Zeus or Aphrodite *Demotai*, the god or goddess of 'all the demes.' The Polis also organized and maintained the kindred festivals of commemoration proper to the family, or gens, or phratry—the All-Souls celebration of the dead which was held at the end of the *Arctourion*; the *ytoma*, the funeral feast of the *ytai*; the *Arctourion*, the joint festival of the phratries; while the great achievement of the consolidation of the scattered groups into the single city was celebrated at Athens by the festival of the *Zoanektia*, the 'union of all the houses,' and the *Ploutonion*, the all-Attic feast of Athens.

The picture that these facts present of a State-religion based on the idea of the family and of kinship is mainly drawn from Athens, of which the religious record is always the richest; but it reflects undoubtedly the system of the other Hellenic States as well. Many of their records attest the belief that some one of the high divinities was the ancestor or ancestress of the whole people, and this ancestry was generally understood in the physical and literal sense. Thus Apollo *Heraios* was the divine ancestor, being the father of Ion, of the Ionic population of Attica; and even the non-Ionic stock desired for political purposes to affiliate themselves to this god.¹ In the same sense he was called *Pater*, 'the Father,' in Delos.² Zeus was the father of Arkas, the eponymous hero of the Arkadians, and was worshipped as *Heraios* at Tegea;³ Hermes also was ancestral god of part of the Arkadian land, and identified with the ancestor Alpytos.⁴ These religious fictions came to exert an important influence on morality, and also to develop a certain spiritual significance, which will be considered later.

5. Hero-cult.—This aspect of the public religion is further emphasized by the prevailing custom, which appears to have gathered strength in this second period, of worshipping the hero or the mortal ancestor of the State, or the tribe, or the clan. The first clear evidence of this in literature is in the poem of Arktinos of Miletos called the *Aithiopis*, which may belong to the end of the 8th cent. B.C., and in which the apotheosis of Achilles is described. But there is, as has been said, strong reason for believing that the practice of 'heroizing' the dead descended from the pre-Homeric age.

¹ *Plut. Aratid.* 281 O; *Demosth.* xviii. 141, 146, 24, 27; *Arist.* *Polit.* 1274a.

² *Diog. Laert.* viii. 1. 15; *Strabo* iii. 4. 2.

³ *Strabo*, lxxxv. p. 24.

⁴ *Plut.* viii. 4.

Nevertheless, of the multitude of hero- and ancestor-cults recorded in ancient Hellas, the greater number are probably post-Homeric. We find the Delphic oracle giving vigorous encouragement to the institution of them, and in the 6th cent. B.C. cities begin to negotiate and dispute about the possession of the relics of heroes. Some of these in the older cults may have been actual living men dimly remembered; some were fictitious ancestors, like Arkas and Lakedaemon; some may have been faded deities, such as were Kaboulous at Elousa and Trophonios at Lebadeia. But all were imagined by the worshipper to have been once men or women living upon the earth. This, then, becomes a fact of importance for the religious thought of the world, for it engenders, or at least encourages, the belief that human beings might through exceptional merit be exalted after death to a condition of blessed immortality, not as mere spirits, but as beings with glorified body and soul. Furthermore, certain ancient heroes, long endeared to the people as the primeval parent or the war-leader of their forefathers, become raised to the position of the high god and merged in his being; Erechthos shares the altar and even the title of Poseidon and Zeus; Alpytos of Arkadia becomes Hermes; Agamemnon in Laconia at last is fused with Zeus.¹

Nor in this second period were such heroic honours reserved for the remote ancestor or the great king or warrior of old, but were sometimes paid to the recently dead, to the men who had served the State well by arms or by counsel. On the assumption that Lykourgos of Sparta was a real man—and any other theory of him is less natural—his case is the earliest recorded instance of the heroizing of a historical personage. A great stimulus about this time was given to this practice by the expansion of Greek colonization, the greatest world-event of the period, which reacted in many ways on religion. As the new colonists could not take with them the tomb or the bones of the aboriginal hero of their stock, they must institute a new hero-cult, so as to bind the new citizens together by the tie of heroic kinship. The most natural person to select for this high honour was the founder or leader of the colony, the *erxos* or *exxos* as he was called, and we may regard it as the usual rule that, when he died, he would be buried within the city, and his tomb would become a *temenos*, and would be visited yearly with annual offerings.

That the ordinary head of the private household in this period received posthumous honours amounting to actual worship cannot be definitely proved. The tendance of the dead had become, indeed, a matter of religion, and at Athens was attached to the ritual of the State by the commemorative feast of All Souls, the *Korai*, or 'Feast of Pots,' the last day of the *Anthesteria*. But nothing that is recorded of this ghost-ceremony convicts it of actual worship; the ghosts are invited to spend the day with the household that holds them in affection, they are offered pots of porridge, and then at sunset are requested to depart. Prayers are proffered in their behalf to the powers of death, but not directly to the ghosts themselves; no cult is offered them as to superior beings endowed with supernatural power over the lives of individuals and States.² Nevertheless, the passionate service of lamentation and the extravagant dedication of gifts which marked the funeral ceremonies of the 6th and 7th centuries, and which certain early legislation was framed to check, reveal a feeling about the dead

¹ The other view, still held by some, that Sote-Agamemnon is the earlier fact and Agamemnon the hero the later, does not bear criticism.

² See CGS v. 219-222; J. E. Harrison, *Prolegomena*, ch. 2.

bordering on veneration, and such as might inspire actual worship.

We may safely assume that the growing interest of the States in hero-cult intensified the family aspect of the State-religion; the hero as the glorious kinsman is invited to the sacrifices of the higher deities, and to the *deipnon* in which the god himself is the host.

It is important for the student of religion to mark the consequences of this close association of the civic religion with the idea of kinship that held together the family and tribe. These have been estimated more at length elsewhere;¹ and only a few general observations are possible here. Where a family-bond exists between the deity and the city, the spirit of genial fellowship is likely to prevail in the ritual and religious emotions, and the family meal might become the type of the public sacrificial meal with the god. Such a religion is adverse to promulgation; for, as it is the sacred prerogative of certain kindred stocks, its principle means the exclusion of the stranger. Its religious and moral feeling is naturally clanish; the whole group must share in the moral guilt of the individual, and the sins of the fathers will be visited on the children. It affords a keen stimulus to local patriotism, and quickens an ardent life within the wall of the city; it has at the same time the natural defects of narrowness of view. Yet, in the course of religious evolution, we must regard the old Hellenic conception of the god, the Father of the tribe or the city, as pregnant of the larger idea of God the Father of mankind—an idea which had already dawned upon Homer at a time when the tribal spirit of religion was still at its height.

A further result of such a system is that the State-divinities become also the patrons and guardians of the family morality. Zeus and Hera, for instance, being the supervisors of human marriage and of the duties of married life; and copious records present the High God as the protector of the father's right, of the tie that binds together the brethren, the sisters, the kinsmen. While such a religion was a living force, it was not likely that the family could assert itself as against the State; to marry healthfully and early, to beget vigorous children as defenders of the State and the family graves, to cherish and honour one's parents, to protect the orphan—these were patriotic religious duties inspired by the developed State-religion, and strenuously preached by the best ethical teachers of Greece. The State being the family writ large, private and public morality could not clash. The brutal action of Kron in the *Antigone* is equally an attack on the religion of the State and on that of the family; and it was not till the 5th cent. that the question could be asked whether the good man was really the same as the good citizen.

6. Influence of advanced religion on law.—Of still greater interest is an important advance in criminal law, discernible as early as the 8th cent., which may be traced partly to the growth of the city, with its extended idea of kinship, partly to the growing intensity of the belief in the power and significance of the spirits of the dead.

In the most primitive period of Hellas, the shedding of a kinsman's blood was already a heinous sin; but the slaying of one outside the kindred circle was ordinarily neither a sin against God nor a social crime. But, as the public mind of Greece became penetrated with the feeling that all the citizens of the *Polis* were in some sense akin, the slaying of a citizen became a criminal act of which the State, and no longer merely the clan of the slain man, would take cognizance. This expanded concept of law is reflected in the expansion of an

ancient and most significant cult, the cult of Zeus Melichios.² This was the underworld god, who was angered and must be appeased when kindred blood was shed; as the idea of kinship was enlarged, any civic measure might arouse his wrath, and rites of atonement might be offered to him. This keener sensitiveness concerning the sanctity of human life was accompanied by a feeling that bloodshed might imprint a stain on the slayer that rendered him ritually unclean, that is, temporarily unfit to approach the gods or men; it was also fortified by the growing fear of the ghost-world, which seems to have lain more heavily on the post-Homeric society than on Homer's men. It is hard to give the dates for this section of the mental history of Hellas. The first record of the thought, which is nowhere explicit in Homer, that homicide in certain circumstances demands purification, is derived from the *Atthis* of Arktinos, the epic poet of Miletos in the 8th century;³ Achilles, having slain the worthless Thersites, must retire from the army for a while to be purified in Lesbos by Apollo and Artemis. We mark here that the slain man was no kinsman of the slayer in any true sense of the word, but was a member of the same Achaean community, and therefore his slaying brought a religious impurity upon the hero; and we may believe that the narrative reveals the early religious law of Miletos. But, in passing, we must recognize the possibility that these apparently new manifestations may be only a revival of immemorial thought and feeling, common in the older non-Hellenic societies, and only for a time suspended.⁴

7. Influence of Delphi and Crete.—In this post-Homeric development of a system of purification from bloodshed, the legends suggest that Crete and Delphi played a momentous part. In the great island, the cradle of European culture, the cult of Zeus had early attached to itself certain cathartic ideas, probably of Dionysian origin. And probably in the pre-Homeric period the influence of Crete had reached Delphi; while the legend of the migration of Apollo Delphinios from Crete to Delphi, and the story that the god himself must go to this island to be purified from the blood of Python, belong to the second period with which we are dealing.

We have reason to believe that the Delphic god—through the agency of his politic priesthood—was asserting his claim in the 8th and 7th centuries B.C. to be the dictator in the matter of purification from homicide, and thus to satisfy the cravings of an awakening conscience. This claim may have been suggested partly by the fear of competition with the spreading Dionysian religion, which also brought with it a 'cathartic' message, and with which the Delphic priesthood were wise enough to agree quickly; partly also by the aboriginal nature of Apollo who was immemorably *ῥαῖος*, or 'pure.' Though the claim was not universally admitted and the Apolline jurisdiction could not obliterate the function of other divinities in this matter, yet it was powerful and effective of much that was vital both to law and to religion. Of the early procedure at Delphi we know nothing. If the god exercised discretion in his grant of purification, if he refused, for instance, to purify the deliberate and cold-blooded murderer, here was the opportunity for the emergence of a civilized law of homicide. It may not have been till the 7th cent. that any Hellenic State could express in a legal establishment its consciousness of the difference between the act of murder and the act of justifiable

¹ See CGR I. 64-69, for the religious evolution of the Greek law concerning homicide, see Farnell, *Evolution of Religion*, pp. 120-122, CGR IV. 226-228.

⁴ See Farnell, *Higher Aspects of Gr. Rel.*, pp. 70-71.

or accidental homicide. The earliest that we know of was the law-court *ἐν Δελφῶν* established at Athens under the patronage of the Cretan-Delphic god to try cases where homicide was admitted and justification was pleaded. In this as in other Attic courts that dealt with the same offences, rites of purification were often an essential adjunct of the ceremony. The typical legend that enshrines the early ideas of *ἀσέβεια* and turns on the question of justifiable homicide is the story of Orestes, which had spread around the Peloponnese and penetrated Attica as early as the 5th cent. B.C., and later became Pan-Hellenic. Apollo as a divine agent appears in it first, as far as we have any literary record, in the lyric of Stesichorus, and at some indeterminate date in this period undertook the purification of the matricide.

These cathartic functions and the general demand for their exercise must have greatly enhanced the influence of Delphi in the earlier part of the post-Homeric period. It was doubtless strengthened even more by the great secular movement of Greek colonization. With wise foresight the god had undertaken the guidance and encouragement of this already in the earliest days when the Hellenes were pushing across the sea; for it seems as if the first Greek settlements on the Asia Minor coast, the Lydian and the Aeolian, were due to his leadership, if not to his inspiration. The legends that associate him with the Dorian migration into the Peloponnese are too powerful to be rejected. And after this event, when light begins to shine on Greek history, and the Hellenic race was rapidly establishing that chain of colonies across and around the Mediterranean which were to diffuse Greek culture through the world, the power of Delphi and the Delphic oracle reached its zenith. For it is clear that it was the prevailing fashion to consult the Pythian Apollo as to the choice of a site. Hence it came about that in so many Greek cities Apollo was worshipped as *Ἀποκλῆς*, that is, as the divine founder, and that the flourishing communities of the West sent back tithe-offerings to his shrine.¹ Was it by some accident or by something essential in his early cult and character that the god was able to play this momentous political part, such as no other deity has ever played in the secular history of his people? The answer may lie far back in the dim antiquity of the Apolline cult, when he was specially *ἄγρως*, a god 'of the road,' the leader of the migratory host. And in pre-Homeric times, if not aboriginally, he was already an oracular god; nor was any occasion so urgent for a consultation of the local oracle as when the people were setting forth on their perilous path to find a new home.²

The Delphic oracle.—The spiritual history of the Hellenic race in the early historic period, when we mark a growing consciousness of nationality and of kinship in the various stocks, is very much a record of the career and activity of the Delphic oracle; and this is too complex and lengthy a theme to be more than adumbrated here.³ Due partly to the local position and the immemorial sanctity of the oracle, partly to the devotion and the grateful remembrance of the powerful Dorian States in the Peloponnese, the Pythian worship came to overshadow the Delian, and provided the chief religious centre and the strongest bond of spiritual unity in the Hellenic world. For political unity it could do little, owing to the centrifugal bias of Greek politics; yet the Delphic Amphiktyony, the most powerful of these religious confederations that are memorial here and there in the early history of Greece, contained within it the germs of intertribal morality and concord. Its

members were not indeed pledged to perpetual amity, but at least to a certain mutual forbearance even in their warlike dealings with one another. But the chief regulative functions of the oracle were concerned with questions of the institution and administration of cults, with the domains of legislation, colonization, public and even private morality and conduct. In the sphere of religion, it doubtless emphasized the necessity of purification from bloodshed; otherwise it had no high religious message to deliver; but it was enthusiastic for the propagation of the cult of Dionysos, and it authorized and sometimes encouraged the growing tendency towards the posthumous worship of distinguished men. In the sphere of morality its standard was generally high and its influence beneficent, especially—if we can trust the record—in the later period when it played the part of a State-Confessional and in its utterances reflected generally the progress of Greek ethics and the spirit of an enlightened humanitarianism. But its chief religious achievements were to bring some principle of unity and authority into the complex and shifting aggregate of Greek polytheism and to deepen the impression on the Hellenic mind of the divine ordering of the world; and the fruits of this teaching we gather in the works of Attic tragedy and in the history of Herodotus.

In view of the history of other temple-institutions of like power among other peoples—the Mesopotamian, for instance—we may be surprised that the Delphic priesthood made no attempt to impose Apollo as the supreme god upon the Hellenic States. The author of the Homeric hymn, composed partly under Delphic influence, exalts Apollo as high as he dares; but neither in this nor in any Delphic utterance is Apollo presented as more than the minister of Zeus, the mouthpiece of the supreme Father-god, the tradition of whose supremacy among the Aryan Hellenes had been fixed fast by Homer and the Homericid.

Nor did the Delphic Apollo succeed in achieving a monopoly of divination; for the spirit of local independence was opposed to any divine monopoly in any department of life. And other oracles, such as some of those on the Asia Minor shore, acquired considerable prestige, especially in the later period when the influence of Delphi had declined. But from the 6th till the beginning of the 5th cent., the Pythian is the only one of the many mantie institutions that is to be regarded as a vital force of Pan-Hellenism.

3. The games of Greece.—As another important phenomenon belonging to the earlier part of this second period we note the emergence and development of the great Hellenic games, which were always associated with the worship of deities or heroes. These also must be reckoned as among the strongest Pan-Hellenic influences, evoking and strengthening the consciousness of nationality. For in the 6th cent. B.C. the whole of Hellas, eastern and western, was represented at Olympia, Pytho, the Isthmus, and Nemea; here was maintained the 'truce of God' between the jealous or hostile communities; and at Olympia once in every four years the Pan-Hellenes offered a common homage to their aboriginal Father-god.

We must, then, regard the great games and the Pythian establishment as momentous factors in the religious national life, as tending to evolve a religion of a broader compass than those of the narrow tribal type of the remote past. And they concern the higher mental history of the race because most of them, and notably the Pythian, included competitions in art and literature; and thus they assisted in establishing the specially Hellenic theory of the divine significance of the artistic and intellectual life.

¹ See CGR iv. 370-382.

² Cf. iv. 181 f., 220-222.

³ Further treatment in CGR iv. 179-218, and art. *Graeciae* (Gr.).

There were other festival and public meetings of a more exclusively religious purpose, such as the great Pan-Ionic feast of the Delian Apollo, that also served to deepen in the various States the consciousness of spiritual unity, and often, where the great lyric poets composed hymns for the occasion, to exalt and illuminate the ideal conception of the divinity: the Delian festival, for instance, of which the splendour developed in the early post-Homeric age and with the growing prosperity of the new Ionic colonies, must have contributed much to the building up of the peculiarly Hellenic ideal of Apollo; and the Homeric hymn, inspired by this occasion, is the earliest record of the national consciousness of the Ionic race.

g. Diffusion of Dionysiac-worship. — Another religious phenomenon, pregnant of consequences for the spiritual history of Hellenism, is the diffusion of the worship of Dionysos. Faint though indubitable traces of this can be discerned in the pre-historic period, but it begins to be palpable and important only in the early historic. Its significance has already been indicated in general outlines (see above, p. 407). Having entered Attica from Boeotia and been adopted into the Attic State-religion some time before the Ionic migration to the Asia Minor coast, in the 8th and 7th centuries it gradually captured most of the States of the Peloponnese and of the islands, and the more distant colonies.

The Hellenic culture of Dionysos forms one of the most interesting chapters in the spiritual career of Hellenism; the taming of the wild Thracian god, the transformation of him into a civic deity, the disciplining and the adaptation of the *Menschenheit* to the uses of an orderly State-religion, were not the least among the achievements of the Hellenic genius. And as the State-religion of those centuries had no eschatologic theory, so it seems to have discarded everywhere whatever eschatologic promises the Dionysiac religion proclaimed on its entrance into Greece. Yet, in spite of the chastening influence of the civic spirit, the worship preserved much of its distinctive tone and religious power, evoking a special mood unknown in the other cults, while even the savage form of sacrament, in which the god was devoured in his human or animal incarnation, survived with some modifications in Tenos and Chios down to a late period. The history, then, of the Dionysiac religion concerns the account of the development of the sacramental idea in the Mediterranean. It concerns also the history of Hellenic culture; for one of its modes of expression was a peculiar type of emotional music, accompanying the Dionysiac hymn known as the dithyramb, which is usually regarded as the parent of Attic tragedy. Its main contribution to the polytheism of Greece was its stimulation of a warmer and stronger religious faith; and its special later service to popular religious theory was the refining and brightening of men's thoughts and sentiments concerning the life after death and the powers of the lower world, with whom the mild and genial god was generally identified or associated.

10. Orphic 'thesis'. — But the highest importance of Dionysos is found rather in the esoteric than in the external or popular domain of Hellenic religion. For, perhaps as early as the 7th cent., the cult of Dionysos was raised to a higher power by the rise and diffusion of the Orphic brotherhoods, or *thiasoi*, who worshipped this deity under various mystic names. The study of Orphism is of the greatest interest and complexity; and here it is possible to indicate only its general features and significance.¹ The preachers of the Orphic doctrines are the first propagandists or mission-

aries that we can discern in the pre-Christian Mediterranean world. For they had a definite message, and, ignoring the gentile and civic barriers of the old political religion, they preached it, if not to all mankind, at least to all the Hellenes. It was a message fraught with some new and momentous ideas, whose real import we have been able to gather in part from the now famous gold-tablets found in the graves of Crete and South Italy, and containing parts of a metric Orphic liturgy and creed that is a product at latest of the 8th, if not of the 6th century B.C. Combining this evidence with some passages in Pindar's *Odes* and Plato's *Dialogues*, we can recover in outline the doctrine of early Orphism. It proclaimed a theory, unfamiliar to native Greek mythology and religion, that the soul of man is divine and of divine origin; that the body is its impure prison-house, where it is in danger of contracting stain; that by elaborate purifications and abstinences the soul might retain its purity, and by sacramental and magic methods the pure soul might enjoy in this life and in the next full communion with God. Preoccupied with the problem of the life after death, the Orphic mystics evolved the concept of purgatory, a mode of posthumous punishment temporary and purificatory; also, if we can trust certain indications in Pindar and Plato, the dogma of reincarnation or more specially of a triple cycle of lives both in this world and in the next. Students of religious philosophy have noted here the striking resemblance to Buddhist thought; and have considered whether Indian speculation could have cast its influence so far westward at so early a time.

It is of more immediate importance for the religious history of the Greek people to determine — if we can — the measure of success that these missions achieved, how far they succeeded in capturing the masses or the élite of the people. They certainly did not succeed in penetrating the inner circle of the Eleusinian mysteries: there is no evidence that they even tried, though it is likely that they did; but we may surmise that their influence was at one time strong at Athens, as Aristophanes proclaims as a generally accepted tradition that Orpheus was the apostolic founder of all mysteries.² They were evidently powerful in Crete; but the chief arena of their activity and the chief scene of their secular and political influence was Western Hellas or Magna Græcia, where Pythagoras was their greatest convert, and the Pythagorean clubs their militant orders. The career of these forms a page of general Greek history. Their downfall relieved Hellas from the danger of the establishment of Orphism as a secular power, which threatened the Hellenic spirit with a bondage to sacerdotalism and to the pharisaic formalism of the priest. Henceforth the Orphic religion was a private influence only, and we have no evidence to determine precisely how great it was at any particular epoch. Pindar was deeply touched by it; *Æschylus* and *Sophocles*, so far as we can see, remained unmoved, while *Euripides* may have been at times attracted and at times repelled, but was in no sense its champion. Plato in a well-known passage³ protests strongly against the Orphic mystery-mongers as spiritual quacks destitute of any real morality, who dealt in magic and traded in promises and threats concerning the other world. Whether this moral estimate of Orphism was just or not, there is no doubt that Plato's theory of the soul as expressed in the *Phædrus* was indebted to the Orphic metaphysics. And the part played by these preachers

¹ From 1881. The mystic formula used in the Attic marriage-ceremony, 'I have had from earth, I have found a better thing,' may have been derived from Orphic sources (see Parrot, *Higher Aspects of Gr. Rel.* p. 121).

² *Ibid.* p. 124 L.

³ See *Quæstiones*.

of purity and salvation in the later spiritual history of Greece was certainly of high importance. They mark the beginning of a new era of individualism in religion; for their concern was with the personal soul and its destiny.

II. Eleusinian Mysteries.—The Eleusinia, or Mysteries of Eleusis, were a more national and Pan-Hellenic institution than the Orphics, but of somewhat similar influence and purpose (see art. MYSTERIES). Originally they may have been merely the tribal mysteries of an agrarian society to which only the adult members of the Eleusinian community were admitted. But, when our earliest record reveals them, namely, the Homeric hymn to Demeter, which cannot be later than the close of the 7th cent., they have already enlarged their borders and their scope. For they appear there as appealing to the whole Hellenic world, and their special promise to the initiated is the happiness of the soul after death. Having once transcended the tribal limits, they seem to have imposed no conditions on the aspirants for admission except the possession of Hellenic speech and purity from actual stain; the initiation was open to women and occasionally to slaves. Nor does their influence and the power of their appeal appear to have waned until the introduction of Christianity. Many scholars have laboured to solve the problems concerning their ritual, their doctrine, and their inner significance. It has been thought that their chief attractiveness may have lain in their preservation of a higher sacramental conception of the sacrifice that had died out in the ordinary public ritual; that the initiate drank of a sacred cup in which were mystically infused the very life and substance of the kindly Earth-Mother with whom their own being was thus transcendently united. But more careful criticism shows that, though a simple form of sacrament was part of the preliminary service, the real pivot of the mystery was not this but a solemn pageant, in which certain sacred things fraught with mystic power were shown to the eyes of the catechumens, who also were allowed to witness mimetic performances showing the action and passion of a divine drama, the abduction of the daughter, the sorrow and long search of the mother, the holy marriage of reconciliation, and possibly the birth of a holy infant. To imagine the thrill and the force of these rites, one must imagine a medieval Passion-play performed with surpassing stateliness and solemnity. Those who saw these things in the Hall of the Mysteries at Eleusis may have carried away with them an abiding sense of a closer communion with the benign powers of the nether world and a resulting hope of a happier posthumous lot. We must regard them as the highest and most spiritual product of the pure Hellenic religion, investing it with an atmosphere of mystery and awe that was generally lacking in the public cult, and which was unperturbed at Eleusis by any violence of morbid ecstasy such as marked the Phrygian and some of the Orphic rites. We may believe that they exercised a healthful influence on the moral and spiritual temperament of the Hellenes; but it is not clear that they definitely proclaimed any higher moral theory, nor do they appear, like the Orphics, to have preached any dogma of metaphysics or theology. But, like the Orphians, they tended to widen the horizon of the religious spirit; for they appealed to a far larger public than the ordinary cults of the city; and, while Pan Hellenic in this sense, they belong to the domain of personal religion; for they satisfied the personal craving of the individual for closer fellowship with the deity, and soothed the troublesome apprehensions that were growing up in this second period concerning the individual destiny of the soul. Yet, as regards

Attica and Athens at least, and probably as regards Hellas, they are not to be ranked, as the Orphians may be, among the disruptive forces of individualistic religion undermining the social fabric of public worship. For the Athenian State administered them by the help of Eleusinian officials in its corporate capacity; and one of the catechumens—the *euai* *de* *levias*—was initiated, according to the most probable view, on behalf of the whole youth of the city.

In the Great Mysteries the agrarian significance, though discoverable and associated with simple agrarian magic, was overshadowed by higher and more spiritual religion. And elsewhere in the State-festivals we note the same phenomenon of progress in the second period. Old-world utilitarian rites of agriculture and fertility were often taken over by the expanding *Pala* and received an artistic elaboration that disguised their original significance for the primitive peasant and raised them to a higher plane of social religion. This interesting process can be best studied in following the detailed records of the Laconian *Karnia* and *Hyakinthia*, the Delphic *Pythia*, the Attic *Panathenaea*; we can feelingly appreciate in these the potent influence of the lyric poetry, the music, and the art of early Greece, shaping and elevating men's imagination of divinity.

By the close of this second period—500 B.C.—the Hellenic national consciousness has realized itself in respect of intellectual culture, ethics, and religion. Zeus Hellenion, the tribal god, is becoming Panhellenion. The age of the tyrants contributed much to the growth of Pan Hellenism; Peisistratos probably something to the idea of a national religion, in that he seems to have worked zealously for the organization and expansion of the Eleusinian mysteries. The cult of Dionysos has penetrated the leading communities and most of the by-ways of Greece; and nearly everywhere he has been partially tamed, and the *Mænads* have been either suppressed or disciplined to the more sober purposes of civic worship. But the two most striking phenomena in the spiritual history of the 6th cent. were, first, the rise and expansion of Ionic philosophy and physical speculation; and, secondly, the development of a new form of literature that came to be known as the Attic Drama. Both of these must be reckoned with among the forces affecting the life of the popular religion.

12. 6th century philosophy.—The relation of Greek philosophy to Greek religion is a great and complex subject, the theme of many modern treatises; and in this slight sketch of the whole history of the polytheism there is no room for more than a few very general observations. So far as the new speculation, which gave birth to the free secular science of Europe, was preoccupied with questions of the physical origins of things and with elemental theories of cosmogony, it would not necessarily clash with any orthodox prejudice of the average Hellenes. For he had no sacred books which dictated to him any views concerning the origin of the world or the constitution of Nature, and which he would have considered it immoral to disbelieve. In fact, when Herakleitos boldly declared that 'neither God nor man made the *kosmos*,' there was no authoritative Greek myth or theological dogma to gawney him. But the great philosophers of the 6th cent.—Pythagoras, Empedokles, Xenophanes, and Herakleitos—were also directly concerned with the philosophy of religion, with speculations on the nature and the true definition of godhead; and some of the surviving fragments of their works express ideas and sentiments in sharp antagonism to the concepts and ritual of the contemporary polytheism. The main trend of their speculations ran counter

to the anthropomorphic theory of divinity; and they tend to define God not as a person, but rather as the highest spiritual, or metaphysical, or even physical power or function of the universe; and there is a common tendency in this 6th cent. thought away from the theistic to the pantheistic view. Pythagoras is said to have explained the conception of God in terms of mathematics, and to have been willing to accept the personages of the popular polytheism on condition of finding their true mathematical equation.¹ But this philosopher stands apart from the other leaders of this first period of Hellenic free thought. The mathematical mind is often a prey to mysticism. And Pythagoras was the most powerful champion and apostle of Orphism, the founder of those secret societies which threatened the secular and the intellectual freedom of Hellas. Equally on its mystic and on its rationalistic side the Pythagorean teaching was in tendency inimical to the public religion of Greece, though the members of this sect appear always to have compromised with it. But it is in the fragments of Xenophanes that we find the most severe protests against the current religious conceptions of Hellas: his verses quoted by Clement² polemize strongly against the folly of anthropomorphism, which is the master-passion of Greek polytheism; and, if one or two of his quoted utterances seem to proclaim monotheism, it is clear that for his higher thought godhead was not a person but a cosmic principle or a noetic idea. On the whole, the same account may be given of the religious theory of Heraclitus so far as this is revealed at all in the fragments. It has, indeed, been recently maintained that he tolerated and found a place in his system for the contemporary polytheism;³ but it is probably a truer view that he regarded it with half-disguised contempt and used its terms and figures only on occasion as literary expressions; while three of his fragments are scornful exclamations against the excesses of his Bacchic ritual, the methods of purification from blood, and the folly of idolatry.⁴

In this early speculation of the 6th cent., however, the parting of the ways has not yet been reached for physical sciences and religion; the cosmic theory is expressed in spiritual and animistic rather than in materialistic terms: for Empedocles, Love and Strife are creative principles; in the view of Thales the magnet has a soul, and all things are full of divine potencies. The great movement of Ionic thought was indeed adaptable to a high pantheistic or animistic creed, but not to the personal polytheism of the Hellenes, though most of the philosophers do not appear to have been vehement protestants. And at first their protests could have influenced only the minds of a few; nor before the 5th cent. was the popular State-religion obliged to take notice of it.

13. *Rise of Tragedy.*—The other phenomenon referred to above as marking the close of this period was the rise of Tragedy. The question of its influence on the whole popular religion belongs to the history of the 5th century. What concerns us chiefly at this point is its close association with Dionysos-cult. The traditional view, that it actually originated in some mimetic form of Bacchic ritual, is in the opinion of the present writer still the most reasonable, although this is now denied by some scholars.⁵ But, even if its connexion with Dionysos-worship is a secondary or accidental fact,

it is still a fact of importance for the history of Greek polytheism. The records concerning Theopis of the Attic village Ikaria, a place dominated by ancient Dionysiac legend; the statement of Herodotus concerning Kleisthenes, the tyrant of Sikyon, who gave to Dionysos the tragic choros which hitherto had been devoted to the hero-cult of Adrastos—are sufficient proofs that this greatest of all the literary achievements of post-Homeric Hellas was dedicated to the god already in the 6th cent.; and throughout the glorious career of the Attic stage Dionysos remained its patron-god. His worship, then, must have received a strong stimulus from this new form of literature, which rapidly achieved popularity, and appealed directly to a larger public than any other. His character thus undergoes a singular transformation: the wild god of barbaric origin comes to take rank by the side of Apollo and the Graces as a divinity of culture and education, the inspirer of one of the greatest of Hellenic arts. Here, again, as in the cults of Apollo, Athena, and the Muses, we mark the characteristically Hellenic fusion of art and religion; and the history of the dithyramb, the Dionysiac hymn, which may have been the parent of the drama, and which was wedded to a peculiar mode of music and rhythm, is an important chapter in the history of European music.

III. *THIRD PERIOD: 600-550 B.C.*—The third period of Greek religion may conveniently include the 6th cent. and that part of the 5th which ends with the downfall of the system of civic autonomy at the battle of Chaeroneia. For the history of Greek religion, as of Greek culture, it is of the highest interest, being the richest in respect of religious monuments and literature, and the most forceful and momentous in regard to the influences at work. In the sphere of external history, it witnessed such world-epochs as the struggle of Hellenism against barbarism, the rise and fall of the Imperial City-State, and the emergence of Macedon as a world-power; in the sphere of culture, it witnessed the culmination of the greatest plastic art of the world, the bloom and maturity of the Attic drama and Pindar's lyric, the diffusion of education and the spirit of inquiry through the activity of the Sophists, and the higher development of philosophy and science. To show how the religious practices and theory of the higher and lower members of Hellenic society were affected by the great events and achievements of this greatest period of human history is a necessary, but a difficult, task.

1. *5th century religion contrasted with the Homeric.*—If we take Athens as the typical religious community of the 5th cent., and compare the structure and forms of her State-polytheism with that of the old Homeric world, we find the personalities of the pre-historic pantheon still worshipped and cherished; no cult of that epic world had as yet fallen into desuetude; nor had the most civilized city of Hellas discarded the immemorial rites of the simple peasant religion, the worship of rivers and streams, and some of the most naive practices of Animism. And it is clear that this conservatism was no hieratic convention, but a living faith, expressing a religious intuition of the people, who were as yet untouched by the cooling influences of science and philosophic scepticism. In fact, for the greater part of the 5th cent. the life of the polytheism was probably stronger than it had ever been in the past. It was strengthened by the admission of a few new figures and by the development of some of the old.⁶

⁶ v. 37.

⁷ Pan came in from Arcadia at the beginning of this century (see CGS v. 111), Asclepius with his club from Epidaurus at the close.

It is rather in respect of its spirit, tone, and outlook that the religion of the 5th cent. presents some striking contrasts to the Homeric. Its anthropomorphism is even more pronounced, thanks to its great art-power; but it reveals a deeper conviction concerning the part played by moral agencies and powers in the affairs of men. The writings of Herodotus expound a religious view of history, of which only faint indications were found in the earlier epic literature. The historians of the 5th cent. regards the momentous contest of Greece with Persia as a conflict of moral forces, the issue being worked out by unseen powers such as Nemesis, Violence, and Justice, with Zeus as the righteous Judge; and, in weaving into his narrative the stories of Alakid heroes and the Eleusinian deities speeding to the help of the Hellanes at Salamis, he doubtless represents the faith of the average Greek. A similar view was also impressed on the religious imagination of the people by oracular utterances, such as that which was imputed to the prophet Bakis—*ἢν Ἀσὶα σφόδρα ἀσπερὲς Κῆρον, Τῆσιν δὲ*!—and is expressed pictorially on the famous vase at Naples representing Hellas and Asia pleading their cause before the High God with 'Αἰνὴ, 'Δεσνὴ, as a tempting douchon standing by Asia.¹ In this scene we trace also the influence of the famous tragedy of *Æschylus*, the *Persæ*, which in more than one passage of deep religious conviction pronounced moral judgment on the great event.² The same view is expressed and the same tone heard in the striking poem of Pindar's eighth Pythian ode, where he exults over the triumph of 'Hercules,' the armed Faun of Hellas, who has cast Insolence into the sea, even as Zeus quelled the monster Typhoeus.

2. Pan-Hellenism.—The Hellenic confederate effort against Persia was the nearest approach ever made by the Hellenic race to Pan-Hellenic action; and in a striking chapter of Herodotus, eulogizing the loyalty of the Athenians to the cause of Greece, emphasis is laid on the name of Zeus Hellenicus.⁴ This is the highest political title of the High God; and its history is interesting. Originally the narrow tribal name of the god of the Hellenes, a small Thessalian group under the leadership of the Aikaidai, it was transported to Argina by a migration of the same tribe, whose ancestor Alakos was the high priest of Zeus Hellenaios; already in the 6th cent., when the domination of Hellas was enlarged, the title may have taken on a wider meaning. But it was the danger of the Persian wars and the part played in them—we may believe—by the men and the old heroes of Argina that brought the cult into prominence, investing the cult-name with a wider significance and a more potent appeal. Here, then, was Hellenic religion giving voice to an ideal that might be realized by the poet, the artist, and the thinker, but never by any statesman or State.

Another cult belonging to the same range as this was that of Zeus Eleutherios, the god of Hellenic freedom. 'Having driven out the Persian, they raised an altar to Zeus the god of the free, a fair monument of freedom for Hellas.'⁶ These lines of Simonides commemorate the dedication of the Greeks after the victory at Plataea, when they had purified the land and its shrine from the polluting presence of the barbarian by means of sacred fire brought from Delphi. The significance of this has been pointed out elsewhere by the present writer;⁷ the fight for liberty was prompted by more than a mere racial passion, by an idea inherent in the

civic religion. The title *Demagogue* is known before the Persian war only in the Zeus-worship of Laconia; henceforth it was widely diffused, commemorating not only the deliverance of Greece from the barbarians, but, in Sicily for instance, emancipation from the domestic tyrant.

In contrast with the deterioration of the old Roman religion caused by the Hannibalic wars, the successful struggle of Greece against barbarism in the East and the West undoubtedly quickened for a time the fervour and devotion inspired by the national cults. The sufferings of Hellas were easily repaired; the gods in whom they had trusted had not failed them, and much of the spoils won from the barbarians was gratefully dedicated to the embellishment of the shrines. The vacillating and time-serving policy of Delphi at the hour of the greatest peril was condoned or unnoted by the victors, and Apollo received an ample share of the fruits of victory. The champions of Hellenism in the West, Gelo and Hiero, commemorated their victories over the Carthaginians and Etruscan powers at Himera and Kyme by thank-offerings sent to Apollo at Delphi and Zeus at Olympia. The bronze helmet found at Olympia and now in the British Museum, inscribed with the simple dedication, 'Hieron the son of Deinomenes and the Syracusans send Tuscan spoils to Zeus from Kyme,' is an epoch-marking monument of Pan-Hellenic history and religion. The gratitude of Hellas was paid in the first instance to the high god Zeus; to him was consecrated the 'feast of freedom' at Plataea, which was still commemorated with pathetic fervour even in the last days of Hellenic decay; to him, under the national title of Olympios, was dedicated his mighty temple at Akragas from the spoils won by Gelo at Himera. But the outflow of national thankfulness was directed to other divinities as well—notably and naturally to the war-goddess of the Athenians; and the spoils of Persia at Athens and Plataea were partly devoted to the erection of two striking statues of Athena. Nor were the lesser powers of the elements forgotten—the winds that assisted the Greek fleet at Artemision and the nymphs of the soil on which the battle of Plataea was fought; the grateful Athenians instituted a cult of Boreas, their kinsman, in their restored city, and assisted in the worship of the Nymphs at Kithairon.

The Arcadian goat-horn-god, the rustic Pan, was admitted into Athens shortly before the battle of Marathon, and the story to which the Athenians gave currency of the help he rendered them at the great battle contributed something, no doubt, to the subsequent diffusion of his cult. A further religious consequence of these great events was the stimulus given to hero-worship: Gelo, the victor at Himera, and some of the Hellenes who fell at Thermopylae, Marathon, and Plataea, received heroic honours. This 'heroizing' of the recently defeated had its moral value as a strong stimulus to patriotism, when they had died in the service of their country; and, though it was degraded in the 5th cent. to the exaltation of the useless athlete, yet it must be reckoned among the life-fores of later polytheism and as a momentous factor of higher religious history.

Finally, we may with probability ascribe to the triumph of Hellas and to the expanding glory and greatness of Athens a marked increase in the Hellenic popularity of the Eleusinian mysteries. For this the Athenians might thank Herodotus, and his thrilling narrative of the vision of a heavenly host seen moving from Eleusis towards Salamis for the salvation of Hellas; they might also thank their own far-sighted policy of encouraging the whole Hellenic world to take part in the worship

1. **Introduction**

1. From the following list, select the two most important factors that influence the rate of a chemical reaction. Circle the correct answer.

at Eleusis, aspiring thus to make the Hall of the Mysteries, a recent architectural work of the Periclean administration, the centre of a Pan-Hellenic faith.¹ And their attempt in great measure succeeded.

3. Influence of religious art.—The study of the polytheism of this century is essentially also a study of the great religious art which culminated under Phidias, but which continued forceful and prolific till the age of Alexander. The general effect of the iconic art upon Greek religion has been briefly indicated above; and long before this century the religious bias of the race was committed to idolatry;² the people craved an image that they could love and cherish, though here and there they might retain the uncouth fetish, the block of wood or rudely-hewn stone, because of the immemorial magic which it had acquired through ages of shy, half-savage veneration. The achievement of Phidias and his contemporaries was only the culmination of a process of ideal anthropomorphism that began with Homer and was helped forward by the lyric poetry and music of the post-Homeric age, and by the art of the 6th century. Strictly estimated and studied in all its fullness, in the marvellous products of vase-painting, glyptic, and sculpture which even the shattered fabric of antiquity presents to us, the art of the 5th and early 4th centuries must be called the most perfect religious art of the world. A more spiritual or more mystic religion could not have produced or could not have borne with such an art. But it was the best and most satisfying expression of the best that the religious spirit of Hellenism admitted; for this polytheism had been built up by the teachers of the people—poets and artists obeying the race-instinct—not on vague conceptions of infinite godhead ineffable for art and inexpressible in clear speech, but on vivid perceptions of concrete divine personages, distinct in form, attributes, and character, robust and very real. The Greek artist, with his miraculous cunning of hand, could deal with these types as he could not have dealt with 'the Word' or with 'the Buddha.' Nor was he merely the exponent of the highest popular imagination, but, unconsciously perhaps and in obedience to a true art-tradition, at times a reformer and in any case a creator. For us his works have this value among others that, even more than the poetic literature, they reveal to us how the people at their best imagined their deities. But they also helped the people to imagine them better and more nobly. Perhaps the earliest art of Hellas that takes rank among the works of high religious inspiration is seen in the Attic vase-paintings produced near to 800 B.C. that portray the *theans* of Dionysos. The strong spirit of that religion which lifted the votary above the conventional, moral, human life, the wild joy of self-abandonment, the ecstasy of communion with God—all are here more startlingly expressed than even in the lyrics of the *Bacchae* of Euripides or in the single perfect Bacchic ode of Sophocles' *Antigone*. It was not till the time of Skopas in the 4th cent. that Greek sculpture could so deal with this orgiastic theme. The glyptic work of the 5th cent. dealing with divine forms is mainly tranquil, majestic, ethical, intellectual; the physical perfection of the divinities sculptured on the Parthenon impresses us not so much with the sense of physical beauty and strength as with the sense of a higher and nobler vital power, so instinct is the beauty with that quality which the Greeks called *arete*—a quality partly ethical, partly spiritual, but palpable in material forms which hint at a tranquil reserve of strength. The expressive power of such an art can show benignity and mildness

of mood without sentimentality, beauty without voluptuousness, intellectual thought without morbidness, majesty without self-display.

The gentle and tranquillizing spirit of the Eleusinian mysteries speaks in the famous Eleusinian relief showing the Mother and the Maid giving his mission to Triptolemos. The Phidian Athena Parthenos was a more deeply conceived ideal than the Athena of the poets, for it showed her as the Madonna of the Athenian people, with a softer touch of maternal gentleness in the face. The Zeus Olympios of Phidias transcended the portrait of the High God as given by Homer or even by Aeschylus; for the chryselephantine statue impressed the later Greeks as the ideal of the benign and friendly deity, the divine patron of a Hellas united and at peace with itself—an image that appeared 'to add something to the traditional religion,'³ embodying, as Dio Chrysostom says, a conception of the god so convincing and complete that, 'having once seen it, one could not imagine him otherwise.'⁴ Nor had any of the poets presented Hera in forms so winning and gracious as those in which the best art of this age embodied her, as the Argive goddess 'of good works,' 'in whose face and person brightness appeared by the side of majesty.'⁵ The poetic presentation of Apollo is blurred and incomplete compared with such plastic types as the Apollo of the Parthenon frieze and the Phidian statue in the Museo delle Terme. The older poetic ideal of Aphrodite was shallow and trite compared with the Aphrodite of the Phidian type, such as we see presented by the Laborde head in the Louvre; here is something of the majesty of the great cosmic goddess imagined by Aeschylus in his *Danaides*, but combined with an emotion of human love in the countenance, and a winning appeal that the verses of the great poet do not clearly convey. And we may surmise that the Olympic Aphrodite of Phidias had some influence on the theory of Plato and his distinction between the heavenly and the sensual love. The full imagination of the personality of Kore would combine the radiance and the grace of the young cornfield with the awe and mystery of the lower world: the former in masterfully presented by a coin of Lampakos, which shows her rising from among the cornstalks with uplifted, yearning face;⁶ and the unknown artist of the great Syracusean medallion struck towards the close of the 5th cent. combines this aspect of her, in a type of surpassing loveliness, with a touch of melancholy that hints at the character of the goddess of Death.⁷

And yet this triumphant anthropomorphic art must have failed, and, judged by the fragments that survive, did fail, when it tried to reveal in clear outline and full light the half-shrouded forms of the nether world, the chthonian goddesses and the Eumenides whose nature appealed to the sense of religious awe, to what the Greeks called *re paider*, and did not brook to be wholly revealed. We may doubt, therefore, if even the Holy Ones, the Semnai, of Kalamis and Skopas were types so expressive of the real moral-religious imagination which fashioned these figures of cult as were certain awe-struck verses of Sophocles in the *Oedipus Coloneus*. Nevertheless, this ideal Greek art, by expressing in palpable forms of benign beauty the half-palpable personages of the lower world, did one service to religion and the religious imagination: it banished the uncouth and the terrible, and helped to purge and tranquillize the Greek mind by investing the chthonian powers with benevolence and grace. We discern here the influence of the Bacchic and

Dionysian mysteries working upon the artist, and through the artist upon the popular faith. That the average Greek of the classic period was saved from the vampire terrors that J. C. Lawson has discovered in Modern Greece¹ was due equally to the religion and to the art that he saw around him.

Apart from this special fact, a phenomenon so momentous in the spiritual world as the flowering of this religious art in the 5th cent. claims prominent notice even in the slightest sketch of the whole history of Greek religion; for it must have worked an effect, which no student of insight would be tempted to belittle, upon the religious mood and thought of the people. Greek records sufficiently attest its religious working; even the alien Roman, *Emilius Paulus*, when he approached the Phœidian masterpiece of *Zona Olympica*, felt the thrill of the 'real presence.'² When *Aristophanes* fervently calls on Athens as 'the Maiden who holdeth our city in her hand and alone hath visible power and might, and is called the Warder of the Gate,'³ he is thinking of the bronze statue carved by *Phœidias* and set to guard the entrance to the *Akropolis*.

It is impossible, then, that this beautiful idolatry, against which the philosophers might occasionally protest,⁴ could have weakened the popular faith in the native deities. Introduced suddenly into Rome, it helped to destroy the old Roman animistic religion. But the religious instinct and history of Greece were wholly different from those of Rome. Greek polytheism would probably have perished or been absorbed by alien systems of cult far sooner than it was, if Greek art had not fortified and ennobled it, rooting it deeply in the æsthetic-religious emotions and perceptions of the people.

4. *Influence of literature:* *Pindar*, *Æschylus*, *Sophocles*.—More familiar, and apparently more answerable, is the question concerning the influence of the poetic masterpieces of this period, the works of *Pindar* and the *Attic drama*, on the general history of Greek religion. The subject is obviously too complex for the scope of this article, and has been handled by many scholars in large treatises. There is room here only for the most general statement of facts, tendencies, and effects. As exponents of the highest contemporary religious thought, the names of *Pindar*, *Æschylus*, *Sophocles*, and *Euripides* are those of prime authority. It is easy and interesting to collect religious citations from their works, and to compare these one with another, and with the current polytheism. It is far more difficult to decide, generally and in regard to any special point, how far any one of them could have influenced or modified the popular religion. Nor are all these four on the same footing in respect of opportunity. For *Pindar* writes for dynasts and aristocrats, and, being a hireling, might be thought fettered in the free expression of his sentiments; and in any case his public was more limited than that which the three dramatists addressed. Their message, therefore, was likely to reach further and to penetrate the Greek mind more deeply than anything that *Pindar* had to say; and that this was actually the case can be proved. Nevertheless, *Pindar* must be reckoned with as an original thinker who spoke words of power; in spite of his profession, his mind remained imperial and free; and in his attitude to the public religion he is to be grouped with *Æschylus* and *Sophocles*; and all three stand together and apart from *Euripides*. All three show the virility, the mental tranquillity combined with imagination and audacity,

that marked the typical character of the greatest age of Hellenism. And all three generally and without querulous protest, though with some freedom of criticism, accept the existing religious order, desiring to ennoble it, not to destroy it. *Pindar* himself was the establisher of certain new cults, and the first great literary preacher in Greece of *Orphic eschatology*, and, we may say, the first great poet in Europe who raised the theme of *Paradise* to the level of the highest poetry. Such a marvel of song on the mysteries of life and death as the second *Olympian ode* was a new voice in Hellenism; how far it echoed, and with what influence on the faith of the people, is impossible to measure with accuracy. For the program of this new eschatology, which is a weighty subject for the history of later Hellenism, we have some important negative evidence in the fact that neither *Æschylus* nor *Sophocles* shows any knowledge of *Orphism* or interest in it, or any pre-occupying concern with the state of the soul after death; nor in their occasional utterances concerning posthumous judgment do they go beyond the popular traditional view; though the thoughtful refinement of *Sophocles* suggested to him that there might be forgiveness of sins and reconciliation after death.⁵ Nor do we find anywhere in the works of the two dramatists any hint of that pregnant *Orphic doctrine* to which *Pindar* gives voice, that humanity is of Divine origin—*θεογονία τοῦ ἀνθρώπου*—a doctrine which passed into the higher thought of later Greece.

Leaving aside this special question, we find a certain general resemblance in the religious view of these earlier poets of the 5th century. All three preach the supremacy of *Zona*, his omnipotence and perfect justice, while *Sophocles* lays stress on his mercy. The effect of this poetic message was probably great, and certainly timely; for the growing power and frequency of heresies, which *Pindar* himself and the dramatists indirectly encouraged, was a danger to the higher religion; and the backward and less cultured Hellenes were doubtless liable to the propensity of the savage mind to prefer the worship of the local demon to that of the high god. Against such degeneracy the works of the greatest 5th cent. poets, like the masterpieces of the greatest 5th cent. sculptor, served at least as an enduring protest in Hellenism. It would be of interest to consider how far the sculptor, in regard to the general conception of his mighty theme and in the choice of mythic bywork whereby he made it articulate, drew certain suggestions from the poetry of *Æschylus*.

These poets also deal with the question of *Fate* and *Destiny*. The personified *Moira* was an old, though insignificant, figure of the popular religion and mythology; *Homer* is aware of her and has to reckon with her. She might become more formidable under the philosophic conception of *ῥά σμικρὸν*, which appeared in the philosophy of *Heraclitus*; and we know that later philosophy and cultivated thought were much perplexed over the problem of the reconciliation of *Fate* with the idea of a free divine Providence. These poets, taking their cue from *Homer*, follow a short cut, interpreting *Moira* as the voice or agent or 'emanation of the power' of *Zona*.⁶ The pupil of *Phœdrias*, *Theokosmos* of *Magara*, was working out the same idea when he carved the *Fates* with the *Hours* as subordinate adjuncts to the great form of *Zona*.⁷

³ *Ivy*, xlv. 31.

⁴ *Phænomena*, 1185 ff.

⁵ *Isocrates* protest in the 4th cent. is the most noticeable (Clem. *Strom.* v. pp. 714, 715 ff.); the Stoic theory of *Zona* condemned the creation of temples as well as idols (ib. p. 691 ff.).

⁶ The *Proemium* of *Æschylus* expresses indeed a view of *Zona* that conflicts with the higher religious thought of the poet. But *Æschylus* has here taken up a crude story that he cannot wholly moralize. On the other hand, his handling of the idea of the curse in the house of *Pelops* is not worked out on the lines of mechanistic fatalism. Cf., further, art. *Fate* (Greek and Roman).

⁷ *Fate*, l. 40. 6.

We may say, then, that both the poetry and the art of this period worked for the deliverance of the polytheism from the burden of fatalism, which tends to lower the value of all theistic religion.

Again, each of these poets, while accepting and in certain points purifying the traditional polytheism, was capable of religious thought that worked on other lines than anthropomorphism. The high god Zeus is generally for them a definite personal Being; but once at least Aeschylus transcends this apprehension of him, and defines Zeus pantheistically as a supreme, cosmic force; a fragment of his *Heliades* speaks of him thus: 'Zeus is air, earth, heaven; Zeus is the whole of things, and whatsoever is higher still than these.' Moreover, the other divine forces that shape our lives are presented by him and his fellow-poets not always as *dei* but as moral powers that are only half-personal, not as concrete individual deities but as emanations of these. We may call them 'personifications of moral ideas,' and some are no more than what this phrase implies, such as those, for instance, with which Euripides capriciously plays. But some may rather be described as the soul-powers of the High God, like in some ways to the Puritan *Providence*; such are Pindar's *Zōrapa Autē Zōvōi Oipax*,¹ the *Dirē* of Aeschylus, 'Justice the maiden daughter of God,'² who 'shines in the poor man's smoke-dimmed cabin,'³ and, in the verses of Sophocles, 'Mercy who 'shares the throne of God to deal with all the deeds of man.' While Pindar's genius inclines to the brighter of these emanations, Aeschylus broods rather over the gloomy forces of the shadowy world, which he might at times be constrained to present in palpable concrete form for stage purposes, and yet his own deeper thought could grasp as half-outlined spiritual powers, not the less real because impalpable. The ordinary Hellenic in his religious perceptions laid too much stress on personal individuality, as if this were the only criterion of ideal reality: from his point of view, if Erös was to be a real force of the spiritual world, then Erös must be imagined as a beautiful youth. But Kypria or Aphrodite in a striking Sophoclean fragment is no longer presented as a personal goddess but as a diffused pantheistic force.⁴ And the Attic drama may have enlarged the mental outlook of the succeeding generations in this matter; for the author of the speech against Aristogaiton in the 4th cent. must have been sure that his audience would understand him when he said: 'All mankind have altars dedicated to Justice, Law-abidingness, Pity, the fairest and holiest (being those) in the very soul and the nature of each individual.'⁵ This is just how Euripides might speak.

The great 5th cent. poets were all moralists, each in his own way. The history of Greek ethics concerns us only at the several points where it touches religion; and to this history, both generally and on its religious side, the works of Pindar and the three dramatists make important contributions. Of special interest is their attitude to Greek mythology, which, in spite of its general brightness and beauty, seriously needed in parts the puritanical reformer, if it was to be harmonised with the higher religious thought. But none of these poets, not even the grave Aeschylus, was willing to undertake such a rôle. Pindar of all the three comes nearest to preaching, for his *métier* allowed him more personal freedom of comment. We find him anticipating Plato in his protests against some grotesque and repulsive stories such as the cannibalism of the gods in the myth of

Pelops, or blasphemous stories such as the theomachies and the combats of heroes against divinities: 'Let all war and strife stand far apart from the immortals' is a good contentious maxim for the expurgation of Greek mythology and for the enrichment of Greek ethical-religious thought. But neither Pindar nor the two older dramatists protest against the more licentious myths, and they accept at need various legends about the amours of the gods. In fact, the axiom that sexual purity was an essential attribute of all divinity was not yet accepted by the higher thought of Greece.

Pindar's freedom and sense of irresponsibility in regard to myths has a certain value, in that it shows that the futilities and improprieties of mythology—the 'unhappy stories of birds'—were not necessarily a burden on the stronger religious minds of Hellas, and that they could be gently excised from the polytheism without endangering the popular worship and faith, which in the main were independent of them.

As for the two dramatists, Pindar's contemporaries, mythology was their public business; and they accepted it genially because they were not in the first place moral teachers but dramatists; it did not, therefore, occur to them to protest or violently to reform. But they might select, discard, and re-shape; they could take the great legends of the past—legends of Thebes, the story of the Niobids, of Prometheus, the death of Ajax—all of them irreconcilable in parts with higher morality and religion, and invest them with as much morality as the tradition admitted. This they did with force and subtlety. And generally the moral spirit and imagination of Aeschylus and Sophocles must be counted among the spiritual facts of this period with which the history of Greek ethics and religion must deal. Doubtless the older and robust poet was the stronger moral and religious force; his protests against the superstitious doctrine of Nemesis, his profound utterances concerning moral responsibility and the moral continuity that links our lives and actions, his discovery that suffering brings wisdom—these are landmarks in the ethical story of Greece; while with Sophocles the conviction is no less deep of the eternity and divinity of the moral law. They were the last spokesmen of a civic-imperial system with a civic religion and morality that had not yet passed its zenith. Cf., further, art. *ÆSCHYLUS*, *SOPHOCLES*.

5. Euripides.—The part played by Euripides in this spiritual history of Hellas was wholly different. Younger contemporary of Sophocles as he was, he seems to belong to a different age. In his work and thought is reflected far more vividly than in the older poets of the same century the new mental life which was fostered by the philosophers and the sophists. The influence of the physical speculations of the 5th cent. and of those of Demokritos and Anaxagoras of the 5th, which at some points advanced further in materialism, had had time to penetrate the more gifted minds and to compel the public to a certain attention. The paid 'sophist,' the pioneer of modern education and the first champion of the critical spirit, was travelling around. And after 470 B.C. the imperial greatness of Athens had begun to attract the greatest teachers and thinkers of the age. It was of great moment for Euripides that such men as Anaxagoras and Protagoras were active in Athens for many years, and that he had enjoyed familiar intercourse with them, as he also enjoyed with Socrates. It is clear that the poet imbibed deeply their teaching and their spirit; he was also learned in Orphism, antiquarianism, and remote folklore. Being by nature a great poet, he had also something of the weak-

⁴ *Agam.* 772.
⁵ *Or.* 12nd.

¹ Cf. *ix*, 22.

ness of the 'polymath' or the 'intellectual'; he had not the steadiness of brain or strong conviction enough to evolve a systematic philosophy or clear religious faith; his was, in fact, the stimulating, eager, critical spirit, not the constructive. His mental sympathies and interests shift and range from pole to pole. He is a secularist in his view of a physical universe, and he forebodes a secular treatment of ethics based on ideas of gods and heredity—though a chorus of his maidens may praise chastity as 'the fairest gift of the gods.' It was, therefore, possible, though most unjust, that Aristophanes should call him an atheist. On the other hand, he is capable of profound religious sentiment and exalted religious utterance, and strikes out flashes of light that might kindle and illuminate a higher religion. Therefore it was possible for Clement of Alexandria to find in some of his words a foreshadowing of Christ.¹ He remains for us an enigma, and probably no final judgment will ever be pronounced upon him, in which we shall all agree. But the student of Greek religion must confront these two questions about him: (a) What was his real sentiment concerning the popular religion? (b) What were his contributions to religious thought, and what was likely to be his influence on the religious temperament of his audience and readers? To make up one's mind on these questions demands a long and critical study, also a tactful sense of the distinction between Euripides the playwright and Euripides the thinker. It is the confusion of this distinction that leads, for instance, to the strangely erroneous views held concerning the religious significance of his *Bacchæ*. A sympathetic reading of many of the plays must convey the impression that certain cult-figures and legends of the polytheism filled the poet with scorn and loathing; and at times he seems to compose as if he had a personal hatred of Apollo and Aphrodite in particular, for instance in the *Ion* and *Hippolytus*. When he can interpret Aphrodite as a cosmic force, he can dilate on this as beautifully and ardently as Lucretius; if he could have believed that Apollo was merely the sun, as he tells us 'the wise were well aware, he might have forgiven him. But it is the real personal Aphrodite of Homer and Helen, the personal Apollo, the father of Ion, the seducer of Kreon, but the beloved ancestor of the Athenians, that rankle in his mind. When he handles the story of the madness of Herakles and brings Madmen on the stage, he uses her first as his mouthpiece to convey to the Athenians what he thought of Hera;² just as he puts into the mouth of Amphitryon his own mordant criticism of the action of Zeus.³ Yet with other parts of the polytheism he seems at times in the most glowing sympathy; in the *Hippolytus*, for instance, where he expresses for the first time in literature the religious rapture of purity; in the *Bacchæ*, where he discovers the necessary phrase for the expression of the Bacchic communion, for the ecstasy of the Maenad revel on the mountain, in verses that tingle with the nature-magic that was at the root of this wild cult. Yet no one should be deceived into thinking that he is preaching the cause of Dionysiac worship; for the *Bacchæ* closes with that depressing anticlimax, where Dionysos plays the sorriest part, and Euripides' own sour dislike of the personal traditional god gives an unpleasant flavour to the last scene. It is this bitterness of protestantism and criticism in this poet that strikes a new note in Greece; and Euripides may be regarded as the first in European history to be possessed with the theologic temper. It cannot be said that he preached a new religion; he was no votary even of Orphism; for, though, as the *Bacchæ* and the fragment of his *Cretans*

attest, he felt something of its spell, he was not of that cast of mind which could be deceived by its pharisaic ritual and laws of diet, and he certainly cherished no mystic belief concerning the life after death. Nor can he be truly described as a soulless reformer of the people's faith and practice; for the reformer must have some belief in that which he wishes to reform, and that Euripides firmly believed in any part of the polytheism is hard to maintain; his final attitude is generally a doubt. Nevertheless, his protests might have been of value to the more cultured citizens who still clung to his deity worship. They are directed mainly and most forcibly against the stories of divine vindictiveness and divine licentiousness. He is evidently touched with the new idea that vengeance is alien to the perfect nature of God; this was still more insistently proclaimed by the Pythagoreans, by Plato, and later philosophers.⁴ On the second count his protest is suggested by the notion that was dawning in him that parity in every sense was essential to the divine nature; he is then the herald in literature of a thought which Orphism may have prompted, and which was to play a leading part in later religion and religious speculation, but which was unfamiliar to his contemporaries either in Hellas or anywhere in the Mediterranean except in Israel. His leading principle of criticism in all these matters is expressed in the *Iphigenia in Tauris*, namely, that the evil in religious practice and legend arises from men imputing their own evil nature to God.⁵ We owe much to the man who first uttered this warning against a debasing anthropomorphism.

The immoral elements in Greek mythology, which have been constantly reprobated by ancient and modern writers, have often blinded them to the fact that Greek religion in its forms of worship and sacred formulae was mainly pure and refined. The stories about the gods, often of the type natural to savage folklore, did not constitute ancient religion; and they were the less able to choke the growth of a higher ethical-religious spirit in that they were not enshrined in sacred books that could speak with authority to the people. Yet we have not infrequent proofs in Greek literature, notably in Plato's *Euthyphron*, that they might exercise at times an immoral influence on men's conduct. Meantime the educational movement in the 6th and 5th centuries had awakened men's minds to the importance of the moral question in literature. And the protests of Euripides are developed by Plato in his scheme of education in the *Republic*; and the same moral point of view prompts him to his puritanical legislation against poets. Such moral movements in the polytheistic societies of Greece are interesting to mark, though their effect is often difficult to estimate. The new puritanical spirit had probably a wholesome influence on the more cultured minds; it had little influence on the mass of the people, nor does the later poetry of the Hellenistic period show much trace of it.

As regards the actual forms of Greek ritual and worship, Euripides has nothing revolutionary to say. He appears to have a strong dislike for prophets, and in this he was in some accord with *Rachylus*, *Sophocles*, and the Athenian people. He shows great distrust for Delphi; and its influence was doubtless impaired at Athens during the Peloponnesian war. He protests against human sacrifice, as a barbaric and non Hellenic institution;⁶ and on one occasion the speaker argues that the gods need nothing from mortals at all;⁷ the thought was suggested merely by dramatic exigencies; and Euripides nowhere attempts a crusade

¹ See Fawcett, *Higher Aspects*, p. 114.

against the value of sacrifice in general. He has only one important thing to say about it, namely, that the small sacrifice of the pious often outweighs the hecatomb.¹ This thought implies a more spiritual view of the divine nature, and is not infrequently expressed in the later literature; according to Theophrastus and Theopompus, this higher view of sacrifice was even encouraged by the Delphic oracle.²

There is much, indeed, in the contentious poetry of Euripides that might have elevated and cleared the religious thoughts of his age; but it is doubtful if his ultimate conception of godhead, as it tends towards pantheism, could have been reconciled with the anthropomorphic polytheism of the people, or if those most conversant with his tone and inspired by his spirit could have remained long in sympathy with orthodoxy. And there is an instinct in Euripides which enhances his value for the modern man, but which in the long run was to be subversive of the old civic religion, namely, the humanitarian or cosmopolitan instinct—that which allowed him to sympathize with Trojans, women, children, and slaves, which inspired him with the beautiful thought that 'the whole earth is the good man's fatherland,'³ which prompted him to despise the life of civic duty and activity, and to recommend, as Aristotle does, the secluded and contemplative life. The further development of this cosmopolitan spirit and its effect on the old civic religion will be noted below.

It has been necessary to dwell so long on Euripides, not only for the reasons mentioned above, but also because, owing to the vogue that he won in his lifetime and that was greatly to increase after his death, he more than any other of the great men of letters must be regarded as the popularizer of the new enlightenment. Cf., further, art. EURIPIDES.

6. Influence of the new enlightenment on the popular religion.—Whether Euripides individually exercised any immediate religious influence upon the popular mind, either for good or for harm, is not easy to decide with precision; for there were other exponents than he of the same freer and more advanced thought which began to express itself early in the 5th century. As a result, we are able to discern the religious view of human life and conduct becoming what we should term more spiritual, more inward. The moral judgment begins to look to the soul or the inner principle; the doctrine begins to be proclaimed that God as a spiritual power can read the heart of man, and judges him by that; that sin lies not in the external act alone; that external ritualistic purity is of less avail than purity of soul. Such thoughts as these, which could serve as the foundation-stones of a new religion, and which helped to shape the later religious history of Europe, were mainly a heritage from the speculation of the 6th cent., and were in the air of the 5th. We cannot think that they were confined to the philosophic circles until Euripides gave them publicity; for the notable oracle quoted and commented on by Herodotus had proclaimed to the people the novel view that a sinful purpose was the same in the sight of God as a sinful act;⁴ Epicharmus had preached the higher ideal of purity: 'If thou art pure in mind, thou art pure in thy whole body.'⁵ It was perhaps in the latter part of the 6th cent. that some rhetorician of the school of Gorgias interpolated the poem of Hesiod's *Works and Days*, which reveals an exalted view of the High God.⁶

¹ See Stobaeus, *Flor.*, vol. iv. (Hekatombe) p. 306.

² See CGS iv. 124.

³ Stobaeus, *Flor.*, vol. ii. (Hekatombe) p. 71.

⁴ Cf. 54.

⁵ See Ziegler, in *AEW*, 1911, pp. 338-405. His authenticity is well

denied by F. Maass, 'Hekatombe in Composition des "Travaux et des Jours"', in *Revue des Études grecques*, xiv (1912).

We may believe, then, that this higher religious ethic had a certain elevating influence on the popular imagination. The question of immediate interest is whether we can trace any effects of this in actual worship. Did the new enlightenment, for instance, lead to the abolition or reform of cruel or impure forms of ritual?

7. Human sacrifice.—This question involves the consideration of the practice of human sacrifice, which had certainly been prevalent in pre-historic and early historic Greece, as in other Mediterranean communities. We have evidence that in the 6th and 4th centuries the practice was of rare occurrence in the Greek societies, and was repugnant to the religious morality of all but the most backward.¹ The Platonic dialogue of the *Alcibiades* contrasts the Greeks with the barbarians in this matter, yet implies that the Arcadians in the cult of Zeus Lykaios and the men of Halos in that of Zeus Laphystios continued the cruel offerings which disgraced their Hellenism. Euripides attests that the human sacrifice once customary in the rites of Artemis near Brauron had been, before his day, transformed to a mere fiction.² The Locrian sacrifices of the maidens to appease the wrath of Athena Ilia fell into desuetude in the 4th cent. B.C.,³ and at some time earlier than this the Athenians must have ceased to immolate the *parthenoi* in their *Thargelia*.⁴ The Rhodians ceased their concubines, and at the same time maintained their immemorial rite, by choosing as a human victim to Kronos⁵ a malefactor who had been condemned to death. According to Porphyry, the practice survived here and there under the Roman Empire until the time of Hadrian.⁶

But the better sentiment of Greece had probably begun to work as early as the time of Homer;⁷ for certain legends concerning the abolition of this ritual and the substitution of the animal for the human life point back to the pre-historic period; and the merciful reform in the ritual was ascribed to the High God himself in a Laconian legend which closely resembles the story of the sacrifice of Isaac.⁸ The humanitarian spirit, then, had asserted itself before the 6th cent.; but doubtless the higher teaching and thinking of this and the succeeding age quickened its influence.

8. Phallic ritual.—As regards that element in Greek ritual which by modern taste is pronounced impure, there is little trace of any attempt at reform in any period of the polytheism. The element was indeed but slight. The forms of worship were, on the whole, decorous, often stately and beautiful; ancient legend reveals the anxious care of the early Hellenes to preserve their temples from any sexual defilement; where a *leptè yfusa*, or 'holy marriage,' was enacted in any of the shrines, there is no need to suspect any licentiousness.⁹ No such feature is discernible in the Eleusinian or other Hellenic mysteries, although the Christian Fathers are eager in their insinuations. The Hellenic cults of the Oriental Aphrodite were generally innocent¹⁰ of that ritual of temple-prostitution which was found in certain Anatolian cults, and which scandalized the Greek as much as the Christian writers; the few impure titles attaching

¹ The feeling about the sacrifice of Iphigenia manifested in the *Agamemnon* of Aeschylus and the story about the Boeotian generals, and the sacrifice of a maiden before the temple of Loukia (Plutarch, *Vit. Publ.* 31 C.), are sufficient proof; cf. *Rev. Phil.* 1907, 361.

² Cf. Herod. vi. 107, who shows that the human sacrifice was rare and conditional.

to this goddess may well have arisen in the later period of the decadent polytheism.¹ In the early ages, it is clear, the wholesome and temperate influence of the Hellenic spirit had worked upon the forms of the polytheism. Nevertheless, in the ritual of a few divinities—Demeter, Hermes, Dionysos, and even Artemis herself²—sexual emblems were occasionally in vogue, and dances of a more or less licentious character are mentioned, though these are very rare; while in the Thesmophoria and other services of Demeter, what was called *ektropoleia*, indecent and scurrilous badinage, was indulged in by the women among themselves, or more rarely with the men also. We note that such ritual is practically confined to vegetation-cults, and in some it is merely vegetation magic, hardly attaching to the divinity, or affecting his or her moral aspect. The phallic emblem and the procession called the *phallourgos* or *phallosgia* were specially associated with Dionysos and Hermes; and Plutarch, a man of more than average culture and refinement, and strikingly susceptible to the spiritual influences of the more mystic religions, describes it as a harmless adjunct of the ancestral and cheerful Dionysiac ritual of the Boeotian peasant.³ Now, it is worth noting that against this element in Greek ritual there is scarcely a word of protest in all the ethical and philosophic literature of Greece. The exception is only a fragmentary utterance of Herakleitos, in which he rails against the phallic procession of Dionysos; but the exact sense of his words is not quite clear.⁴ The higher moral thought of Greece on this matter is probably more nearly represented in the utterance of Aristotle in the *Politics*,⁵ where he lays down austere rules for the training of the young:

'No impure emblem or painting or any representation of impropriety is to be allowed by the archons, except in the cults of those divinities to whom the law attaches the ritual of scurrility [*rudayria*]; in their case the law allows those of more advanced age to perform the divine service in behalf of themselves, their children, and their wives.'

Even in the last three centuries before Christ, when greater stress was continually being laid upon purity in cult, no protest is heard against these old-world forms, which have maintained themselves in many parts of Europe down to the present day, in spite of the denunciations of Christianity. The seeming paradox is explained when we reflect that the idea of purity changes its content in the different generations; and, secondly, that the Hellenic, like all the other Mediterranean religions except the Hebraic, regarded the physical procreative power as belonging to the divine character and as part of his cosmic creative force; therefore an emblem that was secularly impure might be made holy by cult and consecration.

g. Survival of other primitive ritual.—There is much besides in old Greek ritual that appears to us harmless, but uncouth and irrational; strange and naive things were done that primitive ideas of magic and animism inspired; and one may be surprised to find that the higher culture of the 5th and succeeding centuries is not known to have suppressed a single one of these. Still in the time of Theophrastos, and indefinitely later, the Athenians were capable of the quaint old-world ritual of the *Bouphonia*, that strange medley of ritual, magic, and dramatic make-believe, 'in the time of Demosthenes' they were capable of bringing up to judgment in the law-courts an axe or any other inanimate thing that had caused the death of a man or of the sacred ox, and solemnly condemning it to be thrown into the sea. The driving out of

sin or famine, incarnate in a human being, was a ceremony in vogue at Massilia,⁶ and probably also at Athens long after the beginning of our era. Nor did the higher anthropomorphism, powerful as its working was, entirely obliterate the worship or half-worship of animals in the later centuries.⁷ Even Zeus might still be conceived by the men of the 4th cent. as occasionally incarnate in the snake; we have noticed above a ritual law regulating the cult of Asklepios at Athens, composed shortly after 400 B.C., in which a sacrifice was ordered to certain sacred dogs; the pious votary would comply, however the act might awaken the laughter of a comic poet. Herakleitos protested against the absurdity of praying to idols; but no voice of the new enlightenment is heard against these far more irrational and backward ceremonies. The average public thought of the 5th cent. did not repudiate the use of magic; in fact, it is not till this century that its efficacy is known to have been recognised by legislation.⁸ And Plato, speaking about it in his *Lysis*,⁹ a work of his declining years and intellect, is not sure whether he believes or disbelieves in its power. There is nothing more conservative than ritual; and Greece produced no ardent Protestant reformer. Therefore the average educated Athenian even of the 4th cent. would doubtless agree with the orator Lysias that 'it is prudent to maintain the same sacrifices as had been ordained by our ancestors who made our city great, if for no other reason than for the sake of the city's luck.'¹⁰

10. Strength of the traditional religion in the 5th century.—The question naturally occurs—Were the mass of the citizens touched at all in their inward theory of things by the spirit of modernism which breathed from Ionia and inspired the sophists? The culture which was the stock-in-trade of the latter was offered only to those who could pay; and upon these the poorer Athenian looked askance. He heard of it at first with a dislike that might become dangerous. Pantheism, as we are familiar with it in the pages of European and some Semitic history, was happily alien to the Greek temperament. But the banishment of Anaxagoras and Protagoras and the execution of Socrates, by the city that was to become the school-mistress of Greece, might seem toavour somewhat of this temper of mind. These acts were not inspired solely by religious feelings; but they are clear proofs that the polytheism was by no means moribund and could be dangerous in its own defence. Nothing is more erroneous than the view, sometimes expressed, that the popular devotion to the old religion was abating and its divine personalities and forms were losing life and value towards the close of the 5th century. In their dark days the Athenians remained true to their old faith than did Rome in her time of terror. We do not find Athens turning desperately for aid to alien Oriental cults. We hear, indeed, of the beginnings of Adonis-cult in the latter part of the Peloponnesian war—the first ripple of a wave of Orientalism that was to surge westward later. But this feminine excess was unauthorized, and Aristophanes hates it and mocks at it. The shallow view mentioned above would be sufficiently refuted by his comedy of the *Clouds*, in which he, the greatest genius of his time, poses as the champion of the reaction against modernism. It is refuted also by other incidents in Athenian history that fall within the last decades of this century; the rage of the people at the mutilation of the Hermai,

at the supposed insult to the Eleusinian Mysteries, at the neglect of the dead after the battle of Arginousai, may be evidence of morbid religiosity, and is surely inconsistent with a general prevalence of scepticism: in these episodes the whole people reveal a passionate attachment to their holy mysteries, to their quaint phallic Hermes-images on which the luck and the life of the State depended, to the duties of the loving tendances of the dead. Even their animistic beliefs concerning the common phenomena of the physical world had not yet been extirpated or purged by the physical philosophy of Ionia; for, according to Plato, it was still a dangerous paradox, which his Socrates disclaims before the jury, to maintain with Anaxagoras that the sun and the moon are merely material bodies and not in themselves divine. Intellectually, Nikias appears inferior to Homer's Hektor. It was Athens that produced in the 4th cent. 'the superstitious man' of Theophrastos; but it is right to bear in mind that she also produced the man who could so genially and tolerantly expose that character.

11. Influence of comedy.—Those who believe that the faith in the polytheism was falling into rapid decay by 400 B.C. sometimes quote by way of evidence the astonishing licence of Attic comedy in dealing with the divine personalities; the notorious example is the ludicrous figure and part of Dionysos in the *Frogs* of Aristophanes. Yet the people who enjoyed the humour of the play were more devoted to Dionysos than to most of the other persons of their pantheon. If the 'excellent fooling' of Aristophanes is a proof of popular unbelief, what shall we say of that Attic terra-cotta of the 6th cent. which represents the god half-asleep and half-drunk on the back of a male and supported by an anxious Silenos? The present writer has suggested that 'this is some peasant's dedication, who feared his god little but loved him much, and treated him as *son camarade*.'¹ Epicharmos in Sicily had been beforehand with Aristophanes in venturing on burlesque of divine actions, Hephaistos and Herakles especially lending themselves to ridiculous situations. Even in the Epic period the same gay irreverence had occasionally appeared, as in the Homeric hymn to Hermes. These things do not necessarily arise from an anti-religious spirit, but they may be taken as indications of a certain vein in the Hellenic character, a lightheartedness and a reckless freedom in dealing on certain occasions with things divine that is markedly in contrast to the Oriental spirit. Nevertheless, it is not improbable that comedy at Athens and elsewhere did gradually exercise a weakening or a debasing influence on the popular faith. For the other poets of Attic comedy took greater liberties than even Aristophanes: Kratinos, Telekloides, and Plato of the 5th cent., Amphipolis of the 4th, did not shrink from introducing the High God himself on the stage in ridiculous and licentious situations. There probably was some reserve and no gross indecency in the presentation of these plots. And much is conceded to the spirit of the Carnival, especially when a certain *ειρωνία* was sanctified by custom and ritual. Nevertheless, the more earnest-minded of the Athenians may have agreed with Plato's condemnation of such a handling of divine personages;² and, though the popular faith may have been robust enough to endure such shocks, one cannot but suspect that the people's religious imagination suffered a debasement in moral tone. A few south-Italian vases of the 4th cent., on which are scenes that appear to have been inspired by such comedies, are the worst examples of Hellenic vulgarity.

¹ *OSB* v. 224.

² *Rep.* 379 C, where he seems to glance at Epicharmos.

The history of Greek religion, then, must reckon with Attic and other Greek comedy as among the possible causes of religious corruption and decay; but at the worst this is only one side of the picture, for the fragments of the comedies of Menander contain many a striking expression of the higher religious spirit and advanced ethical sentiment (see below, p. 421).

12. Waning of the political value of Delphi.—There are certain external events in the history of Greek religion towards the close of the 5th cent. that must be noted in a general sketch of its career. One is the waning of the political influence of the Delphic oracle: its secular mission appeared to have been accomplished when the era of Greek colonial expansion had closed; at the first terror of the Persian invasion, the great States anxiously resorted to Delphi for guidance, but the priesthood failed to rise to the Pan Hellenic occasion and played a double game. During the Peloponnesian war it was obvious that they were 'Laconizing'; nor were they ever given again an opportunity of leading *la haute politique* of Hellas; and in the middle of the 4th cent. Demosthenes could speak contemptuously of 'the shadow at Delphi,' although the Amphiktyonic League, as the only federal council of Hellas, still retained a nominal value sufficient to induce Philip to scheme for admission. Generally, in the 4th, 3rd, and 2nd centuries the oracle retained influence only in the spheres of religion and morality. It came to serve the purposes of a private confessional, giving advice on questions of conscience; its counsel was generally sane and often enlightened, and shows the priests as possessed with the progressive spirit of Greek ethical philosophy.³

13. Spread of Asklepios-worship.—Another event of importance is the diffusion of the cult of Asklepios and the growing influence on the Hellenic mind of this once obscure hero or earth-demon of the Thessalian Trikkia. It was thence that, some time probably in the 6th cent., he had migrated to Epidaurus, where his power expanded through his union with Apollo. His cult-settlement in Kos was a branch of the Epidaurian; and already in the 5th cent. the Asklepieion of this favoured island had reared the great Hippokrates, and was thus the cradle of the later medical science of Europe. Towards the close of this century, Asklepios and his daughters came over from Epidaurus to Athens, and, according to a well-founded tradition, the poet Sophokles was his first apostle: in the next generation we find the Athenian State regulating his worship, which was soon to conquer the whole Hellenic world. In the survey of the Hellenistic age this must be reckoned with as one of the main religious forces of later Hellenism. We may note in passing a striking divergence between the European spirit of Hellenic religion and the Oriental spirit of Mesopotamia; the Babylonian god practises magic, the Hellenic Asklepios practises and fosters science; and his cures at Epidaurus were not merely of the Lourdes type, but show the beginnings of sane therapeutics.

14. Growth of the 'thiasoi'.—Another interesting phenomenon that begins to arrest our attention in the latter part of the 5th cent. is the growth of private *thiasoi*, or voluntary religious associations independent of the public religion and devoted to a special divinity who might be an alien. The most interesting testimony is the title of a comedy by Kallias called the *Baptai*, which we may interpret as 'the Baptists,' satirizing a society devoted to the Thracian goddess Kotytto, whose initiation rites must have included a ceremony of baptism, of which this is the earliest example within the Hellenic area. It will be more convenient to anti-

³ See *OSB* iv. 211-214.

made the importance and religious significance of these *theoi* in the survey of the next period of our history. Meanwhile it is well to mark certain evidence that the most powerful and appealing of these, the Orphic mystery, having failed in the 6th cent. to capture the States of Magna Græcia, was increasing its private influence in Eastern Greece in the century before the rise of Alexander. Plato's attack is itself a witness to this. And, when Aristophanes¹ and an Attic orator contemporary with Demosthenes² openly acknowledge Orpheus as the apostle to the Hellenes of 'the most holy mysteries' and the teacher of a higher way of life, we must conclude that the spirit of the Orphic brotherhoods had touched the imagination of the general public outside the circle of the initiated.

15. Religion in first half of 5th century B.C.—Yet it is hazardous and probably false to say that the public religion of Greece was decaying visibly throughout the first half of the 5th century. Athens is, as usual, our chief witness. The restored democracy was all the more strenuous in matters of religion as scepticism was considered a mark of the new culture of the oligarchically-minded. The trial of Socrates is an indication of this temper. We have also evidence from this period of the occasional severity of the Athenian people against those who tried to introduce unauthorized and un-Hellenic cults. The Hellenic tradition is still strong against the contagion of the orgiastic spirit of the Anatolian religion, and it was with difficulty that the Athenian public could tolerate the wild ritual of Babazico and the Phrygian Mother, nor even in the time of Demosthenes were the participants in it secure from danger. The early 5th cent. art still exhales the religious spirit and earnest ethos of the Phœidian school; it created the type, and almost succeeded in establishing the cult, of the new goddess of Peace, Eirene, for whose presence among them the wearied Athenians might well yearn; it also perfected the ideal of Demeter, the Madre Dolores of Greek myth, whose Eleusinian rites with their benign promise of salvation added power and significance to the later polytheism. The literature of this period still attests the enduring vitality of the popular religion. The Attic oratory of the 5th cent. was more religious in its appeal than any modern has been, as might be expected of a time when there was yet no divorce conceivable between Church and State. It is not a question of the religious faith of the individual orator, but of the religious temper of the audience, which is attested by many striking passages in the speeches. According to Antiphon, the punishment of sinners and the avenging of the wronged are specially the concern of the deities of the nether world;³ Andokides avers that foul misconduct is a more heinous sin in a man who has been in the service of the Mother and the Maid of Eleusis;⁴ the speech against Aristogeiton is almost as much a religious as a juridical utterance. Demosthenes may have been a sceptic at heart, believing in chance—as he once says—as the governing force of our life; but otherwise he is glowingly orthodox in respect of Attic religion and mythology, and the greatest of his speeches closes with a fervent and pious prayer.⁵ Again, it is well to remind ourselves that the political or forensic orator is a truer witness to the average popular belief than the poet or the philosopher.

16. Plato's attitude towards the popular religion.—A consecutive history of Greek religious thought as embodied in the surviving writings

or records of the philosophic schools of Hælia is far too large a subject even to be adumbrated here; and a general survey of the religion can only notice shortly the leading thinkers whose works there is reason to suppose had popular vogue and lasting influence upon the religious world. Among these the primacy belongs to Plato; and the full account of Greek religion, both in the period that precedes the downfall of Greek independence and in the periods that follow, must include a critical estimate of his religious speculation. This is no place for an elaborate consideration of the metaphysics of his ideal theory, or the relation of his ideas to a theistic system; only the most general observations may be allowed for the purpose of this sketch. To understand his main attitude towards the popular cults, and his influence upon the later educated world of Greece, we must recognize at once that, idealist and reformer as he was, he was no revolutionary or iconoclast in matters of religion: he would reform Greek mythology, purging it of stories of divine conflicts, divine vengeance, divine amours; and, as these fortunately were enshrined in no sacred books, he feels that this might be done gently and easily without disturbance to the established forms of worship. He does not desire to abolish sacrifices or idolatry, but he inculcates simplicity in the offerings.⁶ In one passage he even maintains that the legislator will not change a single detail of the ritual, if only for the reason that he does not know anything of the inner truth that may lie behind such outward forms.⁷ Even in his most advanced physical and metaphysical speculations, he finds a place for the popular pantheon: in the hierarchic scale of things the Olympians are ranged somewhere below the supreme transcendental God of the Universe. The *Timæus* dialogue presents some interesting theologic dogma, here, in the scale of divine creation, the Olympian pantheon, which seems to be accepted rather for the sake of ancient tradition, is given the third place, after the planets and the sun, which are the second works of the supreme Creator, the first being the cosmic Heaven. These deities of the polytheism, then, are not immortal in their own nature, but are held together for all eternity by the will of the Highest God. And it was to them that He committed the formation of man, and lent for this purpose a portion of His own immortality; the mortality of man is thus accounted for, which would have been inexplicable had man sprung directly from the immortal Supreme Being. It is interesting for our present purpose to note that this eclectic and transcendental system, devised by the great master and parent of Greek theosophy, would leave the established religion more or less unimpaired; it even accepts its data at certain points, namely, the nativity of its gods, and draws the logical conclusion that gods who were born could not be by essence immortal: therefore Zeus could not be accepted as the Absolute and Supreme Being of the Cosmos. It also proclaims the idea of an immortal element in man, which, again, is in accord with the contemporary popular faith in the survival of some part of our being after death.

But the work which reflects most vividly the popular religion and betrays the strongest sympathy with it is the *Lysis*, a work of Plato's old age, in which the conservative spirit of the religious reformer is no less striking than the intellectual decay of the philosopher. He accepts the greater part of the civic political religion, merely purifying the mythology and some of the ideas concerning divinity; and it is striking how easily he finds in it materials ready to his hand on which he can

build an exalted ethical religious system of rights and duties, especially those which concern the life of the family and the groups of kinship.¹ In fact, the background of the thought in this lengthy treatise is almost always the Greek *Polis*, though glimpses may here and there break through of a wider vista. Plato expresses a prejudice against all forms of private and orgiastic cult, which were dangerously enticing to women;² any doubtful question that might arise concerning rite or cult he would leave to the decision of the oracles of Delphi or Dodona or Zeus Ammon.

We feel generally that Plato did not consciously assume the part of an apostle of a new order of religion, but that both in his philosophy and in his religious theory he found a sufficient *point d'appui* in the old, of which he tried to strengthen the moral potentialities. The later sects which attached themselves to his name or to his school were deeply interested in religious speculation, which degenerates at last into the mystic superstition of Neo-Platonism. Therefore, as the work of Aristotle belongs to the history of European science, so the philosophy of Plato concerns the later history both of pre-Christian and of Christian religious thought. To estimate exactly how his influence worked on the better popular mind in the centuries before Christ is impossible. But we may naturally and with probability surmise that he contributed much to the diffusion of the belief in the spiritual nature and perfection of God, to the extirpation of the crude notions of divine vindictiveness and jealousy, to the interpretation of the external world in terms of mind and spirit as against any materialistic expression, to the acceptance of the belief in the divinity of the human soul, and its affinity with God, and in the importance of its post-humous life, which was partly conditioned by the attainment of purity. The latter ideas constitute the faith of the Orphic sects, from whom Plato may have silently borrowed them. But, whether through Plato or through the *Stoics*, many of them come to appeal strongly to the popular mind of later Hellas.

17. Religious art in the 4th century.—Our general survey is now approaching that period of world-change brought about by the rise of Macedonia. But, before leaving the scene of the free city-State, we should remember to estimate the religious work done by the great 4th cent. masters of sculpture before the power of Alexander reached its zenith. The fiery imagination of Skopas found plastic types for the forms of Dionysos and his *Maenads*, and his work rivalled at least, if it did not surpass, in inspiration of tumultuous life the masterpieces of the older Attic vase-painters noticed above. Praxiteles, the master of the gentler moods of the soul, in the religious sphere consummated the types of Aphrodite and Demeter; the almost perfect embodiment of the latter goddess, the Cnidian Demeter of the British Museum, has affinity with the spirit, if not with the formal style, of his school, and combines something of the fearful expression of the Madre Dolorosa with the blitheness of the corn-goddess. We are conscious, indeed, of a change in the representation of divinity. The works of this later generation have lost the majesty and awe, the *seuerus*, as the Greeks called it, of the 5th cent. art; nor can the Greek States command any longer the creation of the chryselephantine colossal statues of temple-worship. In these later types, though still divine, there is more infusion of human passion, the personal experience, the struggles and yearning of the individual soul. Anthropomorphism is pur-

suing its path; and, though still fertile in works of high spiritual value, may come to weary and weaken the religious senses.

IV. FOURTH PERIOD.—The establishment of the Macedonian Empire wrought momentous changes in the civil-political religion of Hellas; and some of these were in the direction of loss and decay, while others worked for the possibility of new religious life. The political significance of Apollo of Delphi, of Zeus and Athens, the divine leaders of the *Polis* in its counsels and ambitions, was doomed to pass away. Athens as the warder and counsellor was of less avail for Athens than were the Samothracian sea-deities for the victorious Demetrios. Certainly in the first centuries of the Hellenistic age there were few external signs of decay; we do not yet hear of ruined shrines or the decline of great festivals such as the *Delia*; Athens, though no longer the goddess of a civil Empire, was still and for ages remained for the Athenian the benign Madonna to whose care the boy-athlete and the marriageable girl were dedicated; we have record from the island of Tenos³ of the abiding hold that even such a deity as Poseidon still exercised on the affections of his people as late as the 2nd and 1st centuries B.C.; the later personal names, as some of the earlier, attest the affectionate faith that linked the family and the individual with the national deity, for the child is often named as if it were the gift of Apollo, Athena, Hermes, or the river-god; and, if we had continuous chronicles of each cult-centre, we should probably find similar evidence showing that the dominant figures of the old polytheism were still able to fulfil in some degree the religious wants of the individual worshipper. And scholars who have been tempted to antedate the decay of Hellenic polytheism have ignored, among other evidence, this important historic fact that in the 4th cent. it was still vital enough to make foreign conquests, to penetrate and take possession of Carthage, for instance, and that in the 3rd cent. it began to secure for itself a new lease of life within the city and the growing Empire of Rome; in fact, the last chapter of Greek religion falls within the Roman Imperial period.

1. Growing force of personal religion.—Yet the Hellene in the 4th cent. B.C. and in the early days of Macedonian ascendancy began to crave other outlets for his religious emotion than the traditional cults of his phratry or tribe or city. Personal religion was beginning to be a more powerful impulse and to stimulate a craving in the individual for a more intimate union with the divinity, such, for instance, as was offered freely by the Great Mysteries of Eleusis. We have fairly sufficient evidence that the 4th cent. witnessed a great extension of their influence.⁴ The Mysteries of Megalopolis were instituted, and those of Andania were re-organized, by their aid; and Ptolemy I. is said to have invited the aid of an apostle from Eleusis to assist in some religious institutions of his new city of Alexandria.⁵

■ The religious brotherhoods.—The same craving was also satisfied by the private *stere*, the guilds of brethren devoted to the special cult of one divinity. These unions belong to the type of the secret religious society which is found in all parts of the world at varying levels of culture (see art. GILDS). In Greece we have evidence of them as early as the time of Solon; it was probably not till the 5th cent. that any of them were instituted for the service of foreign divinities; we hear then of the *Stoics* of the Thracian goddess; and, in the earlier half of the 4th cent., of the orgiastic fraternity devoted to Sabazios, with which *Maenades*

¹ For particulars, see Burnell, *Hellas Aspects*, pp. 22, 23-25, 102, 117.

³ BCH XLV. 222-223.
⁴ p. 102.

⁵ See CGH II. 120-122.

in his youth was associated. But it is not till the Macedonian period that the epigraphic record of these guilds begins; henceforth the inscriptions are numerous and enlightening concerning their organization and their wide prevalence throughout the Hellenic world.¹ Their importance for the history of religion is great on various grounds.

They show the development of the idea of a humanitarian religion in that they transcend in most cases the limits of the old tribal and civic religion and invite the stranger; so that the members, both men and women, associate voluntarily, no longer on the ground of birth or status, but drawn together by their personal devotion to a particular deity, to whom they stand in a far more intimate and individual relation than the ordinary citizen could stand to the divinity of his tribe and city. This sense of divine fellowship might sometimes have been enhanced by a sacrament which the members partook of together; we know that this was the bond of fellowship in the Samothracian mysteries, which were beginning to appeal widely to the early Hellenistic world. A common meal at least, a love-feast or 'Agape,' formed the chief bond of the *theotetai*, and this was sometimes a funeral-feast commemorative of the departed brother or sister. There was nothing to prevent the *theotetai* choosing as its patron-deity some one of the leading divinities of traditional polytheism, to which they must not be supposed, as Foucart supposed them, to stand in any natural antagonism; for instance, there were local reasons why Greek merchants whose central meeting-point was Rhodes should form *theotetai* under the protection and in the name of Zeus Xenios, the god who protects the stranger, or of Athena Lindia, the ancient and powerful divinity of Lindos, or of Helios, the pre-historic sun-god whose personality pervaded the whole island. So far, then, the religious importance of these societies consists in their quickening influence on personal religion, in the gratification that they afforded to the individual craving for personal union with the godhead, also in their organization which aroused a keener sense of religious fellowship between the members, and which later served as a model to the nascent Christian community.

But in the history of Hellenic religion their significance is even greater on another ground, namely, that they bear a most striking testimony to that fusion of East and West which it was the object of Alexander and the mission of his successors to effect; for many of these religious brotherhoods, whose members and organization were Hellenic, were consecrated to foreign deities—Sabazios, Adonis, Kouros, and the Syrian goddess—so that they played undesignedly the part of missionaries in the momentous movement sometimes called the *syncretism*, the blending of Eastern and Western religious and divine personalities, of which the significance will be considered below.

3. Menander.—The student who is tracing the course of the religious life and experience of Hellas through the Hellenistic period should endeavour to gather beforehand a vivid impression of the spirit of the Menandrian comedy. For Menander, the friend of Epicurus and the devoted admirer of Euripides, was the favoured heir of the humanitarian spirit that had gleamed fitfully even in the Homeric period and had gathered strength and articulate expression in the century before Alexander opened the gates of the East. Patronized and courted by Demetrios Phalereus and Ptolemy, admired by the scholars and reading public of Alexandria and the Hellenistic world even more than he had been by his own contemporaries, Menander was eminently in a position to give a

tone to the religious sentiment of this period; and the Anthologies of his works prove that he was actually revered as an ethical religious teacher.² Therefore, for the general exoteric history of Greek religion he counts for more than any of the philosophers, for he addressed a far larger public. Yet the message that he has to deliver has come to him from the philosophers and from the inspiration of the humanised Attic spirit, of which he appears the most delicate and final expression. While writing and thinking pre-eminently as the cultured Athenian of the close of the 4th cent., he is the mouthpiece of cosmopolitanism in ethics and religion—'No good man is alien to me; the nature of all is one and the same' (*oibeto dotti me allotrois de ē xperōs ē phōs eis vōnos*);³ the Toronian formula, 'homo sum, humani nil a me alienum puto,' is only an extension of this, losing something of its ethical colouring. Many of the fragments, showing striking approximations to New Testament teaching, are of vital importance for the history of Greek ethics. As regards religion, they may contain protests against superstition, and the extravagance of sacrifices proffered as a bribe;⁴ but they exhibit no real or veiled attack on the popular polytheism as a whole. On the other hand, they have preserved many memorable reflections that bear witness to the development of a religion more personal, more inward and spiritual, than had hitherto been current, even perhaps in Platonic circles. God is presented as a spirit and as spiritually discerned by the mind of man; and a high ideal of Platonic speculation is delivered to the public in the beautiful line, *phōs dotti vō vō vphē theō (dēnos dei, 'the light of the mind is to gaze ever upon God.'*⁵ The sense of close and mystic communion between man and the omnipresent divine spirit is strikingly attested in the passage of one of his unknown comedies:

'a guardian spirit (*daimon*) stands by every man, straightening from his birth, to guide him into the mysteries of life, a good spirit, for one must not imagine that there is an evil spirit injuring good life, but that God is eternally good.'⁶

In attempting to estimate what is most elusive—the inner religious sentiment of any period—it is important to remember that the author of such expression was dear to at least the cultivated public of the Hellenistic age.

4. The 'theokrasia.'—The tolerant humanitarianism of Menander, of which we catch the echo in certain formulae inscribed on the Delphic and other temples, is reflected in that which is perhaps the most striking religious phenomenon of this period, namely, the *theokrasia*, the fusion of divinities of East and West. As regards religious theory, this is not to be regarded as a new departure. Herodotus shows how natural it was to the Hellenic mind to interpret the deities of foreign nations in terms of its native pantheon: and it was easy for Euripides to commend Kybele as Demeter.⁷ But it was by no means easy, in fact it was exceedingly dangerous, before the time of Alexander to introduce any unauthorized foreign cult into the city-State. We hear vaguely of the death-sentences inflicted or threatened on those who did so. Nevertheless, as we have seen, such foreigners as Babaias and Attis were intruding themselves into Athens at the time

¹ See a recent paper by Pierre Walia in *RSB*, 1911, 'Sur les Sentences de Ménandre'; the writer aims at discovering or imagining the dramatic setting of each fragment, and at disproving the view that Menander was posing as an original ethical teacher. Accepting his theory, we can still assign high value to the 'Sentences' for the purposes of Greek ethical history, whether we regard them as original and earnest utterances of Menander or as commonplace which he used tightly for dramatic purposes; for, if the latter view of them is the more correct, they show at least what was in the air.

of the Peloponnesian war, trailing with them the orgiastic atmosphere of Phrygia; and at some indefinite time before this the unpare ritual of certain Oriental goddess-cults had invaded the Corinthian worship of Aphrodite. But after the establishment of the kingdoms of the Diadochi, the gentle barrier in religion gradually loses its force and significance. It was, in fact, a far-sighted measure of policy on the part of some of the kings to establish some common cult that might win the devotion of the Hellenic and Oriental peoples alike. Such was the intention of Ptolemy when he founded at Alexandria the cult of the Babylonian god Sarapis, whom the Egyptians were able, owing to a similarity of name, to identify with their Osiris-Apis, and the Hellenes with their Plouton, owing to the accidental fact that an image of this underworld-god happened to be consecrated to the cult at its first institution. Similarly, when the Syrian city of Hambyke was re-settled as Hierapolis by Seleukos Nikator, the personality of the great goddess Atargatis (q.v.) was mingled with that of Artemis, Hera, Aphrodite, and other Hellenic goddesses; and the treatise of Lucian, *de Dea Syria*, gives us the most interesting picture presented by antiquity of the working of the *theosmismos* in the domain of religion and religious art.

The spirit of syncretism grows stronger and more pervading through the later Greek and Greco-Roman periods, and dominates the later Orphic and Gnostic thought; and the inscriptions, usually the best record of the popular religious practices, attest its wide diffusion. We find the deities of diverse lands—Egypt, Syria, and Greece—linked together in the same formula of thanksgiving, and the same offering dedicated to them all. And the name Zeus is applied to so many gods of the East that in the cult-formula it seems often to have lost all its personal and concrete value and acquired the vaguer meaning of 'God.' The Jewish Jahweh himself—under the name 'Ise'—was occasionally identified with him, and at times, it seems, even with Dionysos.

The importance of this movement for religious thought was of the highest. Varro's view recorded by Augustine,¹ that the name of the deity made no difference, so long as 'the same thing is understood,' and that therefore the God of the Jews was the same as Jupiter, is a great idea bequeathed to the world by Greek tolerance and Greek sanity. Only a nation could attain to this freedom of religious imagination that was not held captive by the magic spell of names² which made it so difficult for the Jew to shake off the tribal spirit of the religious blood-fund. This Hellenic expression of religious enlightenment prepared the way for monotheism, and thus indirectly for Christianity; it also could induce the pantheistic idea of a diffused omnipresent spirit of divinity such as is expressed in the lines of Aratus, the scientific poet of the 3rd cent. B.C.: 'All the ways are full of (the spirit of) God, and all the gathering-places of men, the sea and harbours, and at every turn we are all in need of God, for we are of kin to him.'³

5. Stoicism, Epicureanism, Cynicism. — This pantheistic speculation inspires some of the dogmas of Stoicism; and for most of the Stoic writers and thinkers the concept of divinity was less that of a personal concrete Being than of a spiritual force or soul-power immanent in things; therefore, while some of them tried to find a place in their metaphysical system for the creations of the polytheism and even a justification for augury and divination, the impression left on our minds by the fragments that have come down to us of the religious specula-

tion of the Stoics is that of a system alien and antipathetic to the popular theistic point of view, and especially to the social religion of kin-group and city; Zeno the founder is said to have protested against shrines and idols.⁴ His protest was in vain; nor is there any clear indication that Stoicism had any influence on the religious thought and practice of the average man of the people; unless, indeed, the emergence of the cult of *Apollon*, Virtus, in the 2nd cent. A.C. at Pergamon and Smyrna was suggested by the strong theologic colouring that the Stoics gave to morality.⁵

As for Epicureanism, it cannot be regarded normally as a religious force; if it touched the popular mind at all, its influence must have been generally in the direction of atheism or indifference; the only signs that it did are occasional grave-inscriptions which breathe the Epicurean spirit of unperturbed quiescence in regard to the posthumous fate of the soul.

The philosophic school that was most aggressively protestant against the popular creeds and cults appears to have been the Cynic, mordant and outspoken criticism being characteristic of this sect. We have record of Diogenes' contempt for the Eleusinian mysteries, of Antisthenes' disdain for the great Mother of Phrygia and her mendicant priests; and the fragments in a newly discovered papyrus of a treatise by Kerkidas,⁶ the Cynic philosopher and statesman of Megalopolis in the 3rd cent. B.C., contain a theory which reduces personal deities to impotent instruments of Fate, and would substitute for Zeus and his colleagues certain divinized abstractions such as *Nómos* and *Moralis*; the latter term, if the reading is sound, seems to denote the spirit of unselfishness or sacrifice—an interesting and potentially valuable idea but at this time still-born.

6. Asklepieia-cult and later mysteries. — These austere ideas of this later age do not appear to have made a serious attempt to capture the mind of the public; and the popular religious movements for the most part ignored them and their teaching. The Hellenistic religions are as convincingly theistic and idolatrous as the older were. The chief change lay in this, that a man now might to some extent choose his own divinity or—what was even of more import—be chosen by him or her; he was no longer limited to the cults into which he was born. This freedom had already for some time been offered by the *theosmismos*; and now in the Hellenistic world, especially by the powerful and wide influence of the cult of Asklepios, the idea was developed of a deity who as *Healer* and Saviour called all mankind to himself; and it was this significant cult-phenomenon that induced Kerkidas in the above-mentioned passage to include *Healer*, 'the Healer,' among the true divinities whose worship ought to supplant that of the older gods. In the treatise called *Asklepios* of the pseudo-Apollonius a long address and prayer to this deity are preserved, of which the tone is strikingly Christian.⁷

7. Non-Hellenic mysteries. — The phenomenon here indicated attests again the stronger vitality at this period of personal or individual, as distinct from tribal or political, religion; and this was quickened also by the growth of certain non-Hellenic mysteries in the Mediterranean area in the later centuries of paganism, notably by the Samothracian, those of Attis and the Great Mother, the Egyptian Isis, and, finally, in the last period of all, of Mithras. In most of these the records allow us to discover many interesting ideas that reappear in Catholic Christianity, such, for instance,

an communion with the divinity through sacrament, the mystic death and rebirth of the catechumen, the saving efficacy of baptism and purification. These rites could satisfy the craving of the mortal to attain to the conviction of immortality and to the ecstatic consciousness of complete or temporary self-absorption in God. But in the mysteries of Eleusis and Cybele, and possibly in others, this sense of divinity was conveyed to the mystic by the simulation of a holy marriage or sex-communion with the god or goddess; and for this reason the pagan mysteries were generally attacked by the Christian Fathers as obscene; the charge was unjust on the whole, though the psychic effect of the special act of ritual just alluded to was probably detrimental to the moral imagination.

8. Hermetic literature.—The strangest and most interesting reflexion that the ancient records have preserved for us of this fusion of Hellenic culture and Oriental religious sentiment is presented by the Hermetic literature. The origins of this most fantastic product of the human mind are traced by Flinders Petrie¹ back to the 8th or 6th cent. B.C. But though much of it is pre-Christian, its philosophic diction proves that it cannot be earlier than 300 B.C., and the bulk of it is probably much later. A frequent Hermetic formula addressed to the Deity—*ὅς ἐσσι καὶ ἐγὼ ἐσμὶ*, 'I am Thou and Thou art!'—may be taken as the master-word of these hieratic writings.² The unnatural alliance between Greek philosophy and the Oriental mystic theosophy that these writings reveal is a momentous phenomenon of later paganism; and the study of the origins of Christian metaphysics is much concerned with it. Such theosophy had a natural affinity with magic; and magic, always a power in an age of intellectual decay, begins to be most powerful in this latest age of Hellenism. It is a just reproach that Augustine brings against Porphyry, the most notable of the Neo-Platonists, that he 'wavered between philosophy and a sacrilegious curiosity,' that is, a vicious interest in the black art.³

In these strange forms of faith and speculation the clearness and sanity of the pure Hellenic intellect appear clouded and troubled, the lineaments of the old types of the Hellenic thought and imagination almost effaced. And the learning and science of the Hellenistic age stood mainly aloof from the religious forces that moved the masses of the people.

9. Daimonism.—The mystic and theosophic literature of the Hellenistic and Graeco-Roman period was markedly 'daimonistic,' being infected with the polydaimonism of the East and positing the existence of good and evil daimones as a metaphysical dogma. We can trace a corresponding change in the popular Hellenic imagination. In the earlier period, as has been shown, the native Hellenic was, as compared with other races, fairly strong-minded in respect of the terrors of the demon-world; but the later people of the Greek area were certainly tainted in some degree with this unfortunate superstition of the East, and various forms of exorcism, conjuration, and evocation became more prevalent. The modern Greek temperament appears to be possessed with this disease;⁴ and we may suppose that the germs have been inherited and developed from this last period of the old civilisation.

10. Eschatology.—But another feature that we mark in this mystic religion and these mystic societies of the Hellenistic world indicates a higher aspect of religion, and suggests possibilities of

momentous development; most of them, if not all, proclaimed the immortality of the soul, a happy resurrection, a divine life after death. The Hellene who had been initiated into the Osirian faith hoped to attain immortal happiness in and through Osiris, availing himself of Egyptian ideas and Egyptian spell-formulae. The priest of the mysteries of Attis comforts the congregation of the faithful, sorrowing over the death of their god, with words that aver the certainty of his resurrection and by implication the hope of their own:

*ἄσπετος πόρτα καὶ δὴν ἀνεσθαισέμεν
ὅρα γὰρ ταῖς ἐν ὅσῳ σαρκαί.*⁵

The mysteries of Mithras embodied much the same eschatologic ideas and hopes; but these came to the Graeco-Roman world only in the latest period before the establishment of Christianity, and had little hold on Hellenic society proper. Doubtless the most attractive mystery for the Hellene was the Orphic; we have many proofs of its activity and life in the two centuries before and after the beginning of our era; and we can well understand the causes of its popularity. Its deity had become Hellenised long ago; the Orphic formulae are free from barbarous jargon, and admit the familiar divine names; the insistence on purification was congenial to many Hellenic temperaments; there was probably nothing surviving in the ritual that was objectionable to the cultivated Hellene; and, finally, its picture of Paradise seems to have accorded with the trend of the Hellenic imagination. The numerous grave-inscriptions of those centuries rarely express any definite Orphic sentiment or allude to any specially mystic faith; but we have the evidence of Plutarch attesting the prevalence of the Orphic societies and their power of appeal: when he is consoling his wife for the death of their child, he reminds her of the promises of future happiness held out by the Dionysiac mysticism, into which they have both been initiated.⁶

11. Hero-worship and apotheosis.—The idea that was common to many of these mystic brotherhoods, that the mortal might achieve divinity, is illustrated by another religious phenomenon which stands out in this latest period, namely, the worship of individual men and women either in their lifetime or immediately after death (see art. DEDICATION, HEROES [Greek and Roman]). To appreciate the full significance of this, one must be familiar with the usages of the earlier Hellenes as also of the Oriental peoples who became subjects of the Diadochi. We have observed that the Greek of the 6th and 5th centuries was willing to concede heroic honours to certain distinguished individuals after death; in this there was nothing inconsistent with the principles of higher polytheism; and in the earlier cases the grounds of canonisation were usually good and reasonable. It becomes a more serious question about the religious and moral character of a people when divine worship is proffered to a living person. Of this the first example is the cult of Lycaeus as a god, which, as Plutarch seems to imply, arose even in his lifetime.⁷ The same writer records the story of the apotheosis offered by the people of Thasos to Agamela, and his sarcastic refusal.⁸ The same kind of adulation was lavished by the degenerate Athenians on Alexander and Demetrios Poliorketes. The most salient examples are derived from the records of the Seleucid and the Ptolemaic, the kings of these dynasties usually

enjoying divine honours after death, and sometimes bearing divine titles such as *Zōreia*, 'Saviour,' *Ose*, 'God,' in their lifetime. Is this merely the gross servility of a decadent age that had lost all real sense of religion? This is no doubt the true account of it in some degree: Dio Chrysostom exclaims against the quackery and vanity of it;¹ and the sharp-witted Athenians and the educated Greeks generally would be under no illusion when they prostrated themselves before these human gods. It is natural to suppose that the effect upon the life of the old religion was corrosive, when a queen or a courtesan could be publicly recognized as Aphrodite, and that the general belief in Apollo and Dionysos would tend to collapse when the one was identified with the Selenikidal, the other with Attalos. Yet the faith in Dionysos at least was able to survive the strain. And what looks to us mere hypocrisy and blasphemy would appear to many of the Hellenistic communities in another light. It seems that the uncultured Greek in the time of Herodotus was capable of believing in all seriousness that Xerxes might be a real incarnation of Zeus upon earth;² and such an idea would be familiar, as an old tradition in the popular estimate of kingship, to the natives of Syria, and still more to the Egyptians. When the Rosetta Stone proclaims the Ptolemy as 'the living image of God,' the average Greek might smile in secret, but the native Egyptian would instinctively assent to this assumption of divinity by the heir of the ancient Pharaohs.

This deification of the mortal, so rife in this later period, may be regarded as a moral and religious evil. Yet it must not be taken too hastily as a proof of the unreality of the prevailing polytheism. And, for better or worse, it was a momentous fact belonging to the higher history of European religion; for it familiarized the Græco-Roman world with the idea of the incarnation of the Man-God.

12. *Signs of decay and of new life in later paganism.*—The Hellenistic period cannot be severed by any sharp dividing line from the Græco-Roman; but it belongs rather to the student of Roman religion and the Roman Empire to pursue the history of Hellenic polytheism through the first centuries of our era down to the establishment of Christianity.

The religious phenomena of the period that has just been sketched present, on the one hand, the signs of decay,—the decay of the old civic and political religion which fostered the growth of the Greek Polis,—and, on the other hand, the working of new religious forces which prepare the way for Christianity. The cults of Apollo, Zeus, and Athene were among the first to wither; yet a living and personal religious sense was in all probability more diffused through the Greek world under the Epigoni and the Roman Empire than it had been in the earlier centuries. Contact with the Oriental spirit brought to many a stronger intensity of religious life; religion is no longer preoccupied with the physical and political world; its horizon lies beyond the grave, and its force is 'other-worldliness.' Men flock to the mysteries seeking communion with the divinity by sacrament, and sustaining their faith by mystic dogmas. The religious virtue most emphasized is purity, of which the influence is often anti-social; this was no longer always understood in a pharisaic sense, but its spiritual significance was proclaimed to the people and penetrated the sphere of temple-ritual. An inscription from a temple in Rhodes of the time of Hadrian contains a list of rules 'concerning righteous entrance into the shrine'; 'the first and greatest rule is to be pure and unblemished in hand

and heart and to be free from an evil conscience.'³ Something similar was inscribed on the temple of Asklepios at Epidauros.⁴ The *objectif* of the earlier Hellenic polytheism was the city, the tribe, the family: that of the later was the individual soul. The earlier religious morality looked rather to works and practice, the later rather to purity and faith. The gradual divorce of religion from the political life was a loss which was not repaired for many centuries; but it was compensated by the rise of a humanitarian spirit, which was to be infused into a new cosmopolitan religion.⁵

The above is only a panoramic sketch, indicating the various elements of a singularly manifold religious system. It has been impossible to touch on all the special points of interest, such as divination and the minutiae of ritual and of the festivals; for these the student must consult special articles and treatises. The object of this article has been to present the main essential features in a chronologic survey, and to assign to each its significance and relative importance. The history has been adumbrated of a religion that maintained itself for at least two thousand years on the higher plane of polytheism; a religion which, while lacking the exaltation and moral fervour of some of the Oriental creeds, made certain unique contributions to the evolution of society and the higher intellectual life of man. By the side of the higher growths many of the products of lower and savage culture were maintained which were mainly obliterated by Christianity. It is necessary to note and appreciate these lower facts; but there is a risk of overestimating their importance and vitality. Many of them are found in all higher religions, usually in a moribund state. It is its higher achievement that makes any particular religion of importance in the history of civilization; and we are now aware that Greek religion can claim this importance. Nor can the lower elements as a whole be shown to have generated the higher within the Hellenic period proper. We cannot show the evolution of the personal anthropomorphic deities of Greece from magic ritual or totemism or theriomorphism, without transcending the chronologic limits of the period within which it is allowable to speak of a Hellenic people at all. Some modern anthropology applied to classic life is seriously anachronistic. The emergence of personal gods, from whatever region or by whatever influences they emerged, is an event of very primitive history. At least we know that of the two populations whose blending made Hellenism—the indigenous Mediterranean and the Northern or Central European invader—the former possessed a personal theism of dateless antiquity; while all the evidence points to the conviction that the Aryan tribes entered Greece with certain personal deities already evolved or acquired. We find that anthropomorphism was the strongest bias of the Hellene's religious imagination; and with this we associate his passion for idolatry and hero-worship. It is interesting for the student of Hellenic Christianity to note the influence of these tendencies on the later history of the Greek Church; and generally it has been the result of much modern research to expose the truth that the indebtedness of Christian dogma and ritual to the later Hellenic paganism was far greater than used to be supposed.

LEHMANN.—Other works such as F. Weicher's *Gr. Götterlehre*, 8 vols., Leipzig, 1857-68, and L. Preller's *Gr. Mythol.*, 2 vols., ed. O. Robert, Berlin, 1897-98, are mainly useful now for their collection of facts.

⁵ Herod. vii. 16.

A.D. 451 he had put under him, by the 28th canon of the Council of Chalcedon, the 'dioceses' (provinces) of Heraclea, Ephesus, and Caesarea, and gained a position second to Rome, but superior to Alexandria, Antioch, and Jerusalem. He had authority over all Asia Minor, and in Europe over Thrace, from the beginning, and later, in A.D. 780, after long controversy with Rome, over Illyricum Orientale, i.e. the countries south of the Danube, together with Dalmatia, Epirus, Greece, and Crete. To him also were assigned, by the 28th canon of the Council of Chalcedon, 'all other tribes' as well (*ἄλλοι λαοί*); and this became a matter of great importance from the time of the conversion of the Slavs to Christianity, when by 'other tribes' they began to mean peoples living outside the limits of the Empire. About A.D. 500 the Patriarch of Constantinople received the title of 'Ecumenical' (*ὁ ἐκουμενικός*), i.e. the Patriarch standing at the head of the whole (Eastern) Empire.

With the elaboration of Church organization, Church life reached a very high development. The lively intercourse between the Churches allowed the seven Ecumenical Councils to settle definitions of a dogmatic and canonical character in the name of the Universal (Ecumenical) Church; Theology in its various branches—Dogmatic, Church History, Exegesis, Apologetics, polemics, canons, etc.—supplies admirable examples. There arose the heresies of the Arians, Macedonians, Monophysites, Monothelites, with their ramifications, and then that of the Iconoclasts, which gave rise to debates in which part was taken by the people, by monks, and by the civil power; but the Councils made clear and settled the doctrine of the Church, and excommunicated those who did not receive it. This resulted in the formation of the Eastern non-Orthodox Churches—Nestorian, Monophysite (Coptic, Jacobite, and others), and Monothelite (Maronite). The completion of this dogmatic work of the Councils was reached by the Council which met in Constantinople on 11th March 843, confirmed the definitions of the seven Ecumenical Councils, and secured the triumph of Orthodoxy with the excommunication of the heretics. See COUNCILS AND SYNODS (Chr.).

The Councils also settled the rules of Church discipline; but side by side with these rules there now appeared a new source of ecclesiastical law in the decisions concerning the Church emanating from the civil power as collected at the end of the *Code of Theodosius* (A.D. 438), and at the beginning of Justinian's Code (A.D. 529), and supplemented by numerous Imperial novels.

There appeared also collections of regulations made by the Councils, and afterwards of civil regulations made by the secular power concerning the Church, and, finally, collections uniting both elements. Of the latter, the greatest importance attached to the *Nomocanon*, in 50 and 14 Titles (best ed. by J. B. Pitra, *Juris eccles. Graecorum Auctoritas et monumenta*, Rome, 1868, II. 433 ff.). The theory of the *symphonia* between Church and State was given a very wide extension, which showed itself, on the one hand, in interference by the Emperor in Church affairs, in particular as concerning its property, in the election of bishops, in the summoning of Councils, and even in the publication of statements concerning the formulae of the Creeds; and, on the other hand, in the action of the Church upon the civil laws and administration. Bishops had the right of supervision even over the civil administration of their cities, the right to sit in judgment, and to give protection to the poor (*personae miserabiles*); and sometimes they are found as rulers of the people (*δημάρχου*), and even received royal honours.

Church property increased, and Christian phil-

anthropy, under the protection of the State, assumed great importance. Monasticism, which had already made its appearance at the end of the first period, spread widely in Egypt, Palestine, Syria, Armenia, and Asia Minor. At first each monastery was managed under its own rules; but later in the Church of Constantinople the rule of St. Basil the Great, and in that of Jerusalem the rule of St. Sabbas the Consecrated, became dominant. Church Services also became more complicated. There came into use bells, incense, and candles; there appeared splendid examples of Church poetry; festivals and fasts were established; ecclesiastical art elaborated forms of its own (the Byzantine style), including a surpassing technique (mosaic), the examples of which, e.g., St. Sophia at Constantinople, remain unapproachable to this day. Orthodoxy spread beyond the limits of the Empire to Ethiopia, Iberia (Georgia), Persia, Armenia, among the Goths, Avars, Alans, Lazi, and other Caucasian tribes; and in India, China, and Arabia among the Saracens. Only in the second half of the period does the region over which it dominated begin to be narrowed by the spread of the Monophysites and the conquests of the Arab Moslems.

Within the Empire the battle with the remains of paganism went on, special zeal being shown by Theodosius I., Theodosius II., and Justinian.

(3) From 543 to 1453.—The reasons for the separation of the Western Church are very numerous and very complicated. Already in the 3rd cent. the Roman Church had become latinized, and was acquiring a special character on account of its position in the centre of the whole State and the influence exercised upon its theology by Roman juristic thought. The division of the Empire into two parts, Eastern and Western, prepared the way for the differentiation of their Churches. The weakness of the Western Empire, its fall, the great migrations, and the flood of barbarous peoples gave cause enough for the relation of Church and State in the West to assume a different form, and for the Popes to take upon themselves the part of representatives and defenders of the Roman ideals in civilisation and politics. This is the basis of the misunderstandings which began to arise with the Eastern Church, especially with that of Constantinople, and these passed into disputes which finally ended in complete disruption. Rome rejected the 28th canon of the Council of Chalcedon, which conferred upon the Patriarch of Constantinople powers equal to the Pope's. From A.D. 484 to 519 relations between Rome and Constantinople were broken off because of the Monophysite dispute. Under Pope Gregory the Great a dispute about the title 'Ecumenical' began. Certain canons (nos. 1, 2, 3, 6, 12, 13, 20, 25, 27, 28 of the 'Quinisext' Council at *Trullo*) which condemned Western practices were not received in the West. In the Frankish Empire there arose the question of the *Filioque*, and the decisions of the 7th Ecumenical Council as to the honouring of icons were rejected. The question of the Papal territory which began in A.D. 757 was ended in A.D. 800 by the coronation of Charles the Great. Out of the 530 years of the second Period (A.D. 313–843) relations between Rome and Constantinople were interrupted during a total of 228 years. The affair of Photius and Ignatius, in which Pope Nicholas I. interfered (861), ended in the heads of the two Churches reciprocally excommunicating each other. In consequence of the insertion of the *Filioque* into the Creed and the exacerbated personal relations, the Roman peculiarities in ritual—fasting on Saturday, celibacy of the clergy, and the like—are in Photius' Epistle (A.D. 866) quoted as evidence of Rome's defection from Orthodoxy, the only defender of which was now to be found in the

Eastern Church. After the second deposition of Photius in 886, the name of the Pope was again inserted into the Diptych of the Eastern Church. At the beginning of the 10th cent. relations once more became strained over the question of the fourth marriage of the Emperor Leo the Philosopher, which after his death was condemned at the Council of A.D. 920.

In 1017 the *Philagae* was officially recognized at Rome, and in 1053 the Patriarch Michael Cerularius, dissatisfied with a plan of political alliance with the Pope, dispatched, in conjunction with the Bulgarian Archbishop Leo of Ochrida, an epistle to Bishop John of Trani, in which new accusations (unleavened bread) were added to those brought against the Pope by Photius, and the dispute which arose ended on 10th July 1054 in the excommunication of the Patriarch by the Papal Legate and the final erasure of the Pope's name from the Diptychs. Attempts at reunion of the Churches went on until the end of the period: in 1099, at the Council of Bari under Alexis I. Comnenus and Pope Paschal II. (1099-1118), under John Comnenus (1118-43), under Manuel Comnenus (1143-80), in 1228, 1260, 1274 at Lyons, in 1230 at Avignon, in 1280 at Rome, in 1430 at Florence. These were not successful, inasmuch as they were undertaken from motives not directly concerned with reunion—on the part of the Pope for the sake of increasing the area subject to their power, on the part of the Orthodox to obtain the political support of the West.

For the Musulman conquest of the Patriarchates of Antioch, Alexandria, and Jerusalem in the 6th and 7th centuries, and the defection of the Western Church in the 9th-11th centuries, the Orthodox Church found compensation in the conversion to Orthodoxy of the populous Slavic nations in the 9th and 10th centuries. These nations formed national Churches, at first remaining dependent upon the Church of Constantinople, but afterwards forming temporarily or permanently independent (autocephalous) Orthodox Churches.

So in A.D. 864-65 the Bulgarians and the Serbs at almost the same time submitted to baptism, and in A.D. 988 the Russians. This addition, however, while increasing the number of the members of the Orthodox Church, did not stimulate any great improvement of her internal condition, partly because among the newly converted nationalities education was in a rudimentary condition, but principally because of the pressure of Mongolian nationalities from Asia. The Russian Church from A.D. 1234 to 1480 was under the yoke of the Tatars. The Church of Constantinople from the 11th cent. onwards suffered first from the Seljuk Turks, and at the same time from the Crusaders; in the 13th cent. (A.D. 1204-61) from the Crusaders who had gained possession of Constantinople; and from the 14th cent. from the Ottoman Turks. In 1361 the latter conquered Serbia, in 1393 Bulgaria, in 1453 Constantinople, in 1571 Greece, and finally in 1669 Crete, so that only one Orthodox Church was left in liberty—that of Russia.

The internal life of the Orthodox Church during this period is characterized by the decay of theological thought and of Church education. The questions in dispute were more matters of detail. The Church was chiefly disturbed by the struggle of the partisans of 'accommodation' (*akkomodatsia*), i.e. the permissibility, for the sake of higher ends, of making certain relaxations or exceptions from the ecclesiastical laws against the partisans of *acribia* (*akribia*), i.e. the exact observance of the same. These disturbances arose under Patriarch Tarasius (A.D. 787-806), and continued, with interruptions, until the 13th century. On the side of *acribia* stood the monks, the defenders of the Church's independence, while 'accommodation' was de-

fended by the civil power and the secular clergy. The defenders of the former bore at various times the names of Ignatians, Nicolaites, Zealots, and Armonians; the defenders of the latter were called Photians, Euthymians, and Politici. The struggle ended in the triumph of the former. The heresies of the period either exhibit a mystic character (Paulicians, Euthytes, or Enthymists), or appear to be the result of Parsi influence (the *Arewardi*, or 'sons of the sun,' in Armenia) and Judaism (*Atsingani* in Phrygia). Later on, under Alexis Comnenus in the 11th cent. we have the heretical teaching of John Italus as to the manner of the union of the two natures in Christ; at the Council of A.D. 1156-58 at Constantinople the question discussed concerned the signification of the sacrifice of the Cross; at the Council of A.D. 1166 that of the meaning of *Ja 14^m*; and in the middle of the 14th cent. the more serious controversies of the Barlaamites and Palamites or Hesychasts (1290-51) on the relation of the energy of the Deity to His essence, and on the light of Tabor. The organization of the Church suffered hardly any changes during this period. The canons established at the Councils were concerned only with particular questions. Certain new Collections of Ecclesiastical laws appeared, but the chief importance attached to the *Nomocanon* in 14 Titles as revised about A.D. 883 by the Patriarch Photius. In the 11th-13th centuries were written the commentaries on the canons by Zonaras, Aristenus, and Balsamon; and in the 14th cent. a guide to ecclesiastical law in the *Hexabiblos* of Constantine Armenopoulos, and the alphabetic *Synagoge* of Matthew Blastares. Among the Slavs there appeared their own Collection of Canons adapted from the Greek—the *Kormchani Kniga* ('The Steerman's Book'), in its four redactions, Bulgarian (9th cent.), Slavo-Russian (10th cent.), Serbian, and Sophian (13th cent.).

Canonically the ecclesiastical organization remained unchanged, but *de facto* the Emperors interfered more often in Church affairs, and appropriated the title of 'Holy,' and the right of deciding questions of dogma; and, on the other hand, the Constantinopolitan Patriarch's primacy of honour passed (in fact, not in theory) into primacy of power.

But the attempt to supply a dogmatic foundation for the extension of the Emperor's power in the Church and the power of one Patriarch over the others did not obtain recognition in the Church. The Patriarch had now about him a new organization, the permanent Synod (*svyatoslovno*), consisting of bishops and patriarchal officials, and having the authority of a final, highest administrative, and judicial court. About the Patriarch there was formed a whole staff of officials ('the nine pentads'). Enormous influence on the life of the ecclesiastical community was exercised by the monasteries, especially those on Mt. Athos, the Studium at Constantinople, the *Méve Evgenios* in the Peloponnese, the *Meteora* in Thessaly, etc. They stood up for the exact observance of dogmas and canons and for ecclesiastical independence, supported the science of theology, spread education abroad, and sent out missionaries. The education of the clergy, which had declined at the end of the preceding period, in the middle of the 9th cent. recovered and attained a higher level under the Comneni in the 12th century. In the 13th cent., at the time of the Latin domination, Byzantine learning again declined; but in the 14th cent., under the Palaeologi, it once more revived, though during the whole third period (as against the second period) it suffered from a want of originality. This movement, moreover, was not disregarded by the newly converted Slavic nationalities.

(4) *From 1453 to the present day.*—After the taking of Constantinople (29th May 1453) the Orthodox Church within the boundaries of Turkey retained its internal organisations without any substantial change, but the Patriarch of Constantinople, in his capacity of 'head of a nation' (*Millet-bashi*), received also civil authority over all Orthodox people. By this increase of authority, however, neither the Patriarch himself nor his flock was in the very least guaranteed against the violence of the conquerors, who regarded the *rayas* as without rights and a mere source of income. The Patriarchs were forced to pay taxes beyond their resources, both at their election (*psakhia*) and year by year (*kharidiah*). Vacancies occurred extremely often, and few Patriarchs ended their days on the throne (30 out of 103). Many were elected several times. Still worse was the position of the rest of the clergy and of the lay people, who suffered from the fanaticism of the Turks, and contributed no small number of martyrs for the faith canonised by the Church. There were martyrs also among the Patriarchs. The internal life of the Church was uneasy too by reason of the struggles of candidates for the Patriarchate and the interference with ecclesiastical affairs of the Phanariots, or rich and distinguished laymen living in Phanar (a quarter of Constantinople), who, on account of their knowledge, enjoyed influence with the Government. Some trouble resulted from the institution under Patriarch Samuel (1704-90) of the *gerusia*, an ecclesiastical oligarchy consisting of the six senior bishops and four lay Phanariots, which was abolished in 1858. It was not until the 19th cent. that the position of the Orthodox Church was improved (*Khatt-i-sharif*, 2nd [14th] Nov. 1830, and *Khatt-i-humayun*, 18th Feb. [1st March] 1858). The Turkish Constitution (14th [27th] April 1908) did not bring the anticipated advantage to the Church, and an attempt was even made to deprive the Patriarchate of its ecclesiastical privileges.

Taking advantage of the sad position of the Orthodox Church, the Pope tried to subject it to their power, and with that intent dispatched several epistles and sent a whole army of missionaries to the East. Success crowned these attempts in one region only, S. W. Russia, thanks to political circumstances. There the Jesuits succeeded in establishing the Union of Brest in 1596. The Patriarch Gregory VI. refused to accept an invitation to the Vatican Council. To Leo XIII.'s Bull on the Reunion of the Churches (30th June 1894, *Præclara gratulationis*) the Ecumenical Patriarch Anthimus VII. answered on 20th Sept. by an epistle enumerating the errors of the Roman Church. Negotiations as to union with Protestants were also unsuccessful: in 1550 between Melancthon and the Patriarch Joseph II., in 1578-81 between the Lutherans of Tübingen and Patriarch Jeremias II., and in 1731 the attempt of Zinzendorf. Great trouble was caused by the attempt made by Cyril Lucar, who was Patriarch seven times (1612-38), to approximate Orthodoxy and Calvinism. More success has attended the attempts which are still going on to make a rapprochement with the Anglican Church. They were begun in 1716-25 by the party of the Non-jurors, and renewed in 1802 by the adherents of the Oxford movement. So far they have led only to the establishment in 1899 of *divine union* between the Constantinopolitan and the Anglican Churches, that is, to permission given to laymen of one Church in special cases of extreme necessity to have recourse to the clergy of the other, and to an end being put to proselytising. Negotiations, likewise still in progress, for reunion with the Old Catholic Church, which were begun soon after the establishment of the latter (Conference of Bonn, A.D. 1874), have led to no results.

The weakening of Turkey during the 19th cent. led to the process, still at work, by which the Orthodox nationalities are being freed from her yoke, and they have formed the independent States of Montenegro, Greece, Serbia, Rumania, and Bulgaria.

With the diminution of Turkish territory has proceeded the diminution of the territory subject to the Patriarch of Constantinople, as it appeared unsuitable that the new States should continue in ecclesiastical dependence upon a Patriarch who was a Turkish subject. Autocephalous Churches have also been formed by the Orthodox nationalities of Austria-Hungary. Side by side with this the importance of the Greek nationality is lessening. At the end of the 18th cent. in all Orthodox Churches except the Russian and the Montenegrin the hierarchy was Greek. At the present time the Churches remaining Greek are the Constantinopolitan, Alexandrian, Hellenic, Cyprian, and Sinaiitic. In the Church of Jerusalem the struggle of the Arabic population against the power of the Greek Brotherhood of the Holy Sepulchre has already been crowned with decided success. The unwillingness of the Greeks to give up their ecclesiastical privileges, which raised them above the other nationalities, gave rise to the schisms of Antioch and Jerusalem, now satisfactorily settled, and to the more serious Bulgarian schism.

In the Greek Church a new Collection of Canons has appeared, viz. the *Παράκλησις*, compiled in 1708 by the Athos monks Nicodemus and Agapetus, and in the Rumanian Church the Collection *Indreptarea Legii*. Both are modifications of the Slavic *Kormchani*. In the Russian Church the *Kormchani* ceased to be the source of law still in force, and was superseded in the 18th cent. by the *Book of Canons*, in which a place is given only to the minimum of canonical rules accepted by the whole Orthodox Church: the 85 Apostolic Canons, the Canons of the Seven Ecumenical and eleven Local Councils, and extracts from the canonical works of the thirteen Holy Fathers. There have also been published editions of canonical documents, among which special importance attaches to the so-called Athenian *Synagma* (G. A. Rhalles and M. Potles, *Σύνταγμα τῶν ἁγίων καὶ ἱερῶν κανόνων*, Athens, 1852-59; M. I. Gedeon, *Κανονικὴ συντάξις . . . τῶν πατρῶν Κωνσταντινουπόλεως*, Constantinople, 1858-59).

3. *Present condition and geographical distribution.*—At the present time the Orthodox Church consists of 16 Orthodox Churches of which 8 are Greek: those of Constantinople, Hellenic, Cyprus, Alexandria, and Sinai (in all 7,200,000 souls); 7 Slavic, viz. those of Russia (116 millions in 1911), Bulgaria, Serbia, Carlowitz, Bosnia-Herzegovina, Bukovina with Dalmatia, and Montenegro (9,920,000); 2 Rumanian, that of the Kingdom of Rumania and that of Hermannstadt in Austria (about 8 millions); and 2 Arabic, Antioch and Jerusalem (some 300,000). The ancient Church of Georgia (1,300,000 souls) now officially forms part of the Russian Church (q.v.).

Accordingly, the number of all the Orthodox Churches together amounts to 134 millions. All these Churches are autocephalous, i.e. independent of each other as regards internal administration, but make up one Orthodox Church, as they have one Head in Christ, and possess one doctrine and communion in sacraments and services. The communion between them also finds expression in Councils, the decisions of which are obligatory for the Churches that take part in them, or in the interchange of epistles. Both the Councils and the exchange of epistles take place rather seldom, and not regularly, mainly owing to political circumstances.

(a) **GREEK CHURCH.**—(1) *The Constantinopolitan Patriarchate* is bounded by the frontiers of Turkey, but even within these limits the Orthodox Bulgarians are subject to the authority of the Bulgarian Exarchate. Exact statistics do not exist, but the most likely number for the Orthodox of the Patriarchate is 2½ millions in Europe, and 2 millions in Asia Minor and the Islands. At the head of the Patriarchate stands the Patriarch (since 28th Jan. [10th Feb.] 1913, Germanus v.) with the title of 'His All-holiness (ἡσυχαστής), the Archbishop of Constantinople the New Rome, the Ecumenical Patriarch.' He has precedence over all Orthodox hierarchs throughout the world. The Patriarch in the Turkish Dominions communicates with the Government through him. He has two governing bodies—the Synod and the Mixed Council. According to the Constitution of A.D. 1862, the Holy Synod (Ἱερά Σύνοδος) consists of 12 Metropolitans, half of whom retire in rotation every year. The Permanent National Mixed Council (Διαρκὲς Ἐθνικὸν Μικτὸν Συμβούλιον) consists of 12 members, 6 Metropolitans, and 6 laymen who retire at the same periods as the members of the Synod. The sphere of the Synod's activity is of a spiritual character; that of the Council relates to affairs of a civil and economic character—schools, hospitals, almshouses, looking after the Church finances, questions of legitimizing children, of testamentary dispositions, contracts, etc. Besides the Synod and the Council, the Patriarch has a large number of secondary organs of administration: the central ecclesiastical Epitropia, the pedagogic Epitropia, the Epitropia of episcopal property, the financial Epitropia, the Ecclesiastical Court of Justice, the Notary's office, the Ottoman Chancery, and a whole series of officials both spiritual (for example, the Chief ὑποπρωτοσύγκελλος, the Chief Archdeacon, and such like) and secular (as the Chief Logothete, etc.). In the Patriarchate there are numbered 78 Metropolitan sees, of which 4 are in the semi-independent Bosnia and Herzegovina. The dioceses (ἐπαρχίαι) are ruled by Metropolitans. Some Metropolitans have bishops subordinate to them, e.g. the Metropolitan of Crete has 7 suffragans, the Metropolitan of Ephesus 6, the Metropolitan of Thessalonica 5, and so on. The dependence of certain Metropolitan sees in Bosnia and Herzegovina and of the Metropolitan of Crete is purely nominal. The organ of the Patriarchate is the journal Ἐκκλησιαστικὴ Ἀλήθεια. The higher clergy receive their education in a school on the island of Chalki, in the Sea of Marmora not far from the Bosphorus (since 1844), the inferior clergy in the Seminaries at Caesarea in Cappadocia, on the Isle of Patmos (since 1713), and on Mt. Athos (since 1890). The authority of the Patriarchate also extends to secular schools.

(2) *The Church of Hellas* was proclaimed independent of that of Constantinople at a Council of 6 bishops at Nauplia, 15th [29th] June 1833, but in Constantinople it was recognised as autocephalous only in a decision of the Synod on 11th [23rd] July 1850. Now the Church of Hellas is governed by a Synod modelled on the Russian Synod, and consisting of the President, the Metropolitans of Athens, and 4 diocesan bishops, who change every year. In purely spiritual matters the Synod is independent; in affairs of a mixed character it has to obtain the approval of the civil power. Its decisions gain the force of law on being signed by the king's Commissioner. There are 32 dioceses in all, including 4025 parishes and 1,922,000 souls. Together with the Greeks of the Diaspora, who have since 1908 been reckoned as under the authority of the Athenian Synod, they amount to 2,400,000. In 1908 there were in Greece one Metropolitan (at present Theoclitus), 6 arch-

bishops, 25 bishops, 107 men's monasteries with 1743 monks, and 10 convents with 225 nuns. The yearly income of the monasteries amounted to 2 million drachmas, the value of their property to 60 million drachmas. Higher theological training is received by the clergy in the theological faculty of the University of Athens, secondary instruction in seminaries—the Rhizarian at Athens, one at Arta, and one at Tripolia. The chief clerical journal is the Ἱερά Ζώνη, published by the league of that name. On 15th [28th] Jan. 1910 a 'law' was published with regard to Parish Churches and their property, the qualifications of parish priests and their stipends, and on 1st [14th] Feb. 1911 a supplementary 'law' as to a central Church treasury and the administration of the monasteries.

(3) *The Cyprian Church* was recognised as autocephalous as early as the Council of Ephesus in A.D. 431. In recent times it has occasionally been subject to the influence of other Patriarchates, but formerly its autocephaly had always been recognised. At its head stands the Archbishop (at present Cyril), who bears the title of 'the Most Blessed the Archbishop of Justiniana Nova and of all Cyprus,' and lives at Nicosia. His suffragans are the bishops (Metropolitans) of Paphos, Citium, and Cyrenia. The Archbishop and the Bishops make up the Synod which administers the Church of Cyprus. In the election of the Archbishop the lower clergy and the people have their part. In April 1911 the Orthodox in the island amounted to 132,737; and there were 607 churches and 70 monasteries. At Larnaca there has been a seminary since 1910, and a journal is published, Ἐκκλησιαστικὴ Κίπρος.

(4) *The Patriarchate of Alexandria*, founded, according to tradition, by St. Luke, included in the 4th cent. Egypt, the Thebaid, Libya, and the Pentapolis, and had more than 100 dioceses. In the 5th cent. Monophysitism spread in this region. In A.D. 638 it fell under the power of the Arabs. In the 18th cent. the patriarchs lived in Constantinople. Now it has an extremely small population. The Greeks put the number at 180,000, but, as a matter of fact, it does not reach 100,000. It is governed by the Patriarch (at present Photius), who bears the title of 'the Most Blessed Patriarch of Alexandria and all the land of Egypt, of the Pentapolis and Pelusium, of Libya and Ethiopia,' and lives in Cairo. In the Patriarchate there are (1st Jan. 1913) 7 dioceses, 5 monasteries, 31 parishes, and 56 churches. The Bishops with the Patriarch form the Synod. In Alexandria two clerical journals are published, the weekly ἡλίουτοπος and the monthly Ἐκκλησιαστικὴ Θάλασσα. In 1908 a diocese was founded in Abyminia (Σαβώνη).

(5) *The Church of Sinai* consists of no more than the monastery on Mt. Sinai, built in A.D. 527 by Justinian. The monastery received autocephaly by a decision of the Council of Constantinople in 1578, which ended a controversy between Alexandria and Jerusalem as to which had authority over the monastery, by declaring it independent. The monastery is governed by the Hegumenos Archbishop, who bears the title of 'Archbishop of Mount Sinai and Raitha' (a village on the Red Sea) and 'all honourable,' and is consecrated by the Patriarch of Jerusalem (at present Porphyrius II.). The number of brothers is not more than a few dozen (now 50). At Cairo the monastery possesses a branch establishment (metochia) in which the Archbishop mostly resides; in his absence the monastery is governed by the 'Dikaion.' The monastery is famous for its library, in which among other things was found the renowned 'Codex Sinaiticus.'

(6) *SLAVIC CHURCHES.*—(5) *Russian Church.*—See separate article.

(7) *The Bulgarian Church*, originated under King Boris in A.D. 885, was at first subject to the Patriarch of Constantinople, but very soon pretensions to authority over it were made by Rome. Under Czar Simeon it became independent and the Archbishop was raised to be a Patriarch, and this was recognized even by Constantinople in A.D. 945 under Czar Peter. Under Pope John (A.D. 1197-1207) a union with Rome was agreed upon, but it came to an end in 1232. The throne of the Patriarch was successively at Dorostolium (Silistria), Sardica (Sophia), Voden, Moglena, Præsa, and finally at Ochrida. In 1284 a second Patriarchate was founded at Tirnova. In the 14th cent. Bulgaria was conquered by the Turks, and even after the Patriarch of Tirnova was subordinated to Constantinople and ranked as a Metropolitan see. But the Archbishopric of Ochrida preserved its independence until 16th (17th) January 1767, when it also was united to the Patriarchate of Constantinople. When there was an awakening of the national self-consciousness of the Bulgars in the first half of the 19th cent., there began a struggle to be ecclesiastically independent of the Greeks, and this found its consummation in the declaration of March 10th (22nd) 1870, that the Bulgarian Church was autocephalous. This was recognized by the Sultan, but not by the Patriarch. In September 1873 a Council was held in Constantinople which pronounced the Bulgarians schismatics because they had based their scheme of ecclesiastical organization upon the principle of nationality (ethnophilism). But the decisions of this Council were not recognized by the Slavic Churches, and therefore to this day the position of the Bulgarian Church remains undefined. It consists of two parts, of which one is in Bulgaria, vassal till 1906 and now independent; the other is in Turkey. Both parts are under the Exarch (at present Joseph), who resides in Constantinople and has a deputy in Bulgaria. At Sophia there is a Synod and since 1910 there has been one at Constantinople, each consisting of 4 Metropolitan. At Constantinople there is also (since 1910) a Mixed Council, consisting of the 4 Metropolitans together with 6 laymen. In Bulgaria there are 11 bishoprics (with 3,334,700 souls), in Turkey 3 with bishops. In 1906 there were in Bulgaria 214 town churches, 2056 village churches, 76 men's and 10 women's monasteries, 9 metropolitans, one bishop, 8 archimandrites, 23 economi, 1017 priests, 11 deacons, 5 archidiaconi, 40 hegumeni, 13 hegumenesses, 38 hieromonachi, 68 monks, and 247 nuns. At Sophia there is a Clerical Seminary (about 180 students), and at Bachkova a school for priests. At Sophia is published the journal *Soudnik* ('Counsellor'). The Turkish part of the Exarchate consists of 23 sees, but there are bishops only in half of them, the rest being governed merely by Diocesan Councils, consisting of 4 clerics and 5-7 laymen. In all the population amounts to 1,067,062 souls (1906). There are 1232 churches, and 81 monasteries. At Shkëbi near Constantinople there is a Clerical Seminary and at Uktib (Skoplje), a Priests' School. The authority of the Exarchate extends to the secular Bulgarian schools in Turkey. The organ of the Synod of Sophia is the journal *Tserkovny Vestnik* ('Ecclesiastical Messenger'), of the Exarchate, *Vestnik* ('News'). The Bulgarian Church is governed according to the 'Regulation of the Exarchate' elaborated in 1863 and adapted to the kingdom in 1895. By the law of 1906 the clergy in Bulgaria receive their stipends from the State.

(8) *The Serbian Church*, founded as far back as A.D. 867, gained its independence of the Patriarch

of Constantinople A.D. 1219, and under King Stephen Dushan (1331-55), a Patriarch was appointed with his throne at Ipek. The Patriarchate of Ipek extended over a wide area, and included Montenegro, Dalmatia, Bosnia, and Herzegovina. In 1375 its autonomy was recognized by Constantinople, but between 1306 and 1450 the whole Patriarchate fell under the Turkish yoke and was united to the Bulgarian Patriarchate of Ochrida. The Patriarchate of Ipek was re-established in 1857. In 1900, under the leadership of the Patriarch Arsenius, some 200,000 souls migrated to Hungary where they formed the Church of Karlovits. On Sept. 11th (22nd) 1796 the Patriarchate of Ipek was once more abolished and its dioceses were until 1830 ruled by Greeks, bishops nominated from Constantinople. In 1838 the Serbian Church, or rather a part of it, gained some independence, and in October 1879 full autocephaly. By the *Tsar's* edict of 1878 the Church of the kingdom of Serbia is governed by a Metropolitan (at present Demetrius) and 4 bishops in the towns of Zik, Timok, Nis, and Sabas, who form the Council of Bishops. At present the organization of the Church is regulated by the law of 27th April (7th May) 1890. In 1906 the Church of Serbia numbered 2,736,147 souls, 8 dioceses, 461 churches, 71 chapels, 54 monasteries (men's), 887 parishes, and 1142 clergy. The clergy are educated in the Seminary of St. Sava at Belgrade. Several religious journals are published at Belgrade—*Glavni Pravoslavni Orlov* ('The Herald of the Orthodox Church'), the organ of the College of Bishops; *Pastorski Srpski Orlov* ('The Messenger of the Serbian Church'), and *Pastyrski Bol* ('Pastoral Speech'), the organ of the secular clergy. In accordance with the law of 31st Dec. 1882 (19th Jan. 1883), the clergy are supported by payments made according to a tariff for services rendered.

(9) *The Karlovits Serbian Church* was formed of the 200,000 Serbs who in 1890 migrated from the Patriarchate of Ipek under the leadership of the Patriarch Arsenius III. Crnajić, in the time of the Austrian Emperor Leopold I. The immigrants were granted rights of ecclesiastical and civil autonomy, confirmed in 1791 by the Reichstag. Their dependence upon the Patriarchate of Ipek came to an end with the abolition of the latter in 1796. In 1848 the Metropolitan of the Karlovits Church received the title of Patriarch from Francis Joseph. In 1864 the Church of Hermannstadt was cut off from it, and in 1878 the Bukovino-Dalmatian Church. Now the Karlovits archbishopric contains over a million members, 7 dioceses, and about 800 parishes. At the head of the archbishopric stands the Metropolitan-Patriarch with the title of 'Holiness' (at present Lucian Bagdanovich), and at the head of the bishops of the 6 sees: Karlovits, Pakrac, Buda, Temarvár, Varsos, and Bács. Questions of dogma are decided by a Synod consisting of all the dioceses under the presidency of the Patriarch. The Patriarch is elected by a congress of Church and people held every three years, and exercising the right to decide all matters concerning the Church's autonomy. By the Regulation of Synod, 27th July 1911, and an edict of Francis Joseph published in June 1912, the rights of the congress have been restricted, while the power of the Hierarchy has been increased. The clergy are educated in the seminary at Karlovits, established as long ago as 1792. The Archbishopric publishes a monthly journal, *Bogoslovski Glasnik* ('The Herald of Theology'). By the Law of 1899 the clergy were assigned a stipend, globe, and a tariff of fees for occasional offices.

(10) *The Church of Bosnia and Herzegovina* has been *de facto* autocephalous since 26th March 1880, when an agreement was made between Austria and

the Patriarchate of Constantinople, though nominally it is dependent on the Patriarchate. Down to A.D. 1706 it was under the Patriarch of Ipek, and since then under that of Constantinople. It is divided into four dioceses (Sarajevo, Mostar, Dolnja-Tuzla, Banjaluka), governed by Metropolitan. In 1910 it numbered 825,418 members. At Belov there is a Theological College at which candidates for the priesthood are educated. Since the beginning of 1912 there has been published at Sarajevo an organ of a league of secular clergy, the *Srpski Sveštenik* ('Serbian Priest'); formerly the Archbishopric published *Istoknik* ('The Source'). The ecclesiastical organization is regulated according to a Code for Churches and Schools, published on 1st Sept. 1906 by the Austrian Government, according to which a stipend is assigned to the clergy.

(11) *The Bulgaro-Dalmatian Church* consists of two parts, Zara and Bocca di Cattaro, the link between which is almost nominal—the Metropolitan see of the Bukovina and 2 dioceses in Dalmatia. The Metropolitan see is governed by the Archbishop of Cernowitz, who is Metropolitan of Bukovina and Dalmatia (at present Vladimir Repta), with his throne at the town of Cernowitz; and the dioceses of Dalmatia and Bocca di Cattaro are controlled by the bishops.

Founded in A.D. 1402, the diocese of Bukovina was at first part of the Moldavian Archbishopric; from 1709 to 1783 it was independent; from 1783 to 1873 it was part of the Archbishopric of Karlowitz, and in 1873 it became autocephalous; and at the same time the sees of Dalmatia and Bocca di Cattaro were subordinated to it. The former was founded by Napoleon I. in 1808, the second in 1873. In the Archbishopric of Bukovina there are 525,043 members (1906) and about 330 priests; in the diocese of Dalmatia (in 1910), 39,961 members, 77 priests, 64 parishes, and 3 monasteries; and in that of Bocca di Cattaro, 31,375 souls, 64 priests, 44 parishes, and 8 monasteries. Besides these there are in Lower Austria 6850, in Bohemia and Moravia 7311, in Trieste and Styria 2049 members—altogether an Orthodox diaspora of 17,119. In the Archbishopric of Bukovina the clergy are educated at the Theological faculty of the University of Cernowitz; in Dalmatia, in the Theological College at Zara. At Cernowitz a *Rumanian-Rumanian Cantata* is published. At Zara, down to 1912, there was published the *Glasnik Prvoslavna Dalmatinska Crkve* ('The Herald of the Orthodox Dalmatian Church'). In Bukovina the clergy receive their stipend from the 'Fund for the Religious,' founded in 1783; in Dalmatia, from the treasury, according to the law of 4th Feb. 1907.

(12) *The Montenegrin (Crna Gora) Church* became autocephalous in 1786, when the Patriarchate of Ipek, of which it had been a part, was abolished. Down to 1892 it was governed by Metropolitan who were at the same time the Princes of Montenegro. But in 1892 this theocracy came to an end, and Prince Danilo kept for himself the civil power only, and handed over the spiritual to a separate Metropolitan. At the present time the Montenegrin Church numbers some 220,000 members, and consists of two dioceses—Cetinje, governed by the Metropolitan (at present Metrophanes), and Zastupnje-Rada (since 1900), governed by a bishop (at present Cyril). The bishops are usually consecrated in Russia. In 1900 a law was passed defining the stipend which the parochial clergy are to receive from the State. On 20th Dec. 1903 (12th Jan. 1904) there came into force a 'Constitution for the Holy Synod,' consisting of the Metropolitan, the Bishop, 3 Archimandrites, 3 Proto-priests, and a Secretary. On 1st (14th)

Jan. 1904 was promulgated a 'Constitution for Spiritual Consistoria.'

(13) *RUMANIAN CHURCH.*—(13) *The Rumanian Church* has enjoyed *de facto* independence since 1864, but this was recognized by the Patriarch of Constantinople only in 1885. In 1890 it numbered 8,451,787 members, 3006 parishes with 8000 clergy, and 41 monasteries. It includes 8 dioceses, 2 Metropolitan sees, viz. the Wallachian (Bucharest) and the Moldavo-Susavan (Jassy), and 6 bishoprics, viz. Arjish, Buzau, Lower Danube (Galatz), Romanata, Rimnik-Valcei, and Hush. Each of the Metropolitan and the bishops with sees has a suffragan bishop. The Church is governed by a Synod consisting of the bishops and a Highest Church Council (since 1900), in which secular clergy and laymen take part. The election of a Metropolitan and certain ecclesiastical affairs are in the competence of Parliament, but in these proceedings only Orthodox members take part. The country clergy are educated in (secondary) Seminaries with an eight year course, the town clergy at the Theological faculty of the University of Bucharest. At Bucharest is published a religious paper, the *Biserica* (i.e. *Biserica* = 'Church') *Orthodoxa Romana*. By the Law of 21st Jan. 1908 the clergy receive their stipends from the Church fund (*casca bisericii*).

(14) *The Hermannstadt (Sibien) Rumanian Church in Hungary* was severed from the Archbishopric of Karlowitz in 1864 to satisfy the nationalist tendencies of the Rumanians. The Organic Statute as to its government was confirmed by the Austrian Emperor in 1868. It numbers some 1,075,000 members, and consists of 2 dioceses—the Archbishopric of Transylvania and the bishoprics of Arad and Kasan-Seben. At the head of the Province is 'the Archbishop of Transylvania, Metropolitan of all Rumanians to be found in Hungary' (at present Joseph Metellan). As in the Archbishopric of Karlowitz, there is a Congress of the Church and people, consisting of 30 clerics and 60 laymen.

(15) *ARABIC CHURCHES.*—(15) *The Church of Antioch* numbered in the 4th cent. as many as 250 sees. In 431, Cyprus was separated from it, and in 451 the Church of Jerusalem. In 638 it fell under the power of the Arabs; in 723 it was taken back again by the Greeks, in 1098 by the Franks, and in 1268 by the Turks. It now numbers some 316,000 members, mostly Arabic-speaking, living in Syria, Cilicia, Mesopotamia, Ismaria, and other provinces of Asia Minor. It is governed by a Patriarch (at present Gregory IV.), who bears the title 'Most Blessed Patriarch of the Great City of God, Antioch, and of all the East,' and resides (since 1268) in Damascus. The Patriarchate is divided into 14 sees, governed by Metropolitan. A great and beneficent work connected with it is carried on by the Russian Imperial Palestine Society, which establishes schools for the Arabs. The Patriarchate publishes in Arabic a journal called *Gruea*. There is a seminary at Beisambent. The Hierarchy was for a long time Greek, but the last two Patriarchs (1898) have been chosen from among the Arabs, for which reason the other Patriarchs refused for some time to recognize them.

(16) *The Church of Jerusalem* was originally a bishopric subject to the Metropolitan of Caesarea Philippi. The Council of Chalcedon made it a 5th Patriarchate, subordinating to it all the bishops of Palestine to the number of 60. From the 4th to the 6th cent. monasticism was very general in this region. In A.D. 614 it was wasted by the Persians, in 638 recovered by the Greeks, in 638 conquered by the Arabs, in 1076 by the Seljuk Turks, in 1098 by the Crusaders, in 1187 by the

Muhammadans, and finally, in 1517, by the Ottoman Turks. It now numbers no more than some 20,000 members, mostly Arabic-speaking, but is governed by Greek monks, about 80 in number, who have since 1067 formed the 'Brotherhood of the Holy Sepulchre' (Ἀγιοσπηλιῶν Ἀδελφότης). The Patriarch and all the higher clergy are elected exclusively from the members of the brotherhood. The former bears the title, 'Most Blessed Patriarch of Jerusalem and all Palestine.' To the Patriarch are subject 4 Metropolitans and 11 Archbishops, of whom only a few live in their sees, the majority residing in Jerusalem. The Patriarchate is governed by a Synod, presided over by the Patriarch; the members (16) are certain members of the Brotherhood. On 20th Dec. 1910 (2nd Jan. 1911), besides the Synod, there was established, on the demand of the Arabs, a Mixed Council (Μικτὴ Σύνοδος) of 6 clergy (members of the Brotherhood) and 6 laymen (Arabs), and this slightly restricts the power of the Brotherhood in matters of marriage, Church property, and schools. In the Patriarchate a journal is published called *Néa Zōnē*. In the Monastery of the Cross is a seminary, temporarily closed. Relations with the Patriarchate of Alexandria have been broken off in consequence of personal questions between the Patriarchs.

4. The dogmatic system of Orthodoxy.—The fundamental distinction between the dogmatic teaching of the Orthodox Church and that of other confessions consists in the particular view it takes of dogma. Orthodoxy does not allow of the possibility of dogmatic development. The complete fullness of dogmatic doctrine was once for all taught by Christ and the Apostles, and is an object of faith. Modification and development can affect only the formalization of the dogmas. Such formalization is the more authoritative according as it expresses better the faith of the whole Church at all times, i.e. according as it answers to the formula of Vincent of Lerins: *quod semper, quod ubique, quod ab omnibus*. For this reason the highest authority in the Orthodox Church is the Seven Ecumenical Councils, because they had representatives of the Church from all parts (*ubique*), and because they did not establish any new dogmas, but only formalized that which always (*semper*) had been confessed by the Church ('following after the Divine Fathers'). Guided by this principle, the Orthodox Church regards as inventions of men's minds the doctrine of the Roman Catholic Church as to the perpetual procession of the Holy Ghost from the Son as well (*Filioque*) (instead of the momentary sending of the Holy Ghost by the Son), the Immaculate Conception of the Theotokos, the Infallibility of the Pope and his power over the whole Church, and the doctrine of purgatory. The Orthodox Church is distinguished from Protestantism by its recognition of Holy Tradition as a source of teaching as to faith; by its doctrine of Seven Sacraments, not as signs of grace, but as being the grace itself, and in particular by its doctrine of the Transubstantiation of the bread and wine in the Sacrament of the Eucharist into the very body and very blood of Christ; and by its doctrine of salvation not by faith alone, but also by good works. It also rejects the Reformers' doctrine of the working of salvation by grace alone, and of unconditional predestination, and it teaches that grace works together with man's freedom (*synergismos*), and that predestination has its foundation in the Divine foreknowledge. While admitting the common priesthood of believers, the Orthodox Church admits at the same time a special priesthood in a hierarchy of three orders (Bishop, Priest, and Deacon), and that this receives its full powers not from other members of the Church, but from her

Founder Himself, and hands it on in succession by episcopal laying on of hands. Regarding the Church on earth as only a part of the whole Church, Orthodoxy teaches the indispensability of lively communion between the Church on earth and the other part of the Church—the Church in heaven. This is expressed in prayer to the saints. Finally, Orthodoxy teaches of reverence (*εὐσεβεία*) paid to relics and icons; but this reverence is, by the decision of the 7th Ecumenical Council, 'not to the wood and the paints, but to the persons represented in them.' In its moral teaching, Orthodoxy, in contradistinction to Protestantism, considers asceticism to be indispensable, not as an independent end in itself, but as a means for fallen man to reach moral perfection.

Both Holy Scripture and Holy Tradition are admitted as sources of doctrine as to faith. Any question of the comparative authority of one or the other source is impossible in Orthodoxy, inasmuch as each is merely a different mode of expressing one and the same doctrine of the Church. All its fallacies are already included in Holy Scripture, and finds its foundation therein. Holy Scripture includes both canonical and uncanonical Books. Among the dogmatic documents of Holy Tradition, the highest authority attaches to the so-called *Niceno-Constantinopolitan Creed* ('Symbol of Faith'). Its significance is not in the least undermined by attempts to show that it is of other origin, as, in any case, at the Council of Chalcedon (A.D. 451) it was recognized as being the expression of the faith of the whole Church.

A fuller statement of Orthodox teaching is given in the so-called *Symbolic books*. This expression has been borrowed from the Protestants; but, strictly speaking, *Symbolic books* do not exist in the Orthodox Church, as no single one of them has been approved by the highest ecclesiastical authority—an Ecumenical Council—and the name merely attaches to certain more or less authoritative statements of faith, the number of which cannot be exactly defined.¹ Generally the term is applied to the following statements of faith:

(1) *Πρωτοδικαιον Ὑπομνηματιον* ('The Orthodox Confession') of the Metropolitan of Kiev, Peter Mogilas, composed in 1636, and approved by all the Patriarchs and by the Russian Holy Synod.

(2) *The Confession of Dositheus*, Patriarch of Jerusalem, approved in 1672 by the Council of Jerusalem. It is also known by the title of *The Epistle of the Patriarchs of the Eastern Catholic Church touching the Orthodox Faith*, as it was sent in 1723 to Russia and Great Britain.

(3) *Προτάγμα Πρωτοδικαιου Κατοχισμῶν* ('A Longer Orthodox Catechism') of the Orthodox Catholic Eastern Church, by the Metropolitan of Moscow, Philaret; approved in 1830 by the Russian Synod and afterwards also by the Patriarchs.

Among works on Dogma, the best known in the Russian Church are the *Dogmatic Theologies* of the Metropolitan Macarius, Archbishop Philaret, Bishop Sylvester, and the Protobishop Malinovsky; in the Greek Church, *Ἐπεὶ Κατήχησις, Σύνταγμα δογματικῆς καὶ ἀποδείξεως καθολικῆς ἐκκλησίας* of Z. Rhosses, Athens, 1903, and the work of Androutzos, do. 1907.

Editions (fairly well known) of the *Confessions* of Mogilas and Dositheus in Gr. and Lat. are: E. J. Kimmel, *Monumenta Fidei Ecclesiae Orientalis*, Jena, 1860, and earlier; I. E. Menologos, *Συμβολικὴ καὶ ἀποδείξεως ἀνατολικῆς ἐκκλησίας*, Athens, 1. 1899, II. 1. 1901, II. 2. 1904; in Greek, J. Michalcoski, *Θεωρητικὴ καὶ ἀποδείξεως*, Leipzig, 1904. There is a German translation of the first in Hermann, *Historia Ecclesiae Christianae*, Berlin, 1751; of the second, in *Revue Internationale de Théologie*, 1. [1898] 210-298; an English tr. of the Catechism of Philaret in

¹ Sometimes the title of a 'Symbolic book' is applied to the *Answers of Jeremiah II*, Patriarch of Constantinople (to the Theologians of Tübingen), and the *Confession* of Metropolitan Critopoulos, afterwards Patriarch of Alexandria.

P. Schaff, *The Creeds of Christendom*, II. (New York, 1877) 448 ff. For the newest literature, see Paul Pommerehne, 'Symbolische Bücher in der Russischen Kirche,' in *Theologische Monatshefte* (Bonn.), xli., St. Petersburg, 1911.

As a basis for a summary of the dogmatic teaching of Orthodoxy we must inevitably take the *Nicene-Constantinopolitan Creed* (Symbol) as it is set forth in the above-mentioned authoritative statement of the faith of the Orthodox Church. The first Article of the Creed speaks of the Creation of all things visible and invisible by God the Father. In connexion with this the Orthodox Theologians develop the doctrine of the Holy Trinity, traces of which they find in the OT, the doctrine of angels and their seven orders, of the guardian angel, of demons, of the double bodily and spiritual composition of man's nature as a microcosm, and of Providence, under which predestination (*protopredes*) is explained as foreknowledge (*prognosis*), through which the freedom and the fall of man become intelligible. In opposition to the Pelagians it is recognized that in Adam there stoned also all his descendants, and they are therefore liable to the same punishments, but possess a special potentiality for good as having preserved the *eterna fides* though having lost his *operibus*.

The second Article speaks of the Person of Jesus Christ. In developing this and the eighth article on the Holy Ghost there is given a detailed refutation of the innovation of the *Piliosque*, by which is introduced teaching irreconcilable with Holy Scripture, the immutability of the Creed is violated, and a doctrine of two *dyot* in the Deity formulated. The teaching of the Creed as to the Godhead and manhood in Jesus Christ is supplemented by the definitions of the 3rd to the 6th Councils as to the unconfounded, immutable, inseparable, indivisible union in Him of two natures in one Person. *epileptus* is by some (e.g. V. V. Bolotov) understood as the unity of self-consciousness but not of consciousness, but the majority leave this question on one side. In connexion with the teaching as to the Incarnation the doctrine of the Perpetual Virginity of the Theotokos before, at the time of, and after the birth of Christ is set forth.

The salvation of mankind through the Incarnation, Passion, Death, Resurrection, and Ascension of Christ (Articles 3-6) is understood as a deliverance from sin, the curse, and death. This salvation is completed by Christ's threefold service as King, High Priest, and Prophet. The Descent into Hell was the manifestation of Christ's kingly power, and its purpose was to liberate those who under the Old Dispensation believed in His coming. The 9th and 10th Articles speak of the Prophetic and High Priestly service of Christ. His Prophetic service consisted in His giving the doctrine of *eterna salus* and the means for its attainment. This doctrine, passing from the Apostles to the Bishops, is preserved by means of oral and written *traditio* in the Church. The Church is called 'Apostolic' because she is faithful to this Apostolic tradition; she is called 'One' because she has one Head, Christ, and in her works one Holy Ghost; she is 'Holy' because her members are made holy by true doctrine, and by the Sacraments; she is 'Catholic' because she ought to embrace the whole world. An attempt to give a more exact definition of the Church as 'the Body of Christ' has not been successful. In opposition to the Protestants it is explained that the Church is at one and the same time both visible on earth (or militant) and invisible in heaven (or triumphant). The existence of several autocephalous Churches does not contradict the unity of the Church, inasmuch as they are united by unity of confession of faith and communion in prayers and Sacraments. Her task, the salvation of souls, is exercised by the Church and those that

bear office in her, through preaching the doctrine of Christ and the Apostles, and celebrating the Sacraments established by Christ for the sanctification of men.

The 10th Article of the Creed mentions only one Sacrament—Baptism; but all statements of faith enumerate seven—*baptismus, chrismus, eucharistia, ordines, lepra, ymas, etiam*. The doctrine of the seven Sacraments was not established till the 13th cent., apparently under Western influence (Council of Lyons, A.D. 1274). St. John Damascene mentions only the first three Sacraments, Dionysius the Areopagite six, and among them the taking of monastic vows and *et tria consecrationes reliquias*. The taking of monastic vows is also reckoned a Sacrament by the monk Job in A.D. 1270, and by some modern Russian theologians (Leontiev—as a form of penance; Archbishop Antonius of Volhynia).

The Sacraments are looked upon as spiritual means by which, under visible signs, there is granted an invisible grace of God, i.e. a saving force of God. The Roman Catholic doctrine of their acting *ex opere operato* is rejected. The unworthiness of the celebrant does not interfere with their efficacy; but on the side of the recipient, faith and preparation, in accordance with the ordinances of the Church, are indispensable. Baptism begins with the rite of the renouncement of Satan and his expulsion (*et exorcismus*), and is administered by threefold immersion; only in the case of the sick (*et ex necessitate*) is baptism by affusion (*et effusio*) allowable. Baptism is a new birth which annihilates original sin and all sins previously committed, and makes the baptized a member of the Church; but the consequences of sin remain in a tendency to sin and disease. At Baptism there must be sponsors. The ordinary practice is the baptism of infants as soon as possible. Re-baptism is not allowed, if only because of the words of the Creed 'one Baptism.' Baptism by heretics is recognized if it has been administered in the name of the Holy Trinity and in accordance with Christ's command. If the Greek Church in contradistinction to the Slavic Churches refuses to recognize the Baptism of the Western confessions administered by affusion, this is a modern practice and is also subject to exceptions. The ministrant of Baptism ought to be a presbyter (or bishop), but in extreme cases it may be a deacon or a layman without even excluding women, but upon return to health the rite is completed by a presbyter.

Unction is considered a substitute for the laying on of hands in Apostolic times (Ac 8th). It is generally administered immediately after baptism and by the same person, i.e. the presbyter or bishop, but not by a deacon or layman. It is called the *eterna salus* *et eterna salus* (2 Co 1st), and is repeated in the case of the reconciliation of apostates. The anointing of kings at their coronation is considered a form of unction. The consecration of oil, which was formerly performed by every bishop, is now performed only by the very highest Hierarchs and only in certain churches; the others obtain it from them. For instance, the Church of Constantinople supplies those of Greece, Serbia, Alexandria, etc.; the Russian Church those of Bulgaria, Montenegro, and Antioch.

Holy Communion is administered to all baptized persons, infants not excepted. It is called the holiest of all the Sacraments, since in Baptism we have communion with Christ on the side of His power (*eterna salus*), but in the Eucharist with Him in His very essence (*eterna essentia*). Under the form of bread (leavened) we are offered the very Body of Christ, and under the form of wine the very Blood of Christ, to the worthy unto remission of sins and unto eternal life, but to the unworthy

unto condemnation. The term 'transubstantiation' (*μετεμύωσις*) is borrowed from the West, but in the Orthodox Church it does not imply the raising into a dogma of Aristotle's teaching of substance and accidents, but implies only that the bread and wine upon consecration are transmuted (*μεταβάλλονται*) into the Body and Blood, not *veruāt* or *deuāt*, but *ἀλλάσσονται* and *εργάζονται*, i.e. into the very Body and very Blood of Christ. In contradistinction to the Roman Church, Communion is administered in both kinds and with leavened bread. The consecration of the Holy Gifts takes place not by the repetition of the words of Christ, 'Take, eat . . .', but by the invocation of the Holy Ghost (*ἐκκλησιάζει*, *ἐκκλησιάζει*). The Eucharist is not only a sacrifice of praise and thanksgiving, but also an atonement (*ἱκετήριον*) on behalf of living and dead, identical in essence with the sacrifice of Golgotha. In contradistinction to the Roman Church, the participation of the faithful in the Eucharist is regarded as indispensable, and 'private masses' are not permitted at a celebration of the Eucharist. At any rate, those engaged in the service must communicate, and non-communicants receive particles of the *εσπεράριον* ('oblation') from which were taken pieces for the Sacrament (*ἐκκλησιάζει*). The Eucharist can be celebrated at the same altar only once in the day, and the celebrant can celebrate only once in the day. The consecrated elements receive the same worship (*λατρεία*) that is due to the Lord Himself. Once consecrated, the elements remain so for ever; they are kept in pyxes and ciboria, and are used for the celebration of the Liturgy of the Pre-Sanctified and the communion of the sick. The Liturgy (i.e. the Eucharist) can be celebrated only by a priest or a bishop, and only upon an *ἐκκλησιάζει*.

Penance (*μετάνοια*) is usually taught from the age of seven years, and precedes communion. In penitence there are distinguished the moments of contrition (*μετάνοια*), confession (*ἑξομολόγησις*), and remission of sins (*ἀφεσις*). But the Roman doctrine of satisfaction for sins on the part of the repentant is definitely rejected. Sometimes a penance (*ἐντολή*) is laid upon the repentant; this is meant as a spiritual exercise or self-denial necessary for a victory over evil habits, e.g. fasting on other than the appointed days. It is recommended that confession be made to one 'spiritual Father,' who acts not as a judge, as in the Roman Church, but as a spiritual physician. Denial is given to the doctrine that for sin we must suffer not only eternal but also temporary punishment, from which doctrine proceeded the theory of the *thesaurus meritorum* and the practice of indulgences.

Besides the Sacrament of Confession there is the so-called 'confession to elders,' i.e. to elders among the monks (laymen) famous for pious living.

The Sacrament of Ordination is administered by the laying on of hands (*ἐπιθεσις*) by a bishop. Ordination with the three degrees—bishop, presbyter, deacon—was instituted not by the Church but by her Founder, Christ. A second consecration of ordination to the same degree is not allowed even in the case of converts, as long as the orders of the non-Orthodox Church are recognized as valid. Accordingly, Roman Catholic clerics receive the rank that belongs to them. The practice in regard to Anglicans has not been settled, and the ordination in America of the unfrocked Anglican priest Irving, on 8th Nov. 1906, by the Russian Bishop Tychon, has no decisive bearing upon the point. Ordination is allowed only in the case of the unmarried or the once married. Marriage after ordination is not allowed. Since the Council in Trullo (A.D. 680), bishops have been exclusively chosen from among the unmarried, and mostly from those who have taken monastic vows. The rite of admission (*επιθεσις*) or

επιθεσις) to the minor orders or offices of the Church is not considered a Sacrament. Only two lower orders now exist, the Reader (or Singer) and the Subdeacon. Formerly there were others also—exorcist, doorkeeper, and women servants of the Church, widows, and deaconesses. Bishops, according to the sees they hold, or their distinctions in the service of the Church, bear the titles of Patriarch, Exarch, Metropolitan, Archbishop; presbyters of archpresbyters, protopresbyters, protopresbiter; deacons of archidiacon and protodiacon. These are not different orders, but honorary titles. Monks are said to belong to the clergy only when they have received ordination, in which case they bear the title of *hieromonachos* (presbyter) and *hierodiaconos*. Those who have embraced the monastic life are divided into novices (*νεοφύτοι*) who have not yet taken vows, monks of the lower *σκήνωμα* (*μικροσκήνωμα*, *νεοφύτοι*) who have taken vows and received the tonsure, and monks of the great *σκήνωμα* (*μεγαλοσκήνωμα*) who have taken specially strict vows. Monasteries are not classed in orders, but all follow the rule of St. Basil the Great, somewhat modified in modern times. Their general vows are those of chastity, obedience, and poverty. The last is variously interpreted: in some monasteries with common life (*κοινότητα*) monks may not possess any individual property, in others where life is not in common (*ἰδιότητα*) they may. The heads of monasteries bear the title of *hegumenos*, those of convents *heguménissas*. The larger men's monasteries are ruled by Archimandrites.

Marriage is declared to be a Sacrament on the authority of Eph 5th. It is preceded by betrothal (*νεμύφια*, *ἀγοσύη*), formerly entered into long before marriage (even up to 10 years), but now usually, both in the Greek and in the Russian Church, celebrated just before the Sacrament. The chief moment of the Sacrament is held to be the crowning. In contradistinction to the Roman Church, in which the parties themselves are considered to be the celebrants of the Sacrament, and its essence is held to be either the *consensus* or the *copula*, the Orthodox Church considers the cleric to be the celebrant of the Sacrament, and its essence the conferring of a grace. Wedlock is allowed only between Christians, and at least one party must be Orthodox. Marriage between blood relations is forbidden to the seventh degree inclusive, both in the direct and in the collateral line. In the case of relations by marriage, wedlock is not allowed in the first four degrees. In particular, a man is not permitted to marry his brother's wife or sister's husband's sister. An impediment is also found in spiritual relationship, i.e. relationship arising through standing sponsor at baptism. The Russian Church nowadays forbids marriage only between a godfather and the mother of his godchild, but at one time this impediment extended to the seventh degree (e.g. in the Patriarch Nicholas III. Grammatikos [1093-1107]). From this general norm there are variations both towards condensation and towards greater strictness. A second marriage is allowed, but, if both sides have been married before, it is celebrated with less pomp; a third marriage is allowed only by condescension (*εὐνοσιβία*); a fourth is absolutely forbidden, though sometimes and in some Churches exceptions have been allowed (as nowadays in Bulgaria and Bosnia). Divorce on the authority of Mt 5th is allowed in case of adultery, with a right to the innocent party to re-marry. In the Russian Church in recent times divorce has been allowed on other grounds, and second marriage is allowed even to the guilty party after the expiration of a period of penance. The use of holy oil (*chrism*) is mentioned in Mt

entered Balliol College, and in 1850 gave the first proof of his ability, by obtaining first-class honours in the school of Liberal Humanism. He appears to have developed slowly, he was more inclined to meditation than to accumulation of facts, and therefore never exhibited the qualities of the prize-winning schoolboy. The trend of his thought is well indicated by his interest in Carlyle, Wordsworth, Shelley, F. D. Maurice, and Plato. From 1850 to 1859 he lectured in Oxford, at first on History and afterwards on Philosophy, slowly making up his mind to adopt teaching as a profession. The influence of Josiah was the one dominant factor of this period. During 1854-55, Green was engaged in the work of a Royal Commission on Education, and his reports did much to further the development of education for children of the middle classes, his interest in this type of secondary education was a phase of his democratic tendency, and lasted through life.

In 1857 he finally settled to the work of College Tutor, showing capacity for the detail of his post beyond expectation. He seems to have been eminently practical when circumstances compelled him to undertake such duties. This feature of his character became more marked later. In 1871 he married Charlotte Symonds, daughter of Dr. Symonds of Oxford, and sister of John Addington Symonds. In 1877 he began a temporary discharge, engaged in social work, opened a coffee-house in Oxford (1878), and was a member of the Town Council in 1879. In these activities he showed the qualities of a reformer, and might have advanced to a wider sphere of activity as member of Parliament if his health had allowed him to stand the strain. From 1881 he was actively interested in the discussion over reform of the Church in England. As early as 1867, Green was writing, largely as a way of forcing himself to work systematically. He wrote articles for the *North British Review* at that time. In 1874-75 his views were formulated in his introduction to Hume's *Treatise of Human Nature*. This was his main work until 1878, when, having been elected Whyley Professor of Moral Philosophy, he gave the lectures which form the *Prolegomena to Ethics*. This work never reached its final form. In 1880 he was feeling more isolated in London as one who stood between Kant and Hegel, but the work of translating Lotze was only in its beginning when after a short illness Green died on 10th March 1882.

3. Philosophical views.—(a) General position.—In the history of English speculative thought Green deservedly holds a high position. He forms one part of a well-defined antithesis, in reference to which both his ideals and his achievements must be estimated. The close of the 18th cent. was a period of transition for British philosophy. On the one hand, there remained the method and principles which sprang from Descartes and were established, for Englishmen, by Locke. These had been developed, after Locke, by Berkeley and Hume, and may be called, for convenience, 'Associationism' or 'English Empiricism.' After Hume there was further progress of a somewhat demagogic kind, leading to a revival of the spirit of Empiricism in James Mill, John Stuart Mill, and others. In Utilitarianism as begun by Hume, defended by James Mill, and most brilliantly expounded by J. S. Mill, there is a continuation of empirical thought, with increased emphasis on ethical and political doctrines. In the work of Bentham, speculative questions were relegated to the background. Similarly, in the case of James Mill and J. S. Mill, the real importance of their thought is to be looked for in practical as opposed to speculative questions. This must be emphasised, because Green approaches the work of Hume and Mill from this side, and is most concerned with the ethical implications of Empiricism. The roots of Green's own position are to be found in Kant, so that, in J. S. Mill and Green, British and German lines of development came into direct conflict. The position was further complicated by a new development on the British side. While Kant's successors rapidly moved away from his basis, and Hegel finally emerged as the outcome of a revolutionary development, the empirical position was further re-inforced by the work of Herbert Spencer, which ultimately incorporated Darwinism in its expansion of Empiricism. Green, therefore, found himself face to face with a growing opposition, and was compelled to attack at once Mill, G. E. Lewis, and Spencer. This whole movement is conveniently covered by the term 'Naturalism,' and it will now be clear that Green challenges in Naturalism a long line of thought which was by

no means a stagnant perpetuation of doctrine, but a living and aggressive development. In order to understand Green, it is necessary to grasp the character of this Naturalism. J. S. Mill accurately describes the nature of the first reaction against the 18th century. Speaking of the 'German-Coleridgean doctrine' he says:

'It is ontological, because that was experimental; conservative, because that was innovative; religious, because so much of that was indeed concrete and historical, because that was matter-of-fact and genuine' (*Discussions*, 1890-91, I. 403).

This description of the first reaction applies to the later period also. Coleridge began the movement with a sentimental opposition to Locke's school; J. F. Ferrier (Professor of Moral Philosophy at St. Andrews, 1845-64) was vaguely Hegelian; J. H. Stirling began in 1805 to translate and expound the systems of Kant and Hegel; after him William Wallace at Oxford, and Edward Caird at Glasgow (1806-08) and Oxford, continued the work of expounding German philosophy in Britain. Thus before and during Green's time there was an established line of idealism with which he could associate himself in his opposition to Naturalism, and in all this movement there is clear evidence of the original antithesis of temper. Green's general position may be described as spiritualistic, religious, or idealistic in comparison with the Naturalism, Agnosticism, or Utilitarianism of the opposing theories. As stated above, Green associated himself with the idealistic movement. The vagueness of that expression is justified by the facts; for Green took Kant as his basis, but developed his own doctrine cautiously, and expressed considerable doubt as to the value of Hegel's position (*Works*, III. 143). Consequently it is inaccurate to call Green Hegelian without further qualification; while the influence of Hegel is very patent, there is much in Green which should be regarded as directly developed out of earlier theories. It is partly on this account that the antagonism between J. S. Mill and Green appears now to have been often exaggerated: for Mill included under Utilitarianism a strong element of Kantian morality, and Green tended to limit himself to a combination of Platonism and Kantian rationalism. In both cases the influence of earlier British writers (e.g. Butler, Price) is a factor which tends to diminish the difference in their conclusions. When Utilitarianism took still another form at the hands of Henry Sidgwick, the controversy turned on points that were only of academic interest; for in Sidgwick, Utilitarianism made room for immediate moral judgments as originally found in Butler, thus admitting a rationalistic theory of conscience; while in Green the idea of absolute ends or absolute values, when closely inspected, becomes a formal concept of the end with no material content except just what Utilitarianism was, by then, prepared to supply.

The first consideration has been given to the initial part of Green's work because that is the focus of his interests; and in dealing with that aspect it has become clear that Green was an opponent of Naturalism and of Utilitarianism in all the various forms which each assumed. The deepest ethical problems for a follower of Kant are naturally those of God, freedom, and immortality; Green is true to the Kantian standpoint in seeking a metaphysical basis for his ethical doctrine. To achieve this it was necessary to go back to the point from which Kant had started, namely Hume. The Introductions to Hume's *Treatise of Human Nature* (*Works*, I. 1-371) constitute a complete statement of Green's objections to English Empiricism. As these are at the same time aspects of his positive teaching, they may be summarily stated

(i.) Locke's theory of knowledge is declared to be grounded in a false conception of consciousness: the 'idea' is described by Locke as something given to, rather than produced by, the mind: hence the latter is said to be passive and to receive 'impressions.' The result of this false start was seen in Hume, whose work exhibited relentlessly the outcome of these premises. To put the matter briefly, the initial error was the assertion of ideas as objects of the mind when it thinks; this Green takes to be a false analysis of experience, involving the absurd conclusion that an experience may be experience of an idea as of something given to the mind from without. On such a basis it is obvious that the self must be ultimately a complex aggregate of ideas, a product of experiences often repeated and (by association) knit together, a precipitate of time rather than a living reality. It must be admitted that Green's elaborate criticism is not always fair or relevant; there is much wearisome disputation about terminology where Locke was clearly making no effort to use technical terms; there is frequent distortion of the significance of passages due to concentration on detail in place of breadth of treatment; there is a striking lack of appreciation for the work which Locke actually achieved and for the historical background of the famous *Essay*. On the other hand, Green has a cause to plead, and his main points are strong. The real objection to Locke lay in the fact that his principles, consistently followed, led or might lead to that view of man which makes him a thinking machine, a merely animal organism, a creature without personality. The origin of these false views was to be found, Green thought, in the associationism of Locke and his followers. In denouncing this, Green was eminently in the right; his persistent challenge to Empiricism to show how a series of sensations could know itself as a series produced no answer: the doctrine, like its original supporters, was dead. With this point gained, the whole position is reversed: as the series does not sum itself, there must be a permanent self which does sum the series; this self must be active, not passive, and therefore the sensations, feelings, desires must all be phases of its activity rather than data which it receives more or less passively. Again, if we look to the objective system, we find there not only things in the cruder empirical sense of substances, but also relations; relations cannot be antecedents of the act of thinking, because they are not things that make 'impressions'; they are essentially the 'work of the mind.' Locke (from Green's point of view) was wrong in attaching so little importance to the work of the mind, for it now becomes obvious that not only relations but all that Locke would have called 'objects' are 'work of the mind'; they are not things, hopelessly external to our neuro-cerebral organism, but complexes of relations, nuclei in a network of experience. Thus, through a criticism of Empiricism, Green expounds a form of critical idealism based on Kant.

(ii.) The complement of this speculative theory is the practical theory: after treating the 'understanding,' it is necessary to discuss the principles of morals. The connexion is obvious: if the analysis of the understanding leaves us with no 'self' capable of originating action, there can be no responsibility and no morality. Green was aware that Hume could not be answered by a dogmatic reassertion of Intuitionism. Hume's position was extremely subtle: if his doctrine involved denial of the self, it none the less provided a working substitute in that product of habit and association which the average man might be satisfied to call his 'self'; if his position seemed to cut man off from all communication with God and

deny all affinity between human nature and the Divine nature, it yet left the average layman a sphere of aspirations and scope for social labours. There could be no doubt that, if the only escape from Hume was by retrogression to Cudworth, the case was hopeless. Was it necessary to escape at all? The answer to that seemed to be written in the history of Deism, in growing infidelity, in the fact that the average man is never content to think of himself as a creature of circumstances (cf. *Works*, iii, xxii), but either rises above that estimate of himself or sinks below it to moral degradation. Green saw that morality belongs only to persons as self-determining agents, his task was to prove the possibility of morality by removing the objections to the view that men are self-determining agents; and he achieved this in an argument that deserves more attention than it has received. The point is in strict conformity with the previous demonstration that an idea cannot come from without into the mind, but must be itself a product of the mind, an expression of mental or spiritual activity. From this it follows that we must revise the use of such terms as 'pleasant,' 'tempting,' and the like. There can no longer be taken to indicate permanent qualities of objects independent of the mind. An object is 'pleasant' only when a person regards it in that way; an opportunity is 'tempting' only when a self-determining agent pronounces it such (*Prolegomena*, 88). Through thinking of pleasures and pains as things that act on the self, men had come to regard themselves as victims of circumstances or propensities. Hume finally declared reason to be the slave of the passions; no other conclusion was possible while reason and the passions were external one to another; Green's answer is based on his proof that reason is the root of the passions. The new position had far-reaching consequences: if pleasures and pains can in this way be taken up into the life of the self, if the environment is no longer a sum of irresistible attractions and repulsions, Green can triumphantly vindicate the moral life as a life of self-determination and self-realization.

These two phases of the opposition to Hume so far exhibit Green's main position that it is unnecessary to examine with the same care his attacks on G. H. Lewes and Herbert Spencer. Between Green and those writers who laid emphasis on the physical substratum of the mind, the natural history of morals, and the continuity of animal and human natures, there was hardly sufficient sympathy to make the antagonism interesting. With J. S. Mill and Sidgwick the case is different. Green naturally found in Mill's system the most significant exposition of Hedonism. J. S. Mill appeared to him simply as the heir of those doctrines which Bentham originated and James Mill advanced; the allowances which should be made on account of Mill's own condemnation of Benthamism are made by Green in word only; there is no real surrender of the belief that Utilitarianism is wrong, and that Mill's doctrine is the old Utilitarianism in new armour. In this Green was decidedly at fault; if he had ever realized the extent to which Mill was under the influence of Butler and Kant, he would not have been the precursor of a whole generation of shortsighted attacks on Mill. As will be shown later, Green's central position is religious; and on questions of religion Mill and Green were antagonistic by birth, breeding, and nature. Green divided with Mill the allegiance of the public, largely because of the natural affinity between Green's point of view and that of the advanced thinker in religious matters. Mill, on the other hand, appealed more directly to those who set social progress before the philosophy of

religion, including also those who were so far secular as to be anti-clerical, and so far opposed to orthodox beliefs as to welcome the 'irreligion of the future.' Here, again, the exaggeration of differences was unfortunate: Mill's views on religion were not directed against such refined theology as that of Green, and Green on questions of social progress was fervent enough to satisfy any utilitarian. But of all philosophers since Socrates it has been true that by their followers ye shall know them. Green and Mill were not really in the same plane. Mill belonged to the world of affairs, and his ethical writings are the theoretical background of social and political propaganda. Green is primarily academic; his atmosphere is the rarefied air of dialectic, smokeless if not cloudless. It is only necessary to read Green's criticism of Mill's *Logic* (ii. 196) to realise the difference: in the analysis of thought-processes, Green may win an easy victory; but the investigator in the laboratory or the field, handling 'things,' finds in Mill the more instructive guide; and, even where modern scientific method rejects Mill, it does not reject him in order to accept Green. As compared with Mill, Sidgwick was more akin to Green in his academic mode of thought; he could and did meet Green on his own ground; he attacked his metaphysics, criticised his demonstration of freedom, freely and mercilessly analysed those vague phrases in which Green expressed his aspirations and too often obscured his meaning. But this, again, was not of ultimate significance; the only really valuable criticism made by Sidgwick on Green was the publication of his own version of Utilitarianism.

(b) *Speculative groundwork.*—In the exposition of his thoughts, Green was hampered by his familiarity with German modes of expression. In place of the lucid English of Hume, Green employs a technical language which baffles the untrained reader. His phrases undoubtedly reflect at times a want of clearness in the thoughts; but, as this is not the place to discuss details, an attempt will be made to state his principal ideas in ordinary terms; and those ideas were, we believe, for Green clear and distinct. It must be granted that some ideas are more easily expressed than others; also, the expression of convictions which are akin to religious experiences is notoriously difficult, easily ridiculed, and hardly ever intelligible to those who have no memory of similar experiences. Green's whole philosophy is the outcome of a profound conviction of the deep significance of personality. He saw in contemporary English philosophy an implicit reduction of personality to illusion, an analysis which ultimately explains it away. In Kant he saw the basis of a different philosophy, which could be employed to refute English Empiricism and open the way for a different expression of moral values. Having shown that Locke and his followers were at fault in their psychological method and their idea of the objective world, Green proceeds to argue that experience properly treated (i.e. in Kant's way) proves that there is a 'spiritual principle' in Nature. The world is for common sense a collection of objects in space. On the Kantian basis, space is a form of perception, and 'objects' are discriminated experiences, having differences which reflect the ultimate differences of 'things,' i.e. of those stimuli to which we refer our distinct experiences. The word 'Nature' is thus interpreted to mean a complex of experiences which indicate a ground of experience beyond themselves and constitute a system. This system is objectively real, because it is real for all rational beings, but not objective in the sense of being set over against the thinker as alien to thought. Thus, the old distinction of subjective and objec-

tive, opposed as inner and outer, is removed; the thinker and that which is thought are not divided from one another; they are not divisions of the universe, but distinctions arising out of experience, in which they have first been given as a unity. Since 'Nature' in this sense is always continuous (not an aggregate of empirical 'things'), distinctions are made by thought, and similarly laws of Nature are made by thought. But, as these laws are not arbitrary dictates so much as the revelation of rationality in the universe, it is argued that experience, thus analysed, leads to the conclusion that there is a spiritual principle in all things—in the thinker as his capacity of thinking, and in the objective reality as its capacity of being thought. From this can be deduced (1) the ultimate unity of subject and object as collateral manifestations of one principle (which is called the higher unity, as taking precedence over the unification of separate experiences in one personality); and (2) the freedom of the individual conscious activity, because that 'Nature' which in Empiricism tends to be presented as controlling conscious activity is now shown to be one of its manifestations. This position bristles with difficulties, but its main point is not without justification. Empiricism certainly inclined to the belief that man is a material organism, that thought is a function of the nerves, and that circumstances control action. Against this Green would assert that the nature of man is spiritual, that the physical body is not the cause of thought but its instrument, and that circumstances are no more than occasions for the exercise of freedom in choice. The metaphysical discussions thus prepare the way for the ethical doctrine.

(c) *Ethical and religious views.*—Green's proof of freedom, the basis of his ethical work, amounts to a demonstration that the physical aspect of man cannot be cited as the true cause of his actions. To make morality possible it is not necessary to prove liberty in the sense of unmotivated choice. That phase of the dispute between advocates of necessity and defenders of freedom was past before Green wrote; both parties had already admitted that choice is determined by motives; they were both, therefore, determinist, but divided upon the question of the factors which determine choice. Those who favoured materialism declared that the factors which determine choice are external to the self, parts of that outer world called the not-self. On their side could be quoted the part which physiological changes play in producing psychological states, hereditary dispositions, and the like. Green, on the other side, maintained that what was external (if anything) cannot affect choice, from the very fact that it is external. To affect choice the so-called external influences must become part of experience; it must, therefore, be a phase of conscious life. In part this means no more than that desire, wish, will, and reason are all aspects of experience, and not to be treated as capable of antagonism. If in popular language we may say that our reason is overcome by desire, the philosopher has to recognise that this is inaccurate: reason and desire, if so related as to be distinguished, must, for that very reason, be also contained in a 'higher unity' which is their real identity. Thus the first phase of Green's ethical doctrine is the demonstration of the unity of the self. The second point dealt with is the continuity of the self in time. Though the self is one, it is not therefore static; it develops in and through a time-process. But moral development is not of the same kind as physical growth; it is not a mere accretion of parts. On the contrary, moral development is possible only for a being that sets before itself the idea of a condition which is not yet realised, and which,

when realized, is not other than a condition or state of itself. The moral development of a rational being is, therefore, to be regarded as the continuous realization of the capacities of the self, a ceaseless recognition of incompleteness accompanying the striving after greater completeness.

The central point of the theory is in harmony with the general position sketched above; evolution is not a sequence of disconnected states resulting from changes in the environment, but an evolution of spirit dependent throughout on the activity of a self-determining agent. The third point is the most difficult. Green essays to prove that this doctrine of spiritual evolution or personal self-realization necessarily implies a similar universal evolution. Taking history as a whole, he describes the development of the moral ideal as a process in which not men as individuals but humanity as a whole continuously realizes its 'self.' This involves at once the notorious difficulty of explaining the nature of such a universal 'self.' Green never succeeded in bridging the gulf between these two concepts of 'self.' In dealing with the individual he gave an interpretation of the idea of 'self-preservation' (the key-word of Hobbes and Spinoza alike) which successfully rebutted the arguments of the anti-rationalists; he converted the physical self-preservation into spiritual self-realization. It was possible to go further, and, under the lead of Plato and Hegel, insist on the spiritual view of society, thus making the co-operation of individuals in society something more than a mere compromise to attain material comfort. But beyond the individual and the aggregate of individuals in society, there is in Green the idea of a totality, a universe of rational beings which also becomes one in a higher unity. The opponents of Green's view were never satisfied that this was not Mysticism. The language of the *Prolegomena* particularly gave offence on this account. It did not seem possible to accept Green's terminology without developing pantheism from his position. If the personal realization of ends is to be regarded as also the realization of ends that are super-personal, is it not only too true that man is the vehicle of a Divine consciousness? Will it not then be true that self-realization is not, in fact, properly personal at all? If, on the other hand, emphasis is laid on personality, what becomes of the will to be evil, which must be a contradiction of Divine will, a refusal to be the vehicle of Divine consciousness?

These difficulties must be faced in judging Green's position, and in estimating the nature of his influence; but it would be an error to magnify their importance. The spiritual view of man and of society upheld by Green is one phase of a great tradition; in supporting it he was in the main striving to give a re-interpretation of Platonic and Hegelian views. The ethical doctrine runs up into religious beliefs which do not admit of the same treatment. Through the ambiguity of Green's language we see the essential meaning: man is never an isolated individual cut off from the rest of the universe; he is always in relation to the world about him. Life is a name for the complex activities in which personalities are like nuclei in the network of relations; take from a being all its relations, and it becomes abstract, not (as the empiricists implied) a concrete self-existent individual. Thus the whole comes before the parts in the case of man and of society; the reality in which man finds his own realization is always above and beyond him no less than in him; we build better than we know. From such a position it is at least consistent to declare that the will of God is above all and yet finds its realization only through individual wills; to feel also that the

essence of religion is the experience of co-operation with God, and that, mystery though it be, yet in Him we live and move and have our being.

Green, though never opposed to orthodox Christianity, was often unable to accept the ordinary formulae of ecclesiastical religion. The task of addressing his pupils on the day before the Sunday on which Communion was administered was one of the occasions on which he felt most acutely that his mode of thought was not that of the man who is religious without being philosophical. The truth was that Green desired to get away from outward forms and phrases and concentrate on spiritual significance. His faith was deep but not conventional, and required for its understanding a sympathy not often accorded by the average church-goer or even the average clergyman. In St. Paul's writings, Green found a meeting-point for the Christian tradition and his own idealism. The deepest life of man is the inner self-consciousness; the life of thought is a perpetual revelation of the self which indicates infinite possibilities; man has, therefore, in himself a witness to God, for God is thinkable only as the realization of all that man has in him to become. As God is thus, objectively, the sum of perfection, so in man religion is faith in that perfection. Faith is not a belief in facts resting on historical evidence; it is rather the immediate consciousness of 'potential unity with God,' an experience rather than an acceptance of proofs. The position is stated in essence in the *Prolegomena* (§ 187):

'He is a Being in whom we exist, with whom we are in principle one, with whom the human spirit is identical, in the sense that He is all which the human spirit is capable of becoming.'

At a period when religious men were inclined to rise up in arms against all re-interpretation of dogma, whether due to philosophy or to science, Green's views were of a kind not to be rashly discredited. This he knew; but he was not in any sense troubled by doubts; he rested securely in the personal conviction of truth, and feared not for religion, but for those who by narrowness of interpretation were imperilling the adequacy of religion for life.

(d) *Political philosophy.*—It is possible to write on Logic, Ethics, or Metaphysics without being truly philosophic, but it is not possible to be truly philosophic without coming to terms with the daily life of common people. The moral philosopher is most severely tested at the point where the individual and the common good come into consideration, for he has then to choose the way in which he will formulate their relation and maintain their agreement or their incompatibility. This fact was realized by Green. He saw the significance of political philosophy for his own outlook, and at the same time he had a natural tendency towards an active participation in schemes which might be thought wholly uncongenial to an academic tutor. In Green's political philosophy can be found the most concrete expression of his thought. His academic work in teaching Aristotle stimulated his appreciation of civic life and ideals; his religious emotions, always mildly anti-clerical, found an outlet in the theoretical and practical fostering of common life; his Anglo-German idealism was a further incentive to study the life of societies, these being so clearly capable of interpretation as the realization of identity in difference, unity in plurality. Looked at from this angle, society or the life of communities appears as that higher universal with which the individual has most immediate contact. Whether the individual recognizes it or not, every act has significance for the whole community; the life of the individual is nothing apart from the community; and, conversely, the

community progresses in and through the life of individuals. Here again there is room for mysticism; but the sphere is not so abstract or remote as that of religion; it is possible to demonstrate in some degree that history supports this point of view. Green united modern and ancient politics in proof of his position. Among the Greeks the civic spirit was for him the spiritual element in the history of the City-States. In the democratic movement of his own day he saw a wider manifestation of the same spirit. He regarded the political history of the West as the record of a continual expansion of the common good, checked by private greed and dishonesty, yet never wholly prevented from growing wider and deeper. His sympathy with the work of Bright and Cobden was that of a fervid partisan for those who practised what he preached. The result was a complex attitude highly characteristic of Green. He has been rightly described as a political idealist, a philosophical radical, and a religious radical. The apparent contradictions are easily explained. In his political theory Green kept hold of the idea of personality more successfully than in his metaphysics. This led consistently enough to the demand that all persons should (in Kant's language) be treated as persons; the State has for its primary object the removal of all obstructions to free personal development. In this recognition of liberty, equality, and freedom, Green did not accept the extreme views latent in Rousseau's doctrine; he inclined more towards Burke's view, because the latter had more adequately recognized the universal essence, the relations embodied in habit and institutions which make man what he is (iii. 117). Thus Green's radicalism, rooted in his valuation of personality, was tempered by reverence for institutions which represent the consciousness of society, and have therefore something of universal significance. Lastly, there was the ever-present conception of a spiritual principle as an abiding factor in all the changes of political development. This element—partly metaphysical, partly religious—welded together for Green all the divisions of life into a unitary manifestation of the permanent Divine agency at work in the historical evolution of society. The firm belief that nothing is wholly bad moderated Green's radicalism; the equally firm belief in progress prevented him from acquiescing in established conditions. In his own political activities, whether in questions of educational reform or of social legislation, he found his theory adequate; it was a reason for extending knowledge among all classes, as it was a reason for supporting the abolition of slavery even at the cost of war. In brief, his own genius converted his idealism into the working faith of a social reformer; in practice he was heart and soul with the progressive tactics of the utilitarians, and in this part of his life's work nothing separated him from the better class of utilitarians except the significant assertion in which he persisted, that the ultimate end of society is not comfort but character.

LITERATURE.—The works of T. H. Green are published in three volumes with a memoir by R. L. Wodhams, London, 1881-82. This edition contains all the important writings except the *Prolegomena to Ethics*, which is published separately (ed. A. C. Bradley, 2nd ed., Oxford, 1905). An expression of Green's thought is given by W. H. Fairbairn, *The Philosophy of Thomas Hill Green*, London, 1880. But the most instructive views of Green are to be found in more general works of which two deserve special mention: Henry Sidgwick, *Lectures on the Ethics of T. H. Green*, Mr. Herbert Spencer, and J. Martineau, London, 1882 (a keen criticism); and the essay on 'Green,' in John McCune, *Six Radical Thinkers*, London, 1897 (a broad appreciation of Green's spirit and aims). Mention should also be made of A. W. Bann's *The History of English Rationalism in the Nineteenth Century*, London, 1903, which deals with English Hegelianism and its relation to the philosophy of religion.

GRIFFIN.—See SYNODA.

GROTIUS.—In this article attention will be directed mainly to the contributions made by Grotius to the development of religious and ethical thought. It will be unnecessary, therefore, to do more than indicate in outline the chief events of his life.

1. Life.—Hugo Grotius was born on 10th April 1583, and was from early years brought under the influence of those more liberal views in theology of which afterwards he himself became a powerful champion. His father was Uytenbogaert, subsequently a friend of Arminius and a leader of the party of the Remonstrants. At the University of Leyden, to which he went at the age of twelve, he attended the lectures of Bontegius and very soon exhibited an extraordinary proficiency in scholarship. So much attention did his precocious talents attract that, when no more than twenty years of age, he was commissioned to write the history of the national struggle against Spain. His work as historiographer, viz. *A History of the Revolt of the Netherlands*, was, however, not published during his lifetime. It was edited by his sons and went to 1627. His professional advancement was rapid. He was appointed to the office of Advocate General of the Peace of the Provinces of Holland and Zealand, and in 1618 became Professor of Rotterdam, thus acquiring a seat in the States of Holland. In the same year he proceeded on a mission to England, accompanied with a *Plénipotentiaire* dispute. Here he came into touch with Greville, with Andrews, and in particular, with Comenius, who was most favourably impressed with his appearance and intelligence (Comenius, *Rep. III*). Between the two men there was a kinship of spirit and a community of aims bringing them together in spite of the disparity of their ages. Both were true Christian scholars, earnestly desirous of ending the differences of Christendom, composed, and hopeful of the results which would follow from an unflinching and well-informed appeal to antiquity.

Grotius on his return to Holland found the flood of religious controversy in full stream. The controversy about Predestination and other points of Christian doctrine, which had begun between the two university professors, Grotius and Arminius, had so widened its scope as to become a growing national danger. Although the protagonists, Arminius, had died in 1609, his followers continued to defend the positions which he had maintained, and in 1610 drew up the famous Remonstrance, from which the party derived their name of Remonstrants. The Remonstrants repudiated the Calvinistic doctrine of Predestination mingled with religion. On the side of the Remonstrants was Odothebrecht. Their opponents could reckon on the support and sympathy of Prince Maurice. In 1615 the States of Holland passed an ordinance forbidding the preachers to deal from the pulpit with the points in dispute, the resolution to this effect having been moved by Grotius. This attempt to suppress religious controversy by means of the action of the secular power proved a disastrous failure. However well intentioned, it only aggravated the evil which it was intended to alleviate. The strife continually increased in bitterness, until in 1618 a definite crisis was reached, and the States General ordered the arrest of Odothebrecht and of Grotius. After a trial, which was little better than a travesty of justice, the former was condemned to death and executed as a traitor, the latter committed to perpetual imprisonment. At the same time the Synod of Dort assembled, and repudiated in unqualified terms the theology of the Remonstrants.

Some two years later Grotius, with the help of his wife, escaped from the castle of Loevestein, where he was incarcerated, and took refuge in France. There he occupied, and in 1619 published, his most famous treatise, the *De Jure Belli et Pacis*. The book obtained prompt and wide recognition, immensely increasing the already high reputation of its author. Grotius, however, in spite of the fact that a pension had been granted him, found it no easy matter to maintain himself and his family. After some fruitless efforts to gain permission to return to Holland he accepted, in 1620, the office of Swedish ambassador to the Court of France. The duties of this office he discharged faithfully, but without conspicuous success, for ten years. Finally determining to retire from the post, he went to Stockholm in order to place his resignation in the hands of the Queen of Sweden. It was on his return thence that he was overtaken by a sudden illness and died at Rostock (1645).

Even this brief record is sufficient to show that Grotius' life was not spent in learned leisure. From early manhood he was a busy professional man, engaged in multifarious duties. It is a matter of astonishment that, in spite of all distractions, he should have achieved as large a literary output of permanent value. So versatile was his genius that, in order to obtain some definite conception of the character of his work, it will be well to comment on his productions, under several headings.

2. As Christian apologist.—Of all the writings of Grotius, probably the most widely read has been the unpretentious little book entitled *De Veritate Religionis Christianae*. A special interest attaches to its origin. The germ of the book was composed

in vernacular verse, in order that it might be committed to memory by Dutch sailors and traders, and by them be employed, as occasion served, for the propagation of the faith. Subsequently he expanded this material into a short Latin treatise in six books (1627). In the first book he lays down the fundamental principles of natural religion—the being and attributes of God, and the immortality of the soul; the second is devoted to an examination of the claims of Jesus Christ to be the teacher of the true religion; the third deals with the authority of the Bible; the remaining three books are concerned with destructive criticism of Paganism, Judaism, and Muhammadanism.

It may fairly be said that this small volume initiated a new kind of Christian Apology. Not that it introduced any new arguments. The author explicitly professes to base his work on that of earlier Apologists, among whom he names, in particular, Raymond of Sabunde, Luis Vives, and Philip de Mornay. In fact, the principles which underlie Grotius' treatment of his subject do not differ essentially from those of the classical scholastic Apology, the *Summa contra Gentiles* of Thomas Aquinas. There is the same confident appeal to the natural reason and natural conscience of man, the same unshakable assurance of the impossibility of any radical opposition between reason and faith. But the difference in the method of presentation is obvious. Theology has issued from the study and come down into the market-place. Hence both loss and gain. There is loss in the consequent surrender of completeness of treatment, and in the avoidance of difficult but accurate technicalities. On the other hand, there is a noteworthy gain in compression, in simplicity, and in directness of statement. The arguments put forward are such as make their appeal to the mind of the plain man without expert knowledge. Moral considerations are placed in the forefront; much is made of the obvious superiority of Christian ethics. In fact, the proof of the truth of the Christian religion is made to rest on three supports—the height of the ideal which it sets before men for attainment, the excellence of its rules of duty towards God and man, the pre-eminence of its Founder as testified by the miracles which He was enabled to work.

In writing of the Bible, Grotius naturally defends positions from which modern criticism would dissent; but it is interesting to notice how soberly he insists on the natural value of the testimony of Biblical authors, their opportunities for accurate observation, and their unmistakable good faith. At the time he was criticized for omitting to mention such fundamental doctrines of Christianity as the Trinity and the Atonement. But the criticism is beside the point. It was not his purpose to write a treatise, however elementary, on Christian Doctrine. Rather he set himself the practical task of proving to inquirers the reasonableness of submission to the teaching of Jesus Christ. What that teaching actually was they might learn from recognized sources, especially from Holy Scripture. Thus we have in the *de Veritate* an excellent example of the Christian Apology written by a layman for the use of the laity. It is brief, pointed, practical, effective. That it answered its purpose may be inferred from the number of editions that were called for, and from the fact that it was promptly translated into several European languages.

3. As dogmatic theologian.—During the lifetime of Grotius, Holland was a hotbed of theological controversy. In these discussions he took a share, influenced not by any partisan spirit, but by the desire to make a good use of his wide and intimate acquaintance with Christian writers

of all ages, and to furnish such a statement of the truth as might help to reconcile discordant opinions. His methods may best be illustrated by his treatment of the two burning questions—the theory of the Atonement and that of Predestination.

(a) Grotius' views on the Atonement are to be found in the *Defensio Fidei Catholice de Satisfactione Christi*, a treatise directed against the opinions of Socinus. He declares himself entirely dissatisfied with the explanation given by Socinus of the connexion between Christ's death and our forgiveness. It is not enough to say that Christ preached forgiveness and gave His life to be a pledge of the truth of His preaching; that by His death He gained the right to distribute pardon; that He gave us a supreme example of patience; and that by the Cross He instilled into us that faith which is the necessary condition of forgiveness. Above and beyond this, Christ's sufferings must be recognized as vicarious punishment, notwithstanding His innocence. For Grotius boldly maintains it to be not of the essence of punishment that it should fall upon the shoulders of the guilty party: 'Affirmo non esse simpliciter iniquum aut contra naturam poenae ut quis puniatur ob peccata aliena.' It cannot, therefore, be said *a priori* that Christ's punishment on our behalf involved an injustice. The view that sin can be regarded as merely constituting a debt, and its punishment remitted without other consideration than the willingness of the creditor to forgo payment, is severely criticized. In opposition to this 'debt and credit' conception of the relation between sin and its punishment, he views the matter as a kind of legal transaction, God filling the rôle of Rector or Governor, and man that of culprit. The Governor's function is explained to be the administration of laws, which have been devised for, and are enforced in the interest of, the common good of the governed. Yet this enforcement is not a matter of mechanical rigidity. Room is left for the exercise of discretion, and the law which requires the due punishment of the offender is subject to dispensation. Having made these preliminary explanations, Grotius proceeds to state his theory of the Divine forgiveness in terms of the law-court. A *solutio* involves the removal of an obligation. In some cases the *solutio* immediately cancels the obligation, as when a debt is fully paid or a penalty fully borne. Let it be remembered that the person who provides the *solutio* need not necessarily be the debtor or criminal, but may be some one else acting in his name. In these cases there is no remission because no part of the debt has been left unpaid, no part of the penalty omitted. But in other cases, where the settlement is not thus complete, there can be no discharge of obligation unless the governor officially intervenes and decides that some offered compensation shall be accounted sufficient for the purpose. In relation to the law, this act of the Governor is dispensation; in relation to the offender, remission. The compensation is, properly speaking, a *satisfactio*, not amounting to a *solutio* strictly so called. Thus Grotius dissents from Anselm's theory of the Atonement, according to which the price paid by Christ was the equivalent of the debt due from man, the infinite value of the death corresponding to the infinite amount of sin. Grotius holds that Christ, by submitting Himself to suffering and death, offered a true *satisfactio*, which, by the act of God as Governor, was accepted as a sufficient reason for granting to guilty man a remission from the obligation to pay the penalty for his sins. When a debt is remitted without any *solutio*, the transaction is called *acceptilatio*. If the discharge follows upon the substitution of some new obligation in place of the old, the term used is *novatio*. With the help of these

technical terms Grotius condenses his theory into the following sentence:

'Sed ut acceptatio, non est solutio rei ipsius debite; non est novatio, sed est remissio antecedentis satisfactionis.' There is no unconditional abolition, there is no payment of the exact debt; there is no substitution of a new obligation; but there is a remission in consequence of a precedent satisfaction.

Two further points remain for consideration. Why did the Almighty adopt this method of requiring satisfaction before forgiveness; and why was Christ the person to provide it? To the first question Grotius replies that there was, indeed, no absolute necessity for the choice of this particular mode of Atonement, but that God selected it in order that He might thereby manifest at the same time the greatest number of His attributes, viz. His clemency, His severity or hatred of sin, and His concern for upholding the law. To the second question he answers that Christ was pre-eminently suited to provide the requisite satisfaction, because of His incomparable dignity, and because of His close connexion with ourselves as head of the body of which we are the members. His death ensured our forgiveness, while at the same time it was a conspicuous demonstration of the Divine justice.

This theory of the Atonement has not escaped severe criticism. H. M. Ozonham writes of it as follows:

'Of all the strange notions that at various times have darkened the revelation of Calvary it would be hard perhaps to find any more strange than this, which eliminates from the greatest fact of history all real significance, while it dares to interpose between man and God the fiction of misdirected vengeance.' (*Orthodox Doctrine of the Atonement*, London, 1881, p. 288).

But in passing judgment upon Grotius it would be unfair to forget that his theory was framed to meet a particular difficulty. Socinus had forcibly urged the incompatibility of free forgiveness with the demand for satisfaction. Let men choose, he had said in effect, between the view that God is ready to forgive sins freely and the view that He requires the satisfaction of the Atonement. Grotius set himself to show that the supposed contradiction does not exist, and that it is possible to combine belief in the freedom of Divine forgiveness with belief in the necessity of the Atonement. To this particular end his argument was well adapted. It disposed once for all of the unsound dilemma which Socinus had set up. At the same time it is impossible to close one's eyes to the very serious defects of this so-called 'Governmental Theory' of the Atonement. The attempt to express the sacred and tender relation between God and the erring soul in terms of human law could not be otherwise than unsuccessful. That the analogy between sin and crime enabled Grotius to bring out some points clearly is true. He showed convincingly the weakness of the conception of sin as mere debt. But the hard and rigid ideas of sovereignty and administration are wholly inadequate for the purpose which they are made to serve. The royalty of God is allowed to obscure His fatherhood. Moreover, the theory of Anselm, with all its shortcomings, had at least suggested a reason why the sufferer should be God Incarnate, viz. in order that there might be an equivalence between injury and compensation. This reason disappears from Grotius' statement of the case, and there is nothing to put in its stead. Grotius throughout appears strangely unconscious that he is speaking of a mysterious truth in merely analogical terms, and that the spiritual fact could at best be roughly indicated by what is, after all, no more than a complicated and highly elaborated metaphor.

(b) With regard to Predestination, Grotius' desire to discover a *via media* between extreme opinions is even more clearly exhibited. The *Conclusio Dissidentium de Re Predestinariae* of *Gratius Opinionum* is exactly what it purports to

be—an attempt as to state the problem as to lessen the bitterness of controversy. Its mediating tendency becomes specially apparent if its statements be contrasted with the outspoken declarations of the Five Articles of the *Remonstrantia*. In a certain sense the Arminians held the tenet of Predestination; but it was a predestination to eternal life, conditional upon the Divine foreknowledge of the faith of the individual. Grotius, avoiding this pronounced Arminian tenet, allows a kind of predestination to be antecedent to the foreknowledge of faith. Such an opinion, he says, if rightly explained, need not diverge from the truth of the Scriptures, Catholic tradition, and right reason. But why God should call some in such a way that He foreknows they will follow His voice, and others in such a way that He foreknows they will not follow, is a mystery belonging to the inscrutable judgments of God, who, indeed, loves all men, but loves some more than others. To the question whether grace is irresistible, Grotius likewise gives a hesitating answer. Of grace there are two modes—illumination and regeneration. The one concurs the mind, the other the will. Both considered in themselves are irresistible, and man in relation to them is entirely passive. But to these Divine operations certain human acts are subordinated, such as attention and the use of the regenerate will in faith and penitence. In no case must it be supposed that the will of man is physically determined: *'Libere credit homo, sed liberate non nata sed data.'* In certain cases, Grotius is ready to recognize the possibility of an absolute decree, ensuring the means which shall inevitably produce faith and consequently salvation. The faith of the elect will not fail finally and totally, though they may for a time fall away from the justifying grace of God.

From this review it may be inferred that the opinions of Grotius on the subject of Predestination were not so dominated by any single and consistent principle as to issue in an orderly and logical system. Himself drawn this way and that by opposing considerations, he endeavoured to patch together a compromise which should secure the assent, if not the approval, of hostile factions. But, when party passions run high, balanced statements, however carefully constructed, are apt to be cavalierly treated. At any rate this was the fate of Grotius' well-meant efforts. He did not succeed in composing the quarrel between Remonstrants and Counter-Remonstrants. Nor did his work in this direction contain elements destined to live. Whereas his theory of the Atonement undoubtedly influenced the subsequent current of theological thought on that subject, no similar effect appears to have been produced by his attempt to analyze the meaning of Predestination.

4. As Biblical commentator.—Grotius was a voluminous commentator. Of the four folio volumes in which he collected theological works were published in 1670, no fewer than three are filled with his annotations of the OT and NT. From Bossuet—a most hostile witness—we get unimpeachable evidence of the authority acquired by his exegetical writings during the latter half of the 17th cent. (*Œuvres*, ii. 58). It was a success well deserved. Grotius' system of interpretation was based upon sound principles. Rejecting the rigid theory of verbal inspiration which had practically rendered impossible any rational treatment of the Sacred Text, he recognized and allowed for the presence of the human element in the work of the Canonical authors. In an age when it required some courage to make the avowal, he declared himself unable to hold that all the books contained in the Hebrew Canon had been dic-

tated by the Holy Ghost. What need was there that the Histories should have been so produced? It was enough that the writer's memory should be strengthened and his accuracy in consulting authorities ensured (*Vol. Pro Pace; de Canon. Jure*). The words of Scripture were to be interpreted according to the recognised rules of grammar and philology, on lines independent of dogmatic considerations. It is clear that Grotius had laid to heart the lessons which he had learned from Scaliger. In applying his principles he displayed a rare soundness of judgment which particularly attracted the admiration of that pioneer of Biblical criticism, Richard Simon. Fully accepting the reality of prediction in Jewish prophecy, he held that the passages in question generally referred to the fortunes of the Jewish people, and only in a secondary and allegorical sense found fulfilment in Jesus Christ. With regard to the use in the NT of quotations from the prophets, he maintained that for the most part they were introduced for the purpose of enforcing a faith already existing, and that, in controversy with the Jews, the Apostles had preferred to base the proof of their Master's Messianic dignity on His miracles and His resurrection (cf. note to Mt 1st).

In the 17th cent. textual criticism was still only feeling its way forward without fixed principles to guide it. In this department of study, as in so many others, Grotius showed to advantage in comparison with his contemporaries. A collection of his suggestions with regard to various readings is printed as one of the Appendices attached to Walton's *London Polyglot* (vol. vi. App. xv.). The higher criticism was even further removed from the horizon of that age. Yet it is interesting to notice how Grotius had come to the conclusion that Ecclesiastes is a pseudonymous and post-exilic work, and how he attempted to detect Christian interpolations in Sirach and the Book of Wisdom. Examples of his independence in matters of exegesis, and of his freedom from the shackles of mere tradition, will be found in his comments on the following passages: Gn 1st 3rd, Ps 2, 10, Is 7th 9th 11th (cf. F. W. Farrar, *Hist. of Interpretation*, London, 1888, p. 253 n.).

5. As moralist.—In referring to the events of Grotius' life, we have already noticed the favour with which the *de Jure Belli et Pacis* was received. From the point of view of the jurist, the publication of this book may be said to mark the initiation of the new science of International Law. For, although Francis à Victoria, Balthasar Ayala, and Albericus Gentilis had already written on the subject, no previous work had commanded any large measure of assent. A general agreement as to first principles was still lacking. The treatise of Grotius provided what was wanted. Within thirty or forty years of its publication it was generally accepted as authoritative by the professors of Continental Universities. The students of ethics, however, will take more interest in the moral principles upon which Grotius builds up his structure of jurisprudence. Writing at a time when no such thing as a concert of Europe was imagined, he was precluded by the nature of his subject from appealing to any positive enactments. He was, therefore, compelled to find a sanction for his proposed rules of war in that which is antecedent to all institutions. With a fine confidence he made his appeal to Nature, teaching that the source of rights is to be found not in any bare calculation of expediency, but in the moral constitution of man. Moreover, it is of the essence of his system to consider man not in isolation but as a member of a community. Human nature, even apart from any specific want, constrains men to form a society which, in order to satisfy their instinct, must be peaceably and ration-

ally constituted. Utility, indeed, affords the occasion for the introduction of civil law, but is not its source (Art. 16). Grotius complains that previous writers had mingled together in confusion law natural and Divine, the law of nations, and the law of particular States. In making his appeal to the law of Nature, he maintains its validity even upon the impossible supposition that there is no God, or that He takes no account of human affairs (Art. 11). He holds that its pronouncements can be deduced from notions that are self-evident and impossible of denial except by those who do violence to their own reason (Art. 10). Thus, although Grotius was not specifically concerned with questions of right and wrong in relation to the conscience of the individual, he clearly insists on the possibility of moral sanctions independent of religion and revelation. In so doing he prepared the way for the modern development of ethics as a separate science.

6. General estimate of Grotius' character and influence.—Grotius possessed untiring industry, a highly trained and penetrating intellect, and a vast erudition, together with absolute sincerity of purpose and unquestionable honesty. These qualities attracted, as they most thoroughly deserved, the profound respect and admiration of his contemporaries. But he was never a great leader. Some elements of force were lacking. In religion he was earnest, thoughtful, and devout. But he hardly gives us the impression of being irresistibly compelled to deliver his testimony by the indwelling power of conviction. His was not the mystic's direct and overwhelming vision of Truth. His faith had its roots in his conscience and his reason, and in a well-considered deference to authority. Though he wrote much on disputed religious topics, it was not his natural bent. In answer to a letter from de Thou strongly dissuading him from taking any part in theological controversy, he replied that he found himself obliged to do so by his love of country, his wish to serve his Church, and the request of those to whom he owed obedience (*Ep.* 66). It is an accurate statement of the considerations by which, against his inclination, he was impelled into controversy. He was emphatically a lover of peace. Above all things he desired to promote the cause of Christian reunion. In pursuit of this great end he was willing to concede much to Roman Catholicism; and, when writing on this subject, he so expressed himself as to lead many to suppose that he would eventually join that communion. That he came to view with increasing disfavour and apprehension the dogmatic instability and sinister tendencies of Protestantism is undoubtedly true; but no direct evidence is forthcoming to show that he ever intended to make his submission to Rome. It is, therefore, idle to speculate on what he might have done, had his days been prolonged. When it came, his death was the close of a conscientious and laborious life, the fruits of which have not ceased to be of service to succeeding generations.

GROVE.—See TREES AND PLANTS.

GROWTH (Biological).—A distinctively vital process, characteristic of all living creatures. It is closely associated with development (*g.u.*) and with

reproduction, which is often a more or less discontinuous growth. For practical purposes it is usually enough to say that growth is increase in the size or volume of an organism, and usually implies increase in mass or weight. But this definition is too wide, since there is plainly considerable difference between an increase of size due to a subcutaneous deposit of fat and the slow, continuous growth of a lean fish like a haddock; or between an enlargement due to the accumulation of watery fluid and the fine growth of an embryo's brain. When a dried turnip is surrounded with water, or when a frog leaving its winter-quarters in the mud passes into the pond, we see increase in size, but no one would call this growth. The fact is that more than one word is required to cover the phenomena which may be in a general way referred to as growth. Organic growth is essentially a regulated increase in the amount of the protoplasm and intimately associated substances. It is much more than accretion, it is an active process of self-increase. Unlike a crystal's growth, it comes about at the expense of materials different from the growing substance—often very different, as in the case of plants which feed on air, water, and salts. Unlike mere expansion, it is regulated in relation to the organism, or organ, or cell that is growing.

Conditions of growth.—(a) *Nutrition.*—It is a fundamental condition of growth that income should be greater than expenditure. Growth primarily depends on the assimilation of food—on there being a surplus in the continual process of self-renewal. It is not inconsistent with this to say that an organism may grow larger for a time without taking in any food, for what happens in such a case is a change of condensed stored substances into more dilute and bulkier form. The shoots of a potato sprouting in a dark cellar show true growth, though the organism as a whole is actually losing water in transpiration, and, as its respiration shows, breaking down carbon-compounds. Nor is it inconsistent with our previous statement to recognize the fact that, during the period of most rapid growth in tadpoles, the imbibition of water is more important than the assimilation. But during this period the weight of dry substance in the tadpole does not increase at all.

(b) *External agencies.*—Growth, like development, has its optimum environment, but this differs greatly for different kinds of organisms, and it is difficult to make general statements in regard to the agencies that favour or hinder growing. As light is essential for the assimilatory process (photo-synthesis) of ordinary green plants, we may say that light is a condition of their growth; but as a matter of fact light is directly retardative. The strongly refractive, so-called chemical rays, which have little or no effect on assimilation, have an inhibiting effect on growth. Other things being equal, plants grow more rapidly during the night than during the day. The growth of plants is also dependent on humidity, the amount of oxygen, electrical conditions, temperature, etc. The optimum temperature usually lies between 22° and 37° C., and there is a complete cessation of growth in plants at a temperature less than 0° or higher than 40°–50° C. For animals the general statement may be made that lowering the temperature slows growth; it does so in part by retarding the process of cell-division, and this, in part, by retarding the formation of nucleic compounds in the cells. For a developing chick the temperature above which death occurs is 43° C., the minimum at which growth stops is about 28°, the normal limits are between 35° and 38° C.

(c) *Internal stimuli.*—Growth is a regulated

phenomenon, occurring in a certain sequence and within certain limits. The regulation has reference to the specific constitution of the organism (its structural organization on the one hand, its characteristic metabolism on the other), and that means that it has reference to the past history or evolution of the organism. This regulatedness is one of the criteria of organic growth; it differentiates it from the mere multiplication of chemical substances, or from the continued action of a ferment. But it should be remembered that in the growth of crystals there is also some degree of regulation in relation to the already existing architecture.

One of the ways in which the regulation of growth is brought about within the organism is by means of internal secretions or 'hormones.' The internal secretions of the thyroid gland and the pituitary body have a specific regulatory effect on the growth of the brain, the subcutaneous tissue, and the bones. The internal secretions of the reproductive organs have a definite effect on the growth of parts of the body, both of important organs like mammary glands and of trivial decorative structures, like some of the secondary sexual characters. In the galls formed by plants, say in response to the stimulus of the salivary secretion of the larval gall-insect, we have very striking examples of specific secretions inducing specific kinds of growth. It is said that, in the growth of the roots of some plants, specific chemical substances are formed which inhibit further growth. In short, facts are accumulating which show that particular parts of an organism have their growth regulated by specific internal secretions. It has been proved that some, if not all, human giants are the result of exaggerated pituitary stimulus, and it is possible that some kinds of dwarfs are due to a deficiency of this stimulus.

The correlation of the growth of different parts of the body must be recognized as a fact even though there is no available physiological interpretation, e.g. in terms of the formation of specific secretions. There is great inequality in the rate of growth of different parts. In cases of under-feeding there is great diversity in the way in which the growth of different parts is affected. More familiar and perhaps simpler are cases where an organ, such as the heart, responds by increased growth to increased demands upon it.

In his elaborate discussion of growth, Herbert Spencer sought to show that it varies (other things equal)—(1) directly as nutrition, (2) directly as the surplus of nutrition over expenditure, (3) directly as the rate at which this surplus increases or decreases, (4) directly (in organisms of large expenditure) as the initial bulk, and (5) directly as the degree of organization. This kind of analysis is valuable, but what is most needed at present is an extensive series of measurements of growth under diverse conditions.

Periods and rates of growth.—In a segmenting ovum we see development but no growth. Soon, however, development and growth proceed hand in hand, both very rapidly. Later on, when development is proceeding slowly—all the chief steps having been taken—growth may go on very vigorously. Thus in the pre-natal life of man great strides in development are taken in the first three months, along with very rapid growth. Thereafter, when the developmental steps are less striking, the growth is for a time very rapid. From the third to the fourth month the increase in growth is 600 per cent. After this it drops quickly and is barely 25 per cent. in the last month of pregnancy. In some organisms the growing period is very sharply punctuated; thus in insects with complete metamorphosis all the growing is done in

the larval period. In other cases growth may go on as long as the organism lives and feeds. Thus we may distinguish the definite or determinate growth of birds and mammals from the indefinite or indeterminate growth of reptiles and fishes. In other words, some organisms have a definite limit of growth—the physiological optimum—while others have not.

It is partly, no doubt, because of dependence on nutrition and on external agencies that growth is so often 'punctuated,' in some detail, rather than continuous. Every one is familiar with the rings of growth seen in the cross-section of a tree and with the lines of growth on the outside of shells. Similarly the coming and going of the seasons in for many fishes accurately registered by the concentric zones of growth seen on the scales and even in some of the bones. But besides the periodicities of growth which can be reasonably correlated with external periodicities, such as those of the seasons, there are others of a more recalcitrant nature, such as the phases of quick growth and slow growth that alternate in the development of some animals, as Fischel has shown, for instance, in the embryo of the duck.

Active growth in multicellular organisms implies the growth of the individual cells and ensuing cell-division. The cells may grow by taking in water, and by accumulating products of metabolism, but essentially by having a surplus in the renewal of the living matter. Spencer, Leuckart, and Alexander James have thrown light on the limit of growth in cells and the division which usually occurs when that limit is reached. When a spherical cell has quadrupled its original volume, it has by no means quadrupled its surface, the one increasing as the cube, the other as the square, of the radius. But, as it is through its surface that the cell is fed, aerated, and purified, functional difficulties set in when the growth of surface begins to lag behind the growth of the cell-substance. The maximum safe size is the limit of growth, and it is then that the cell so often divides, halving its volume and gaining new surface. As a general rationale, applicable *mutatis mutandis* to organs and organisms as well as to cells, the suggestion thus briefly outlined is very helpful. Haveri and Richard Hertwig have also pointed out that the limit of growth in cells is in part determined by the ratio of the amount of nuclear material in the cell to the amount of cytoplasmic material.

The rate of growth has been studied carefully in a few cases—e.g. in guinea-pigs by Minot—and the facts are striking. In guinea-pigs there is in both sexes a decline in the growth-rate almost from the moment of birth. The rate falls rapidly between about the 5th day and the 50th, from the 50th day onwards more slowly, until growth stops. Moreover, this post-natal decline in the growth-rate has been shown to be a continuation of an ante-natal decline. As Jenkinson puts it, 'The younger the animal, the faster it grows; the more developed it is, the more slowly it grows. The rate of growth, in fact, varies inversely with the degree of differentiation' (*Experimental Embryology*, p. 62).

In man, according to Robertson's remarks, there are three maxima of rate of growth. The first is before birth, but its precise occurrence is uncertain. As we have mentioned, the increment from the 3rd to the 4th month is 600 per cent. It then falls with great rapidity between the 4th and 6th months, and thereafter more slowly till birth. The second maximum is in early infancy or childhood. Minot puts it in the first year, when the increase of weight is about 200 per cent. Robertson puts it in the fifth year. The third maximum is near the time of puberty—about the age of 13 for girls, of 16 for

boys. It has been suggested by Robertson that the first period is predominantly characterized by the synthesis of nuclear compounds, that the third is one of cytoplasmic increase, while the second is intermediate and represents a contemporaneous occurrence of both synthetic processes. It is important to notice that the growth of women is very different from that of men. It is not only 7 per cent less, but it is on a different scheme, with the parts in different proportions.

The law that the rate of growth varies inversely with the degree of differentiation has been verified in a few cases in regard to individual parts. 'Thus human stature exhibits the same law of growth-power as is shown by the weight of the whole body, with this difference, however, that the rate is not so high in early stages, the descent in later stages less abrupt' (Jenkinson, *op. cit.* p. 68).

When we say that growth is a regulated increase in the amount of living matter, we refer to such facts as its periodicity, its varied rate in different species, and its general correlation. Kellicott has emphasized the same idea by calling attention to the diversity in the rate of growth of different parts of the body. In the smooth dogfish (*Alopius canis*) the organs, or perhaps tissues, seem to grow as more or less separate units. 'Each organ grows in its own characteristic way—each has an individual form of growth curve' (Kellicott, *op. cit. infra*, p. 508). The rates of growth of the brain, the heart, the pancreas, the spleen, and so on, are different from the rate of increase in total weight. In animals of indeterminate growth, like fishes, the brain, heart, digestive glands, and fins do not keep pace with the general increase of trunk musculature and connective tissue; and a loss of physiological equilibrium results. The determinate and more perfectly regulated growth of birds and mammals, for instance, is an obvious improvement on the more primitive unlimited growth.

When we consider growth in its entirety as a regulated self-increase of the whole organism and of its parts, we see how far it lies beyond the present limits of physico-chemical interpretation. The analogous phenomena of chemical polymerization and of the increase of crystals in a solution are interesting, but they do not at present bring us nearer understanding organic growth.

J. ARTHUR THOMSON.

GROWTH (Moral and Religious).—I. DEFINITION AND SCOPE.—This article has for its scope the sum-total of the moral and religious changes through which a child passes in the attainment of moral and religious maturity, these changes being considered as natural processes.¹ Two distinctions are to be made at the outset. (1) 'Growth' as here used is a more specific term than 'increase.' In addition to the effects of mere increase in knowledge and power, we have to consider changes in children's interests, points of view, and feeling-attitudes. (2) There are two factors in the changes from moral infancy to moral maturity—the congenital or constitutional factor, and the individual's own experience. The former may be illustrated by the mental phenomena of puberty. Here a

¹ The arts, *Abolishment* and *Conscience* contain data and analyses that are presupposed in the present discussion.

change occurs that does not depend for its general character upon the individual's experience. On the other hand, many features of the individual's moral progress are after-effects of his previous experience. Stout and others propose that the term 'development' should be used for congenitally determined changes, and 'growth' for the others.¹ The present article will adopt this nomenclature.

Development and growth do not, however, denote two independent series, but one series of changes each of which has the two discriminable factors. Thus, a hungry baby is bound to make some kind of demonstration, but what kind depends upon the experiences that have previously been associated with feeding. Just so, the ripening sexual instinct is bound to manifest itself morally, but the conduct of each pubescent boy or girl depends partly upon habits of thought, speech, and conduct already acquired. Development is the manifestation of instincts and impulses, of which the food-instinct and the sex-instinct are in a peculiar sense basal, but which include many other unlearned tendencies, such as curiosity, play, more gregariousness, emulation, and sympathy.² Such tendencies are always one so-efficient in character, but of themselves they do not define one's moral attainments.

'Man's original equipment does for him and adapts him, directly, only for such a life as might be led by a family group of wild men among brute forces of land, water, stars and sun, frost and berries, animals and other family groups of wild men. But man has created a new world, in which his original nature is often at a loss, and against which it often rebels' (Thorndike, 91 f.).

Each item that is ascribed to development (as distinguished from growth) is a generic tendency rather than a specific attainment. What is specific is the particular direction given to the tendency by the individual's own experience in a particular environment, and this is what we mean by growth. While the general direction of both racial and individual progress is in some sense pre-determined by original nature, the character of each individual depends also upon accumulation of the effects of particular reactions to particular stimuli.

Because this cumulative process is itself spontaneous and constitutional, we are justified in calling growth a natural process. Further, we are justified in designating as natural any common method whereby the species as a whole, or a race of men, expresses a fundamental tendency of human nature. Thus, the monogamous family is a natural, though not the exclusive, instrument of the reproductive instinct. In a parallel way, society at large is natural; and, consequently, the cumulative influences of society upon the individual are natural also. An unnatural reaction is one that either defeats an instinct or fundamental tendency, or (though it satisfies an individual) is incapable of social approval and adoption.

II. CHARACTERISTICS OF THE DIFFERENT STAGES OF GROWTH.—Efforts have been made in recent years to construct out of congenital factors alone a picture of the normal progress of the child's personality. The suggestion of such a possibility appears to have come from the fact that the human embryo assumes successively certain forms that correspond in part to an ascending series of embryonic forms of inferior species. Here, to some extent, the individual body recapitulates the physical evolution of the species. May not the mental life of the immature individual similarly recapitulate the mental history of the race? This hypothesis was adopted in such a rigorous fashion as to give an impression that the one great essential for the maturing of character is that a child should run through a series of congenitally fixed periods in each of which

one's social attitudes are pre-determined (see Literature at end of art. ADOLESCENCE). This notion lent support to the euturo-speech theory of education, according to which a child can best assimilate our present culture by first assimilating the products of earlier cultures in the order of their origin.³ The recapitulationists went for a time to remarkable extremes, e.g. accounting for our fondness for water by reference to the aquatic life of our remote ancestors, and for the attractiveness of trees by reference to our arboreal forbears. But not only has evidence for recapitulation in any such extreme sense not been forthcoming; the challenge that it has offered to the educational world has been answered by fundamental dissent from the educational doctrines of both the older culture-speech theory and the later recapitulation theory. It is not denied that in such respects as simplicity or complexity of organization, immediateness or remoteness of interest, and the growth of inhibitions, there is a certain kind of recapitulation or parallelism. Nor is it denied that the adaptation of the literature of the world to child interests shows a partial parallel. But the notion that the moral interests and attitudes of children are congenitally restricted to what was most prominent in earlier cultures is rejected. A child is interested first of all in what is immediately about him. The social environment to which he has to adjust himself is not a primitive one. It sets its problems upon its own plane, and the child mind goes at them directly, not merely through the intermediation of culture upon some other level. Indeed, a child cannot live through a genuinely savage period without having a savage social environment. The cultural progress of a child, then, is not merely a development, it is also a growth, in which motives and moral attitudes (as well as applications of motives) are largely determined by present social experience.

What, then, are the natural periods or stages of change from the moral and religious condition of an infant to moral and religious maturity? It will conduce to simplicity if 'religious' be here understood as synonymous with 'Christian,' and the Christian religion be assumed to include morality (the second Great Commandment). Re-statement can easily be made by the reader for any other religious or ethical position. It is now clear that to define these periods of growth we shall need to combine three points of view: (1) phenomena consequent upon mere increase of knowledge or of power, physical or mental; (2) the relative prominence of different instincts or unlearned tendencies at different ages; (3) the changing contents of the child with the present social order.

Comparatively little attention has been given to the growth of the moral personality in its unity and in relation to its moral environment. Periods of the physical life have been extensively studied, and isolated phases of the mental and moral life have been subjected to analysis, but what we now require is to see the individual child in his integrity as a person reacting to the ordinary environment and growing thereby. The chief essay thus far made in this field is E. A. Kirkpatrick's *The Individual in the Making*. His division and general description of the pre-adolescent years is the basis for the analysis of these years that now follows. But various modifications of his terminology and description have been made, considerable discussion of the method of religious growth has been added, and an independent analysis of the adolescent years is offered.

1. First Year.—*The pre-individual stage.*—The infant reacts to things and to persons in much the

¹ See Baldwin, D.P.P., art. 'Growth (Mental)'.
² The most thoroughgoing analysis of these unlearned tendencies is that of E. C. Thorndike, *Education*, New York, 1913, ch. v.

³ For a brief statement, with bibliography, see art. 'Culture-Speech Theory,' by John Dewey, in F. Monroe's *Cyclopedia of Education*, vol. 1 (1911).

same way. There is little realization either of one's individual selfhood or of other persons as objects that have thoughts and feelings. Nevertheless, a basis for genuinely social habits can be laid now by associating pleasure with the infant's experience of persons. Such association with persons is the surest quickener of intelligence, and the surest beginning of a spiritual and moral interpretation of one's world.

2. Ages 1 and 2.—The period of preliminary socialization by imitation.—Even yet the child does not steadily distinguish himself from others. But his ability to walk and to talk, and his increasing control of hands and arms, make possible greatly increased interaction with other persons, and increased participation in the common consciousness of the family.

'He acquires many antipathies and likings that he feels, but cannot explain, in later life. . . . If the persons around him show fear of worms, insects, snakes, darkness, lightning, etc., he shares their feelings, and may in later life be unable to overcome his timidity and repugnance, although he knows that there is absolutely no harm in worms or heat for such feelings' (Kilpatrick, 37).

In the same way attitudes towards persons, and even towards one's own pleasures and pains, can be educed and formed into habits even at this early age.

3. Ages 3, 4, and 5.—The period of preliminary individualization.—The child now discovers himself as an individual, and he experiments with his own selfhood as contrasted with both things and other persons. A boy in his fourth year requested of his mother something that was entirely beyond her power. When she attempted to explain, he cried out, 'You can, too! You're a bad mamma! I haven't any mamma any more!' Here is no longer the complete absorption in wee that is characteristic of the preceding years, but a self-consciousness and an effort to find one's place among persons. Towards the end of this period there is likely to appear sheer contrariness, or apparently unmotivated refusal to conform to social expectation. But such refusal is often, no doubt, a genuine experiment which brings the pleasure of self-active exploration in new fields. This individualization offers new opportunities for moral and religious growth. Individualization is a necessary foundation of character. Therefore the process should be encouraged, not hindered. This preliminary self-assertion expresses no moral fault, and it should not be treated as a violation of a moral standard already understood and assimilated. On the other hand, conformity without experimentation should not be prized. This implies that the best moral results are to be expected where a child finds out for himself that certain kinds of conduct bring mutual pleasure, and other kinds mutual pain. That is, his experimentation, while free, should be within a social group, so that success shall mean a shared pleasure, and his earliest self-consciousness be a social self-consciousness. If, now, the family be a religious one, with habitual outward expression of its faith in speech, in family devotions, in church attendance, in religiously motivated conduct, the child, even at this age, can begin the conscious assimilation of religion. Christian family life is naturally and normally the introduction of the child to the duties and privileges of the family of God (see CHILDHOOD, § 4).

4. Ages 6 to 11 inclusive.—A period of socialization by means of regulation and competition.—(1) The child now begins school life, with its new social environment. The rules or ways of securing social co-operation in the school play a large rôle in the child's experience. (2) In the home also rules are now imposed with increased assumption of the child's responsibility to obey. (3) Association with other children in games and plays extends

greatly, and the necessity of playing according to rules increases throughout the six years. This necessity is due partly to the possession of growing strength, initiative, resourcefulness, which would be destructive if organization did not increase. It is due also to the increasing remoteness of the ends sought. Finally, it is a consequence, in part, of the development of instinctive tendencies which Thorndike calls 'mastery and submission,' 'approving and scornful behaviour,' and 'emulation or rivalry.' Games during these years work out these tendencies on a larger and larger scale. But another factor also enters. Competition changes its character as the years go by. At first each individual plays for his own advantage or honour, as in the game of 'tag.' Then come games in which each child plays on a 'side.' But still the individual seeks individual success, with little or no 'team work,' as in the game called 'pull away.' But towards the end of the period there is an approximation to true team games, that is, games in which functions are specialized and the player seeks the success of the team rather than personal glory. But the approximation is ordinarily only a distant one. Individualistic and social impulses still struggle against each other in a most interesting manner, as can be seen in the efforts of boys of twelve to play football. Clearly we are witnessing the approach of the bloom-time of one of the socializing instincts.

(4) Towards the end of this period there is another manifestation of the same thing in the combination of leadership and humming. Girls form 'sets' and boys form 'gangs,' with a spontaneity and impulsiveness that point towards an instinctive origin (see CHILDHOOD, § 3). (5) In this period children usually experience important contacts with society in a larger sense, as in the Church, in social customs, in the ordinances of a city, or the laws of the State. The grown-up world is likely to appear to children in their impetuosity as chiefly a hindrance to freedom, as negative regulation. Probably this cannot be altogether prevented. Yet it is important that children should discover that the regulations of society are not arbitrary, and that freedom comes through obedience to the conditions of socialized existence. Here the family organization is likely to be the determining factor. Arbitrariness, or what seems like it, on the part of parents may easily intensify the already strong tendencies to individualistic self-assertion on the part of children; and this experience, if it is cumulative through the whole period, may permanently stunt the personality on its social side. In the family, and in the Church, the child should be conscious not so much of regulation as of fellowship. In this way he will have a means of interpreting the values of his own little competitive organizations, and he will have reinforcement for the developing social instinct. (6) Yet the special mark of this period cannot be any profound socialization of motives. The program of character takes the form, rather, of a heightened sense of laws, of rights, of penalties, of the necessity of co-operation, and of the force of social opinion. That is, the will is being socialized chiefly on the plane of 'the law' as distinguished from 'grace.'

(7) But it is a mischievous exaggeration to say, as is often done, that this period is naturally one of unrelieved egotism. The narrow range of experience, the lack of foresight, the seeking of proximate rather than remote ends, the impulsiveness—these do, indeed, render impossible the broad sociality that adults demand of themselves. But against all this we must set not only the fact that children spontaneously, apart from all instruction, organize themselves socially, but also these two capital evidences: First, children very early show

traces of the parental instinct. This should not be confused with the sexual instinct, which ripens later. The parental instinct is manifested towards babies and smaller children, domestic pets, dolls, toys, and parents. Girls display it in certain directions more than boys, but it is actively present in both; and it should be developed as a softening and socializing force. Second, children respond to parental affection with real devotion. Admiration amounting in many cases to worship, family loyalty, and pride, a genuine glow of affection—these are the rewards which parents may reap who really share their life with their children.

(8) The religious significance of this period can easily be gathered from what has already been said. If the social environment of a child is a religious one, he naturally conforms to it under the same conditions that favour conformity in other respects. The fundamental condition is that he should realize himself as a part of an actual religious fellowship, as his father's family, a Sunday-school class, or the Church. Religion will then be to him an extension, through imagination, of social experience on the level of his present life. Laws of conduct, with the consequences of right and wrong acts; admiration and condemnation; the inclusion of God in one's family life, and loyalty to Jesus as one's leader—these will sufficiently indicate the nature of the religious experience at this age. Neither intellectual nor moral depth is to be looked for as yet.

5. Ages 12 to 14 inclusive.—*Early adolescence.*—No single phrase can adequately characterize the method of socialization that now sets in. For, on the one hand, there appears a tendency to take a self-assertive or at least independent attitude towards social authority (as in the family), and, on the other hand, to deepen one's social attachments ('gangs' and 'sets,' personal friendships, loyalty to 'teams,' partisanship). The whole expresses the approach of puberty, or the attainment of it. Here the basal fact is the ripening of an instinct. For the sake of simplicity, the age characteristics of boys are taken as our starting-point. Beginning with this period, deduction should be made, therefore, for the earlier development of girls; and the deduction should increase as the years go on—from about one year at the beginning of adolescence to about three or four years at its close. Both the apparently contradictory marks of the period above named have a positive moral significance. The new attitude towards social authority is not a mere revolt, as the complementary fact of the deepening of social attachments shows. Rather, the profounder socialization that is being prepared for—requiring, as it will, the steady devotion of personal conviction and reasoned loyalty—presupposes the detachment of the individual consciousness from chance groupings and from control by mere rules passively submitted to. Thus, increasing individualization and increasing socialization are merely complementary phases of a single process. Rather, they may be; but the possibility also arrives for a deeper selfishness than any that childhood knows. Self-assertion often becomes revolt, open or clandestine, against the social order. There is a sudden accession of juvenile crime at precisely these years. Yet even in his crimes the youth commonly reveals the socializing process that is going on, in the fact that his criminal acts are usually done in 'gangs,' or at least prompted and supported by gang enterprises and sentiment. The moral opportunity of parents and teachers is clearly indicated. It is to release the youth progressively from childhood's restraints, and to promote his free devotion to worthy socially-organized activities. There is now a rather general recognition that the youth's

interest in heroic men and women furnishes an important clue to some of the best material for moral impressions, and that his penchant for organization can be morally utilized by promoting clubs for outdoor sports and other appropriate activities. These things are now widely utilized also in religious instruction and training. The Young Men's Christian Associations in particular have seized upon the organizing impulse, and used it effectively. There is now a large literature of religious and moral work with boys, and most of it makes some sort of boys' organization a central consideration. Further, on the part of Sunday schools, along with a growing use of hero studies, there is wide experimentation in methods of social-religious group life. Confirmation or Church membership now makes a vital appeal to the grouping impulse in many youths.

6. Ages 15 to 17 inclusive.—*Middle adolescence.*—For the general moral significance of the attainment of reproductive capacity, see ADOLESCENCE. The main differences between this period and the one just described are fittingly indexed by the fact that, whereas in early adolescence the sexes have a sort of repulsion for each other, in middle adolescence sex attraction becomes clear and conscious. Here, again, we find a period of moral growth fundamentally determined by instinctive development. The moral possibilities and the moral dangers radiate from the same centre. The misuse of sexual power is unquestionably the chief moral failing of humanity. But around the largely instinctive preparations for family life gather some of the greatest moral forces. If we put together the two facts of increased capacity for sentiment, and the necessity of reckoning oneself henceforth a man or a woman, not a child, we shall see that we are now near the climax of the moral growth of self-conscious individuality. Middle adolescence is more difficult of treatment than the earlier periods, however, for the reason that the conditions become so much more diverse. For example, we must now deal with the moral growth of persons the large majority of whom are engaged in industries, either within or without the home. Some of the effects of shop and factory labour upon adolescents we can already discern. From the monotony and fatigue of their daily work, for instance, they react towards flashy, exciting, and often perilous pleasures. On the other hand, religious conversion occurs more frequently during these years than at any other period of life. Indeed, the ages of sixteen and seventeen mark the climax in the age curve for conversions in so many different and widely scattered groups that we cannot doubt that we are dealing here with a natural law. But misunderstanding of the significance of such facts is easy. What is proved is that, in populations subjected to certain emotional incitements, the largest response comes from young persons of sixteen and seventeen. This by no means proves that capacity for religion suddenly awakes at this age. It proves only that responsiveness to certain kinds of appeal is at a maximum. A complementary indication of a natural law may be seen in the fact that religious Confirmation almost the world over has tended to seek its centre of gravity in point of age in the earlier period, not far from the age of fourteen. At fourteen the religious response is social in quality, but not chiefly emotional. What we must recognize as the peculiarly important fact about middle adolescence is that the new capacity for sentiment carries with it a certain plasticity that is of exceeding importance for education. This plasticity does not exist before; and, once gone, it is likely never to return. As has been indicated, it carries within itself certain con-

¹ See Jane Addams, *The Spirit of Youth in Our City Streets*, New York, 1908.

straitened tendencies. The moral interests of the race, therefore, demand that these years should be devoted to education—possibly in connexion with industries, but certainly with opportunity for freedom, play, idealization, experiment.

7. *Agnes 18 to 24 inclusive.—Later adolescence.*—This deserves to be counted as a period, not because of any new developmental factor, but because of the changing social relationships and functions of the young. The youth is now fully his own master, the maiden (in her different way) her own mistress, and upon each now comes the full authority and responsibility of a citizen. Marriage is to be contracted; an occupation is to be entered upon; legal majority with all its responsibilities is attained; at last one is a full member of society and of the State. The general effect is to check the emotional ferment of the preceding period, and to give greater place to rational reflection and deliberate decisions. Bearing in mind that mental and moral growth is checked for multitudes at various stages, especially of adolescence, and that many youths squander their powers by frivolous living, we may say that the normal line of moral and religious growth at this period has as its main characteristics independent reflection and the solidifying of the will by the bearing of responsibilities. A frequent result of the deepening realization of responsibility for one's own thinking is doubt concerning commonly accepted views, whether in religion or in politics. Indeed, dissent from the socially accepted is a frequent phenomenon of adolescence at all its stages. But the quality of the dissent is likely to change from arbitrary impulse at the beginning to emotional unrest (as doubt of one's status before God), and, finally, to the steadier questioning of a mind that is interested primarily in seeing clearly for itself the foundations of things. During later adolescence the mental and moral life commonly takes a set (as conservative or radical), and fixes upon interests (intellectual, social, moral, recreational) that exercise a fundamental control over one's maturity. One's acquisitions go on increasing, and subdivision and differentiation occur within one's thinking and one's purposes, but the fundamental motivation of the whole is generally determined before the end of adolescence.

III. *GENERAL PRINCIPLES.*—It remains now to indicate certain general principles that apply to this whole series of growth periods.

1. A general description of vital processes as complex as those with which we are here dealing has inevitable limitations. Growth periods and transitions have, for instance, no such sharpness as any numerical division must have. Such divisions, too, can indicate only a central tendency from which there is much variation. Further, the qualitative description can never adequately represent the temperamental and other variant shades that a given mental tendency may take. Nevertheless, the fact that, to use common parlance, 'no two children are alike' is misused and becomes misleading whenever it seems to justify the abandonment of definite methods and expectations.

2. A single central principle of moral and religious growth can be discerned throughout these periods, namely, the reciprocal individuation and socialization of consciousness by participation in the social order. Intercourse with persons is the primary condition of the attainment of reflective self-consciousness. The individual's acquisition of language is, for example, a crucial point for his whole growth. Further, the social inhibitions and the social pleasures to which the individual is gradually introduced both awaken and socialize self-consciousness. Hence the incomparable importance of group life for the child at every period—

the family group, the play group, the school group, the 'set' or 'gang,' the civic group, the national group, the Church group, world society, the Kingdom of God. The degree and the form of one's participation in these groups depend partly upon the ripening of instincts, partly upon increase in knowledge and in power; but none of the periods of growth is strictly either pre-moral or pre-religious. The social principle, which has its culminating definition in the notion of an ideal society or family inclusive of God and men, applies throughout. The religious family includes the Heavenly Father in the domestic consciousness to which the youngest children adjust themselves; and thus it may go through their enlarging experience, the social consciousness being in varying ways religious at all stages of life. Indeed, nothing short of religious hope, faith, and loyalty gives uncompromising and unhampered expression to the social principle of moral growth. In religion we find at once the broadest and the deepest sense of social connectedness, and the profoundest realization of personal freedom. That is, religion is the supreme principle of both individuation and socialization and of their unity.

3. This principle gives us likewise a clue to arrests and perversions in moral and religious growth. An arrest consists in the persistence of any individual-social consciousness and mode of functioning beyond the chronological period to which it naturally belongs. A perversion consists in the disproportionate growth of any natural factor in any period. Now and then congenital conditions or unfavourable physical environment give a certain instinct undue prominence, and upon this basis a monstrous moral growth supervenes. But in other cases come unfortunate social emphasis or social neglect turns the forces of growth into side channels. The permanently selfish person is generally one whose natural and even useful egoistic impulses have been socially over-indulged in early life until a habit has been fixed. Thus it is, too, that society itself produces not only such relatively mild perversions as egoistical self-consciousness on the one hand, and social callousness on the other, but also much of the criminality and the vice that afflict us. Undoubtedly degeneracy of certain stocks is at the root of 'such crime and vice; there is often relative incapacity for response in one direction, and disproportionate strength of impulse in another. It would unquestionably contribute enormously to the moral health of society if these stocks should cease to breed. But it remains true, on the one hand, that the outcome of growth, even for one with unfortunate heredity, depends in great measure upon the social pains and pleasures that he meets during his plastic years; and, on the other hand, that a great proportion of vice and crime is simply perverted growth on the part of fairly well endowed individuals. Such perverted growth must be charged to the inadequate provisions that society has made for a normal moral life on the part of the young. Sexual vice, for example, though it is the utterance of an instinct, is enormously promoted by the refusal of adult society to face the facts of sex, and to incorporate into our dealings with the young a socially constructive sex-consciousness. Most of the entrenched wrongs of society, in fact, thrive by virtue of specific social experiences of the young. The natural correlate of our analysis of growth and its laws, therefore, would be a proposal that society should regulate all its intercourse with the young on the principles of education.

LEGISLATION.—From the very extensive literature of child-study and of moral and religious education, the following list selects a few recent studies of the order and processes of moral

GUIANA.—1. Name, geography, and physical characteristics.—The origin and history of the place-name 'Guiana' or 'Guyana' are obscure, despite the very full and pregnant note by G. E. Church prefixed to the article under this name in *EBR*¹², vol. xii, p. 674. The name is almost certainly compounded of the two local Red men's root-words *uni* or *guai* and *ana*, which respectively indicate 'water' (or rather 'river'), and 'the place of.' There seems little doubt that the name Guiana was unintentionally coined by some of the earlier explorers of the 'Wild Coast' of the north-east of the southern continent of America. In sailing past the long series of river mouths and deltas which occupy the coast between the Amazon and the Orinoco, they very probably inquired of the few natives of the locality with whom they came into contact as to the name of the new land, and, being answered that it was 'a place of many rivers,' misunderstood this to mean that *Guiana* or something that sounded like it was the proper and accepted name of the country which they saw from their ships.

Naturally enough, the extent of this imaginary land of Guiana was undefined in the minds of these earlier explorers. Probably it was to them at first merely an alternative for what they had before spoken of as the 'Wild Coast.' Then it was thought of as extending quite indefinitely back from the coast, even perhaps as far as the then almost unknown ocean which, it was assumed, lay far away to the westward. Next, as a little information was gleaned from the few bold traders who penetrated into the interior, as also from the Red men who came down to the coast from homes somewhere about the heads of the rivers, it was vaguely gathered that the main sources of the many rivers which reached the coast must lie close together, also that behind these sources there was some sort of water communication between the two great

river Orinoco and Amazon, and that the whole of the land watered by the rivers of Guiana was thus a great island, the so-called 'Island of Guiana,' a huge delta-island, as it were, of the single great river-system which the Amazon and the Orinoco were then supposed to form.

About the mouths of the rivers of the Guiana coast representatives of various European nations—Dutch, English, and French—at an early period established a few widely scattered settlements, and thus acquired some sort of claim to possession. Meanwhile other European nations—the Portuguese as regards the whole of the southern part of the continent and the Spaniards as to the northern part—professed to have acquired between them, by gift from the Pope, exclusive rights over the whole continent, including that country of Guiana which even then was more or less in *de facto* possession of the Dutch and others. For several centuries Dutch, English, and French struggled, each against the others, for possession of Guiana, and were—often much to their indignation—regarded and dealt with as interlopers by the Spaniards and Portuguese. Only within quite recent years has the last of the Guiana boundary disputes between Dutch, English, and French and the Brazilians and Venezuelans—the two last-named respectively representing the old Portuguese and Spanish claims—been settled.

Nowadays Guiana—the old island area of Guiana between the Orinoco and the Amazon—is divided, from north to south, into Venezuelan Guiana (i.e. that part of Venezuela which lies south of the Orinoco), British, Dutch, and French Guiana, and Brazilian Guiana (i.e. that part of Brazil which lies north of the Amazon).

The island of Guiana, of course, never existed, in the strict geographical sense of the term; but, as it has proved, the term did cover something real, in that it applied to an area distinct in physical features, and, perhaps consequently, in the kind and condition of the natives who occupied the land before White men first entered in, and who still linger there. Towards the back of the so-called 'island' there is a group of mountains, mostly flat-topped and hardly anywhere exceeding 3000 ft. in height, from which originate all the main rivers of Guiana, some of these flowing towards the west to join the upper waters of the Orinoco and the Amazon, while others—the longer and more important ones—run eastward into the sea on the Guiana coast. Except for the mountain watershed, to which reference has just been made, and a few minor and isolated elevations, the whole of Guiana is comparatively low and of recent origin; indeed, a very large proportion of it consists of actually recent alluvial deposit from the many rivers. The long slope from the coast to the main watershed is for the most part densely covered with trees; and the slope from the watershed down towards the main affluents of the Orinoco and the Amazon is chiefly open country, locally called *savanna*, with few trees except in the gullies.

2. *Ethnography.*—At the time when Europeans first entered and penetrated the region in question, it was inhabited by red-skinned natives obviously belonging to a considerable number of tribes, more or less distinct from and hostile to each other, and all at a very primitive stage of (American) culture, though some—and those the more dominant tribes—were further advanced than others. As it happened that the chief and most enduring European influence brought to bear on the Red men of Guiana was that of the Dutch—the English, though a long way behind, perhaps coming second in this respect—and as the Dutch, from motives of policy, sought to make allies rather than subjects of the Red men, there seems to have been comparatively

little change in the condition of the so-called 'Red Indians,' from the first entry of Europeans till comparatively recent times. It is true that the early European settlers introduced into Guiana large numbers of African negroes for manual work on the tropical plantations; and that, though these plantations were very seldom far from the coast, the negro slaves—especially, from the nature of the case, the more brutalized of them—did from time to time, and often in large numbers, escape into the forests of the interior and make their homes not far from those of the Red men. But, as it was also part of the established Dutch policy to use their red-skinned allies against the escaped black slaves, there was hardly any intermingling between these American and African coloured folk; and it was only much later—quite recently, indeed, when the gold which had long been sought there had at last been discovered, and the White colonists themselves had thereby been attracted in large numbers into the interior—that any very considerable change occurred in the habits and condition of the Guiana Red men. What the latter were up to a very few years ago they almost certainly were when the Dutch established their first colony, in 1621, on the Ramequibo River.

From time to time many different names have been more or less vaguely applied to the various groups, or so-called tribes, of Guiana Red men; and it is even now difficult to classify them in any definite and scientific way. But in the main they belong to four not very widely separated branches of the American race. In the swampy forests nearest to the sea are the *Warrans*, the least advanced of all the local tribes, and probably representing the earliest of the known inhabitants of the country. In the forest, a little way inland from the Warren country, were, and still are, the *Arawaks*, who must have come into Guiana, from the north, at a later date than the Warrans, but sufficiently long before the arrival of White men to have established themselves firmly and almost as aborigines. Inland from the Arawak country the greater part of Guiana is, and has been throughout historic times, occupied by several branches of the great Carib stock, all the members of which may conveniently be distinguished as 'true Caribs.' Still further from the sea, i.e. entirely in the *savannahs* lying beyond the main watershed, are, or were, the so-called *Wapianacs*, who may or may not have been originally of Carib stock. The true Caribs and the Wapianacs almost certainly reached Guiana after the Arawaks, and not very long before the discovery of the country by White men. Indeed, some of these true Carib tribes entered Guiana from the south, by the waterways connecting the Amazon with the Guiana river-system, at periods long subsequent to the settlement of the Dutch on the coast.

3. *Stage of culture.*—All these Red men were in a very primitive stage of that culture which was developed—sometimes, as in Mexico, to a very high degree—in America. And though, as might be expected from their history as briefly indicated above, the Warrans are at a somewhat lower stage than the other Red men of Guiana, the difference is not very considerable.

The Red men of Guiana, so far as their habits have not been altered by European influences, are in the stage at which they live by hunting and fishing and, in most cases, by cultivation of a kind almost too simple to merit the name of agriculture. Four-footed game and birds are plentiful everywhere. Fish are extraordinarily abundant in the rivers, large and small, as also in the sea. Fresh-water turtles are so numerous in the rivers that their flesh and eggs provide the Red men with a considerable addition to his animal food; and near

the sea, crabs and shell-fish are at least equally plentiful. Nor is there any lack of wild fruits and other vegetable food. As to cultivation, the *cassava* plant is the chief object; and the roots of this made into 'bread'—much of which is further manufactured into the slightly fermented and highly nutritive drink called *patocari*—supply a very large part of the food of all the tribes except perhaps the Warrans, who, having their homes in swamps where cultivation is difficult if not impossible, use the fruit and pith and sap of a palm (*Mourfia sericea* [Linn.]) growing wild round their homes in place of *cassava*.

None of these Red men had *occasion*—and, in proportion as they are out of contact with Europeans, still have little *occasion*—for much in the way of clothing. A small apron is quite sufficient except at festivities or in courting; and on such occasions a greater or less amount of ornamental clothing is easily added by working up the feathers, seeds, shells, and barks which Nature has abundantly provided.

As for shelter, on the open *savannah*, where the wind is often cold, fairly large and substantial houses, with thickly thatched roofs and thick mud walls, are built; throughout the greater part of the forest region much less substantial houses of leaves and posts suffice; and in their low-lying, palm-tangled swamps the Warrans construct for themselves yet simpler shelters of leaves and sticks; but, owing to the nature of the ground, they have to place these houses on somewhat substantial platforms of felled palm-trunks. In none of these cases is the house in any way much elaborated; nor is much labour involved in getting the material together.

Fire was always easily made by rubbing two sticks together, in a simple and easily learned way (cf. art. FIRE), and fuel lies everywhere around. Most of the tribes are good potters, after a simple fashion. Bows and arrows, blowpipes—the latter used only on the *savannah*—and fishing-gear they are singularly expert at constructing. The only other prime necessity of their simple and easy lives is the hammock, or hanging bed, the invention of which is the one great triumph of ingenuity which they have achieved. The material of which the hammock is made is either the cotton which grows almost wild about their houses or the strong string-like fibre which they know how to extract from palms and similar plants.

In short, these Red men, when first discovered by Europeans, had attained to nothing more than that stage of culture in which each individual, or at any rate each family group, knows how, from the material ready to hand, to supply easily all the immediate needs of life, but is unable, owing to ignorance of the necessary arts, to produce treasure of wealth for the use and enjoyment of succeeding generations.

4. *Mental attitude: quasi-religious conceptions.*—It is more difficult to describe what would appear to be the mental attitude of this people, at this stage of culture, towards their fellows and towards the world in general. The individual Red man of Guiana knows only himself, and knows neither of any beginning nor of any end to that self. He sees children born into the world, and—if and when he thinks on that subject—he probably assumes that he himself was once 'born,' but not that he then came into existence as an individual; rather he assumes that at the crisis of birth he—i.e. the 'being' whom he recognises in himself—merely passed into a new body. Similarly, when he sleeps, he dreams perhaps that he is a jaguar or a tree or some other man or thing than himself; and when he is awake, if he remembers his dream at all, he assumes that he (his being) was really at the

moment that jaguar, tree, or man, and that he has now passed back into the body which he happened to be occupying at the moment when he went to sleep. Once more, he sees men die, and probably assumes that he himself will one day die; but he does not for a moment suppose that this will be the end of him, but rather that it will be merely the passing of himself into another body—much as during his dreams he has already been in other bodies.

Another thing which it is necessary to understand is that a typical Guiana Red man is—and, so far as he retains the innate habit of thought of his race, could not but be—the parent of egoists. He knows himself, and instinctively claims for himself certain rights, for instance the right to get for himself all that he is strong and clever enough to get. At the same time he can hardly fail to recognize the existence of innumerable other beings, which are more or less 'good' or 'bad' to him, but are all more or less elusive as to bodily form. These beings with which he comes in contact may be in what we should call human bodies, which may be those of Red men of tribes other than his own, or, again, not of his own family or not of his own household; they may be in bodies which we should call those of brute beasts; or they may be embodied in trees, or stones, or any other outward shape. Moreover, all these beings may be, as the Red man thinks, sometimes in one kind of body and sometimes in another. His feelings towards this innumerable host of beings outside himself are not what we should describe as those of affection or hatred, but rather those either of appreciation of something useful to himself, or of deprecation of something possibly more or less harmful, or at least useless, to himself. He dreads, or at least suspects, every strange man and strange object; and the degree of his liking even of the beings which are not strange to him is in proportion to the degree in which he is familiar with them, or rather to the degree in which, from experience or otherwise, he judges that these outside beings are or may be useful to him. Even the members of his own family are not loved, but are more or less valued, in proportion as they are, or may be, more or less good, i.e. useful, to him.

Another aspect of this primitive philosophy is that, as every 'being,' however much and however often it may change its form, is without beginning and without end, hence it follows that no one of these 'beings' ever dies (as we should say), but remains actually present in the world, whether in visible form or not. To the Red man every being that ever existed still exists; and every being that at any time did anything, good or bad, to make itself remembered, even though it has long left the body in which it did that deed, is not only actually present, but is as capable as ever it was of doing the kind of thing that it used to do. If the deeds of the 'dead man' were good (subjectively, to our supposed red-skinned philosopher), the dead man is (to him) a still existing hero, and he thinks it well to cultivate his favour, or at least to guard against his disfavour. If, on the other hand, the 'dead man' did things which were bad, he still remains present as a being to be dreaded. It is apparently in some such way as this that the Red man regards the world of beings that are to him what, for want of better words, we should speak of as, on the one hand, 'heroes,' or even gods, and, on the other hand, evil spirits, or even devils.

The old controversy between anthropologists as to whether any particular group of primitive folk did or did not recognize the existence of a supreme god (see GOD [Primitive and Savage])—the Great Spirit, All-Father, and the Creator—as a being of entirely different origin and order from their own,

has been raised as regards the Guiana Red men. The present writer, after long and intimate intercourse with the latter, came to the conclusion, to which he still adheres, that they have never of themselves recognized such a superior being, and that, if they speak, as they have certainly sometimes spoken, of a very powerful being which, for instance, made men or made the world, or submerged an existing world under the waters of a great flood, they are then referring, on the strength of tradition, to a more or less exceptionally powerful being belonging to their own order.

Holding the ideas above described, the Guiana Red man instinctively feels that of all the quite indefinite number of beings—in all sorts of forms—of which he becomes aware during the course of his life, the most important to him are those which are, or may be, actively hostile to him, all of which he calls *henaima*; and those which may help him to ward off the effects of the *henaima*'s hostility—these he calls *poai*. Absolutely all evil that happens to him is done by the being which, whether at the moment of action it happens to be in the form of man or beast, or stock or stone, or in any other conceivable form, is *henaima*; and the Red man's one obligation other than that of getting together the necessities of life is to guard himself against the attacks of the *henaima*. Against the open attack of the *henaima* he can to a certain extent guard himself; but against the insidious attacks which the *henaima* is able to make—in virtue of that being's unlimited power of changing its form—the Red man naturally feels himself insufficiently equipped; and he therefore applies for help against the *henaima* to the professional wise man of his tribe, the *poai*, or medicine-man.

It may at first sight appear that this conception of the relations of good and evil is not very different from that which among more civilized folk takes the form of a great contest between good and evil, between God and the devil. There is this difference, however, that to the Red man there does not appear to be any God to fight for him; it is a question of fighting only for his own welfare, with the help, at most, of beings of his own kind, though perhaps somewhat more clever.

A question may be asked as to what is the nature of the material with which the *henaima*, when he does not use an arrow or other material weapon, works harm, and, again, as to the material with which the *poai* counteracts this evil. In both cases the 'medicine,' i.e. the poison or the antidote, is called by the Red man *beena*; it is thought of as an essence extracted from some substance, and it may be used, now by the *henaima* and now by the *poai*, much as, under the conditions of Western culture, poison might be administered by an enemy, or medicine by a doctor.

The *henaima* and the *poai* are both more clever, i.e. more artful, than their patient, and both possess one faculty which is of great importance to them; they know how to extract the real being of the red-skinned patient from the body in which it happens to be enveloped. For instance, the *henaima*, if he gets possession even of a fragment of the body of the patient on whom he intends to inflict ill—say even a few hairs or a nail-cutting—may be able to get possession of the whole being which was within the body from which the fragment was cut; or, again, the *poai*, by certain processes of what we should be inclined to call incantation, can, for convenience of treatment, draw out the spirit (the real being) of his patient, just as one of our own medical men might on occasion have the body of his patient stripped of its ordinary clothes.

5. *Morals*.—The innate ideas of the Guiana Red man most nearly approaching to what, if he had ever for himself attained to any higher stage of

culture, would have been his religion have been briefly indicated above, and it now remains to note what, under the restraints of this very primitive philosophy of his, is his line of conduct towards all outside himself. As a matter of fact, his morality, like his religion, is purely egoistic. Whatever he does he does for himself. His 'wives'—he is naturally a polygamist—are no part of himself; and, so far as he takes trouble for them (and he habitually does much in this way), it is because they are good—i.e. useful—to him. On the other hand, his children—one of the chief uses of his wives is to bear children to him—are (the boys at least) part of himself, and are cherished accordingly. This difference in his personal relation towards his wives and his children is clearly indicated in his practice of the remarkable custom of *cousade*, in accordance with which, as soon as the child is born, the mother, as a matter of course, at once resumes her ordinary daily tasks; but the father not only refrains from hunting and all similar hard tasks, but lies in his hammock, and is even nursed. The explanation of this strange custom seems to be that a part of the father's being is supposed to have been separated from him and embodied in the child. It is the recently separated father and child who require nursing—much as, in the process of plant propagation by cuttings, the first necessity is to provide for the healing of the wounds on stock and on offset.

Moreover, it is the egoism of the Red man which regulates the more or less kindly bearing—in proportion as the co-operation of these is useful—towards his relations other than his descendants, and towards Red men of groups other than that to which he belongs. Again, it is his egoism, carried to a more or less extreme form, which regulates his greater or less hostility towards strangers—whatever the colour of their skin—so long as he suspects them of possible evil intention towards himself.

Finally, the present writer is anxious to make it quite plain that, in attributing to the Guiana Red men an extreme form of egoism as the leading motive of life, he has no intention of disparaging them. It is only that the Guiana Indian is a survivor from a very primitive stage in the development of mankind, from a stage before the first glimmering perception of the habit of altruism had given the impetus which really started a portion of the human race along the road which, after many centuries, led so-called civilized folk to a point whence they see the universe in a light so different from that in which the Guiana Red men—and a good many other equally primitive folk—see it.

The most practical lesson to be derived from all this seems to be that the difficulty of suddenly imposing our very much and differently elaborated system of thought, religion, and morality, on such folk as the Red men of Guiana is enormous, that the task should not be undertaken except after as full an understanding as possible of the conditions, and that it can be accomplished only, if at all, by civilized teachers who have agreed among themselves as to what exactly to teach.

GUILT.—See SIN.

GUINEA (Africa).—See NEGROES AND WEST AFRICA.

GUJAR (Skr. *Gurjara*, the country now known as N. Gujarat and Rajputana which took its title from a tribe of the same name entering India in the train of the Huns [V. A. Smith, *JRAS*, Jan.-Apr. 1900; D. R. Bhandarkar, *JASB*, 1908, p. 167 ff.]).—A tribe of cultivators, herdsmen, and cattle thieves, which at the census of 1901 numbered 2,103,023, found in the largest numbers in the Panjab, Rajputana, United Provinces, and Kashmir. The theory of Cunningham (*Archæological Reports*, ii. 84), that they are connected with the Yash-chi tribe of Central Asia, afterwards known as the Tokhari, is rejected by Risley (*JCR*, 1901, i. 513 ff.) on the ground that the latter are almost certainly of the brachycephalic type, while the Gujar is dolichocephalic. He therefore includes them in what he calls the 'Indo-Aryan branch.' It is, however, certain that during the first five centuries A.D. hosts of the Scythian and Hun invaders of N. India became absorbed in the indigenous population, and were adopted into Hinduism (Smith, *Early Hist. of India*, 1908, p. 275 ff.). In their purest form at present they seem to be found in Kashmir, where Drew (*Jamboo and Kashmir Territories*, 1878, p. 199 f.), though he does not regard them as 'high Aryan,' found some with eyes lighter in colour than are common among other tribes of the country. There is much in the physique and customs of the Gujar which renders it probable that they are connected with Central Asian tribes.

In religion, the Gujar of the Panjab have been largely converted to Islām, and not far from half their total number now follow that faith. In the United Provinces and Rajputana they are still largely Hindu. In the W. districts of the United Provinces they are usually worshippers of Śiva and of the Sakti, or Mother-goddess, and in particular of Bitalā Bhavānī, who controls small-pox. They also worship the local village gods, such as Chāmar, and two tribal deities, Pyārejī and Bābā Sabhā Rām. The latter are deified heroes of the tribe. Pyārejī, whose shrine is in the Sahāranpur District, flourished early in the 17th cent. A.D. He was one of the marvellous children of the folk-tales, and, when he grew up, the tribe was severely afflicted by the ghosts of certain Brāhmanas whom they had slain by treachery. Pyārejī, who had by that time acquired saintly powers, exorcised the evil spirits, and the reputation which he thus acquired earned for him Divine honours. The management of his shrine still remains in the hands of his descendants, who have now joined the Vaiṣṇavite sect. Bābā Sabhā Rām was another worthy of the same class, who is worshipped at a shrine on the banks of the Jumūā in the Ambāla District. The Panjab Gujar are specially devoted to the cult of the saint Barwar, whose shrine is at Sakhi Sarwar (g.u.) (Maoilagan, *Panjab Census Report*, 1891, i. 120).

The Musalmān branch of the tribe, in spite of their conversion, continue to follow many of the animistic practices of their Hindu forefathers, such as the ceremony of waving lights over a bride to scare evil spirits. They consult Brāhman astrologers to fix lucky times for domestic rites; and they worship not so much Allāh as a host of deified heroes and saints, such as Ghāzī Miyān, the saint of Bahāich in Oudh, Madār Shāhib, and other martyrs of the faith. In some parts of the Panjab, members of the tribe claim the hereditary power of wonder-working and curing diseases. The head of one sept in the Jhām District pretends to cure

a skin disease which causes baldness, by pulling out a single hair from the head of the patient. He practices only on one Sunday in the month, and must accept no fee, because that condition was imposed by the *śaṅkṛ* who conferred the power upon his ancestor many generations ago (Rosen, I, 108). A branch of the tribe in the Hadda District shows that its conversion to Islam is recent and incomplete, by the retention of Hindu rules of eating, keeping strictly for personal use the vessels employed in cooking, practising purification before prayer, and praying with the hands downwards instead of upwards, as is the usual custom with Muhammadans (P.N.Q. II, 48). The Gajars in the Bharatpur State of Rajputana have a curious custom of making a cow of cow-dung, covering it with cotton, and then going through a rite of symbolical slaughter of the image. This seems to imply some form of totemistic communion, or a commutation of the actual killing of the sacred animal. The latter explanation is accepted by the neighbouring tribes, who consider that the Gajars are degraded by the rite (*Rajputana Gazetteer*, I, [1879] 108). In W. India many of the tribe have joined the Jain community, while others follow the Vaiṣṇava Vallabhachārya sect.

W. CROCKE.

GUNA.—This is one of the most characteristic technical terms of the Sākhya (g.v.) philosophy. This system explains the evolution of primitive matter (*pratyak* or *pradhāna*) and the infinite variety of the universe by the hypothesis that primitive matter, in spite of its unity and indivisibility, is composed of three different substances, termed *gunas*. Since the Sanskrit word *guna* signifies 'quality' in addition to its earlier meaning 'constituent', the later signification was formerly adopted for the technical Sākhya term, and primitive matter was said to be composed of the 'three qualities.' This rendering, however, is incorrect. The three *gunas* in the Sākhya philosophy are nothing but the constituents of primitive matter (or of the material universe, developed from primitive matter), as is proved by the express declarations of the Sākhya texts and by the connexion of the doctrine. The view maintained by H. Jacobi does not practically differ from this, when he contends (*GGA*, 1906, p. 203 f.) that, although the three *gunas* are regarded by the extant Sākhya authorities as constituents of primitive matter, the term originally denoted 'quality,' since the Sākhya system, as he maintains, goes back to a period at which to the Indian consciousness the categories of quality and substance were not clearly distinguished.

The three *gunas* bear the names of *saṁsra*, *rajas*, and *tamas*. To assign to these, however, their etymological meanings of 'goodness,' 'passion,' and 'darkness' would be misleading; and, indeed, the terms do not admit of exact translation. The founder of the Sākhya philosophy regarded as most important for man those qualities in objects which excite either pleasure or pain or indifference (apathy, insensibility). Pleasure was associated with the ideas of brightness and lightness, pain with those of inaction and movement (activity), apathy with those of heaviness and restraint. The conclusion was then drawn that all matter is composed of three elements, each of which is manifested especially in one of the three above-mentioned dispositions. The author of the Sākhya system further explains the profusion of

material products and the variety of impressions by the unequal and varying combination of the three constituents, which everywhere contend with one another, and give more or less complete expression to their own essential nature, according to the measure of success attained by one or two, in suppressing both the others or the third at some particular place. If the several constituents are allowed to develop freely, *saṁsra* is manifested in the object as light and buoyancy, in the subject as virtue, benevolence, happiness, cheerfulness, etc.; *rajas* in the realm of objects as force and movement, in the subject as every kind of suffering, anxiety, passion, wickedness, etc., but also as ambition, effort, and activity; *tamas* in the realm of objects as heaviness, rigidity, and darkness, in the subject as cowardice, fear, stupidity, sloth, etc. According to this theory, *saṁsra* predominates in the world of the gods, *rajas* in that of men, *tamas* in that of animals, plants, and minerals.

The most remarkable feature of this whole theory is clearly that it traces the characteristics of man back to physical causes. The relation of the three *gunas* to human belief and sentiment, modes of life and action, is described in the 17th and 18th chapters of the Bhagavad-Gītā.¹ It is a remarkable doctrine also that pleasure, pain, and apathy not only exist as subjective and individual experiences, but have their objectively real correlatives in the external world.

Every process in the material universe depends, according to the doctrine of the Sākhya, upon the action of one or more of the *gunas*. In spite of the infinite variety of the modifications to which they are subjected, every phenomenon, every development, and every change is explained by the qualities of these three elements. If, however, *saṁsra* and *rajas* and *tamas* have a place in all products, it is a necessary inference, from the principle that the product is simply the material cause in a definite stage of evolution, that they must have already existed in that first cause, i.e. in primitive matter. As *saṁsra*, *rajas*, and *tamas* in the form of the product (*kārya-rūpa*) fashion the universe as it exists, so in the form of the cause (*kāraṇa-rūpa*) they fashion the primitive matter before evolution begins. Is it possible, however, for the infinite indivisible primitive matter to be fashioned by three finite elements? Can it consist altogether of parts? The answer given to the second question is in the affirmative, just as a single river may consist of three tributary streams. And in reply to the first the explanation is offered that the three constituents are finite only in the sense that *saṁsra*, *rajas*, and *tamas* are not present in their entirety everywhere, but that, on the other hand, there is no point in the universe where at least a minimum of these three elements is not to be found. As long as primitive matter remains quiescent, the three *gunas*, according to the doctrine of the Sākhya, continue in a state of equilibrium. While this condition lasts, during which the constituents remain unrelated to one another, all the forces and qualities which display themselves in the developed universe are latent and inactive as germs in primitive matter. It must not, however, be inferred that during this period the three *gunas* are completely at rest; that would be contrary to the nature of these elements, which are in a state of ceaseless change. It is rather that in primitive matter, before evolution begins, an isolated movement takes place within each separate *guna* in such a way that each of the *gunas* is transformed into an equivalent to itself, i.e. *saṁsra* becomes only *saṁsra*, etc.

When the state of equilibrium of the three *gunas*

¹ Translated into English by J. Davies, 2nd ed. 1894; E. E. Schlegel, *IBS* VIII, 2nd ed. 1895; L. Sarason, London, 1895.

is disturbed, and they begin to contend with one another, the universe is evolved in the way described in the article *ŚĪKṢĪTĀ*. This philosophy ascribes the breaking up of the stable equilibrium of the three *gūṇas*, i.e. the close of the inert and undeveloped state of primitive matter, to the mechanical influences exerted by the souls on the primitive matter which stands to them in a relation of perpetual dependence. These notions of living beings which in the previous age of the universe have not yet received their recompense claim reward or punishment in a new age. Forthwith merit and demerit, which had slumbered during the period of the dissolution of the universe, awake to life, and proceed to call into existence a new creation. When the process of evolution of primitive matter has reached its conclusion, a period of stability follows, during which the creative force of Nature brings into being individuals and particular products. To this period of the world's existence the three *gūṇas* maintain everywhere throughout the universe an unceasing strife for the ascendancy. At the close of the period of stability, and therefore of an age of the universe, reabsorption commences, the products of the gross elements returning successively in reverse order into their material causes, until primitive matter is again found in the same condition as before evolution began, and the state of equilibrium of the three *gūṇas* is again established. This alternation of the rise and dissolution of the universe is repeated in a perpetual cycle without beginning or end.

It is obvious that this whole theory of the three *gūṇas* as taught by the Śāṅkhya is a pure hypothesis, which shares the fate of very many other hypotheses of philosophy, and cannot hold its ground from the modern scientific point of view. It is nevertheless an interesting essay in explanation, which to the Indian mind has appeared possessed of such convincing force that the idea has become absolutely the common property of all philosophical Sanskrit literature. Even at the present day the entire circle of philosophical conceptions in India is controlled by the theory of the three *gūṇas*.

LITERATURE.—R. Garbe, *Die Śāṅkhya-Philosophie*, Leipzig, 1904, p. 205 f.; P. Max Müller, *The Systems of Indian Philosophy*, London, 1900, pp. 145 f., 201 f., 243 f.; *Sarva-darśana-saṅgraha*, tr. E. B. Cowell and A. E. Gough, 2nd ed., London, 1904, pp. 151–152. R. GARBE.

GÜNTHERIANISM.—Günterianism is the name given to a rather vaguely defined body of teaching, mainly philosophical in scope, but with important bearings upon certain theological dogmas, which originated in the writings of Anton Günther (born 17th Nov. 1783 at Lindeman in Bohemia; died at Vienna, 24th Feb. 1853).

a. Life of Günther.—He was the son of devout Roman Catholic parents, but, giving himself in his youth to the study of Kant, Fichte, Schelling, etc., he seems for a while to have been seriously shaken in his religious convictions. When, however, in 1811 he moved to Vienna with the household of Prince Broctschold, to which he acted as tutor, he fell under the influence of Countess Mary Hofbauer, afterwards connected with the result that his faith in Christianity revived, and he set himself earnestly to study for the priesthood. Two years after his ordination (1813) he entered the Jesuit novitiate, but found that he had no vocation, and soon for the remainder of his days (1815–22) he settled down quietly at Vienna as *Privatdozent*, giving some part of his time to pastoral work, but occupied mainly with philosophical and theological speculations. For more than twenty years he acted as official censor to a Government which still subjected literature to theological revision. He refused tempting offers of a professorship at Munich, Bonn, Breslau, and Tübingen, probably in the hope of ultimately securing a similar distinction at Vienna itself; but, before the opportunity came, his writings, many of which were much controverted and discussed, had brought his orthodoxy under suspicion. Finally, in 1837, his books were placed on the Index at Rome, though due recognition was given to his personal integrity and good intentions. Günther continued to his condemnation, but it did not his remaining years with bitterness.

b. System.—It was the purpose of Günther to build up a philosophical system in opposition to

the prevalent Hegelian pantheism, which he considered the philosophy of the schoolmen was inadequate to meet. Consequently we find in his writings a certain fundamental dualism (which attains its climax in the antithesis between God and the created universe) dominating all his speculations. Nor can the student of his works, casual and unsystematic though they be, resist the suspicion that the development of his ideas has been guided by an exaggerated desire to discover analogies and symmetrical features in every field of thought, and that the anticipation of being able to provide some sort of natural explanation of the great Christian dogmas of faith has moulded, consciously or unconsciously, the whole of his psychological theory. It was a conspicuous element, if not a fundamental principle, of Günther's teaching that there is no real distinction between the truths demonstrable by human reason and the mysteries of faith. The latter are not to be regarded as beyond the range of human intelligence unaided by revelation. On the contrary, he maintained that pure reason is capable of demonstrating the 'why,' though not the 'how,' of such revealed dogmas as the Trinity and the Incarnation. Revelation he held to be only hypothetically necessary; that is to say, in so far as man's intelligence had been clouded and impaired by original sin. From this position it resulted that reason is the supreme arbiter, and ought not to be regarded as the handmaid of faith—a view, as the Papal condemnation pointed out, which laid itself open to the objection that knowledge and faith are not distinct things, and, further, that the dogmas of faith may change as knowledge is perfected. These theological conceptions rested on a philosophical basis which seems to have been devised expressly to support them.

Like Descartes, Günther made psychological consciousness his starting point. Man, he said, acquires the consciousness of himself, of his ego, not immediately, but by means of the faculties of the ego, its 'receptivity' and its 'spontaneity' (that is to say, the understanding and the will), the acts of which bring the spirit (*Geist*) face to face with the ego, which is the reason and foundation of both. Starting from the ego, Günther, by an inferential process again analogous to that of Descartes, sets out to demonstrate the existence of God, as well as of 'nature' and of 'spirit,' with their attributes and mutual relations, the whole system being pervaded by a sort of symbolical reflexion of the relations which he discovers between the Persons of the Trinity. In the Trinity he recognises three egos, which he describes as thesis, antithesis, and synthesis; or, again, as absolute subject, absolute object, and absolute subject-object, trying in this way to give an account of the genetic nexus between Father, Son, and Holy Ghost. Corresponding to this, when God, not, properly speaking, free, but necessitated by the Divine essence, created the universe, a trinity of elements resulted, consisting of spirit (subject or thesis), nature (object or antithesis), and man (subject-object or synthesis). Apart from these three things there can be no universe. Their 'form' is one, but their essence is threefold, this being the very opposite of what we find in God, where there are three egos, three substances, and a single essence. From this point of view it may be said that creation is an inverted God (*verkehrter Gott*) or a 'contraposition' of God.

Similarly, in his psychological analysis of man's constitution and mental processes, Günther finds an aid to the comprehension of the mystery of the Incarnation. In man, he says, there are three elements—body, psychic principle (*Seele*), and spirit (*Geist*). The psychic principle is the product of

will eat in common; and the only prohibited meats are beef, the flesh of the *sigdi*, or blue bull (*Boselaphus tragocamelus*), and that of female goats, which none save manials will touch. Game and fish are also allowed, and Gurung use buffalo meat in their own country—a practice which they deny when serving with their more Hinduized brethren (Vansittart, *loc. cit.*). This laxity of caste restrictions makes the Gurkha specially valuable on field service, and tends towards greater comradeship between him and the British soldier, particularly in Highland regiments, than is possible in the case of Indian sepoy, who are more scrupulous in matters of food and drink.

3. The Gurkha religion.—The religion of the Gurkha is thus of a mixed character. The present ruling dynasty, like all new converts, follows the tenets of Hinduism with more anxious care than many of their co-religionists in the Indian plains. They have a great reverence for Brahmana, and the slaughter of the sacred cow is rigorously prohibited. The result is a very decided observance of orthodox Hinduism. Thus, though at present in the Indian plains there is little actual worship of Indra, the Vedic god of the firmament, except in a vague way for the purpose of securing timely falls of rain, in Nepal there is a regular feast in his honour, the *Indrajatra*. But it is significant that this is combined with a car-festival, the *Rathjatra*, in honour of Devi Kumari, the maiden goddess—one of the many forms of her cultus which has probably been derived from the indigenous Animism. This local cult of Indra, however, may have been, in a great measure, derived from Buddhism, Indra or Sakra being a favourite object of worship among the later Buddhists (Oldfield, *ii*, 312 ff.; Wright, p. 36; Waddell, *Buddhism of Tibet*, Lond. 1895, p. 356). Siva is worshipped under the forms of Sambhunatha, 'the Lord, giver of prosperity,' and Padupatinatha, 'lord of cattle,' the latter cult probably absorbing some of the primitive theriolatry. The Sivaratri feast, 'the night of Siva,' is very popular, the principal object of worship being the four-faced *linga* which stands in the temple of Mahadeva at Padupati. To this prayers and offerings are made; fees are given to the presiding Brahmana, who pour water on the *linga*, wash it, and cover it with flowers. When this rite is over, the officiating priest, after repeating sacred verses, reads out of the holy books the many names and epithets of Siva, while the worshippers fling leaves of the Bel tree (*Aspl. marmelos*) over the top of the *linga* (Oldfield, *ii*, 331). Equally popular is the worship of his consort in one or other of her many forms. The chronicler, writing of the king Sivadeva-varma of the ancient Suryavanshi dynasty, says that, recognizing that Bechlā Devi was the principal deity of Nepal, he ordered that after the worship of Siva as Padupatinatha a cloth should be tied by one end to his temple and the other to the palace, the object being to bring him into mystic contact with the goddess (Wright, p. 126). In her form of Devi Bhairavi she is the guardian deity of a considerable district; and in another shape she is honoured at the *Durgā-pūjā* or *Dasakra* festival, with annual sacrifices. Here, however, as is the case in Bengal, a clay image of the goddess is not made; but on the first day of the festival the Brahmana sow barley on the spot where they worship, and sprinkle it daily with sacred water. On the tenth day of the feast they pull it up and present small bunches of it to their followers, in return for presents which they receive from them—a case of the 'gardens of Adonis' of which Fraser has collected many instances (Wright, p. 39; Fraser, *Adonis, Attis, Osiris*, London, 1907, p. 194 ff.). The more savage and purely animistic conception under which the goddess is regarded is shown

by the proceedings of the Gurkha Raja, Raj Bahadur, in A.D. 1800. His Brahman paramour, after recovery from an attack of smallpox, finding that she had lost her beauty, and with it her influence over her lover, committed suicide. Thereupon the Raja vented his rage on the shrines of Devi, to whom he had in vain made supplications for the recovery of his mistress. Some smaller shrines, and the large temple of Devi, known as Taleja, near the palace at Kathmandu, were desecrated and defiled; filth was thrown on the images; worship was forbidden; and the *saide*, or physicians, were executed (Oldfield, *i*, 255 f.; Wright, p. 202).

The mixture of creeds is shown by the temple dedications at the chief sacred cities. Siva as Mahadeva and Sambhunatha has shrines at Kathmandu; Visnu as Jagannath and Narayana has temples in the same city, that of the former having been erected by Maharaja Jang Bahadur; Devi at Kathmandu and Lalita Patan; Bagh Bhairava, or Siva in his tiger form, one of the aboriginal deities, at Kirtipur; and Ganesa at Kirtipur and Bhatgaur. Finally, according to Oldfield (*ii*, 234 f.),

'there is so close a connection between Hinduism and Buddhism, and the one religion seems to pass into the other so insensibly, that it is difficult to draw the exact line of difference between them. Nothing is more common than to see shrines dedicated to Hindu deities (Visnu, Ganesa, and Ganesa) or to others representing them, not only within the precincts of a Buddhist temple, but actually forming part of it.'

But this refers more to the popular than to the orthodox worship. Even under the mild and tolerant Newar sovereigns the strongest influence was exercised to induce the Buddhists to adopt the creed and customs of the Hindus who were then dominant in the country; and their successors, 'the bigoted Gurkhas, regarded the Buddhism which existed in their newly-acquired provinces as a creed which was, at the same time, too contemptible to be feared, and too heretical to be in any way encouraged. . . . It is now in the last stage of its existence; it is rapidly being supplanted by Hinduism, and before the lapse of another century the religion of Buddha, after enduring for upwards of two thousand years, will, in all probability, be as extinct in Nepal as in the plains of Hindostan.'

LITERATURE.—The earliest and still the best authority on the religion of the Gurkha is Brian H. Hodgson, the author of numerous papers on the subject, many of which have been collected in *Essays on the Languages, Literature, and History of Nepal and Tibet*, London, 1855. See also W. K. Burgess, *Account of Nepal*, 1855; T. Smith, *Five Years' Residence at Nepal*, 1855; Laurence Oliphant, *A Journey to Kathmandu*, 1855; O. Carver, *Nepal, a Journey to Nepal*, 1855; and, in part, F. Burgess, *Travels in Nepal*, 1855. An account of the religion of Nepal and of the territories annexed by the British is given by H. A. Oldfield, *Sketches from Nepal, History and Description, based on a personal Buddhist visit to the Nepalese Kingdom, China, and Ceylon of Nepal*, 1888, vol. III, p. 255 ff.

GURU.—See BHAKTI-MINGA, vol. II, p. 540.

GUSAIN.—See GOSAIN.

GWALIOR (Hindi *Gwalār*, said by Cunningham to take its name from the shrine of the hermit Guālipā, the cow-keeper saint).—The celebrated fortress, capital city of the Gwalior State in Central India; lat. 26° 15' N., long. 75° 12' E. The religious buildings in the fort consist of two remarkable temples, and a series of caves or rock-cut sculptures. One of the temples is now known as Sālabāī, which is interpreted to mean 'mother-in-law and daughter-in-law'; but the name is really derived from Sājabāī-bāī, 'the thousand-armed,' an epithet of Siva. An inscription dated A.D. 1093 opens with an invocation to Padmanātha, who has been identified with Padmaprabha, the sixth Jain *Śīrṣāṅkara*, or hierarch. But there are numerous sculptures of Brahmā, Viṣṇu, and Siva, that of Viṣṇu being the central figure over the main entrance of the portico and sacrum; and Cunningham therefore concludes that the

building was originally dedicated to his worship, the name *Padmendā* being not of Jain origin, but applied to Viṣṇu in the sense of 'lord of the lotus.' This temple is now in ruins, the cruciform porch alone remaining, though in a dilapidated condition. The second great temple is the loftiest building on the hill, and forms the most conspicuous object in the view from every side of the fortress. Its original name is now lost, and it is known as *Taṭ Mandir*, the 'oilman's temple,' from the person at whose expense it is said to have been built. The design of the temple resembles that of several of the S. Indian shrines. It seems to have been originally dedicated to Viṣṇu; but over a later doorway is a figure of Gaṇeśa, which shows that the followers of Śiva subsequently adapted it to their worship. They also introduced the *ḥṛṇṇ* and the image of the bull Nandi. The earliest inscriptions referring to the worship of Viṣṇu belong to the 9th and 10th centuries A.D.; and the temple seems to have been adapted to Śaivite worship as early as the middle of the 15th century. There is also a true Jain temple, discovered by Cunningham, and one of the Mother-goddess, *Mātā Devī*, besides other less important shrines. The rock-sculptures are unique in N. India for their number as well as for their gigantic size. They fall into several groups. That known as *Uvāhī* contains twenty-two principal figures, all of which are entirely naked. Inscriptions fix their date at 1440-53, under the Tomara Rājās. One figure is that of *Adinātha* or *Rābhadeva*, the first Jain pontiff. The largest figure, not only of this group, but of all the Gwalior rock-sculptures, is a standing colossus, 57 ft. in height, near which is seated a second colossus, 30 ft. in height, of *Neminātha*, the twenty-second Jain hierarch. In the S.W. group the most remarkable figure is that of a sleeping female, 8 ft. in length, lying on her side, with her head to the south and her face to the west. Both thighs are straight, but the left leg is bent backward beneath the right. Next this is a seated group of a male and female with a child, whom Cunningham identifies with *Buddhārtha* and his wife *Trīśālā*, the reputed father and mother of *Vardhamāna* or *Mahāvīra*, the last of the twenty-four Jain pontiffs (Bühler, *Indian Sect of the Jains*, Eng. tr., Lond. 1903, p. 26). The remarkable fact about these sculptures is that they were executed during a single generation of 29 years (A.D. 1441-1474).

LEGENDS.—The antiquities of Gwalior are fully described by A. Cunningham, *Archaeological Reports*, 3, 260 ff.; see also W. M. Bloom, *Remains and Recollections*, London, 1880, I, 217 ff.; J. Fergusson, *Hist. of Indian and Eastern Architecture*, 6th ed., pp. 544 ff., 548, 551 ff.; Fergusson-Burgess, *Coins of India*, 2nd ed., p. 529 ff. Some of the temples and statues are illustrated in W. M. Weitzman, *Through Town and Jungle*, 1904, p. 170 ff. W. CHUCKER.

GWALIOR STATE.—See CENTRAL INDIA.

GYPSIES.—A race of people inhabiting various countries of Europe, but distinguished from the surrounding populations by their special language, customs, and physical characteristics.

1. **Name.**—The name 'Gypsy,' or 'Gipsy,' is used only by English-speaking people, and is a corruption of 'Egyptian,' by which name the race in question was known in mediæval Europe, owing to the belief that these so-called 'Egyptians' were natives of Egypt, or, rather, of a country called 'Little Egypt.' In England the abbreviation 'Gypsies' appears in 1513-23, 'Gipsy' in 1528, and 'Gipsyan' in 1536. What seems to be the first Scottish instance of the abbreviated form occurs in 1598, when the Privy Council Records state that Hew Ballenden, younger of Foudroich, was 'accompanied with certane gipsies and divers

utheris' at Lasswade, Midlothian. But the full name 'Egyptian' was concurrently used with its abbreviations throughout Great Britain until the present day. The name 'Egyptian' has also been applied to this race in most of the countries of Europe, occurring in France and Belgium as 'Gyptien,' in the Netherlands as 'Gyptenaar,' and in Spain as 'Gitano' (from 'Egiptiano'). It was used in a Latin form in Hungary in 1480, as may be seen from the will of a Hungarian noble, *Ladislav Hermanfy*, now preserved in the archives of Prince Battyány. The passage deserves quotation. In allocating four of his 'smaller horses,' the testator directs as follows, the language employed being Latin:

'The third, which I bought from the Egyptians or Gypsies (at *Egyptia* also *Cypagani*), I leave to my servant *Isak*. This horse is a grey one, and used to be a carriage horse.'

Here an alternative name, very wide-spread in Europe, is introduced. It takes the following shapes: *Cingani* or *Acingani* (Corfu), *Tchonghian* (Turkey), *Jingani* (Syria), *Cigani* (Hungary), *Zigani* (Russia), *Cygnan* (Poland), *Cigano* (Portugal), *Tringani* (France), *Zigeuner* (Germany), *Zingari* (Italy), and *Zincoli* (Spain).¹ The etymology of this name has given rise to much discussion, but without definite result. Many other names, more local in character, have been given to the Gypsies. In Spain they have been known as 'Greeks,' as 'Bohemians,' as 'Germana,' as 'Flemings,' and as 'New Castilians.' In France they have been variously designated 'Bohemians,' 'Saracens,' 'Cascarotes,' and 'Biscayans.' In the Netherlands they were not only 'Gyptenars,' but also 'Greeks' and 'Heidens' (i.e. Heathens). They have been frequently styled 'Tartars,' notably in Scandinavia, where they are also called 'Fante-folk.' There are English instances of 'Bohemian Tartar' and 'High-German' applied to people who were probably Gypsies; while Scotland has references to 'Gypsies or Saracens,' otherwise 'Moors or Saracens,' as present in that country in the 15th century. In Poland they have been called 'Sealans' and 'Philistines,' as well as 'Cygan.' Early writers have variously designated them 'Nubians,' 'Ethiopian,' 'Amyrians,' 'Uzii,' and 'Clicca.' Many of these names seem to denote the name of the country or province whence the Gypsies had come, bestowed upon them by the people of the country in which they had arrived.

2. **Physical characteristics, distribution, etc.**—The physical characteristics of Gypsies of pure stock, or nearly so, are well marked. Their complexion is generally dark, ranging from olive to deep brown, or even black. A. Weisbach, who examined 89 Gypsy soldiers from a Hungarian regiment, found the colour of their skin to be as follows: brown, 18; inclined to brown, 30; light brown, 8; inclined to yellow, 6.² That is to say, the great majority were brown-skinned men. The colour of their hair accorded with their complexion. Of the whole number 33 were black-haired, 16 had hair of a dark brown, and 3 were brown-haired. The hue of the eyes was in the following proportions: dark brown, 26; brown, 15; light brown, 5; greyish brown, 2; and grey, 2. It will be seen, therefore, that the prevailing colour of skin, hair, and eyes was dark. Eugene Pittard, of Geneva, records similar results from an examination of 1270 Gypsies, of whom 840 were men and 430 women; 94 per cent of the men, and 98 per cent of the women had black or brown hair.

'The proportion of black-haired men was very remarkable,' observes Pittard. 'In many cases the colour of their hair was

¹ *Ethnographica*, Budapest, vol. I. no. 2, March 1899, p. 164.

² The *Gypsies* described by Herodotus (v. 9) as inhabiting Hungary have also been identified with the *Cygnani*.

³ *Die Zigeuner*, *Anthr. d. anthrop. Ges. in Wien*, 1898.

Owing to the fact that a certain proportion of the Gypsy population is migratory, and also because there are many people of mixed blood who may be regarded as Gypsies by one enumerator but not by another, it is impossible to obtain wholly accurate statistics in connexion with the race. Indeed, the figures vary to an astonishing degree. The official census taken in 1873 reported that the number of Gypsies in the countries belonging to the Crown of Hungary amounted to 214,714;¹ whereas the return of 1900, quoted above, raises the figure to 280,000. On the other hand, the *Almanach de Göttes* for 1888 states that there were only 70,303 Gypsies in Hungary on 31st Dec. 1880.² The same authority gives the following figures: Rumania, 300,000 Gypsies in 1876; Servia, '29,030 as servant de la langue bobémienne,' in 1884; Bulgaria, 37,000 in 1881; and Eastern Rumania, 27,180 on 13th Jan. 1886. These statistics, notably in the case of Rumania, are remarkably at variance with those furnished by the Helmsford report of 1900, wherein it is stated that the number of Gypsies in Rumania amounts to 'perhaps nearly 300,000,' while Servia possesses 46,212, and Bulgaria 52,122.³ It will be noticed that, excepting the *Almanach de Göttes* statement with regard to Hungary, the later figures show an increase which might be explained by the assumption that the race has been more prolific during the last generation, possibly owing to an improvement in its surroundings. There is, however, a sufficient discrepancy between the reports to warrant the conclusion that these statistics can be accepted only as approximate.

The Gypsy populations of several other European countries are thus allocated in the Helmsford report of 1900: Russia, 50,000; Finland, 1561; Poland, 15,000; Lithuania, 10,000; Galicia, 10,000; Spain, 50,000; and the British Isles, 20,000. A 'Statistical Account of the Gypsies in the German Empire,' published by Rudolf von Sowa in 1888,⁴ shows that there were then 241 families, consisting of 1054 individuals, living permanently in Prussia. Although permanent residents, they were not sedentary all the year round, but moved about, attending the principal fairs in their occupation of horse-dealers, musicians, and puppet-show men. In most of the other German States there are no resident Gypsies, according to von Sowa, although Gypsies from other States or countries occasionally pass through. Württemberg, however, possessed about 100 resident Gypsies in 1886; while there were 53 in Alsace-Lorraine, 24 in Baden, and 17 in Brunswick. Von Sowa's statistics appear to minimise the number of Gypsies in Germany, if one may judge from his statement that 'as far as is known, there are no Gypsy colonies in Bavaria.' He adds that 'the police authorities have the strictest orders not to permit Gypsy bands to enter Bavaria, or, if found, to send them away.' This certainly does not accord with Richard Andree's report on 'Die Zigeuner in Bayern,'⁵ based upon the official *Zigeunercensus*, Munich, 1906, wherein the number of Gypsies in Bavaria is estimated at 3350. It must, therefore, be assumed that von Sowa's figures, as regards the German Empire, cannot be relied upon.

¹ The Gypsy race is found in every country of Europe, all over Asia, Turkey, Persia, Turkestan, Afghanistan, Helmandia, Siberia, Egypt, the north coast of Africa, and in the Sudan. It is scattered throughout North and much of South America. Everywhere it is the same Gypsy race and the language is the same Romani or Gypsy tongue, in different stages of decay, and modified by various circumstances.

The accuracy of these statements cannot be questioned, although the writer omits India and Australasia from his list. It is scarcely necessary to explain that the Gypsies found in America and Australasia are not indigenous, and have merely gone there from the Old World in modern times. But the writer here quoted omits India deliberately. In view of the fact that the Gypsy language is closely akin to Hindustani, this is a remarkable omission. The writer's contention is, however, fully deserving of citation, although it is opposed to the ideas at present prevailing. He contends that the parent Gypsy is spoken in the Balkan Peninsula and the region of the Lower Danube.

'As we leave this district, in all directions their numbers rapidly diminish, and their language becomes corrupt. Thence, when we reach the territory adjacent to India and the Hindu Kush, their language has almost disappeared, and they are very few in number. There are no Indian Gypsies. . . . There is no need to go to India to seek the cradle of the Romani tongue.'

That there are no Indian Gypsies is too sweeping an assertion; nevertheless, it contains a good deal of truth. There are Gypsy-like castes in India, but these people would not find themselves at home among European Gypsies. Turkish and Welsh Gypsies could easily converse with each other, whereas neither could converse with the Gypsy-like castes of India, unless in a most fragmentary way, through the medium of Hindustani, a language common to the greater part of India. De Goeje of Leyden, who was an eminent Arabic scholar, has shown, however, that a great migration of Jāts or Lāris took place from India to Persia in the 5th cent. A.D., and again in 710 from the same district to the valley of the Tigris. Thereafter, in the 9th cent., they were brought into the Greek Empire by the Byzantines. De Goeje has a very strong case in favour of these people being Gypsies. An argument used against him is that the Jāts still remaining in India do not speak the Romani language; but language is not an infallible test of race. Another objection is that there are indications of a Gypsy population in Europe at an earlier date than the 9th century. De Goeje's theory is, none the less, of much importance.

But the other view has much to say for itself. It is certainly a pregnant fact that Europe is, at the present day, the seat of the Gypsy race and language. It is possible to draw very opposite conclusions from this fact, but in any case it cannot be ignored. Francis Hindes Groome has quoted a striking passage, not previously noted by modern scholars, from the *Itineraria* (Cambridge, 1778, p. 57) of Symon Simeon, an Irish Minorite friar, who visited Egypt in 1322. There he saw many 'Danubian' captives, whom he describes in terms which suggest that they belonged to the same stock as the modern Gypsies of the Danube:

'Item ostendunt eis, quod in aspidochelone civitatibus (Alexandria and Cairo) de omni secta alia ab illorum viri multosque lactantes juvenes et omni parvas venditiones exponebant ad instar hircorum, et aliquantulum indiam exhibebant et danubiani, qui equos utriusque corvis in colere cum corvis et carbonibus multum participant; quia hii cum arabis et danubianis semper guerram sustinebant, atque cum captivum redemptionem vel venditionem evadunt. . . . Prædicti autem Danubiani, quamvis ab indianis non sunt figure et colore distincti, tamen ab eis distinguuntur per alacritatem lingue quam habent in facie et cognoscuntur; comburant enim omni cum ferro ignito facies sine villis terribiliter in linguam, credentes se sic flammas [flammis] baptizari et dicunt, et a paucioribus corvis "us ignis parat. Qui postquam ad legem Machometi fuerint conversi obsequiis deterioribus sunt barbaris, sicut et sunt Radices renegati, et plures molestias inferunt. . . . Item sciendum, quod in prædictis civitatibus tanta est eorum multitudo, quod nequaquam numerari possunt.'

Groome's comment is as follows: 'There is much in this

passage that remains obscure; but it seems clear from it that in 1822 there were in Egypt large numbers of captives, male and female, old and young, from the Danubian territories. They were black as crows and coal, and in complexion and features differed little from Indians, except that their faces bore long scars produced by burning (a kind of tattooing, like that of the Gypsy women in 1437 at Paris). On conversion to Mohammedanism these Danubians were worse to the Christians than the Saracens. Were these Danubians, or some at least of them, Gypsies, prisoners of war, from the Danubian territories? and did some of them buy back their freedom and return to Europe? If so, perhaps one has here an explanation of the hitherto unexplained names "Egyptian," "Gypsy," "Gitan," etc., and of the story told by the western immigrants of 1417-21 of renegades from the Christian faith.¹

The presumption that these Danubian captives were Gypsies is very reasonable. It has already been mentioned that modern Rumania possesses between 200,000 and 300,000 Gypsies, and that there is a large Gypsy population in the other Danubian territories. No one can point to a time when these regions were not inhabited by Gypsies, and there is therefore every probability that the captives of 1822 were members of that race. It ought to be added that Polydore Vergil, writing about 1499, asserts that the Gypsies were all tattooed—a practice which, in his opinion, gives them an Assyrian ancestry.²

Gypsies speak of themselves as *Rom* or *Romani* (*Rom*, *Rdm*, or *Romano*, in the singular masculine), and sometimes as *Romani-tchav* or *tchavle*, and *tchavle*, i.e. 'Romany lads and ladies.' Their language is known to them as *Romanes*, *Romani*, or *Romani-tchib* (*tchib*= 'tongue'). It has been more than once suggested that this name of *Rom*, or *Rom*, is derived from their long residence in the Byzantine Empire, formerly known as *Roum*.

3. Occupations.—At the present day, Gypsies follow various occupations, modified partly by the habits of the country in which they live. They have long been famous as musicians, and in S.E. Europe the hotels, restaurants, and other places of public resort are nightly visited by Gypsy bands. Everywhere their women are associated with the arts of divination, notably by means of palmistry. The men are equally celebrated as clever horse-dealers, and in Southern France and Northern Spain they are professional clippers or shearers of horses and dogs. Such names as *tiaker*, *brasier*, *caudronnier*, and *caldorier* preserve the memory of a time when they were more generally than now famous as metal-workers. Indeed, the existing bronze-workers of Polish Galicia are all of Gypsy race.³ The skill of Gypsies as craftsmen is further denoted by the Scottish name of *coird* (Gaelic *coird*= 'artisan'); and by the Montenegrin *majstori* (cf. Germ. *Meister*), given to them because they are even yet the only artificers in Montenegro. Their occupations in Eastern Europe, as detailed by Emil Thewrewk de Ponor,⁴ are very varied. They are stated to be singers, dancers, tight-rope dancers, puppet-show men, mountebanks, clowns, tale-tellers, improvisatori (in Turkey and Moldavia), bear-leaders, monkey-leaders, smiths, farriers, metal-workers, gold-washers, fishermen, horse-dealers, pig-dealers, boot-makers, agriculturists, hangmen, knackers, fortune-tellers, sorcerers, quack-doctors, cheats, thieves, and beggars. The wives of the musicians are noted for their skill in making beautiful embroideries for Hungarian ladies of rank. Other Gypsies, in various countries, are workers in wood, manufacturing chairs, spoons, children's toys, and such-like articles. Those of Scotland were at one time famous as makers of horn spoons, whence their popular name of 'horners'; and in Scotland they are still known as 'muggers' on

account of their trade in pottery. Many of the occupations already noted are associated with them in the Middle Ages, when they appear prominently as travelling actors, showmen, mountebanks, jongleurs, hypnotists, quacks, false coiners, pilferers, robbers, and mercenary soldiers. As itinerant actors and showmen they were apparently very numerous. P. Lacroix, in referring to such people in the 16th cent., observes: 'Many of them were Bohemians or Zingari (i.e. Gypsies). They travelled in companies, sometimes on foot, sometimes on horseback, and sometimes with some sort of a conveyance containing the accessories of their craft and a travelling theatre.' Richard Augustus Hay, a Scottish priest of the 16th cent., tells how a company of Gypsies used to be the guests of the Earl of Roelin every year, occupying two towers in Roelin Castle (Midlothian, Scotland) during May and June, when they acted several plays. As these towers became known as 'Robin Hood' and 'Little John,' it may be assumed that they were named after the most popular plays.⁵

Perhaps the most important of all the occupations professed or followed by medieval Gypsies is that which has yet to be named. They figured conspicuously in the character and attitude of religious pilgrims, and were everywhere accepted as such—a fact which will receive fuller consideration below.

The performances of histrionic dances, for which Gypsies were noted, can hardly be separated from their displays as actors. In the Accounts of the Lord High Treasurer of Scotland there is an entry of the year 1530, which shows that the sum of forty shillings was then paid 'to the Egyptians that danced before the King [James V.] in Holyrood house.' There is no indication as to the nature of the dances on that occasion. But from Spanish and Provençal sources we learn that, in the medieval miracle-plays relating to the life of Christ, Gypsy dances are of frequent occurrence. For example, the last act of Lope de Vega's *Nacimiento de Christo* ends 'with the appearance of the Three Kings preceded by dances of Gypsies and Negroes, and with the worship and offerings brought by all to the new-born Saviour.'⁶ One of the carols sung by Spanish children on the Day of the Holy Kings (Epiphany or Twelfth Day) opens with the verse:

'The Gypsy women, who are always
The joy of the town-gate,
Seeing the Kings arrive,
Wish to give them a dance.
Get ready the costanets, Gypsies;
The Three Kings have come in at the gate,
To see the young boy;
Chas, chas, chas.'⁷

In a certain Provençal *noël* the Three Kings themselves are understood to be Gypsies, and they successively foretell the future of the infant Christ by the art of palmistry, in approved Gypsy fashion. They introduce themselves thus:

'We are three Bohemians
Who tell good fortune.
We are three Bohemians
Who rob wherever we may be;
Child, lovely and so sweet,
Place, place here, the crown,⁸
And each (of us) will tell thee
Everything that will happen to thee!
Begin, Jagan, however,
Give him the head to eat.'

³ *JOLLS (O.S.)*, vol. II, p. 149.

Then art, from what I see,
Equal to God.
And thou art his Son all wonderful:
Thou art, from what I see,
Equal to God.
Born for me in the nothingness:
Love has made thee a child
For all the human race:
A virgin is thy mother,
Thou art born without any father;
This I see in thy hand.
Love has made thee a child, etc.

After completing their forecast of the Child's destiny, they proceed to examine the hands of the Virgin and Joseph, the latter of whom is thus addressed:

'And thou, good old man,
Who art at the corner of the manger,
And thou, good old man,
Wilt thou not that we see thy hand?
Say, thou parent perhaps
That we should steal that arm
Which is tied up there?
We would rather steal the child:
Place (something) here upon, fair sir,
We have carolously drunk (to-day).'

The Gypsy proclivities which emerge in this last stanza are still more unreservedly indicated in an Andalusian carol:

'In the gate of Bethlehem
The little Gypsies have entered,
And the new-born child
Have robbed of his cradling clothes.
Rascally Gypsies,
Faces of olive,
They have not left the child
One little rag!'

'How the Blessed Virgin with her Child Jesus and Saint Joseph fled into Egypt, and how they found food and lodging,' is the title of an Italian tract of mediæval origin, wherein a Gypsy woman encounters the Holy Family during their flight, and offers them hospitality.

'I have here a little stable,
Good for the young she-ass;
I will now place the manger there and hay:
Behold a shelter for ye all!'

After bidding Saint Joseph to be seated, she goes on to foretell the future of the Virgin and Child,—'for we dear Gypsies can all divine the future.'

These references¹ are not the only ones which associate Gypsies with Jesus of Nazareth. One very persistent tradition is that the nails used at the Crucifixion were made by Gypsies, and that the race became accursed in consequence. On the other hand, the Gypsies of Alsace and Lithuania assert that this was not so, and that a woman of their people endeavoured to steal the nails from the Jews, in order to prevent the Crucifixion. She succeeded in stealing one, with the result that only three nails remained available, two of which were used for the hands, and the remaining nail was driven through the feet, which were crossed one above the other. Grooms comments as follows upon this tradition:

'This Gypsy counter-legend offers a possible explanation of the hitherto unexplained transition from four nails in three in crucifixes during the twelfth and thirteenth centuries. Dr. E. Morris discusses the change in his *Introduction to Legends of the Holy Land* (Early Eng. Text Soc., 1871). There it appears that, while St. Gregory Nazianzen, Jerome, and the author of the *Golden Legend* speak of three nails only, St. Cyprian, Augustine, and Gregory of Tours, Pope Innocent III., Balason, Theodore, and Albert speak of four; and that the earliest known crucifix with three nails only is a copper one, of probably Byzantine workmanship, dating from the end of the twelfth century. Now, if the Byzantine Gypsies possessed at that date a metallurgical monopoly, this crucifix must, of course, have been fashioned by Gypsy hands, when the three nails would be an easily intelligible protest against the calumny that these nails were forged by the founder of the Gypsy race.'

4. History.—From these various references it will be seen that the Gypsy race has been interlinked, with what justice remains to be ascertained, with the earliest events of Christianity. Moreover, evidence is accumulating which tends to show that

¹ Extracted from the fuller accounts in *JGSL* (O.S.), vol. I. pp. 128-142, and vol. II. pp. 45-57.

² *Gypsy Folk-Tales*, p. 122.

they were obtaining the benefits accorded to Christian pilgrims as early as the 8th cent., and that they are referred to in this character by Charlemagne, in an edict of the year 790.¹ They undoubtedly appear as pilgrims at a much later period.

We know, for example, that in the year 1427 the noble Transylvanian family of Horvath presented forty sheep 'to the poor pilgrims out of Egypt, in order that they, returning to Jerusalem, may pray for the salvation of our souls'; that in 1418 the Baron Count of Hermannstadt, in Transylvania, granted 'to the people from the Holy Land food and fodder for their horses, worth eight denars'; that in the same year the municipality of Frankfurt-on-the-Main gave bread and meat to 'the wandering people from Little Egypt'; and that in 1419, Andrew, a duke of Little Egypt, with a hundred and twenty followers, received money, wine, and bread from the town of Moscow, in Hungary. Further, a certain 'Lord Bismarck from Egypt and his two hundred and twenty comrades' were visited a man of money, corn, and poultry by the municipality of Eremstadt, Transylvania, in the year 1418. Then, again, in 1450, on St. Andrew's Eve, the town of Arnhem, in Guelderland, paid six guilders 'to the count of Little Egypt, with his company, to the honour of God'; and, at the same time, gave 'to the same count and to the Moslem women, to the honour of God, a half mackerel (a corn measure) of white bread, a barrel of beer, and a hundred herring.'

In all these cases, which are only a few selected out of many of the same kind, it is manifest that the pilgrims who received these various gifts belonged to the caste known as 'Egyptians' or Gypsies. That Gypsies actually professed to be pilgrims is seen from the statement made by Pucor in his *Commentarius* (1572), wherein he asserts that they were the pilgrim dress.² Aventinus, who wrote in the early part of the 16th cent., complained indignantly that their pilgrim character gave them a liberty possessed by no other class. 'Robbing and stealing are prohibited to others, under pain of hanging or beheading, but these people have licence for them.' Aventinus was not using the language of exaggeration, for robbery and theft were among the many characteristics of the mediæval Gypsies. Nevertheless, they sustained at the same time the rôle of genuine pilgrims; and as such they were supported by the citizens and country-folk among whom they travelled.

In order to understand the situation properly, it must be realized that the Gypsies enjoyed Papal protection. This is seen from a letter granted in 1496 by Charles, Count of Egmond, under his privy seal, to a certain 'Count Martin Gmogy, born of Little Egypt,' in which it is stated that the Pope, Alexander VI., had ordained Count Martin and his family and company 'to go on pilgrimage to Rome, to St. James of Gallica, Compostella, and to other holy places.' To enable this count of Little Egypt and his followers to fulfil the Papal injunctions, Count Charles of Egmond strictly commanded all his representatives throughout his principality to succour and protect the Gypsies. The Count of Egmond and all orthodox people were bound by their religion to obey the wishes of the Pope in this respect. Obedience, moreover, brought them a spiritual reward. The citizens of Amiens were granted Papal indulgences and pardons because they gave alms to an earl of Little Egypt and his company of about forty persons who visited their town in September 1427. The same kind of reward is indicated also in an ordinance of the magistrates of Tournai in Hainault, who appealed to the devout members of the community to give alms to 'the great Earl of Little Egypt or his people,' who were expected to sojourn for four or five days in Tournai in the last week of March 1429.

At this period, if not at earlier dates, the leaders of these Gypsy bands were men of noble birth, who received their appointments from the Crown, or other supreme power, in the various European countries. They have borne many designations—

¹ For an exhaustive and scholarly study of this question, see an art. by Leo Wiener, in *JGSL* (N.S.), vol. III. no. 4, April 1910, pp. 222-276.

² The passage is quoted in *JGSL* (O.S.), vol. III. p. 2.

king, regent, governor, master, judge, duke, earl, count, baron, and captain. It is to be noted that these rulers were not of Gypsy blood, but belonged to the nobility and gentry of the country in which their particular section of the race was settled. The evidence obtained from Poland and Lithuania is clear and distinct.

'From the sixteenth century till the close of the eighteenth the Chancellor Royal nominated a *Regent of the Gypsies* from among the Polish gentry. These regents were the supreme judges for the Gypsies of the district; they gave laws to the Gypsies, they had the right of punishing the Gypsies, and of levying taxes on them.'¹ 'With us,' says a Hungarian writer,² 'the Gypsy nobility was ranked in the nobility of Transylvania and Hungary. The nobility of the Gypsies has long been with us an office of state, combined with which were two prerogatives: freedom of movement, which the Crown bestowed on distinguished persons as a reward of merit, but not on Gypsies.'

In illustration of this statement are two commissions granted in 1557 by Queen Isabella of Hungary in favour of two of her courtiers, Lord Balatai de Kiskend and Caspar Nagy, who were appointed *voivodes*, or rulers, of the Gypsies of Transylvania.³ More than a century before this, in the year 1488, the Emperor Sigismund had issued a passport to 'our faithful Ladislaua,' *voivode*, or baron, of the Gypsies, in which the Emperor commands all the imperial officials to favour and protect the said Count Ladislaua and the Gypsies who are subject to him. 'And if any trouble or disturbance should arise among the Gypsies, then none of you whomsoever, but Count Ladislaua alone, shall have the power of judging and acquitting.'⁴ This, it will be seen, gives the Gypsy Count an authority second only to that of the Emperor himself. It would seem that this nobleman represented a family which had held the countship of the Gypsies for several generations. This appears from three documents of 1598, 1573, and 1577, the first of which relates to a Domeniek Csigani, there styled a nobleman or prince (*homo regius*). Those of 1573 and 1577 refer to 'the son of Domeniek Csigani' and to 'Ladislaua Csigani,' presumably the same individual. The context renders it probable that these were ancestors of Count Ladislaua of 1557.⁵

Another Gypsy baron was Antonios Eparchos, who is described as a versatile genius, at once poet, Hellenist, and soldier, who corresponded with Melanchthon. In 1540, after the great siege of Corfu, the *Seef* of the Gypsies of Corfu was transferred upon Eparchos as compensation for his losses and as the reward of his talents. Marmora, whose *Historia di Corfu* was published in 1672, describes the Gypsy barony as 'an office of not a little gain and of very great honour.' The jurisdiction of the baron extended over the continental dependencies of Corfu, as well as over the Gypsies of the island. Under Venetian rule, the title appears to have been *Giudice e Capitano degli Aciagani*, 'Judge and Captain of the Gypsies.' At the close of the 16th cent. the *feudum Aciagorum*, or Gypsy barony, was possessed by Gianuli de Abitabulo, from whose family it afterwards passed to the house of Goth.⁶

From these references it will be seen that the counts and earls 'of Little Egypt,' whose occasional visits to one part of Europe or another are chronicled in various archives, were not men of Gypsy blood. They were members of the upper classes of Europe, who were appointed by their respective governments to these Gypsy baronies,

as a distinction and a reward. Their revenues were mainly derived from the authorized poll-tax that their subjects were bound to pay to them, although they had apparently other sources of profit. One thing clear is that, when they travelled from home, both the rulers and the ruled subsisted upon the gifts which they looked for—and not in vain—from the people among whom they sojourned. This was because they bore the character of pilgrims, to whom it was a pious duty to give alms.

The mediæval Gypsies constituted therefore a system, and not merely a race—an organization which had its ramifications all over Europe, and which held a position that all the secular and religious authorities recognized. To analyse the component parts of that organization, and to endeavour to solve the problem of its origin, is outside the scope of this article. A close investigation of the causes and effects of the Crusades (q.v.) forms the first step in such a study. No very great weight can be attached to the single assertion of a French Gypsy soldier in 1622, that his people came into France under the French kings at the time of the Crusades, notably under St. Louis (1252).⁷ Indeed, that assertion conflicts with the belief already referred to, that Gypsies figured as Christian pilgrims as early as the reign of Charlemagne. But it is evident that the Gypsies of the 15th cent. availed themselves of the privileges of pilgrims and Crusaders, and particularly of those possessed by the Templars and Hospitallers. A concrete instance of this is seen in the case of 'Lord Emmaus from Egypt and his two hundred and twenty comrades,' who were so hospitably received at Kronstadt, Transylvania, in 1416. Emmaus, or Emmans, is in Judaea, not in Egypt; and Emmans was formerly a Commandery of the Hospitallers. The Lord Emmaus of the year 1188 was a certain Barthelomy, who, with his comrades, enjoyed precisely the same privileges as those accorded to the Lord Emmaus of 1416. That is to say, he and his company were entitled to travel about Europe, living on the countries through which they passed, all on the strength of their being pilgrims, or the defenders of pilgrims. As recently as 1532, the Grand Master appealed successfully to the Pope and the Emperor against the attempt made by the Duke of Savoy to exact money from the Grand Master and his company for their food and lodging when passing through Savoy. Thus, the position occupied by the people popularly called 'Egyptians' was identical with that of the Hospitallers. This identity can be seen in other respects, such as exemption from military duty to the country in which they lived, and freedom from its taxation. Perhaps the most notable link is the use of the sign of the Cross as a mark of union.⁸

Even if the Gypsies had been quiet and peaceable people, their assumed right to exact food and money from others would have rendered them a burden to the general population of Europe. But, as they travelled in large companies, their men being armed to the teeth, and as their demands were enforced by acts of violence, when necessary, the situation became increasingly intolerable to the middle and lower classes. Consequently, in all the countries of Europe, edicts were passed for the suppression or the expulsion of the 'Egyptians.' On the other hand, the leaders of those 'Egyptians' were men of noble birth, legally appointed by the State to their position of regent, baron, or count, and that position gave them a good income and many privileges. It was therefore to their advantage that the laws against 'Egyptians' were passed.

tiants' should be nullified as far as possible. The result of these opposing interests was that, for several centuries, the European countries oscillated between the enactment of laws framed for the purpose of ending the Gypsy system, and the very perpetuation of that system by the continued filling-up of vacancies in the Gypsy baronies.

France furnishes an excellent illustration of this conflicting state of things. In 1289 an edict was issued in the king's name forbidding any Gypsies to enter the country, and ordering them to leave within 15 days without delay. Nevertheless, it appears that in 1245 there were no fewer than 4000 Gypsy men in France, all capable of bearing arms. Further, in 1264, and again in 1280, the Gypsies received notice to quit France—with two months' grace in the former instance and one month's in the latter. In spite of all this, it was found necessary in 1288 to issue a royal declaration 'Contre les Bohémiens, leurs femmes et enfans, et over quel leur doissent retraire.' This last clause refers to certain of the French nobility and lord-judiciary, who are accused of giving shelter to the Gypsies in their castles and manors, in defiance of Acts of Parliament expressly forbidding them to do so. They are now ordered once more to desist, under pain of losing their fiefs and offices, with threats of severer punishment if they continue to disobey.¹

Eventually, but only after the lapse of centuries, the Gypsy system was completely suppressed. In the course of the struggle, thousands of Gypsies were executed, banished, or imprisoned; and their surviving representatives are, with few exceptions, inoffensive members of the community in which they live. The problem of the Gypsy system and the Gypsy race still awaits a completely satisfactory solution; but a careful study of the system cannot fail to throw light upon the origin of the race.

It may be added that the country known as 'Little Egypt' was probably the Holy Land, in the first instance, and, in later times, the territories retained by the Crusaders in Greece and the islands of the Levant.

5. Religion.—The question of the religion of the Gypsies is somewhat involved. Their over-lords during the Middle Ages were undoubtedly Christian. The Genoese family of the Abitabili, their successors of the house of Goth, and, at a later date, Antonio Eparchos, the correspondent of Melaschthon, all of whom were in turn Barons of the Gypsies of Corfu, could not have been anything else than Christian. The same can be said of the noble Hungarian family represented in 1423 by Count Ladislaus, who then held the office of *vayvoda*, or baron, of the Cigane. Similar examples are Lord Balatai de Kinkend and Caspar Nagy, who belonged to the court of Queen Isabella of Hungary, by whom they were created *vayvodes* of the Cigane of Transylvania in 1557. All of these were non-Gypsies upon whom the office of *vayvoda* was conferred. No room for doubt exists in the case of two Swabian nobles of the Gypsies who died in the 15th century. The monument of one of them was placed in a little monastery beside Schloss Fürstenaue, a castle of the Counts of Erbach, in the Odenwald. The epitaph was to this effect: '1445 years after the birth of Christ our Saviour, on St. Sebastian's evening, died the high-born lord, Lord Pannal, duke in Little Egypt, and Lord of Hirschhorn in the same country. Lord Pannal's arms were emblazoned on his tomb—a golden eagle crowned, with a stag horn for crest, above a crowned helmet. The Swabian chronicle recounts further how, in the year 1498, at Pförtzen, 'there died the well-born Lord John, Free Count out of Little Egypt, to whose soul may God be gracious and merciful.' Both of these references² testify clearly to noble birth and Christian faith. The case of Count Martin Grougy, 'born of Little Egypt,' who was commanded by Pope Alexander VI. to go on pilgrim-

age, about the year 1493, is perhaps not quite so definite. Nevertheless, it is inconceivable that a Pope would enjoin upon any but a Christian the duty of pilgrimage to various holy places in Europe. The religion of the Gypsy rulers, therefore, may be regarded as certainly Christian. That of the Gypsies themselves, in some instances, falls within the same category. Mention has been made of Symon Simeon, an Irish friar, who visited Candia in Crete in 1322, and who there saw 'a race outside the city, following the Greeks' rite,' whom he describes in terms that clearly indicate Gypsies. Consequently, it is evident that those Cretan Gypsies belonged to the Eastern or Greek Church. The same friar also refers to numerous Danubian captives in Alexandria and Cairo, apparently Gypsies, who had been converted to Muhammadanism by their captors. What was their previous religion? The Danube territories formed then a part of Christendom, and, if there is no evidence that those Danubian captives were previously Christians, there is, on the other hand, no evidence that they were not. The presumption is that they were Christians in name, if not in fact. The whole history of the Gypsies points to this conclusion. It was because they were accepted as Christian pilgrims that they received alms, to the honour of God, and free quarters in all the countries of Europe. They wore the pilgrim dress, and the cross was their chief symbol. When they had to retreat before superior numbers, they sought and obtained refuge in religious houses. No fewer than three hundred Gypsies found shelter in the Augustin Convent at Plainpalaia, Geneva, in 1532, when they had to give way before the attacks of the populace and the town officials. Moreover, when twenty of their number were taken prisoner on that occasion, they were speedily pardoned and released, *propter Deum*. Martin del Rio tells of a similar incident in Spain, apparently in the town of Santiago, on Corpus Christi Day, 1584, when the Gypsies took refuge in 'the magnificent mansion and hospital of the knights of St. James, where the ministers of justice attempting to seize them were repulsed by force of arms; nevertheless, all of a sudden, and I know not how, everything was hushed up.' Neither the Augustin friars nor the Knights of St. James would have so championed the Gypsies had they been strange and unknown pagans. Nor would either of these fraternities have exerted themselves to protect a crowd of the ordinary citizens of Geneva or Santiago from the consequences of their turbulent behaviour towards the city officers.

There is no better testimony to the Christianity, nominal or real, of the Gypsies than that afforded at the Church of Les Saintes Maries de la Mer, in the Ile de la Camargue, Bouches-du-Rhône. In this church the festival of the Holy Marys is annually celebrated on 25th May. On that occasion, the crypt of the church is reserved exclusively for the Gypsies, because here is the shrine of Saint Sara of Egypt, whom they regard as their patron saint.

The Gypsies, to the number of several hundreds, begin to arrive as early as the 22nd of May, and throughout the night of 24th-25th May they keep watch over the shrine of Saint Sara. On the 25th they take their departure. This custom, which is in full force at the present day, has continued for at least four or five centuries. For M. Ribon, curé at Les Saintes Maries, states (1897) that the native offerings of the Gypsies, still preserved in the crypt, date back to about the year 1450. Since that date, therefore, the Gypsies have worshipped in the crypt as Christians.

Many other statements might be adduced which show the Gypsies, past and present, in the light of orthodox Christians, punctilious in observing the rites and ceremonies associated with Christianity.

On the other hand, evidence of another kind is not difficult to obtain. The crypt of Les Saintes

¹ For these references, see *JGLS* (O.S.), vol. III, 1891-92, p. 228, and *Q* (N.S.), vol. v, 1911-12, pp. 513-514.

² For which see the *Annuaire Societé de St. Omer, Flandres*, 1893, p. 284, 310.

Marice itself suggests an opposite view. It is stated that the shrine of Saint Sara rests upon an ancient altar dedicated to Mithra; that the Gypsies of that neighbourhood, who are known as 'Caragues', are descended from the Iberians formerly inhabiting the Camargue; and that their cult is really the Mithraic worship of fire and water upon which the veneration of Saint Sara is superimposed.¹ Even this fact, however, if it be a fact, does not wholly differentiate them from the worshippers in the church above, because a critical analysis of modern Christian ritual, in some of its phases, at any rate, reveals affinity with, or derivation from, the ritual of earlier faiths. De l'Hoste Ranking points out² that what Wislowski describes as a Hungarian Gypsy ceremony 'is simply the ordinary ceremony of the Orthodox Greek Church.' This statement, however, leaves the origin of that ceremony still unsettled. The same writer mentions that Christmas, Easter, and Holy Week are high seasons among the Transylvanian Gypsies. This does not necessarily show that the Gypsies are Christians, for these had been sacred seasons long before the Christian era.

In his monograph on the 'Forms and Ceremonies' practised by Gypsies, E. O. Winstedt has brought together a mass of curious information on this subject. Here, again, there is the same difficulty of ascertaining what is and what is not a distinctive Gypsy custom. For example, 'The Gypsies of Roussillon hold a feast in honour of the dead on All Saints' eve; but the ceremony—burning incense—seems to be borrowed from their Christian neighbours.'

With regard to a certain ceremony of the Hungarian Gypsies, Winstedt further observes:

'Exactly how much of this is purely Gypsy ritual, and how much is due to borrowings from the superstitions of the inhabitants of Slav, Hungarian, Greek, Latin, Germanic, and Turkish lands in that quarter of the world, it would be difficult to say.'

Even the practice of constituting marriage by the simple act of jumping over a broomstick, which appears to have been at one time a usage among Gypsies, is not solely an attribute of these people, for there are survivals of such a custom among the peasantry of Austria, Germany, and the Netherlands.³ Ranking indicates another parallel instance when he writes:

'The great festival among the Transylvanian Gypsies is St. George's Day, "Green George," as he is called. The chief figure of the feast is a lad who from head to foot is covered with green leaves, twigs, and flowers, and hence is called "Green George," obviously our "Jack in the Green."'

This is the spring festival observed among the Gypsies of Rumania, Serbia, and Bulgaria, as described by Kopernicki.⁴ But the point is that, as Ranking justly remarks, it is also the same as the May Day festival observed, until quite recently, in England and Ireland, in which the leaf-clad 'Jack in the Green' is the principal figure.⁵ The Gypsies, therefore, have no special claim to this custom, which is or was common to the whole of Europe. It is the ancient celebration of the yearly re-birth of vegetation in spring time, as observed in the Roman *Floralia* and the kindred rites of the Drakids. The 'holly-boy' and 'ivy-girl,' which used to figure prominently in the Shrovetide festivities of English villages, notably in Kent, represent similar ancient rites.⁶ Groome's statement,⁷ that 'there is, or was lately, actual idolatry

—tree-worship—among German Gypsies,' might be held to indicate an absolutely pagan cult. The fir, the birch, and the mulberry-tree are specified as the respective symbols of the Old Prussian, the New Prussian, and the Hanoverian Gypsies.⁸ Once more, however, it has to be noted that tree-worship was formerly practised in all the countries of Europe, traces of it being still discernible among the peasantry down to our own times.⁹ Indeed, not only among the peasantry and in past times; as witness the solemnity of decorating churches with holly and mistletoe in the Christmas season, which is the ancient Yule.

Considerations such as these seem almost to point to the conclusion that the chief difference in religious matters between ordinary Europeans and the Gypsies of Europe is that the latter have conserved in a greater measure than the former the pagan practices once common to all Europeans.

In a communication made to the *Orientalische Gesellschaft* (Berlin) in 1888, Solf represents the 19th cent. Gypsies of Germany as combining a religious code of their own with Christian profession and practice.

'A "captain" presides over each tribe. He is elected for seven years. His powers are both regal and sacerdotal. His marriage, divorce, excommunication, and exorcism those who have forfeited honour and privilege. Nearly all the marriages are celebrated on Whituesday. Great care is taken to prevent to avoid marriages between the degrees prohibited by the German law, although they are otherwise allowable by Gypsy custom and tradition. Adultery is exceedingly rare, and is punished with severity. The children are baptised, and handsome presents are always expected from the god parents. If a child is born while they are lodging near a village, they usually take him to the parish church for baptism. They mourn mourning at a death. Solf describes the Gypsy as "full of piety."'

The term *Heiden*, or 'Heathen,' so often applied to Gypsies in Western Europe during past centuries, would seem to denote that they were not regarded as Christians. When, in 1423, the town of Arnhem, in Guelderland, gave six guildens 'to the count of Little Egypt, with his company, to the honour of God,' and, on the same day, a quantity of food and drink 'to the same count and to the Heathen women, to the honour of God,' a difference in religion between the count and the Heathen women appears to be implied. Nevertheless, the name *Heiden*, or 'Heathen,' was used, on at least two occasions, as a racial or caste designation solely, when the people so designated were Christians by religion. One of these instances occurs in Justinger's *Berner Chronik*. Bataillard, who cites the passage,¹⁰ points out that Justinger was recorder of the town of Bern, and that his chronicle runs from 1411 to 1431. In 1410 he makes the following entry:

'Regarding the baptized Heathen. In this year there came to Basel, Zurich, Bern, and Solothurn more than two hundred baptized heathen [*Heiden*], they were from Egypt, pitiful, black, miserable, with women and children, and they camped before the town (Bern) in the fields, until a prohibition was issued, because they had become intolerable to the inhabitants on account of their thefts, for they stole all they could. They had dukes and lords among them, who were great silver bolts [*silberne Bolzen*], and who rode on horseback, the others were poor and wretched. They wandered from one country to another; and they had a safe-conduct from the King of the Romans.'

Here, it will be seen, the term 'Heathen' is applied to people who were admittedly Christian by religion. The other similar instance is that afforded by the *Staats-Archiv* of Basel, in which it is recorded that on 12th June 1423 a payment of one gulden was made 'to two heathens [*zwei Heiden*]' who had become Christians. There is practically no doubt that in all these instances—at Bern in 1410, at Basel in 1423, and at Arnhem

in 1429—the people denominated 'heathen' were Gypsies. Those referred to in 1419 and 1423 are distinctly stated to have professed the Christian faith. Notwithstanding this, they continued to be styled 'Heathens,' as a racial name. It is extremely probable, therefore, that the term was so understood when used at Arnhem in 1429, and that those 'Heathen women' professed Christianity. Indeed, it is very unlikely that the magistrates of Arnhem would have bestowed substantial benefits upon avowed pagans.

There is obviously much room for speculation as to the religion of the rank and file among the 'Egyptians,' or 'Heathens.' If they were not actually members of the Christian Church, they, at any rate, passed themselves off as Christian pilgrims, sustaining that character not only by their dress, but also by their observance of Chris-

tian rites, as in the Church of Les Saintes Maries. To what extent they also followed heathen practices cannot be ascertained.

LITERATURE.—A *Gypsy Bibliography*, by George F. Black, issued by the Gypsy Lore Society in 1905 (now ed. 1914), mentions almost every work upon this subject published up to date. It is found in the leading libraries of Europe and America. Those to whom this work is not accessible may be referred, for historical information, to the following: H. M. G. Grailmann, *Die Zigeuner*, Dusseldorf and Leipzig, 1789 (Raper's Reg. vi.); *Disquisition on the Gipsies*, London, 1781; C. Mepp, *Die Zigeuner der Gipsen in Europa*, Göttingen, 1870; P. Bataillard, *Sur les Origines des Bohémiens en Belgique*, Paris, 1878. For ethnography, language, and history, see A. F. Peck, *Die Zigeuner in Europa und Asien*, Halle, 1844-45; F. Müllersch, *Ueber die Wanderungen und die Wanderungen der Zigeuner Europas*, Vienna, 1873-75. F. H. Groome's introd. to his *Gypsy Folk-Tales*, London, 1890, contains a comprehensive survey of the whole question. The *Journal of the Gypsy Lore Society* (New Series), issued at 113 Alfred Street, Liverpool, continues to furnish the most recent results obtained by modern scholars.

DAVID MACLINTOCK.

H

HABIT.—In its most general acceptance, habit denotes a persistent readiness in certain phenomena to recur, which has been acquired by repeated recurrence. Here readiness is to be understood as including not merely ease or facility, but also a tendency or impulse. Habitual readiness is thus distinguished, on the one hand, from a readiness that is transient; on the other hand, from a persistent readiness that is inborn. The former is merely the general tendency of all living things to act under any stimulus. The latter is what is known distinctively as *instinct* (q.v.). The distinction between habit and instinct, however, is no longer thought to be so absolute as was in former times generally supposed. Empiricism, indeed, has long endeavoured to break down the distinction. The older empiricists, of whom J. S. Mill may be taken as the last representative, generally held that most, if not all, instincts are habits formed by each individual, but at a period so early in life as to have left in memory no traces of their formation. But this older form of the empirical theory has completely given way before the ideas of evolutionism. At the present day, while many, if not all, instincts are in their ultimate analysis reduced to habits, they are still admitted to be inborn in the individual, and the process of their evolution is extended over an indefinite period in the life of preceding generations. Empiricism includes in its theory not only instinctive impulses to action, but also the insuperable necessities of thought. The necessity of thinking that $2+2=4$, or that two straight lines cannot enclose a space, is regarded merely as a habit which has become so firmly fixed that it can no longer be resisted. A much more questionable use of the term *habit* is one which extends it to facts in the inorganic world. For instance, W. James speaks of 'the habits of an elementary particle of matter,' and describes 'the laws of Nature as immutable habits which the different sorts of elementary matter follow' (*Principles of Psychology*, vol. I, p. 104; cf. Radstock's *Habit and its Importance in Education*, p. 32). These theories carry us into the general problems of philosophy, and it is the ethical significance of habit with which we have specially to do. For our purposes there is no gain, but rather a loss of scientific perspicuity, in extending the idea of habit as is done by the theories in question. For, even if the unalterable necessities of thought and the unalterable properties of matter can be with

any propriety described as habits, yet, in so far as they are unalterable within the range of all scientific experience, they lack the essential character of habits; they cannot even be identified with instincts, for these are by no means incapable of modification. The very essence of a habit is that it is an effect of alterations going on in living things; it is an aspect of organic growth. Consequently, as Aristotle pointed out long ago, habit cannot be engendered in inorganic things. 'For instance, the stone, which by nature moves downwards, cannot acquire the habit of moving upwards, not even if one tried to give it the habit by throwing it up ten thousand times; nor could fire form a habit of moving downwards; nor could anything else with a nature of one sort be made to take on another from habit' (*Eth. Nic.* ii. 1. 3). Analogies, indeed, are sometimes drawn from acquired facilities in the inorganic world. Folded paper returns readily to its folds. A lock or an engine works more easily after being used for a while. The fittest analogy of all is probably to be found in the improvement of a violin that has been played by a master. In all these cases the acquired facility is associated not with elementary particles, but with complex combinations of matter; the material of the violin is even an organic compound. But the analogy of such facilities with habit is superficial at the best. It has no connexion with any process of organic growth.

As an organic process, however, habit is found in the vegetable world. Thus the modifications which may be developed in a plant by artificial culture or by natural adaptation to a new environment are of the nature of a real habit. More nearly akin to the habits of human life are the numerous aptitudes which animals can be trained to form. In man also the most spiritual habits have their basis in his organic life. The nutrition of the organs called into play must be affected by the uniformity of their action during the formation of a habit. Layers of nutritive material will run into peculiar positions determined by the habitual movement of the organs they supply, and thus the growing organs will receive a peculiar structure, adapted to the actions repeatedly performed. The fact is that often after prolonged effort we continue to feel the beat of the blood in the arteries and the throb of nervous and muscular movement which the effort called forth, long after the effort itself has ceased. This effect is experienced not only in the sensations of active effort, but also in

the so-called passive sensations. A din thrills in the ears of many persons after a long railway journey, and after-images are a familiar phenomenon in vision. It thus appears that, though the elementary properties of inorganic, and perhaps also of organic, matter are unalterable, there is in organic beings a natural adaptability to the alterations of organic structure involved in the formation of a habit.

This is the physiological interpretation of the fact that habitual actions are done with a certain unconsciousness; that is to say, though we may remain conscious of the series of habitual actions as a whole, we fail to limit consciously the separate actions in the series. When we begin to form a habit, the actions required are in general performed slowly, deliberately, and with an amount of effort that is often even painful. Gradually with repetition the slow and deliberate effort disappears, and the actions are performed with an easy rapidity that carries them beyond the ken of consciousness. For, to attain distinct consciousness, one mental activity must endure for a certain length of time before being supplanted by another. Consequently, if one activity is in experience uniformly followed by another, it comes after a while to suggest that other so instantaneously that it fails to be noticed in consciousness, and the activity suggested alone appears. This process can be traced all through intellectual life, and is specially familiar in the perception of the external world. The fact perceived is always suggested by some sensation, and in general so instantaneously that the sensation escapes attention, and the fact perceived appears like an object of immediate intuition. The same result is of great service in practical life also. For feelings that might, if indulged, obstruct or even paralyse active exertion may come to be habitually associated with some such exertion. They will then serve merely to suggest and stimulate the activity with which they have been habitually associated without obtruding themselves into consciousness at all, or at least in a manner to disturb or distract. Surgeons or nurses, who would be helpless if they indulged their natural sympathy at the sight of a painful wound, may train their sympathetic feelings to prompt at once the measures necessary for relief and cure. On the other hand, the indulgence of mere feeling, however amiable it may be, tends to create that habitual excess of sensibility which is commonly described as *sensitiveness* or *sentimentalism*. This almost inevitably entails an enfeeblement of character; and therefore an important phase of moral training consists in checking the tendency to excessive indulgence of idle sentiment, and forcing the sentiment into habitual association with some form of practical effort (James, *Principles of Psychology*, vol. I. p. 126 f.).

Often the activities which come to be thus habitually associated form a long series; and, when by frequent repetition they succeed one another with great rapidity, they become no longer distinguishable, but are fused into an undiscriminating consciousness of them all taken together. Thus vibrations of the atmosphere, on reaching a certain velocity, are no longer heard distinctly, but form a single tone; and many striking optical effects are produced by the fusion of visual sensations rapidly succeeding one another. In the same way actions, originally done with conscious effort, may by habitual training cease to be individually distinguishable, leaving in consciousness merely a trace of their general effect. They then appear as if they were performed by the organs called into play without affecting the highest centres of conscious life.

An interesting illustration of this phenomenon is given by Max Müller in his *Autobiography* (p. 216 f.). The printer in

United who set up the *Epigraph* in Goshalt knew nothing even of the existence of this language. But, though it contained some 200 characters, he somehow devoted attention which Müller himself had overlooked. He explained this by saying that his eye was formed certain habits of movement in accordance with the common combinations of letters, and felt something unusual in wrong combinations, just as it might feel the combination *As* to be wrong in English.

Even the higher nerve-motors in the brain exhibit the same result at times. Complicated mental operations come to be so habitual that they too fall below the verge of consciousness. From the physiological point of view this sort of activity is described as *unconscious cerebration* (see Carpenter's *Mental Physiology*, ch. xlii.).

In its psychological as distinguished from its physiological aspect, habit is connected with the mental process of suggestion or association. A habit is an acquired readiness in the suggestion of phenomena that have been frequently associated. Now, among other facts connected with this process it is a familiar law that phenomena are more readily suggested in proportion to their original intensity and to the frequency with which they have been repeated. These two conditions of ready suggestibility are the influences mainly called into play in the formation of habits. Sometimes a new habit seems to spring into full development all at once, under the impulse of a peculiarly intense impression. A violent shock in conscious experience may suddenly produce such organic changes as in ordinary circumstances are the result of very gradual modifications. This effect may be met with in all spheres of mental life, but it is peculiarly striking in the great moral and religious change commonly known as *conversion*. It may be that, however sudden this change may appear at times, its suddenness is more apparent than real. Possibly it has been prepared by subconscious processes that have been going on for some time before and only burst suddenly over the threshold of consciousness (E. D. Starbuck, *The Psychology of Religion*, London, 1898, pp. 105-112; W. James, *Varieties of Religious Experience*, New York, 1902, p. 236 f.). In any case the fact that changes of similar violence are seen in other regions of mind shows that sudden conversions are not out of harmony with the laws of mental life (Starbuck, *op. cit.* ch. xi.). But, however valuable a sudden and violent shock may be as an initial impulse to the formation of a new habit, its value apart from this is apt to be dangerously overestimated. An intense excitement finds its worth mainly in the fact that its intensity makes it readily suggestible. It haunts us so that we cannot escape from it, and thus it determines the current of our life; that is to say, it gives life a new habit. But without this continued recurrence of an intense impression its original intensity would not prevent it from being gradually, in some cases even rapidly, effaced. It is a familiar rule, therefore, of all life that habitual attainments must be kept in continued practice, else they are apt to be supplanted by a return of the untrained awkwardness with which they began. Even instincts, as will presently appear, die away if they are not kept in life by practice; and any peculiar variety of plants tends to lose the distinctive habits developed by culture, and to revert to its wild type if it is left uncultivated. This fact bears with eminent significance on the training of the moral and religious life. The young convert in the glow of his fresh enthusiasm is apt to imagine that the habits of the new life are already acquired. He does not realize that he has only been born anew, and that there is a long process of growth before him still, ere he can reach the stature of spiritual manhood. It is not therefore surprising that statistics seem to point to a startling proportion of relapse after

spiritual changes produced by the violent excitements of revivalism, when compared with the proportion among cases where conversion has been due to the ordinary unexciting religious culture of home and church and Sunday school (Starbuck, *op. cit.* p. 170). For moral and religious habits must be trained by the same organic process by which all life is evolved; and it is an interesting fact that the Great Teacher draws His favourite parables and metaphors for illustrating the development of the kingdom of God from the processes of organic growth in Nature. It is the organized structure developed by a process of growth that distinguishes habitual goodness from a goodness that is due to any transitory impulse. 'One swallow does not make a spring,' as Aristotle puts it in illustrating the necessity of trained habit to genuine virtue (*Etica Nic.* I. 7. 15); and Hosea (6*) had long before denounced the futility of a goodness that is transient as a morning cloud or early dew. On the other side also of the moral life:

*The sin that practices burn into the blood,
And not the one dark hour which brings remorse,
Shall brand us after, of whose fold we be
(Tennyson, *Martin and Fitch*).

While habit is thus not to be confounded with any fleeting impulse, it is also, as we have seen, distinguished from those impulses that are inborn. But we have seen, further, that this distinction is not so sharp as was at one time supposed. Possibly instinct may itself be but a habit earlier formed, and thus embedded in the primitive structure of living things. But, whatever its origin, we now see that the processes which constitute life can, by a prolonged uniformity of action, produce a new organic structure giving a habitual readiness of the same kind as the instinctive. For this reason habit is commonly spoken of, in a phrase which has long been proverbial, as a second nature. It is, moreover, a familiar experience in common life, confirmed by scientific observation, that the second nature, thus created by a man's own habitual action, may overbear the instincts of his original nature. For instincts are by no means beyond reach of the changes going on in life. On the contrary, not only do they require the stimulus of a proper environment to be called into activity in the first instance, but, even if roused in this way, they may afterwards be completely supplanted by counteractive habits. Numerous illustrations of this will be found in Spalding's celebrated article on 'Instinct' in *Macmillan's Magazine* for February 1873, and in the chapters (xi. to xvi. inclusive) on 'Instinct' in G. J. Romanes' *Mental Evolution in Animals*, London, 1883; see also C. Lloyd Morgan's *Animal Life and Intelligence*, do. 1890-91, ch. xi. on 'Habit and Instinct.' It thus appears as if the value of an instinct, like that of any intense impression, were to be found in the original start which it gives to the process of forming a habit.

But, if the mere animal can thus modify its native instincts in adaptation to the changing exigencies of life, it would be preposterous to deny to man a similar adaptability. The truth is that man's superiority to the mere animal is to be found mainly in his superior adaptability. This is not indeed to be interpreted as meaning, what is too commonly assumed, that Nature guides the lower animals by the instincts with which she endows them, while she leaves man to the direction of his own intelligence. Both statements are wide of the truth. For, on the one hand, many of those modifications of instinct which have been referred to above are intelligent adaptations by an animal to a new situation. On the other hand, it is a mistake to suppose that man is distinguished from the lower animals by the comparative poverty of his instincts. So far from this being the case, his

superiority is to be found in a richer endowment of natural impulses (James, *Principles of Psychology*, vol. ii. pp. 303, 441) as well as in a power of more varied and more intelligent adaptability to unforeseen contingencies. But the instincts of man, like those of the lower animals, become persistent influences only by being kept in habitual practice. In fact, many of the instincts with which man is endowed are opposed to one another, and it is environment and training that determine which of the opposing instincts is to become the habitual influence (James, *op. cit.* vol. ii. p. 392). Science thus points to the conclusion which common observation had long ago reached, that every man is what he is more by trained faculty than by native endowment, that he is 'a creature of habit,' 'a slave of custom,' or, as Paley puts it in a phrase which has become almost proverbial, 'a bundle of habits' (*Moral and Political Philosophy*, bk. i. ch. vii.).

The development of habits may be said to be the aim of all education. The capacity for forming habits constitutes educability. This capacity, as we have seen, has two aspects. Physiologically it means the power of forming new organic structures; psychologically it is the power of associating activities so that they will readily suggest one another in the order in which they have been associated. Both these powers constitute a natural endowment in which men differ greatly from one another. Some men are of weak formative power, hardly able to fix new organic changes, to make new associations cohere by any amount of repetition. They remain characterless beings to the end. In every sphere of life they represent the feeble type. 'Mr. Pliable' never takes on any persistent habit. The original endowment of men, however, varies not only in its general nature, but also in its special directions. Each individual can usually form a certain kind of habit with ease, while he may be practically incapable of forming others. This gives to every one his peculiar bent, his *idol*.

It thus appears that there is a limit to the plasticity of human nature, a limit to the changes that may be produced in a man's original nature by the second nature of habit. On the theory of evolution, indeed, this limit is not absolutely immovable; even the distinctive organic structure of new species has been evolved by a modifying process similar to that by which habits are formed, through a process so slow that it must have extended over incalculable eons of cosmic history. But there are two facts which must be recognized. On the one hand, all experimentation by man proves that there is a limit to the variations which he can produce in himself or in animal and vegetable organisms. On the other hand, however, instances of appalling moral degradation and instances of amazing moral triumph make us hesitate about any sweeping assertions against variability in the moral life. Here at least the ratio of the old and the new is no fixed quantity. Apparently it varies in different individuals, and probably in the same individual at different periods of growth. Consequently it is difficult to define the relative influence of inherited nature and acquired faculty in human life, and the attempt to define it leads to conflicting theories. Not only do scientific thinkers vary in their views on the subject at the present day, but the variation runs through the great historical controversies between Augustinianism and Pelagianism, Jansenism and Molinism, Calvinism and Arminianism.

But educability implies the power not only of forming, but also of reforming, habits. Often the most formidable task of the educator is, not to counteract the original tendencies of nature, but

rather to break off habits that have become inveterate. The second or habitual nature, as we have seen, sometimes overrides the primitive nature of men; and then it becomes for the educator a more intractable factor than congenital instinct. It seems at times to impose a limit on the plasticity of human nature as rigid as any that are fixed by original constitution. This is the ground of the familiar educational rule, to begin all training on a right method from the first, in order to avoid the formation of habits which must be unlearned before further progress can be made. The obstruction of old habits is also one of the causes which make the acquisition of new habits increasingly difficult with advancing years. For, as the years go on, every man is gradually forming an aggregate of habits which constitutes his distinctive character. That character becomes every day more intricately woven into the innermost tissue of physical and psychical life, and the drift of this process points to the conclusion that the character thus formed may become at last practically unalterable. Whether the moral doom of men does actually in the end become fixed immutably for evil as well as for good is a problem which would carry discussion beyond the limits of our theme. But in the phenomena of habit there is revealed a moral government of life, which is characterized by the most rigorous justice. The growth of habit furnishes an unflinching reward for every virtuous act, and brings to every vicious act an unflinching penalty. In a familiar but singularly appropriate figure, every act we perform is likened to seed sown in a fit soil, destined to produce a fruit of its own kind. Whatsoever, therefore, a man soweth, that precisely, but that certainly, shall he reap in the habits that he creates. Thus virtue is literally its own reward, vice its own punishment.

LITERATURE.—The best studies on habit are those in the great works on Psychology. Most of these treat the special kinds of habit separately, though the separate treatments can usually be found in an index. Fortunately, however, one of the greatest recent works on the subject, W. James's *Principles of Psychology* (London, 1907), devotes a whole chapter (the fourth) to the general nature of habit. The chapter on Habit (the eighth) is by W. B. Carpenter's *Mental Physiology* (London, 1875) also deserves mention as being still of value. On the educational aspects of the subject there is a little monograph by Paul Radenstock, *Die Gewöhnung und ihre Wichtigkeit für die Erziehung* (Eng. tr. *Habit and its Importance for Education*, Boston, 1905). For younger children and their teachers there is another monograph by Walter L. Sheldon, *Lessons on the Study of Habits* (Chicago, 1905). The historical development of the subject is admirably traced in the tenth chapter of *A History of the Problems of Philosophy*, by Paul Janet and Gabriel Séailles (Eng. tr., London, 1902).

HAIDA.—1. Geographical and ethnological.—The *Haida*, or, as they term themselves, *Xáida* (i.e. 'people'), are an American Indian people whose territory includes the Queen Charlotte Islands and the southern end of Prince of Wales Island, Alaska. Between 150 and 200 years ago the so-called *Kaiyami* left the N.W. end of the Queen Charlotte Islands, and, landing on Prince of Wales Island, drove out the Tlingit from the southern end, of which they took possession. The Haida are not now a numerous people; of the main body, according to Swanton, in 1907 there remained some 600, and of the Alaskan branch about 300, making less than 1000 in all. In 1836-41 their

numbers were estimated at more than 8000; and in 1888 at 2500, which must have been quite an exaggeration, in the light of the figures reported since then. Linguistically, the Haida form an independent family, termed, in Powell's classification (7 *RBEW* [1891], 118 f.), *Skittagaten*, from the town-name *Skidegate*, a corruption by the Whites of a name of a chief of the north shore, *Sq̓d̓ag̓t̓s*. Authorities like Boas and Swanton, however, consider possible an ultimate relationship of Haida with Tlingit (phonetic and lexical coincidences, grammatical peculiarities), and more remotely with Athapascan; but this is still doubtful, although certain elements of social organization also point in the direction of closer affinity between Haida and Tlingit (Kluskachan). Physically, the Haida belong to that group of Indians of the North Pacific Coast which includes also the Tlingit and the Tsimshian, as has been shown by the anthropometric researches of Boas and other investigators.

2. **Contact with Whites.**—Swanton considers it not impossible that the Queen Charlotte Islands may have been visited by Spaniards during the 17th cent. (*HAII* [1907] 521), but 'the first certain account of their discovery is that by Ensign Juan Perez, in the corvette *Santiago*, in 1774.' Bodega and Manrique came the next year; in 1786, La Perouse, and, in 1787, Capt. Dixon, who 'spent more than a month around them, and the islands are named from his vessel, the *Queen Charlotte*.' From that time onwards, 'scores of vessels from England and New England resorted to the coast, principally to trade for furs, in which business the earlier voyagers reaped golden harvests.' The result of this intercourse is thus indicated by Swanton (p. 521):

'The advent of whites was, as usual, disastrous to the natives. They were soon stripped of their valuable furs, and, through smallpox and general immorality, they have been reduced in the last 60 years to one-tenth of their former strength. A station of the Hudson's Bay Company was long established at Masset, but is now no longer remunerative. At Skidegate there are works for the extraction of dog-fish oil, which furnish employment to the people during much of the year; but in summer all the Indians from this place and Masset go to the mainland to work in salmon canneries.' These canneries also furnish the Klagwai with work in summer.

Most of the Haida are Christians, at least nominally; mission-stations exist at Skidegate (Methodist), Masset (Anglican), and Howkan (Presbyterian). Of the general attitude of the Haida, Swanton says (*loc. cit.*):

'The Haida, Tlingit, and Tsimshian seem to show greater adaptability to civilization and to display less religious conservatism than many of the tribes farther south. They are generally regarded as superior to them by the white settlers, and they certainly showed themselves such in war and in the arts.'

In the 'Story of the abaman, Gándox's-father,' recorded by Swanton ('Haida Texts,' in *Bull.* 29 *BE*, 1905, pp. 311-315), some items of White influence are referred to, and it seems that the 'new religion' of Bini, the Carrier Indian (Athapascan), reached the Haida of Skidegate.

3. **Tribal and social organization.**—The Haida belong to those American Indian peoples who had a set social system, with caste divisions. The whole Haida people, according to Swanton (*HAII* i. 522), 'is divided into two "sides" or clans—Raven (Hoya) and Eagle (Got)—each of which is subdivided and resubdivided into numerous smaller local groups.' Each clan is reputed to be 'descended from one woman.' Besides the principal and more important towns of the Haida, 'there was formerly an immense number of small towns hardly distinguishable from camps, places that had been occupied as towns at some former time, and mythic or semi-mythic towns' (*ib.* 523). Society consisted of chiefs and nobles, and common people and slaves; and the lines were strictly drawn between the various classes. The slaves (see below) per-

formed menial labour, and the difference between the common people and the nobility was accentuated in diverse ways. For example, 'if people of low family passed close in front of chiefs' houses in their canoes, they might be injured or enslaved.' High-born children did not cry like those of slaves or of common people; chiefs' children sat high in their fathers' canoes; to lean backwards in sitting was an evidence of low caste, good form demanding that 'one must sit on the forward part of the seat in an alert attitude'; common people were often referred to as 'mosquitoes'—their bad words 'bit' the rich (Swanton, 'Haida Songs,' 12, 24, 25). There were many 'low-caste' words, which the upper classes disdained to use. The use of labrets was a mark of high birth among the Haida. The people of the other clan took charge of a man's funeral; when an Eagle died, the Raven people attended to the ceremonies, and vice versa.

4. **Slavery.**—The Haida are among those tribes of the North Pacific Coast with whom the institution of slavery attained considerable proportions; here a slave-class existed, the members of which were either war-captives or individuals purchased or obtained in other ways as slaves from neighbouring tribes. The strong caste-system probably made it difficult for male slaves as a rule to rise to positions of importance, although Swanton states that the greatest Skidegate chief was a slave in his youth (cf. *Bull. 29 BE*, p. 206 f.). With female slaves the case was somewhat different, for those, 'especially if they were known to be of noble descent, sometimes married their captors and became free.' Swanton says further (*HAI* i. 205):

'Four prominent Haida clans and one clan among the Tsimshian are said to have originated from marriages of this kind, while another prominent Haida clan was called "the Slaves," though it is impossible to say whether they were descended from slaves or whether the term is applied ironically.'

Slaves appear to have been often harshly used, and in the songs and myths there are many references to their low estate and menial duties. In a cradle song given by Swanton ('Haida Songs,' p. 11), it is stated of the child that he may not kill dog-salmon or halibut, or chop cedar-bark; for such things are the work of slaves. In another song a mother styles herself, in jest, the 'slave' of her child (p. 41), and in yet another (p. 16) a mother is represented as having to take care of the baby herself, because her family have no slaves. One slave was often set above all the rest. By the supernatural beings of Haida mythology, men and women were regarded as 'human slaves,' 'human servants,' etc. At death, the bodies of slaves were usually thrown into the sea. According to Swanton (*Bull. 29 BE*, p. 433), 'payment of *hida*, remuneration for having enslaved a person, was accompanied by dancing; payment of *weil*, remuneration for having killed or wounded a person, was not.' A special being, 'Supernatural-slave,' appeared to those about to be enslaved.

5. **Secret societies.**—According to Swanton, the Haida have had secret societies 'only during the last 100 or 100 years.' These are of the spirit-initiation type. The entire performance consisted in the supposed possession of the novices by some one of a number of spirits, who carried the youth away and made him act the way the spirit himself was supposed to act. Some of these ways of acting were introduced, while others were in accordance with native conceptions. They were largely the property of certain chiefs, who would allow only their own families to use them' (Swanton, *HAI* ii. 407).

6. **Peace and war.**—A considerable proportion of the Haida stories relate to war with their neighbours, the Tlingit, and others. Each war-party was accompanied by its own shaman. Tantrizing songs were sung in the language of the

people attacked. A figure for 'being killed in war' was 'being eaten by the Raven.' Those killed in battle were thought to go to the house of Tazet in the sky. Battle-songs were sung by women in the absence of their husbands at war, and there were songs used by all families in making peace. It was believed that unfaithfulness on the part of a wife while her husband was away hunting or at war would cause him ill-luck or even death. This incident appears frequently in tales and legends. A supernatural being named Tie 'presided over slaughter, and made his presence known at a time when it was about to take place' (Swanton, *Bull. 29 BE*, p. 374). 'When peace was made, one man from each side was generally taken up and borne around upon the shoulders of his opponents. He was called the "deer"' (ib. p. 380).

7. **Totemism and heraldry.**—As noted above, the Haida people are divided into two clans, 'Raven' and 'Eagle,' of both of which there are many minor groups and subdivisions. Each clan has presumably a female progenitor (Djiláqona, the reputed ancestress of the Eagle clan, figures in a number of legends, and is connected with a famous scandal). Marriage between members of the same clan was forbidden. The fact that men and women are of different clans seems to have influenced the Haida idea of the next or spiritual world. Most of the supernatural beings, however, seem to be assigned to the Raven people. Children followed the mother, and were bound to her by closer ties than were husbands to wives. The Haida have been described briefly as having 'animal totemism,' with 'exogamic totem-groups' and a 'maternal organization.' The germ of what is known in Europe as heraldry may be said to have developed among the Haida. Mooney (*HAI* i. 544) says:

'Among the Haida and some other tribes of the N.W. coast, according to Swanton and other authorities, is found the germ of a similar system. Here, in many cases, the clan totem, or perhaps the personal emblems of the individual, has evolved into a crest which persons of the highest rank, i.e. of greatest wealth, are privileged to figure by carving or painting upon their bodies, or painting upon their bodies in the dance, as payment of a sufficient number of "potlatch" gifts, to secure recognition as chiefs or leading members of the tribe. The privilege is not hereditary, the successor of the owner, usually his sister's son, being obliged to make the same ceremonial payment to secure the continuance of the privilege.'

Swanton, in his article on 'Totem-poles' (*HAI* ii. (1910) 704 f.), states that,

'According to native Haida accounts, carved designs were originally made directly on the front slabs of the house, afterwards on a broad, thick plank, and finally on poles,' remarking, further, that 'this comparatively modern evolution is corroborated by the Tlingit, who have only the grave post, upon which they carve representations of stories as well as crests.'

The totem-poles of the Haida are chiefly of three kinds, 'outside and inside poles, and memorial columns.' Grave-posts consisted of carved posts with carved grave-box on top. The totem-posts were erected during potlatches.

'The carvings on grave posts and grave boxes were almost always crests owned by the family of the deceased, while those on house poles might be crests, or they might illustrate stories, and occasionally a figure of the house-owner himself was added, or the figure of some one whom he wished to ridicule.'

8. **Games.**—Among the plays and games of the Haida Indians, Swanton and Culin enumerate: archery, dice-games, the 'hand-game,' hoop and pole, jacks, straw, quoits, ring and pin, shanny, stick games, tops, and some other miscellaneous games. The dice-game of *gugigi qadlagad* 'was usually played at camp in the smoke-house, and the winner had the privilege of smearing the loser's face with soot' (Swanton, 'Ethnol. of Haida,' p. 80). 'The game appears to be played indiscriminately by men and women. In the "head game," G. A. Dorsey (Culin, 'Games,' in *24 BBEW*, p. 312) reports the use of a false bone

so constructed that it can be made to show up either white or black. Of the hoop and pole game, several varieties exist among the Haida. It is usually played with a disk or ring of hemlock twigs and a long stick. Under this head Culin also classifies the game of *pas ak' dji*, or 'a woman's public house,' described by Swanton ('Ethnol. of Haida,' p. 60) as follows:

'This was a boys' game. Late in the spring, when a tall, slim plant called *Lai*, the pith of which was eaten, was at its best, the boys would collect a great quantity of this millia. Then two would each drive a couple of sticks into the ground about 5 yards apart. After that each would take about 20 sticks of the salmon-berry bush, and, using them as spears, alternately lay in drive one of them between the adversary's pines, or stick it into the ground beyond, so that it would rest on their tops. Each boy would then bid a certain number of *Lai* stalks, and after they had used up all of their spears, he who scored the most hits won all that had been put up by his adversary. If he were one point ahead, he got nothing more, but if he were two points ahead, he won as much again; if he were three points ahead, twice as much, and so on.

Concerning the game of *totipaddidada*, or 'knocking something over by shooting,' which was played by older people (sometimes a whole town turned out, and the resulting contests extended over a long period of time), Swanton informs us that, 'for some religious reason, they ceased playing with arrows as soon as winter began.' Of the 'stick-game,' Swanton, who describes it in some detail in his account of Haida games, says ('Ethnol. of Haida,' p. 58):

'The great gambling game of the Haida was the same as that used on neighbouring parts of the mainland. It was played with a set of cylindrical sticks, 4 or 5 inches long. The number of the sticks varied in the sets that I have seen, one having as many as 70. Some of the sets were made of bone, but the most of *yu* or some similar kind of wood. These were finely polished, and in many cases elaborately carved or painted, but usually were simply divided into sets of from two to four by various lines drawn around them in black and red. One of the sticks was left black, or nearly so, and was called *dji*, but. The *dji* was the piece hidden and guessed. The gambling-sticks had separate names, most of them bearing those of animals. The more elaborate ones are ornamented with representations of the animal figures whose names they bear.' A set of 48 sticks, collected by C. F. Newcombe and now in the University of Pennsylvania Museum (Culin, op. cit. p. 58), consisted of the following: shadow, 2; red fish, 2; black bear, 2; mirror (of glass, watered), 2; sea anemone, 2; dance hand-drum, 2; pallo, 2; black bear, 2; deer fish, 2; gullfinch, 2; large butterfly, 2; halibut, 2; trumpfish salmon, 2; dog salmon, 2; catfish, 1; chiefs who live (i.e. red nose), 1; supernatural beings of high rank (48), 4.

A monotonous chanting accompanies the game, here as elsewhere. Of the ethics of gambling among the Haida, Swanton observes, 'It is not so true to say that cheating was fair in Haida gambling as to say that it was part of the game.'

In a 'ring and pin' game, described by Swanton ('Ethnol. of Haida,' p. 60), when the V-shaped piece fell to the ground instead of being caught on the stick, after being thrown into the air, 'the one who threw must yield to the next player; but, before doing so, he was at liberty to pull his opponent's hair violently or punch his knuckles as many times as he had made a catch.' Concerning the game of jackstraws, which, he thinks, 'would seem a natural and logical development from the game of stick-counting,' Culin (p. 729) says: 'The only intimations the writer has had of it in America are among the Eskimo and the Haida.'

9. Songs.—The Haida have many brief songs of various sorts, both in connexion with feasts and other public ceremonies and for other purposes. Magic songs and 'power songs,' used by shamans and others for the purposes of acquiring or increasing ability or influence, and incantations of divers kinds for luck in fishing or success in hunting, war, etc., are common. There are also war-songs, love-songs, songs for calming and for raising storms, 'dancing hat' songs, satiric and taunting songs, songs belonging to the animals and other creatures in stories, house-songs, canoe-songs, songs of joy and mourning, women's songs, cradle-songs, and peace-songs. A large number of all

sorts are recorded in the various works of Swanton (in 'Haida Songs,' texts and translations of 80 cradle, 11 mourning, and 6 miscellaneous songs from the several Haida dialects are given). Totem-pole raising and 'potlatches' were accompanied by much dancing and singing. The joyful songs, called *Lai*, were commonly sung indoors. The *dji* *dji* *gagda*, or 'women's songs,' were used 'when totem poles and house timbers were towed in during a potlatch (Bull. 29 BE, p. 147).

10. Feasts and festivals.—Like other tribes of the North Pacific coast, the Haida had a number of important feasts and festivals, some of which were of foreign origin. The institution of the 'potlatch,' a great feast in which the giver disposed of large amounts of property (commonly blankets) in presents to all invited, being afterwards 'potlatched' in return, was so esteemed that in one of the cradle-songs, cited by Swanton ('Haida Songs,' p. 3), a child is told that he is a boy and not a girl, in order that he may give great potlatches—for that was he born. Swanton says (HAI ii. 593):

'During the festival in which the gifts were made, houses and carved poles were raised, chiefs' children were initiated into the *mu* society, their ears, noses, and lips were pierced for ornaments, and salms of copper plates, which figured prominently in the social and economic life of the people of this region, took place. Among the Haida, children were then tattooed. All was accompanied with dancing, singing, and feasting.'

People save money for years in order to hold a great potlatch, and, distributing their wealth in this manner, become really 'rich' and attain high rank as chiefs, etc. It is said, as Swanton reports ('Haida Songs,' p. 21): 'Once when there was a great famine in Skidegate Inlet, the chief of Drum Town had enough property to hold a potlatch and save every one from starvation.' In a cradle-song the future potlatches of a child are likened to the deluge in the time of the Raven. In another, families are warned to be ready for invitations to the potlatch when the child is to be tattooed, etc. At potlatches and feasts the chiefs were placed 'in accordance with their wealth, the richer sitting nearer the inside house-pole, in the back part of the house.'

Among the peoples of the North Pacific Coast the salmon-ceremonials were of great importance.

11. Shamans, medicine-men, etc.—The shamans of the Haida deserve special mention from a religious point of view. According to Swanton (HAI ii. 592):

'Among the Haida and Tlingit, shamans performed practically all religious functions, including, as usual, that of physician, and occasionally a shaman united the civil with the religious power by being a town or house chief also.'

Shamans obtained their positions hereditarily, or by natural fitness. The former was more common, the shaman getting his position from his uncle, and 'inheriting his spiritual helpers, just as he might his material wealth.' He had a guardian spirit in either case, and 'the first intimation of his new power was given by the man falling senseless and remaining in that condition for a certain period.' This was the sign of the presence of a secret-society spirit or a guardian spirit.

12. Witchcraft.—Among the Haida, as with other peoples of the North Pacific Coast, belief in the power to influence or control the thought and actions of others by supernatural means, occult practices, and the like, prevailed. According to Swanton (HAI ii. 596):

'Among the Haida witchcraft was supposed to be due to *mu* which had got inside of a person's body, and if these could be expelled he might be restored to his right mind. There were said to be as many as ten of these *mu* sometimes, one of which (the last to leave) was a white one. A means of detecting witchcraft employed by the Haida shamans was 'to repeat the names of all persons in the village in the presence of a live mouse, and determine the guilty party by watching its motions.'

One of the Haida families of the Eagle clan was called 'witch-people.'

13. Calendar.—Of the Haida month-names two refer to mammals, three to birds, two to fish, three to plants and fruits, and two to the weather. Swanton, in his account of the Haida calendar (*Amer. Anthropol.*, 1903), says that they formerly intercalated between the two portions into which they divided the year what they called a 'between moon,' which may sometimes have been omitted to correct the calendar. The two periods of the year, 'summer' (April–September) and 'winter' (October–March), consisted of six months each.

14. Art.—The art of the Haida is, in some respects, the most interesting and remarkable north of the region of Mexican and Central American influence. Indeed, as W. H. Holmes observes, 'The carvings of the Haida, Tlingit, Kwakwaka, and other tribes, in wood, bone, ivory, and slate are remarkable for their artistic qualities and perfection of execution, displaying more than a mere expression of the masterly qualities of the prehistoric work of the tribes of Mexico and Central America.' He says further: 'A carving in black slate by a member of the Haida tribe, representing the "bear mother," is not surpassed in spirit and expression by any known work north of Mexico. However, like the totem-pole models, masks, rattles, dishes, boxes, and tobacco pipes which excite our admiration, it was executed with great tools and at a time when the influence of the art of the white man had no doubt come to be somewhat distinctly felt' (*HAI* II, 461).

As materials whereupon to exercise their artistic genius the Haida had particularly the fine-grained black slate of the Queen Charlotte Islands, soft when first quarried, but growing harder with time, and taking a good polish; also the cedar-wood of this region, which enabled the tribes of the North Pacific Coast to attain a perfection not elsewhere reached among the aborigines north of Mexico. Haida carving and sculpture express themselves in special relations with religion, mythology, and history. Of wood work we have the curiously carved and painted totem-poles (models of those for White consumption are now made in slate as well as in wood), and boxes for containing bones of the dead (grave-boxes), grave-posts, human figures and those of animals; the carved and painted house-fronts, posts, etc.; furniture (boxes and chests for storing household goods, property, etc.); implements, utensils, weapons, ceremonial objects (batons, etc.); masks, etc.

H. Balser (*Mem.*, vii, [1907] 12) describes a mask, carved from a solid block of wood some 40 years ago by a Haida Indian intended as a portrait of his wife, and said to be 'a good likeness.'

The Haida houses were substantially built of planks, and on the fronts were 'elaborately carved and painted symbolical figures,' while 'directly in front a totem pole is placed, and near by a memorial pole is erected.' Haida canoes are another example of the carver's art and that of the decorator. Of objects in slate the Haida made pipes, carvings of human beings, animals, and mythological figures. In horn, bone, and ivory, cups, ladles, spoons, and other utensils, implements, and ornaments were made, often in the form of or adorned with representations of human beings, animals, mythological beings, in whole or in part.

Of three Haida carved spoons described by Ridgway (*Man.*, vi, [1906] 11.), one has the motif of a woman clasping a frog or a toad to her breast and kissing it, another a woman and a bear, a third a woman and a butterfly clasping each other. A fine old pipe has a woman and a raven in such a union.

The Haida were also skilful in metal work: copper was used for ornaments and utensils (knives, rattles, daggers, the 'coppers' used as symbols of wealth); of silver (introduced by the Whites) they made bracelets, etc., with symbolical figures engraved upon them. Other rather artistic developments appear in the chiefs' 'robes' of frayed bark, and in the ceremonial head-dresses. Noteworthy also is the Haida basketry hat. Rock-painting does not occur in the Haida country; according to

Newcombe, of two rock-carvings noted one is probably Tlingit.

15. Painting and tatting.—Besides the use made of painting on masks, totem-poles, and other wooden objects and ornaments, house-fronts, canoes, etc., the Haida practiced painting and tatting of face and body. A. C. Fletcher says:

'Along the Pacific coast both men and women were tattooed on the face and body, a custom that recently reached its most ornate development among the Haida of Queen Charlotte Islands. The designs were of conventionalized "totemic" figures, and seem to have indicated personal or tribal distinction rather than any religious cult' (*HAI* II, 709). Red and blue colours were employed.

16. Life and soul lore.—The souls of animals, according to the Haida, 'have the human form, and act very much as men do on earth.' According to Swanton (*Bull.* 29 BE, p. 188), 'every animal and every human being is supposed to be provided with a "thread of life"—an idea not found elsewhere in America, so far as I am aware.' The word applied to this 'thread of life' is *lis*—the term used also for thread made of mountain-sheep wool.

In one of the tales a woman lets out the 'thread of life' of her husband, who goes hunting, knowing by its action when he is coming back; in another tale a man is told to wear a new hat, when he leaves on a fishing expedition, and, when a storm occurs, 'she stretched her arm to the thread of life of him only who wore the new hat, and she saved him, because his wife left something for her.'

Restoration to life is a common thing in Haida tales, but Swanton (*Bull.* 29 BE, p. 340) met with but a single instance of restoration to youth, i.e. where Slaughter-lover 'spit medicine upon the old people they had killed, and they also became young.' Fire was the means of communication between this world and the world of spirits, the messenger being 'Old-woman-under-the-fire.' Water is also occasionally mentioned as serving for such purposes (ib. p. 14). Food for the souls in the land of souls was transmitted through fire. Concerning 'Woman-under-the-fire,' Swanton remarks (ib. p. 209):

'Woman-under-the-fire repeated to the supernatural beings everything that was said near it. But, if charcoal were instantly rubbed upon the lips of a person who had said anything they did not want the supernatural beings to hear, Woman-under-the-fire knew that it was not intended.'

The souls of those dying in battle or by violence went to Tixot's house in the sky. Concerning the souls of gamblers, we read in the tale of Sounding-gambling-sticks (ib. p. 67):

'He was also said to live in a place within sight of the land of souls, and, when a gambler died, he came over to gamble with him, staking dog salmon against souls. If he were successful, there would be many deaths; if the gambler won, there would be a great run of dog salmon.'

The re-incarnation of salmon in human beings (particularly twins) is a common belief among several peoples of the North Pacific coast, with whom the Salmon Festival is of special significance.

17. Re-incarnation.—The belief in re-incarnation of the dead filled a very important rôle among the Haida, with whom the child was thought to be the returning father, mother, or other dead relative. The myths, legends, and songs treat often of this topic. In the cradle-songs the babies are reminded of what they used to do when formerly on earth; old tato-marks and other evidences of their identity with those passed away are pointed out; their childish actions are rebuked as being unbecoming, since, e.g., they are re-born chiefs, and 'too great to cry,' etc. In a cradle-song given by Swanton ('Haida Songs,' p. 5) a child is sung to as follows:

'You need not think that the smoke of your house in the middle of Shodane will be as great as when you were a woman [in your previous life upon earth].

You need not think that they will make such a continual noise of singing in Shodane Creek as they used to when you were a woman [in your previous existence].'

In another cradle-song we read (p. 38):

'Why does he cry as a noble chief (i.e. softly)?

Why does he move around as he sits?

He moves around and cries for grandfather's house.'

Many of the favourite stories of the Haida tell of the re-incarnation of the Raven or Shining-Heavens, their highest deity—particularly the myth 'How Shining-Heavens caused himself to be born.'

12. Influence of sea-environment on mythology and religion.—The influence of their island home and its sea-environment upon the mythological and religious ideas of the Haida has been very great, although not a few of the mythical figures, motifs, and incidents may have been borrowed rather recently from the Tsimshian, the Tlingit, and others. Water-monsters and supernatural beings of the sea of various sorts figure largely in folk-thought, myth, and legend. The most prominent group of these supernatural beings are the Killer-whales. The killer-whale (*Orcas sp.*) appears in many stories of the type of 'The Man who married a Killer-whale Woman,' cited by Swanton (*Bull. 29 BE*, p. 298 f.). The killer-whale is prominent in Haida art, being often represented conventionally by his fin instead of by his whole body. In tales borrowed from Tsimshian and elsewhere, the rôle of the killer-whale is disproportionately emphasized, as, e.g., in the story of Gunnasngit (*ib.* 228-340).

13. Supernatural beings.—The Haida world teems with supernatural beings of land and sea, mountain and forest, river and lake, cliff and cave, air and sky. Communication between them and human beings is generally by way of fire, personified as 'Old woman under the fire' (see above), the messenger of the supernatural. These supernatural beings 'are unable to bear the odour of urine, the blood of a menstruating woman, or anything associated with these' (*ib.* 148). They are believed to land their canoes bow first, and to do the opposite of the human in various other things. Supernatural beings 'hunt during the night, and get home before ravens begin calling; if they are detained in any way so that they hear the raven, they at once fall dead' (*ib.* 188). When a supernatural being was born, he grew up quickly, and soon cried for a bow, but would only be satisfied with one of copper. Supernatural beings made fire by rubbing hard white stones together. Those who have become animals can be recognized, when being skinned and cut open, by the ring of copper about their necks. Simply looking at them is said to be enough often to make supernatural beings laugh (*ib.* 299). Supernatural beings 'do not want anything dirty, like human beings, upon them.' Thus, a man often feels a real shake under him for this cause (*ib.* 297).

Among the most noted supernatural beings, or figures with names of such, are the following: Killer-whale, Supernatural woman to whom is thunder, the Whale, Cave-supernatural being, Supernatural fisherman (god of fishing), Master-Carpenter or Master canoe-builder (a favourite deity of the canoe-building Haida), House woman, Supernatural sparrow, Dug-out canoe (being who wins the strength of women), Sacred one-standing and-traveling, Supernatural being who went naked, The one in the can (the greatest supernatural being in the can), Master-hopper (a one-legged supernatural being, or a being with one leg shorter than the other), Supernatural being of whose voice the ravens often cry, Raven, Djiłqons, and Shining-Heavens.

The terms 'Master,' 'Greatest of,' 'Mother of,' 'Owner of' are often applied to supernatural or semi-supernatural creatures; e.g. 'Mother of halibut,' 'Greatest of gulls,' 'Owner of dog-salmon.' These supernatural beings seem often to have the power of assuming the form of a thing and yet to be distinct from it. Thus, e.g., 'Cliff woman,' or 'Roof woman,' may be a cliff or a roof, and also live under it.

20. Deities, demi-gods, and heroes.—From the mass of characters in Haida mythology and folklore the following may be singled out as especially noteworthy: Shining-Heavens, Raven, Laguna, Djiłqons. Of these Laguna is a Tlingit spirit;

Djiłqons is the ancestor of the Eagle clan; the other two are the chief deities, or demi-gods, of the Haida. 'Shi, or 'Shining-Heavens,' is 'the highest deity anciently recognized by them.' The myth of his incarnation, 'How Shining-Heavens caused himself to be born,' is one of the greatest of stories told by the Haida (Swanton, *Bull. 29 BE*, pp. 20-31).

One of the first incidents in this tale might be compared with the finding of Moses by the Egyptian princess: a Haida woman, digging on the beach, uncovers a cockle-shell, from which comes the cry of a baby. She looks into it and discovers a little child, which she takes home. The wonder-child man grows up, it is Shining-Heavens, who shows his supernatural character in the approved way. In one myth the Raven finds a cockle-shell full of children thrown about by the waves. By one this birth in a cockle-shell is interpreted to mean birth from a cockle. The birth of the wonder-child, the re-incarnation of some famous personage, or the incarnation of some supernatural being, is the typical hero-story of the Haida.

Besides the tale of Shining-Heavens, we have the story of 'He who got supernatural power from his little finger,' 'He who was born from his mother's side,' and others. Abandoned or put-away children often figure in hero-tale, such, e.g., as 'The one abandoned for eating the tipper of a hair seal.' That the existence of a Raven clan among the Haida, Tlingit, and Tsimshian has had something to do with the importance of Raven stories in their mythology is pointed out by Swanton (*Bull. 29 BE*, p. 146, and 'Ethnol. of Haida,' p. 104), who gives (*Bull. 29 BE*, pp. 110-149) the tale of 'Raven Traveling,' which is sometimes spoken of as the 'creation legend of the Haida'; but, as Swanton remarks, it rather 'explains how things were altered from one state or condition into that in which we now find them' (p. 146). Raven, indeed, is transformer rather than creator, although he is represented as having originated not a few things, and is the principal figure at the 'creation,' for 'topographic features, natural phenomena, the tenses, passions, habits, and customs of animals and human beings are mainly explained by referring to something that Raven did in ancient times.' His story-name is Naakileas, or 'He whose voice is obeyed.' He has a buffoon side, like some other American Indian gods and demi-gods, but some Haida also express the opinion that 'Naakileas was a great chief who put on the skin of a raven [the usual magic device] only when he wanted to act like a buffoon.' The travelling companion of Raven is Eagle or (among the Masset Haida) Butterfly. Other interesting deities are Tāxtt (whose name is confused with that of a small bluish salmon), to whose house in the sky go all murdered or killed in battle; and Tia, the Killer, 'the deity who presides over death by violence.' Tia, who is headless with blood streaming from his neck, is seen or is heard by those about to be killed (*ib.* 173). A curious feature of Haida mythology, as Swanton notes, is the fact that all the 'river-spirits' seem to be women, only a single instance to the contrary having been met with. Among these water-creatures, who appear frequently in the tales and legends, are the following: Creek woman (in various localities); Supernatural woman who plays up and down with her own property (i.e. with the fish); Flood tide woman; and the Tidal woman. One of the winds, North-east, was named after Fair-weather woman, who figures in several stories. Other female characters in Haida mythology and folk-lore are: the Half-rock (stone from hips down) woman, or Woman-rooted-to-the-ground; Old woman under the fire (messenger from men to the supernatural beings); Porpoise woman; Ice woman; Property woman; Mouse woman; Panther woman (this character has a Tsimshian name); Woman-sitting-and-smelling. But the most famous female figure in Haida lore is Djiłqons. Djiłqons is the ancestor, or at least the special patroness, of all those of the Eagle clan; and she figures in a

scandal with Swimming-russet-backed-thrush, another supernatural being.

37. *Animals in legends.*—In the legends of the Haida a large proportion of the birds, beasts, and fishes of their environment figure more or less prominently; whale, porpoise, seal, sea-lion, salmon, cod, halibut, devil-fish, eulachon, sculpin, herring; gull, duck, water-fowl (scoter, grebe, etc.), eagle, raven, crow, cormorant, wood-pecker, owl, wren, hawk, puffin, loon, dipper (water-couzel), geese, robin, thrush, blue hawk, blue jay, snowbird, creeper, tanager, grouse, black-bird, sparrow; beaver, porcupine, marten (older brother of black bear), land-otter, dog, black bear, grizzly bear (a bugaboo for children), mouse, mink, heron, ground-hog, weasel, frog, etc. Some of the mainland animals, such as the wolf, also appear. The animals in the story have names different from their common everyday ones. Thus marten is commonly *Kux.u*; but in stories he is called *Kux.wgindgit*. The Thunder-bird and the Sleep-bird are peculiar characters. Of the land-animals the land-otter has a rôle *sui generis*. According to Swanton ('Ethnol. of Haida,' p. 20 f., *Bull.* 29 BE, p. 225),

'A man who just saved himself from drowning was supposed to be deprived of his senses by land-otters and become transformed into a creature called *gagux*. This being had land-otter fur all over its body, and upturned nose, and a face covered with fish spines. It travelled all over the Haida country with the utmost ease.'

If a land-otter looked at any one while drinking water, that person 'was seized with fits, soon died, and went to live among the Land-otter people' (*Bull.* 29 BE, p. 270). The idea that loss of the senses or craziness is caused by the land-otter is common to several of the Indian peoples of the North Pacific Coast. Concerning the land-otter we learn also (ib.) that 'if a land-otter forgot to take along the mat used to cover the knees of a canoe-man while paddling, he was sure to be killed by human beings.'

LITERATURE.—The most authoritative recent literature concerning the Haida consists of the various monographs of Swanton, the earlier Reports of Ross, etc. The following may be cited here: FRANK ROSS, 'Decorative Art of the Indians of the North Pacific Coast' (*Bull. Amer. Mus. Nat. Hist.*, N.Y., vol. 12, no. 10 [1877], 'Pictorial Paintings of the Indians of Northern British Columbia' (*Amer. Mus. Nat. Hist.*, 1 [1880] 194), 'Reports on N.W. Tribes of Canada' (*Rep. Brit. Assoc. Adv. Sci.*, 1880-1881), 'Indian Sagas from the coast of British Columbia' (*Bull.* 11, 1881), Stewart Callin, 'Haida of the North American Indians,' in F. R. H. H. H., 1907; G. M. Dawson, 'Report on the Queen Charlotte Islands' (*Rep. Geol. Survey of Canada for 1878*, Montreal, 1880); James Deane, 'Notes from the Totem and the Haida' (*Arch. Internat. Pub. Inst. Assoc.*, 1 [1889] 140), C. F. Newcombe, 'The Haida Indians' (*Can. Jour. Anthropol.*, 1 [1890] 140), Quiber, 1891, p. 135-140; J. G. Swan, 'The Haida Indians of Queen Charlotte's Islands, British Columbia' (*Smithsonian Contrib. to Knowl.*, vol. xxi, Washington, 1874); John R. Swanton, 'Contributions to the Ethnology of the Haida' (*Amer. Mus. Nat. Hist.*, N.Y., Anthropol., 5 [1904] 1-200), 'Haida Texts (Mamot (Haida) and a [1888] 271), 'Haida Texts and Myths (Haida) (Dialect) (*Bull.* 29 BE, 1905), 'Haida Songs' (*Can. Jour. Anthropol.*, 11 [1912] 1-62), 'Haida' (*Atl. Mon.*, 7 [1913] 1-23), on the language, see John R. Swanton, 'Haida' (*Haida, of Amer. Ind. Lang.* [*Bull.* 41 BE, 1911] 205-262), C. Harrison, *Haida Grammar*, ed. A. F. Chamberlain, Ottawa, 1896. Mentions may also be made of *Old Stories in the Haida Language*, London, 1893, and of the partial tr. of the *Pr. St.* by J. H. Keen, do. 1899, and of the tr. of three Gospels and of *Acts*, by C. Harrison and J. H. Keen, 1891-97.

HAIR.—See PRODIGES AND PORTENTS.

HAIR AND NAILS.—In custom, ritual, and superstition, the same ideas underlie the majority of beliefs and ceremonies relating to human hair and nails; and the whole class of observances may be conveniently treated in a single article. Sometimes, indeed, customs may be due to the close connexion of the hair with the head; and analogies in the case of the nails will naturally be wanting. For example, certain practices relating to the

hair of the head appear to have originated from the wide-spread belief that the head (*q.v.*) itself is particularly sacred (see Fraser, *GP*, pt. II, 'Taboo,' p. 253 f.). Some races think that a spirit lives in the head, and it is important not to disturb this spirit more than is necessary, or, as among the Greeks, the hair is itself regarded as the seat of life (Gruppe, *Gr. Myth. und Religionsgesch.*, Munich, 1904, pp. 187, 738)—a belief which is also found, in a modified form, among the Omaha (Fletcher and La Flesche, *77 BEW* [1911], p. 124). Hence the Burmese shrink from frequent washing of the head; and, when the hair of their kings was cut, the operation was attended with much solemnity. Possibly, therefore, some superstitions concerning hair-washing or hair-cutting arise from a special fear of offending or injuring the spirit of the head. Samson's strength was lost as soon as the hair of his head was cut off (*Jg* 16¹⁷). But, in the main, these superstitions are the outcome of a primitive belief which affects the nails as much as the hair. The savage thinks that any portion of his body, though severed, still retains some sort of connexion with himself. Thus, injury to the hair or nails is liable to cause danger to the person to whom the clippings belonged. The principle of 'sympathetic magic' is well-known in folklore; and, if a man can work magic on an enemy by obtaining a portion of his clothing, it is even more readily comprehensible that he can do mischief by means of a part of his enemy's actual body. The simplest precaution against this danger is obviously to avoid hair-cutting altogether. This course is sometimes taken to protect those whose lives are especially valuable, as in the case of the Frankish kings (*GP*, pt. II, p. 258), but more often the cutting of hair or nails is avoided only on certain occasions or at certain periods, when it would be more dangerous than usual. Young children are frequently thought to be peculiarly exposed to magic; hence we often find that neither nails nor hair may be cut in infancy or during the early years of childhood. This superstition is (or was till recently) common in England; e.g., a baby's nails must not be cut until it is a year old, otherwise it will be 'light-fingered,' or ill-luck will result (see *County Folklore*, I [1892] 12 [Suffolk], v. [1908] 230 [Lincolnshire], etc.). Usually the danger is avoided by biting the nails (one of the superstitions which indicate a fear of iron). This practice is widespread in Europe (see *Danish Tracts*, II [1895] 24; *County Folklore*, IV [1904] 58; *Malusine*, II, 428, for examples from various parts). So, among the negroes of Jamaica, to cut the nails of infants with scissors will make them thieves (*PL* xvi. [1906] 68).

In the case of adults, the hair (or sometimes the nails) must not be cut during times of special danger. According to Diodorus (I, 15), Egyptian travellers did not cut their hair until the end of their journey. The inhabitants of Taif in Arabia shaved their heads at the sanctuary of their town, on returning home. Robertson Smith, who quotes this example (*Rel. Sem.* 331), suggests that the bond between the worshipper and his god has been loosened by absence during the journey, and the offering of hair has the effect of binding it again. This explanation is very possible in certain cases; but more probably the custom of leaving the hair uncut during a journey arises from the fear that a stranger may work magic by means of the locks. It is also possible that the idea of purification may underlie the practice: a traveller has been exposed to defilement or infection among strangers, and he removes the uncleanness by cutting his hair on returning home. Van Gennep (*Rites de passage*, p. 263) lays stress on the pilgrimage or journey as

intermediate between two stages (*separation of origin*), each of which has its appropriate ritual.

In Greek myth, Achilles kept his hair uncut because his father Peleus had vowed it to the river Spercheios, if his son should come home from war in a foreign land (*Il.* xiii. 144 ff.). This, however, does not prove that the early Greeks were among those who abstained from hair-cutting when on a dangerous expedition; Achilles had left home as a boy, and (as will be seen below) it was a practice for Greek youths to offer their hair to the local river on reaching manhood. But the passage is a good example of the common custom whereby the hair is left uncut during the period of a vow. A Nazirite was commanded to let his hair grow while under a vow; afterwards he shaved 'the head of his separation' at the door of the tabernacle, and burned the hair in the sacrificial fire (*Nu.* 6²; see also *Ac.* 18²¹). Here, and in many other cases, the hair-cutting seems to be a means of purification for the person who, during the continuance of the vow, has been unclean.

Besides the period of a vow, there are other occasions on which the cutting of hair is avoided. According to a common English superstition,

'It was better you were never born
Than on the sabbath pare hair or horn.'

(For European parallels, see *Millusine*, ii. 487 f.) Here Christianity has no doubt adopted a pagan superstition, which is mentioned as early as Hesiod (*Works and Days*, 742 f.: *μηδ' ἀνδρὶν κερτοῖς τὰς ἐν δαίμονι* | *ἀλλ' ἐνδὲ γλαυκῶν ῥόδων αἵματι σιδέειν*, i.e. nails must not be cut at a religious festival). The same warning is given in the *Symbols of Pythagoras*, where the prohibition extends to the hair also (*Iamb.* *Pyth.* 25, *Protrept.* 264). Plutarch (*de Is. et Osir.* 4) offers the explanation that nails are secretions (*εἰσροήματα*), and therefore impure. The remark is sensible enough; but we may perhaps look a little deeper for the origin of the tabu. We have seen reason to suppose that hair-cutting often marks the end of an unclean state, by carrying off the infection. But, within the range of savage thought, the same cause may produce results diametrically opposite; and, amongst some races, the danger of hair-cutting must be counteracted by various observances. The Maoris, in particular, were placed under many restrictions, and were debarred from all social intercourse for some days after the operation (*GP*, pt. ii. p. 204). The ancestors of the Greeks and other Europeans may well have suffered similar restrictions; and the idea that the cutting of hair or nails prevented access to a festival would naturally pass into a belief that the festival would be defiled by such an act. Besides Sunday, Friday is commonly considered an unlucky day for hair or nails—e.g. in Somerset (*FL* v. [1894] 336), in the Hebrides (*ib.* x. [1899] 208), and elsewhere. Sometimes a distinction is made, as in Northumberland, where it is unlucky to cut hair on a Friday or pare nails on a Sunday (*Dendarm Fracts*, ii. 343). The prohibition, as far as regards Friday, seems to be influenced by Christianity; at least among the later Romans, Friday was lucky for the hair, as appears from a verse found in Ausonius (*Ecol.* i): 'ungues Mercurio, barbam Iove, Cypride crines,' i.e. the nails should be cut on Wednesday, the beard on Thursday, the hair on Friday). Among the modern Jews in Jerusalem it is thought that nails should be cut early in the week, that they may not start growing on the Sabbath (*FL* xv. [1894] 187).

When it is necessary to cut hair or nails, there is a further difficulty in disposing of the clippings. For, as has been mentioned above, they may fall into the hands of an enemy who can work magic

upon them. In Europe this idea survives in the belief that a person will suffer from headache, if any of his hair is carried off by birds to build their nests. To avoid risk, the clippings are often burnt or buried. At Rome, the *famen Dialis*, who was subject to many kinds of tabu, was obliged to bury the outtings of his hair or nails under a fruit-tree (*Aul. Gell.* x. 16). A large number of parallel instances are collected in *Millusine*, ii. 200 f.; *GP*, pt. ii. p. 274; Hartland, *LP* ii. 132 ff. Harm may be done innocently as well as by malice; hence the warning, in a 'symbol' of Pythagoras, not to defile or stand upon the outtings (*ἀσχευόμενοι καὶ κομῆς καὶ τριχῶν καὶ ὑποκρίματα* [*Diog. Laert.* viii. *Vit. Pyth.* § 17]). In another Pythagorean 'symbol' there is an injunction to spit on the outtings (*Iamb. Protrept.* 21), obviously as a phylactic (for this virtue of saliva, see *Sittl. Die Gebräuche d. Griech. u. Röm.*, Leipzig, 1890, p. 117 f., and Hartland, ii. 256 f.). Brand (*Pop. Ant.*, 1870, iii. 263) mentions a superstition that one should spit three times on hair which has been combed out, before throwing it away. In many cases, when the hair or nails are not burned or buried, they are carefully preserved. Often the motive is a fear of magic; but occasionally, the practice is due to a different cause. Those who believe in a resurrection of the body have a natural anxiety that no part of their person may be missing on the day of resurrection. In Leirish, while some peasants burn their hair and nails for fear of the fairies, others keep their hair-cuttings, which may be required on the Day of Judgment to turn the scale against the weight of sins (*FL* vii. [1896] 182 f.). This explanation has probably superseded an original fear lest the body should be incomplete. Indeed, in Cavan this reason is avowed; it is unlucky to burn hair, which will be required on the Last Day in order that the body may appear as God created it (*FL* xix. [1898] 315). Such an idea is not confined to Christian races; Fraser (*GP*, pt. ii. p. 279) quotes similar beliefs from the *Inns of Peru*, the *Turks*, and others.

In leech-craft, the use of hair and nails is widespread; only a few typical examples can here be given. Pliny (*HN* xviii. 23) mentions, as a remedy for fever, that the Magi placed the parings from a patient's fingers and toes at the door of another man, before sunrise. Some of the Magi, more innocently (as Pliny adds), order the parings to be thrown on an ant's nest; the first insect that carries off the nails is to be caught and worn as an amulet. These prescriptions are generally explained, with Pliny himself, as cases of the 'transference of evil' to another person, animal, or place; and many cases of folk-medicine seem to be based on this principle. In the Hebrides, epilepsy is cured by burying a black cock with clippings of hair and nails from the patient. In Meath, a child may be cured of the same malady by burying some of his clothing with a lock of his hair. As the linen moulders, the child recovers (*FL* xix. 316). Here, and often, the object is to be rid of the disease by mere transplantation. But, as Hartland notes (ii. 144 f.), many of the cases generally explained by transference are different. In a common type of leech-craft, the hair or nails of a sick person are stuffed into the hole of a tree, or hung up in its branches. Here the object may often be to secure a healing union with a healthy tree; for in a similar rite, in which a sick child is passed through a tree, the good health or preservation of the tree is an important feature. It is quite possible, therefore, that the idea of a healing union is the motive of some other practices in which the parings are transferred to an animal or man; and Hartland thinks that the notion of mere transference has often obscured or supplanted an older

If a very dear relative had passed away, people often took the nail from the little finger of his right hand and a lock of hair from the right side of his head and put them into the belt of a young girl of his clan just reaching maturity. Afterwards she had to lead a very quiet life for eight months and fast for as many days, unless she were delicate, when half as many sufficed. . . . After her fast was over, and just before she ate, she prayed that the dead person would be born again from her, and also that she would marry well and live a good life.

The formal cutting of the hair is sometimes a part of initiation rites. A conspicuous case is found in the Omaha consecration of a boy to Thunder, the symbol of the power controlling the life and death of the warrior (for a full description, see Fletcher and La Flesche, *77 REEW* [1911], 122-123). Similarly, in India the hair of the child was ceremonially cut into the form appropriate to his family, and before such rites as the new and full moon ceremonies the ritual prescribed the clipping of hair and nails (see, for details, Oldenburg, *Religion des Veda*, Berlin, 1904, pp. 425-429). This reference to the peculiar form of family hair-dressing recalls the similar Omaha usage, where the child's hair is cut in a specific manner for each gens (see Fletcher and La Flesche, 42-46, 145 ff.), this being retained until the time of second dentition, when the hair is allowed to grow (ib. 123). As among the Omaha different gentes had their individual ways of cutting the child's hair, so different tribes were distinguished by divergent modes of wearing the hair. Thus the Pawnee

'cut the hair close to the head, except a ridge from the forehead to the crown, where the scalp-lock was parted off in a circle, stiffened with fat and paint, made to stand erect, and curved like a horn, hence the name Pawnee, derived from *pa-wi*, "horn." . . . The Dakota and other western tribes parted the hair in the middle from the forehead to the nape of the neck, the line, usually painted red, being broken by the circle thus separated the scalp-lock, which was always finely plaited, the long hair on each side, braided and wrapped in strips of beaver or otter skin, hanging down in front over the chest. The Nez Percés of Idaho and neighbouring tribes formerly wore the hair long and unconfined, falling loosely over the back and shoulders. In the S.W. among most of the Pueblo men the hair was cut short across the forehead, like a "bang," and knotted behind' (Fletcher, *HA I* 186). For the usage among the Indo-Germanic peoples, see Schröder, *Reallex. der Indogerm. Altertumskunde*, Braunschweig, 1901, pp. 312-318; Hirt, *Indogermanen*, do. 1905-07, pp. 461-1, 732. Concerning the American scalp-lock, Miss Fletcher adds that 'this lock represents the life of the child, now placed wholly in the control of the mysterious and supernatural power that alone could will his death. The braided lock worn thereafter was a sign of this dedication and belief, and represented the man's life. On it he lived his existence that marked his achievements and honors, and for anyone to touch lightly this lock was regarded as a grave insult. As a war trophy the scalp-lock had a double meaning. It indicated the act of the supernatural power that had decreed the death of the man, and it served as tangible proof of the warrior's prowess in wresting it from the enemy.'

Marriage frequently involves a change in the mode of wearing the hair. Among the Hopi the unmarried girl wears her hair in a whorl over each ear, symbolizing the squash flower, but after marriage the hair is worn in two braids. Among the Indo-Germanic peoples the hair of the wife is parted and covered, whereas the unmarried wear it loose (cf. Haase, *Heiratsgebräuche der alten Inder*, in *Ind. Stud.* v. [1861] 405 f.; Von Schröder, *Heiratsgebräuche der Inder*, Berlin, 1923, p. 144 ff.), just as the married Jewess covers her own hair with a wig. Again, difference of rank is marked by different modes of wearing the hair, shorn hair being characteristic of the slave, as contrasted with the long locks of the free man (Schröder, 318); among the Franks only the kings wore their hair long (Agathina, *Hist.* I 8). Cutting off the hair is found, furthermore, as a punishment for adultery in India and among the ancient Teutons (*ERE* I, 129*; Tacitus, *German.* xix.), for false accusation among the Assyro-Babylonians (*ERE* iv. 259), and for other offences (ib. 252*).

The general principle that the hair, as being a part of the individual, given him who has received or taken it from its original owner some power over and connexion with that owner finds illustra-

tion in folk-tales where one friend gives another some of his hair, which, on being burned, summons the primary possessor to the assistance of his friend (Steel and Temple, *Wide-Awake Stories*, Bombay, 1934, pp. 131, 32-34, 414; for further instances, see MacCulloch, *CP*, 211 f.; and for hair as a life-token, etc., ib. 126 f.). It is also to be noted that in folk-magic, particularly in love-charms, the use of pubic hair plays a part (Ploss-Bartels, *Das Waid*, Leipzig, 1908, i. 292).

Attention has already been called to the importance of the day on which the nails are pared. The order in which the nails of the individual fingers should be trimmed is also sometimes held to be of moment. Among the Persians the order is 4, 2, 5, 1, 3 (Anquetil du Perron, *Zend-Avesta*, Paris, 1771, ii. 117); and this is adopted by Rabbinical authority for the left hand, though some maintain that for the right the order should be 2, 4, 1, 3, 5, the left hand being first manicured; others, however, hold that the right hand should be pared for first, and that the order should be 1, 3, 5, 2, 4 (Seligmann, *JS* ix. 149). The impurity of the serpent which caused Adam's fall was under the nails (ib.); the Hindus also hold that the nails are dangerous, those of Europeans distilling deadly venom, so that they eat with knives and forks, instead of with their fingers (Crooke, *PR* ii. 9); and in portions of America the scratch of a negro's nails is said to cause blood-poisoning. The burning of hair and nails to drive away demons or to avert the evil eye is not based on the inherent properties of those substances, but is intended merely to create a stench, to which demons are notoriously sensitive (Thurston, *Omens and Superstitions of S. India*, London, 1912, pp. 63, 115). LOUIS H. GRAY.]

HALAKHA.—See RABBIISM.

HALEBID (Kannara *Amṣi-bīḍu*, 'old ruins').—A village in the Hassan District of Mysore; lat. 15° 13' N.; long. 76° E.; the site of the great ancient city Dorasamudra, Dvārasamudra, or Dvārāvātipura, the capital of the Hoysala Ballala dynasty. It was founded in the early part of the 11th cent. A.D., and largely rebuilt by Raja Vīra Somadeva in the 13th. He is said to have been attacked by leprosy, and was warned to erect temples in honour of Śiva as a means of curing his disease. This probably accounts for the splendid religious buildings which survive to the present day. The city was captured by the Muhammadan general Kāfir, and plundered in 1310. Sixteen years later it was finally destroyed by another army of Muhammadan invaders. One Śaiva temple is said by Ferguson to be dedicated to Śiva in his form Kaitābhadevara (Kaitābha being the name of an Asura, and Kaitābha a title of Durgā, the spouse of the god); but Rice shows that its proper name is Kedarāvara, 'Lord of Kedar' (see KĪDĀRĪTĪ), and that it was erected by Vīra Ballala and his queen Abhinavā Ketālā Devī, about 1218. Of this temple Ferguson says:

'If it were possible to illustrate this little temple in anything like completeness, there is probably nothing in India which would convey a better idea of what its architects are capable of accomplishing. It is, however, surpassed in size and magnificence by its neighbour, the great temple at Halebidu [known as Hoysaleswara, "Śiva, Lord of the Hoysala dynasty"], which, had it been completed, is one of the buildings on which the advocate of Hindu architecture would desire to take his stand' (*Ind. and East. Arch.*, ed. 1910, i. 442 f.).

This, the older of the two ornamental temples, was probably commenced by Vinayāditya (A.D. 1047-1100). It is unfinished; but whether this was always the case, or whether it was completed and afterwards lost its towers, is uncertain (Illice, *Mysore*, i. 514). Ferguson has given an elaborate

and enthusiastic description of this magnificent building. Rice, however, corrects his proposed restoration, assuming that the final ornament of the towers, resembling a lantern, was really a sacrificial vase (*halakim*), bound round with a cloth knotted towards the four cardinal points, such as is filled with holy water and used at the consecration of a temple. Fergusson remarks:

'The mode in which the eastern dome is broken up by the larger masses, as in the give height and play of light and shade, is a better way of accomplishing what the Gothic architects accomplished by their tracery and projections. This, however, is surpassed by the eastern front, where the variety of outline, and the arrangement and subordination of the various fronts in which it is displayed, must be regarded as a masterpiece of design in its class.'

Rice (i. 515 ff.) gives a full account of this splendid temple.

LITERATURE.—B. L. Rice, *Spain*, London, 1897, i. 515 ff.; M. Wilks, *Historical Sketches of the South of India*, ed. Madras, 1888, i. 7; P. Buchanan, *Journey through Mysore*, London, 1807, iii. 280 ff.

W. CROOKER.

HALEVI.—s. Life.—Jehudah ben Samuel Halevi (Arab. *Abd-J-Hasan Yahdada ibn Alawi*), Jewish philosopher and poet, was born in Toledo about 1088 (the year in which that city, the meeting-place of East and West, fell before Alphonse VI.), and died in Palestine about 1143.

Halevi was sent at an early age to the Rabbinical academy of the famous Isaac Alfand at Lucca. In addition to the usual subjects of Rabbinical study, he devoted himself to mathematics, the natural sciences, philosophy, and, since he was to be a physician, medicine. Arabic he learnt to write as skilfully as he did Hebrew. A burn slinger, he gave himself to poetry when he was quite a young man. On the completion of his medical studies he began to practise, first in his native city, and later at Cordova. But, though successful, he does not appear to have had much love for his vocation. His chief interest was literature, religious literature more especially, and, as he grew older, his sympathy with his own people and his love for Palestine, the cradle of their just greatness and the promised scene of their future glory, became his ruling passion. Meanwhile theological study, the instruction of young men in Rabbinism, and literary pursuits related the sacred and the secular, and his professional life. He wrote poems, both secular and religious, mainly in Hebrew, and his great philosophical work, *Kisab al-Khamri*, usually known as the *Kuzari*, in Arabic. His religious poems have enriched the liturgy of the synagogue, his *Kuzari* is a classic. It was soon after the completion of the latter work—he was then about fifty-five—that he found opportunity for realising the great dream of his life. To see Jerusalem with his own eyes, and to worship at her altar shrine, was his chief desire.

'O, who will give me wings

That I may fly away,

And there, at rest from all my wanderings,

The ruins of my heart among thy ruins lay?'

Then he apostrophised Zion in one of his most fervid and popular elegies (often included in the liturgy for the Fast on the Ninth of Ab), and now that yearning was to be satisfied. Travelling through Spain, where his journey was a triumph—an enthusiastically was he hailed by his many admirers—he took ship for Egypt. He was an ailing man, and a tempestuous voyage caused him extreme discomfort, but it also fired his soul. The thought of the desired haven, and the utterance of that thought in verse, stilled for him the tumult of the ocean:

'The sea rages, but my spirit is glad,

It draws me to the Temple of its God.'

The hospitality of his many friends kept him in Egypt longer than he wished, but at length he seems to have reached Palestine. He certainly got as far as Tyre and Damascus, and he may perhaps have seen Jerusalem, though only for a short time. It was at Damascus that he penned the elegy already cited. The closing passages of his life are unknown, but legend has filled up the gap. It is said that, while he was reciting his poem on Zion in the Holy City, an Arab horseman rode over him and trampled him to death.

2. **Philosophy.**—Halevi's great philosophic work is, as has been stated, the *Kuzari*. Written about 1140, it was rendered into Hebrew some thirty years afterwards by that famous translator, Judah ibn Tibbon. A little later (about 1200) a second Hebrew version was undertaken by Isaac Cardinal. Of this only the preface and a short fragment have been preserved. History tells of one Bulan, king of the Khazars, a tribe in the Crimea, who became a convert to Judaism in the 8th century. Halevi, who may have met some of the descendants of the Khazars at Toledo, utilised this incident to give point and vividness to his

book. His aim, as is indicated by its sub-title, 'The Book of Argument and Demonstration in aid of the Dampied Faith,' was designed to vindicate Judaism against the assaults of its various detractors—the Karaites within the gates, and the Muslim and the Christian without. His disciples had asked him what shape such a vindication ought to take, and his great book was his reply. The story of Bulan provides the work with its starting-point and framework. The king, dissatisfied with paganism, invites a philosopher to expound his system. The God of philosophy, however, proves to be a distant Being, indifferent and inaccessible to men. The king turns, therefore, first to a Christian, and then to a Muhammedan, but with equally unsatisfactory results. The truth of the religion in each case is devoid of convincing historical guarantees. On the other hand, both have appealed to Judaism as the fount and the witness of their creed. The king accordingly sends for a Rabbi, and the rest of the work gives the imaginary conversation which ensues. The arguments of the Rabbi, which are, of course, those of the author, convince the king, who thereupon declares his adhesion to the Jewish faith.

In order to understand the genius and significance of the *Kuzari* it is necessary to have a clear idea of the state of religious thought which prevailed among the Jews in Halevi's time. Coloured by Greek philosophy, by the teachings, more particularly, of Plato and Aristotle, Arabic theology in its turn influenced Jewish thinkers living under Muslim rule in Africa and Spain. That influence had a twofold result. It gave rise, on the one hand, to a orthodox view concerning the origin of the universe and the relation of God to the world, and it furnished, on the other hand, the impulse to a synthesis intended to reconcile Jewish theology with Greek speculation. Islam, forced to attempt a like reconciliation on its own behalf, had produced the order of philosophers known as the *mutakallimim*, and these, in a measure, had their counterparts in certain Jewish thinkers headed by the famous Saadya (9th–10th cent.). Saadya's great work, *Emunoth Vedeoth* ('Creeds and Beliefs'), was designed to defeat the sceptic with his own weapons. A too material philosophy had been his undoing; a philosophy grounded on faith in the Unseen should be his salvation (see SAADYA). To Saadya succeeded Bahya ben Joseph ibn Bakudah (11th cent.), who, in his *Hodeh Halel* ('Duties of the Heart'), provided a philosophical antidote to the Aristotelian doctrine with which Ibn Sina (Avicenna) had familiarized his Muslim followers and their Jewish admirers. Theological turmoil in Islam was matched by a like ferment in Jewry. In the opinion of many among both communions, however, the attempt to reconcile religion with metaphysics was a failure. It fostered scepticism instead of curing it. Philosophy was the enemy, and war to the knife was the only means of averting its sinister effects. Thus orthodox asserted itself once more—in Islam in the person of al-Ghazali (11th cent.; see ETHICS (Muslim)), in Jewry in the person of Halevi, whom al-Ghazali influenced, and whose deep distrust of 'Greek wisdom,' whose blossom is beautiful, but bears no fruit, tinctures even his poetry. Both writers aimed at displacing philosophy by unconditional belief, and the Jewish Rabbi was probably moved to write his *Kuzari* by the polemical works of the Muslim theologian. But, while a common purpose animated them, the Rabbi set himself the additional aim of defending his religion from Islam itself, with its attacks upon Jewish Biblical exegesis.

In spite of this, Halevi's repudiation of philosophy is far from thoroughgoing; it may even be

criticized as inconsistent. In regard to the fundamental principles of theology, such as the Divine Existence and the close relations of a personal God with the universe, he will have nothing to do with metaphysical speculation. The veracity of those principles is established for him by one kind of testimony, and one only—that furnished by the historic facts of the Bible. Holy Scripture is the impregnable rock upon which rests the truth of Judaism itself. But, when dealing with less vital matters—the genesis of the world, for example, the Divine attributes, human free will, and the like—he has no scruple in resorting to philosophy, and even to metaphysics. Nor can it be said that he succeeded in his main polemical purpose. If Saadya failed to discourage philosophical scepticism by encouraging philosophical belief, Halevi equally failed to discourage it by banning it altogether. The next great name after him in the chronology of Jewish thought is Maimonides (and of 12th cent.), with his *Mafet Nebukem* ('Guide of the Perplexed'), the most systematic attempt at interpreting Judaism in terms of the Aristotelian teaching which Jewry has produced. The fierce and protracted conflict of opinion to which that epoch-making treatise gave rise is a matter of history (see MAIMONIDES). The truth is that both the philosophical and the anti-philosophical positions are at once useful and dangerous. Theology has its payable roots, and the evidences to which it makes its appeal necessarily vary with the individual. If the mystic finds his proofs of God in his own spiritual experience—'makes them,' as T. H. Green expresses it—the ordinary believer either looks to Nature and history for corroboration of his creed or declines to corroborate it at all. On the other hand, there are persons desirous of believing, but so constituted as to require conviction as a condition precedent to religious faith. If philosophy may unsettle and alienate the ordinary believer, it may satisfy and win the more exacting mind. Halevi practically recognized this truth when, though setting out with the avowed purpose of excluding rationalism from the sphere of his inquiry, he resorted to it in order to justify certain elements of his Judaism. Apart from its initial postulates, the *Kusev* is throughout a reasoned and, therefore, a philosophical exposition of the Jewish religion. And it is as such an exposition that it retains its interest for us. It gives us a picture of the religion which appealed to the average Jew of the Middle Ages, of the religion, moreover, which still commands the allegiance of his successor to-day. That the book attained instant popularity, that it influenced so considerable a Jewish philosopher as Ibn Daud, who wrote his *Sevenat Hamal* in 1108, and that it has passed through a dozen editions, is not surprising. More remarkable is it that it should have been translated into many European languages, including English.

The following is a summary of the salient teachings of the work:

The aim of religion is the good life. Revealed religion is, therefore, superior to the natural religion of the philosopher which debases the good life in diverse ways. The belief in God, in His eternity, in His providential guidance of Israel's history, and in His revelation constitutes the essence of the Jewish creed. The truth of that creed is attested by historical facts, e.g. the Sinai revelation, which took place in the presence of a whole nation. Nothing in Scripture can ever be irreconcilable with reason. Thus the Biblical appellations of God, such as 'merciful,' 'loving,' 'long-suffering,' and the like, do not imply any weakness of the Divine nature, but express the diverse points of view from which it is approached by the human mind. In like manner the Divine attributes merely correspond to the various relations of God to His creature.

Like the dream of the Divine existence, the idea of the election and mission of Israel rests upon an historical basis. The Bible tells of a succession of prophetic or spiritually-gifted nations, beginning with Adam, continued in the Patriarchs, and completed by the Israelite people, who were chosen as

the depositaries of the Divine truth. That truth reached its full expression in the Bible, with its three great themes of precepts—ethico-legal, ritual, and spiritual, and its communication to Israel elevated that people into a kingdom of priests, charged with the performance of the prophetic task. The adaptation of the Biblical precepts to the needs of successive ages is the characteristic function of the Talmud, which defines the boundaries of permitted and prohibited things in accordance with tradition. The theory of an Oral Law supplementing and elucidating the Written Law (Scripture) is essential to a due interpretation and fulfilment of the Biblical ordinances. Hence, unlike Karaites Judaism, which rejects tradition, Rabbinism gives satisfaction of spirit to its adherents by the assurance that, in obeying the laws of their religion, they are performing the clearly ascertained will of God.

Moreover, Judaism, the religion of joy, imposes limits on asceticism: 'Thy self-humiliation on a fast-day is not more acceptable to God than is thy devout rejoicing on a festival. The powers of soul and body are to be equally developed. The good man, as Judaism conceives of him, will not shun the world and its activities, nor will he long for death in order the more speedily to enter into eternal life. Man, moreover, is free (this is in opposition to the Epicurean and fatalistic doctrine of Necessity). Nor does the idea of Divine providence conflict with this truth. God knows the consequences of human actions, but this is not equivalent to determining them. Between the Divine foreknowledge and human action lie intermediate causes. The human will is one of them; it can direct the law of cause and effect as it desires. Nevertheless, the Divine omnipotence is not limited, inasmuch as these intermediate causes depend upon God, and are to be referred back to Him.

As to the prophetic gift, it is a direct emanation from the Godhead; it is the common law. There is no prophecy outside the Holy Land (probably a polemical reference to Mohammedanism). The Prophet must be a man of exemplary life. In virtue of his obedience to the Law and of its sanctity, Israel has a special aptitude for prophecy, which it may lose by disobedience to the ceremonial precepts. That exile is no proof of its rejection by God. Israel is the martyr-people; it is 'the heart of the nations,' feeling every pain and disaster of the great body of mankind. But the dry bones will live. The Jew has been dispersed throughout the world in order to disseminate the Divine truth. Christianity and Islam are fore-runners, preparing the way of the Messiah, whose day will make them one.

3. Poetical worth.—Halevi the poet is at least as great as Halevi the religious thinker. He has been called 'the most inspired writer of Hebrew after the Psalmists.' The allusion is to his poems, which, unlike his great prose work, were written mainly in the sacred language, but in the Arab style, with its fettering artifices and conventions. Though essentially a religious poet, Halevi, in common with his predecessors of the Judæo-Spanish school, did not disdain to sing of secular themes. Indeed, the new Hebrew poetry which that school created was secular before it was religious. Halevi—so facile is his gift—turns to poetry when others would use prose. If he has to write a letter or send a greeting to a friend or a great man—the Ibn Ezra, Samuel Hanagid, Joseph Ibn Migash, and many others—he sends it in verse. He invokes his muse on the smallest provocation. He has left epithalamia, elegies, satires, epigrams, riddles, and love-songs. He sings of youth and of old age, of feasting, and of the splendour of land, sky, and sea. He rallies a lad who has begun to grow a beard; he chronicles the discovery of his own first grey hair:

'I found my first white hair to-day,
And plucked it out, scarce knowing what I'd done.
'As easy task,' it cried, 'to vanquish one;
But how when all the best are grey?'

With the title, 'To a Friend who finds my Poverty as grievous as I do,' he indites the following lines:

'I'm done with thee,' exclaimed my friend,
The day my money fled.
'So wroth! Say, What's my sin?' I cried.
'Thy poverty,' he said.

But the didactic note prevails. He warns the worldling that mundane things, 'a protecting shadow' to-day, 'may be a snare to-morrow'; 'the eagle's pinion may wing the shaft that slays him.' He has some lines entitled 'The Counsel of the Sage,' which contain the following advice: 'Keep a joyous face for thy friend; be not always sad. Win the hearts of the learned, and capture the wisdom of the wise. So will thy desire be fulfilled, and thy wealth multiply.' About to take

medicine, he writes some prayerful verses, in which he affirms his trust not in the potion, but in the healing power of God. Here is a characteristic stanza or two on 'Love to God':

'I haste unto the true life's fount,
Savouring the life that's vain and false;
My one desire to look upon my King!
No other being has my reverence.
Could I but see Him in a dream,
Then would I sleep for aye;
Could I but see His face within my heart
I'd never wish to look abroad.'

Another poem is entitled 'The Shame of the Jew in his Pride.' Its central thought is thus expressed: 'Men revile me—they know not that shame, borne for Thy sake, is truest glory.'

Halevi's chief strength, however, lay in his gift of hymn-writing. He is the poet of the Synagogue *par excellence*. No liturgical writer has found so wide acceptance among the Jews, or lifted their devotional poetry to so high a level. He has left hymns—some 300 in number—for the whole of the Jewish year, and the Synagogue has made abundant use of them. They are a common bond uniting the sects of Jewry—the Karaites among them—with their many differences of thought and ritual. Simple, as a rule, in ideas and expression, they tower above the effusions of the more ancient liturgical poet Kaliri, with his love for dark sayings and difficult phraseology. Halevi's religious poetry moves, moreover, on a far loftier plane. Its leading feature is a keen consciousness of God, the desire for communion with Him, an absolute trust in His rectitude. The joyousness issuing from this temper is modified, however, by the sad thought of Israel's low estate. The enmity of Edom and Ishmael (Christendom and Islam) is a constantly recurrent theme, as though the iron of persecution had entered into the writer's own soul. Occasionally he invokes the Divine judgment upon the oppressor. This sombre tone persists even in some of the poems written for Feast-days. But their final note is one of hope and faith. Purified by tribulation, Israel will be redeemed at last, and the old national life restored. Sometimes the poem is the voice of the soul of collective Israel, 'the King's son,' sometimes of the individual soul. Now the poet mourns his own sins, especially the sins of his youth; now he calls to youth to remember that life is fleeting, and that old age, with its disillusion and regrets, and the day of death, 'when there is neither love nor hate,' will come at last. 'Haste,' he exclaims, 'after thy King, with the souls that flow unto the goodness of the Lord.'

Apart, perhaps, from a quicker feeling for the beauty, as distinct from the solemnity, of the physical world, Halevi's poetry makes no appreciable addition to the content of Jewish thought. The Bible and the Rabbinical literature not only colour, but fashion, his theology and his outlook on life. His chief characteristics are intense spiritual feeling and lofty imagery. Traces of theosophy meet us here and there.

The angels are very real beings to the poet; they hold up the throne of God, but God upholds them. He is the Omnipresent, who fills, but transcends, Nature. 'Thou containest the universe; but the universe does not contain Thee.' But God is immanent as well as transcendent: 'He came down at Sinai, and He dwelt in the bush.' 'Is His throne, in very deed, among the Cherubim? Lo, the highest heavens contain Him not. He lives in men's hearts, even as He dwells among the angels. Yea, His assembled worshippers are very near to Him. Invisible to the eye of flesh, He is manifest to the soul.' His grace, too, is infinite; it triumphs over His strict justice, and ensures forgiveness for truly repentant sinners who 'come to grasp His robe.' 'Their tears are as drink-offerings in His sight.' The one supreme joy is communion with God. His grace the one supreme boon. 'Away from Thee, my life to death; near to Thee, my death to life. . . . Let me seek Thy grace for awhile, and then let me die . . . for what else hath life in its gift? And if Thou art not my portion, what is my portion?'

In like manner, the poet cries in one of his finest passages:

'My heart is one with my Beloved; my soul lives again;
A poor prisoner, yet am I glorious.
My heart holds my Beloved; what need to seek Him, then,
Either in the heavens or in the deep?
My soul enthrones Him; why, then, brother or friend?
Or what can King or Prince do for me?'

Still more daring is his flight. Influenced by the Midrashic interpretation of Canticles, he thus apostrophises God:

'Beloved, hast Thou forgotten how Thou didst lie between my breasts?
Why, then, hast Thou sold me into leading captivity?
Once Thou hadst my love, and Thou gav'st Thy love to me;
Now, then, couldst Thou give my honour to another?
Have I Kodesher but Thee? Or hast Thou a prisoner of hope but me?
Olive me, I pray, Thy strength, for to Thee I give my love.'

He retains, too, some of the Talmudic superstitions. The note of the *shofar* (cornet), for example, on the New Year Festival will confound Satan, and give unimpeded play to the Divine mercy and men's contrition. His spirit chafes under his people's sufferings. Besides active persecution, they have to endure attempts to wean them from religion. 'They would turn me aside after false prophets'—so Israel is made to complain; 'they revile me when I seek to serve my God.' But 'Lo, Thy fame is in my ears; the Red Sea and Sinai witness to Thy greatness. How, then, shall I think of any god but Thee?' In these lines we may discern a poetic echo of the great thesis of the *Kuzari*—the testimony of history to the eternal truth of Judaism.

Halevi's eminence as a religious poet is attested by the frequency with which he has been translated. Heine, moreover, generally frugal in his praise, gives the ancient singer of his race unstinted homage: he is

'A very wondrous mighty
Fiery pillar of all song,
That preceded Israel's march
Caravan as it was marching
Through the desert of sad exile.'

When this spirit was created
By its Maker self-contented,
He embraced the lovely spirit,
And that time's beatitude echo
Thrills through all the poet's numbers,
Which are hallowed by this grace.'

Of the many attempts to summarise Halevi's significance in the sphere of religious literature, Graetz's appreciation is perhaps the happiest: 'He was the transfigured image of self-conscious Israel seeking to express himself in thought and in Art.'

MORRIS JOSEPH.

HALLAJ.—In the history of Muhammadan pantheism there is no event more celebrated and remarkable in its consequences than the execution at Baghdad, on the 24th of Dhu'l-Qa'da, A.H. 309 (26th March, A.D. 922), of Abu'l-Mughitha Hussain ibn Mansur al-Hallaj—often incorrectly called Mansur Hallaj—on the charge of pretending to be an incarnation of the Deity. His claim was expressed in the most forcible and uncompromising terms that can be imagined: *And I-I-Allah*, 'I am the Real.' The significance of this formula will be explained after some account has been given of its author's life and character. Hitherto it has not

been possible even to sketch the outlines of his career with any certainty, but the researches of Louis Massignon, which will shortly be published (see below), have thrown fresh light on the subject.¹

2. *Life.*—Hallaj, whose grandfather is said to have been a Zoroastrian, was born A.D. 858 at Balkh, near Persepolis, in southern Persia, and passed his boyhood at Wasit, one of the chief cities of Iraq. At the age of sixteen he went to reside at Tusar (Shashtar) in Khazistan, and entered upon the ascetic and mystical life as a pupil of the saintly Ṣaḥī, Ḥabīb ibn 'Abdallāh al-Tustarī; he then migrated to Bagra, where he became a disciple of 'Amr ibn 'Uthmān al-Makki, and married the daughter of another Ṣaḥī, Abū Ya'qūb al-Aḡa'. On leaving Bagra, he proceeded (in 877) to Baghdad and completed his training in Ṣaḥīsm under Junayd, the greatest mystic of the time. Little is known concerning his movements and the events of his life during the next twenty years. About 895 he made the pilgrimage to Mecca, where he remained for a year in seclusion. The fact that soon afterwards his Ṣaḥī teachers broke off relations with him was probably due to their dislike of the extreme pantheism to which he had by this time committed himself, although Hajwiri states (*Kashf al-Mahjūb*, 180) that they did not repudiate him because of any attack on religion and doctrine, but solely on account of a breach of discipline. After spending two years in retirement at Tusar, he travelled for a long while (c. 899-903) in Khurāsān and Fārs, preaching and composing his first works on mysticism; at this date he received the title of *Hallaj* ('wool-carder') by which he is generally known.² Having made the pilgrimage to Mecca a second time, he settled for a year at Baghdad, whence he travelled by sea to India and roamed to the farthest boundaries of Turkistan, preaching and writing as before. He then returned as a pilgrim to Mecca, where he stayed two years, and about 905 arrived at Baghdad, where he delivered a public discourse which raised an outcry against him and led to his being arrested; but he managed to escape from prison, and concealed himself at Bās in Khazistan (910). Three years later he was again arrested and brought to trial at Baghdad before 'Isā, vizier of the Khalīf Maqtadir. On this occasion he was charged with being a Carmatian (q.v.); and, although no evidence was found to justify the allegation, he was detained in custody at Baghdad. His captivity, which lasted for eight years, was not of a rigorous nature: he was moved from one prison to another, and was allowed to receive visitors and continue his preaching—a privilege which he used to such purpose that he gained many influential sympathizers.

Finally, in 922, a second trial took place. It was conducted by the viziers Ibn 'Isā and Ḥamid, and dealt with three principal charges against Hallaj: (a) his secret correspondence with the Carmatians; (b) the extravagant notions of his disciples, who believed him to be Divine; (c) his own belief on the question of essential union with the Godhead ('*aiṣ al-jam'*). Ḥamid wished to confine the inquiry to these points, but the *qāḍī* insisted on his adding a fourth, viz. the doctrine (which was, indeed, held by Hallaj) that the pilgrimage to Mecca is not one of those religious obligations that are absolutely binding, but belongs to the class that admits of abrogation. On this skillfully chosen combination of theological,

legal, and political grounds, the prisoner was condemned to death. During his execution, which was carried out in a barbarous manner, Hallaj displayed the utmost fortitude. His mutilated body was burned and the ashes thrown into the Tigris, while his head was sent to Khurāsān to be shown to his followers in that country. Many, however, both there and elsewhere, would not believe that he was dead, and continued to expect his return. They maintained, quoting the statement in the Qur'ān (iv. 156) concerning Christ, that Hallaj had been transported alive to heaven, and that the actual victim was one of his enemies whom God had changed into his likeness, or, according to other versions, a horse or a mule.

Similar legends are told of 'Alī (cf. *al-Farag*, 225) and several Shī'ite heretics. As Massignon has pointed out, they express the popular feeling that a God-man cannot justly suffer the indignity of being murdered, crucified, or dismembered.

3. *Teaching.*—Although the later Muhammadan tradition attributes the condemnation of Hallaj to his outrageous impiety, it is certain that political motives played a large part in the affair. He is described, in the oldest historical books that mention him, as an agent attached to the Shī'ite or Carmatian propaganda,³ a reckless and unprincipled agitator who dabbled in alchemy and magic, and imposed on the vulgar by performing miracles which were only the tricks of a clever conjuror. Now, there seems to be no evidence that Hallaj was a Carmatian, but it was easy to pretend that he was. The doctrine of incarnation (*ḥudūd*) was held in common by some heretical Ṣaḥī sects and by various branches of the extreme Shī'ites, and Hallaj might plausibly be represented as a Carmatian, since he is said to have called himself 'the Radiant Light,' and to have been addressed by his disciples in terms like these: 'We bear witness that thou art He who puts on a different form in every age, and in the present age hath assumed the form of Ḥamān ibn Maṣṣār; and we implore thy blessing and hope for thy mercy, O knower of secrets!' (*al-Farag*, 248, 12). Moreover, in the first quarter of the 10th cent. the Carmatians almost succeeded in establishing a reign of terror; and Massignon suggests, with reason, that Ḥamid, who had incurred much odium by his measures for controlling the importation of corn, may have sought to regain popularity and credit by pretending that Hallaj was one of their most dangerous missionaries, and making it appear that his conviction was a political triumph. Otherwise, it is at least doubtful whether the audacious dialectic with which he pursued his theological speculations, or the pantheism which he openly professed, would have cost him his life. Islam has always been tolerant to the excesses of mystical enthusiasm, and the plea of ecstasy has seldom been urged in vain.

According to the theory of Ṣaḥī philosophy, *al-ḥaq*, 'the Real,' i.e. God regarded as pure being, is opposed to the phenomenal world, which exists only as a reflexion of pure being upon the darkness of matter or 'not-being.' Even the more orthodox mystics hold that union with God is attainable. They say that in 'passing away' (*fanā*) from his phenomenal self man necessarily becomes one with God, inasmuch as the Divine element in his nature is then free to rejoin its source. The theory, stated in this way, is not Hallajian, but Hallaj presents the same ideas in a symbolic form peculiar to himself.⁴ While the Ṣaḥīs are generally careful

¹ The present writer is indebted to M. Massignon for the greater part of the following biographical notes as well as for other important facts, and desires gratefully to acknowledge the courtesy with which they have been communicated.

² According to some authorities, the epithet refers to his power of rousing men's secret thoughts, while others say that it was bestowed on him because he once carried a large quantity of cotton in a miraculously short time.

VOL. VI.—11

³ The definite statement that he was one of the missionaries of 'Alī al-Riḍā, the eighth Imam of the Shī'a (Reverend, *Literary History of Persia*, i. 439), seems not to be justified by the original text (*Ḥabīb*, 100, last line), which says that he carried on a propaganda in favour (*ruḍd*) of the Alids.

⁴ Apparently, however, Hallaj did not regard the defiled man as being devoid of personality and indistinguishable from the

to disavow the heretical notion that the Divine substance or spirit can enter into man, this doctrine of human transubstantiation (*Aulâf*) was nevertheless adopted by some of them; and, since it was taught by Fârî, one of the chief disciples of Hallâj, we may conclude that it is implied in the famous formula, *And 'I-âqq, 'I am the Real.*

Such, however, is not the opinion that prevailed among the mystic theologians who flourished in the 4th and 5th centuries of the Muhammadan era. The majority of these men saw in Hallâj a genuine theosophist, exalted by mystical rapture or intoxication to a point where he believed himself to be united with the Divine essence; and in their eyes he was not guilty of anything worse than a momentary indiscretion. Others hesitated to condemn him outright and took refuge in an attitude of neutrality. Ghasâlî, who at first adopted this course, afterwards declared that *And 'I-âqq* is an expression belonging to the highest stage of Unitarianism. Those who deemed Hallâj an infidel usually qualified their condemnation by saying that, although he had violated the religious law, he had not been false to the inner truth of Islâm; his offence was that he divulged the mystery of the Godhead, and on this account he deserved to die.

Hallâj is the founder of Muhammadan pantheism in the same sense as Ash'arî (q.v.) is the founder of Muslim scholasticism. The pantheistic movement did not commence with him: it had long been gathering force below the surface, and his words only gave the signal for its explosion. They revealed, as in a flash, what many had more or less consciously thought but few had yet dared to speak. Here, at last, was the plain truth uttered so simply and tersely that no one could mistake or forget it, and its effect was intensified by the dramatic spectacle of torture and vengeance inflicted upon the man who had proclaimed himself to be God. The later Sûfî writers, especially the mystical poets of Persia, celebrate Hallâj in glowing language as a hero and martyr whose passion for the Real caused him to lay down his life in order that he might gain the perfect union that results from self-extinction.

Hallâj left behind him a sect designated by his name, who professed the doctrine of *hulûl* and are reckoned among the heretics of Sûfism; and also a large number of mystical writings in prose and verse. The titles of forty-seven treatises by him are recorded in the *Fihrist* (p. 192), and this catalogue is not exhaustive. Only one of them has been preserved complete or nearly so—the *Kutûb al-Yusufîya*, which Massignon has recently discovered in an Arabic MS of the British Museum (Add. 9062), together with a Persian commentary by Râshidân Baqlî (A.D. 1206), extant in two Constantinople MSS. The forthcoming edition of these texts will furnish materials for a detailed account of the mystical theories developed by Hallâj, and will open the way to a better understanding of his character and his influence upon the subsequent history of pantheism in Islâm. For example, it appears from a passage in the above-mentioned work that the Yazîdî—the so-called devil worshippers—derived their peculiar veneration for Iblîs from Hallâj and his school (Massignon, in *RHR*, June 1911). A considerable quantity of fragmentary compositions—sayings, letters, discourses, poems, etc.—some of which are undoubtedly authentic, have come down to us under his name. Two collections of poetry in Arabic and Persian are falsely attributed to him.

duity. The 'I' is not absorbed in, or confused with, 'the Real.' In this respect his doctrine is at variance with that of the Persians (q.v.) in general (see Massignon's introduction to the *Kutûb al-Yusufîya*, p. 20).

The letter, published at Bombay in 1887 and again in 1904, is a particularly gross forgery.

Levinson.—L. Massignon is preparing a special work, entitled *Bibliographie chronologique de l'œuvre d'al-Hallâj*. Only the most important notions in English and other European languages can be mentioned here: *Im Hallâj*, tr. de Masson, Paris, 1882-71, t. 498; *Hallâj, Sa'at al-Hallâj*, tr. Nicholson, London, 1910, p. 156; *P. A. G. Theodor, Studien zur Geschichte der mystischen Mystik*, Berlin, 1888, pp. 211-222 (the *Life of Hallâj*); *tr. from Apper's Tadhkirat al-Ash'arî*, R. G. Brown, *A Library History of Persia*, London, 1908-09, t. 498-497; *A. von Kromer, Gesch. der islamischen Idem des Islams*, Leipzig, 1888, pp. 70-75; *R. P. A. REYNOLD A. NICHOLSON.

HALLUCINATION.—1. Definition.—A hallucination is generally defined as a false perception. It is generically that; but it is not the only species of false perception, and a closer characterization is therefore necessary. Psychologists draw a distinction between states of consciousness in which there is contained or involved a reference to an object in the so-called external series here and now existent, and a state of consciousness which, though in content otherwise generally similar to the other, does not carry this objective reference. The first is termed a percept or a presentation; the second is termed an image or representation. These psychical experiences form two series known as the presentational and the representational series respectively. This nomenclature indicates the dominant characteristics of each type of experience, though, of course, there are representational elements in the percept, and representations are based on perceptual experiences. Normally there is no confusion between the two. A hallucination is said to occur when a member of the second series is ascribed to the first—i.e. when an image is taken by the conscious subject for a percept. The one, be it noted, is, *qua* psychical event, as real an experience as the other. The 'fallacy' lies in the function which the conscious state in this case is made to perform or in the significance which is attached to it. It is made to report falsely about external reality. In this it partakes of the character of illusion (q.v.), and yet it may be distinguished from that kind of experience. Whether the distinction is merely one of degree is a question on which there has been much debate among psychologists. *Esquirol*¹ gave currency to the following distinction. In hallucination an experience which is purely subjective, or, speaking in terms of cerebral activity, is centrally initiated, is judged to have an objective correlative or to be peripherally initiated, whereas in illusion the starting-point is found in presentation; there is peripheral initiation—it is not, strictly speaking, a 'fallacy of the senses'—but the presentational factors are wrongly apperceived or interpreted. Hallucination, in short, takes place when we perceive an object which by the accepted tests of external reality must be finally judged to be non-existent; illusion takes place when we perceive the wrong object. This may be taken as a working mode of differentiation, though further investigation has led to the conviction that the line of demarcation is not so bold and well-defined as it is thus made to appear. There are a number of borderland cases which present difficulty, and which are sometimes to be found in the literature of the subject under the head of 'hallucination,' and sometimes under the head of 'illusion.' It certainly seems well-established that in numerous (some would say in all) cases classed as hallucination there is a sensory or presentational factor. In these cases, however, the sense element is so vague and unspecific that it would not normally form the

¹ *The Fallacy of the Senses*.

basis of a percept; it is the occasion rather than the ground of the false perception.

2. *Varieties*.—It is said, not quite accurately, that we may have hallucination of more than one sense. What is meant is that the content of the hallucination may be of one or other or of several of the modes of consciousness normally regarded as modes of sensation. In this sense the statement is correct. Thus we may see before us the figure of an absent friend or acquaintance or some grotesque and monstrous figure; the visual factor is predominant here, and it may be said at this point that 'visual' hallucinations bulk most largely in the records of the subject, whether they relate to the experiences of persons in a normal or abnormal condition. But we may also find hallucinations in which the auditory (the subject hears voices or definite sounds), touch, temperature, olfactory, kinesthetic, and other modes are respectively predominant. This is well marked in the experiences of persons in the hypnotic state. Tell such a person that he has taken snuff and he sneezes; tell him he is standing on ice and he feels cold at once; 'he trembles, his teeth chatter, he wraps himself in his coat.'¹ If one sense only is involved, the hallucination is said to be *simple*; if several are involved, the hallucination is said to be *complex*.

There is a well-known experience particularly marked in the case of the person in the hypnotic state, or under the influence of post-hypnotic suggestion, known as *negative hallucination*. This is the case where the subject fails to perceive an existent object. He may only fail to see a person in the room, or he may be totally unaware of his presence, according to the character and scope of the given suggestion. The epithet 'negative,' though applicable enough from the point of view of the observer or observers of the case, is misleading as applied to the hallucinatory state itself. The hallucination is as positive as any other. The whole objective situation is apprehended by the subject as other than it is; or, if we limit the reference to that part of space in which the unperceived object or person is at any moment, then that part of space is falsely perceived; the background is continuous; there is not a gap in it; e.g., the back of the chair on which is seated the person whose absence is suggested will be seen, although, of course, it is not really visible.

Dreams (q.v.) are generally regarded as the most familiar type of hallucinatory experience. We seem in dreams to be the spectators of external objects and of series of external events which are sometimes so vivid as to cause a distinct feeling of relief or disappointment when we wake and find that these events do not fit into the normal external series. So careful an observer as McDougall,² however, finds a marked distinction between the features of a dream experience and the features of a hallucinatory experience. This is a direct challenge to more careful introspection. The present writer's observations go to confirm the view that dreams are pure hallucinatory states. The chief distinction seems to be that in the dream state the hallucination is more complete than usual. The impressiveness of the object is as marked and the emotional co-efficient at least as intensive as in experiences which are unquestionably recognized as hallucinations. It is to be remarked that among these are the hallucinations of the half-awake state or the transition state between sleeping and waking. The line between these hypnagogic hallucinations and dreams is extremely difficult to draw.

Instances of so-called normal hallucinations are to be found in what are termed *waking hallucinations*.

This form occurs in the experiences of persons who may otherwise be regarded as in a normal waking state. There are many such cases reported by historians; 'the anthropologist furnishes instances from his observations of primitive peoples; 'current report furnishes a sufficiency of contemporary or comparatively recent cases. We are fortunate here, however, in not having to depend merely on such evidence. In 1899 the English Society for Psychical Research issued a questionnaire containing the following query: 'Have you ever, when believing yourself to be completely awake, had a vivid impression of seeing or being touched by a living being or inanimate object, or of hearing a voice; which impression, so far as you could discover, was not due to any external physical cause?' To this 17,000 replies were received, of which over 2000 stated that under the conditions indicated figures had been seen, or, less frequently, voices had been heard. Similar inquiries have been made in America by W. James, in France by L. Marillier, and in Germany by the Munich section of the *Gesellschaft für psychologische Forschung*, with a similar result. An attempt has been made by Parikh, in an analysis of the evidence, to show that, while the subjects of these hallucinations no doubt believed, in all good faith, that they were fully awake at the time of the experience, they were really in the transition state between sleeping and waking. The evidence will not, however, bear this construction, though there are enough instances of a kind to make a *prima facie* case for it. The object of these inquiries has not been to establish the existence of waking hallucinations, but to obtain evidence on the *vernal* question of the possibility of directly intimating distant events by this means to a person who would have been unaware of these events through the ordinary and understood modes of communication. This is known as the question of *coincidental hallucinations*. The hypothesis has been advanced that there is a causal relation between such apparitions and the distant events to which they refer. The problem is one which lies beyond the scope of the present article. It is treated at length in *Phantasms of the Living* (E. Gurney, F. W. H. Myers, and F. Podmore, London, 1896). The available evidence shows a number of cases of coincidental hallucination markedly in excess of the number to be expected on the theory of probabilities; and this, so far, is favourable to the view that these occurrences are not merely fortuitous, but it is not sufficient in extent or quality to warrant a definite conclusion.

In addition to the above so-called 'waking hallucinations,' which are regarded as taking place when the subject is in his normal condition, there are hallucinations which occur either (a) in a state which at the time of the occurrence cannot be called normal, or (b) in a state which is permanently abnormal, as in the case of mental disease. As an instance of the first type may be mentioned the familiar hallucinatory experiences, already referred to, connected with those moments of our mental life when we are passing from the waking to the sleeping state, or from the sleeping to the waking state. At these moments there is a sudden irruption of an apparently irrelevant image or procession of images which have a vividness and impressiveness much superior to those of the image in the normal waking experience, and which are readily mistaken for percepts. Some of the experiences referred to as waking hallucinations, it will be found, really belong to this type. In extreme general fatigue or in fatigue of a particular sense organ, hallucinations readily occur. The exhausted traveller often passes into the hallucinatory state; prolonged

¹ A. Moll, *Hypnotism*, Eng. tr., London, 1903, p. 100.

² 'Hallucination' in *IBU* xii. 423.

³ Cf. Parikh, *Hallucinations and Illusions*, p. 77 E.

⁴ Cf. Long, *Waking of Religion*, p. 113 E.

fasting is a preparation for the state of hallucination. After protracted visual strain, 'visual' hallucinations often occur.

Intoxicants influence hallucination. The most familiar example is the hallucination accompanying alcoholic poisoning in the state known as *delerium tremens*. Intoxication by chloroform, nitrous oxide, hashish, opium, atropin, etc., are further instances. Hallucinations thus conditioned are mostly of an unpleasant and even terrifying character, though in certain cases, e.g. hashish intoxication, there is a pleasurable phase.

In other cases, conditions of a psychological character are predominant, as, e.g., in hypnotic trances and ecstasy. The results obtained by 'crystal-gazing' (q.v.) may also be included here. The general preliminary condition of these experiences is an intense concentration of the attention upon one point. Indeed, we may note the effect of concentration of attention upon hallucination before it reaches the stage indicated in any of the above-named experiences. A person eagerly listening for a knock or a footstep may have the hallucination of the sound he is awaiting. A 'ghost' may be seen by one who is aware he is in a haunted room, and who is consequently in a state of strained expectation. In the census of the Society for Psychical Research there are thirteen cases of hallucination which took the form of the appearance of a person whose arrival was looked for. *Collective hallucinations*, i.e. hallucinations of a particular kind experienced by more than one person at the same time and place, are, no doubt, explained by this factor. The hallucination first experienced by one member of the group may spread to the others by suggestion operating through the special directions and concentration of attention induced by the reported abnormal occurrence.

In *Apports* the process is carried further. The subject is in a highly suggestible state, and hallucination is easily produced either while he is actually in the hypnotic trance or subsequently, when the waking state supervenes, under the influence of suggestion made during the trance, i.e. of 'post-hypnotic' suggestion. The records of hypnotism (q.v.) teem with instances of both types.

In the extreme forms of *ecstasy* (q.v.) the distinction between the self and the not-self disappears, and with it the articulate content of the not-self, which on the psychical side is represented by percepts and images. There is one total, all-embracing, emotional state. There is, obviously, no room here for hallucination. But in the ecstatic experiences, which may find its consummation in such a condition, there are moments in which hallucination, in the strict sense of the term, may be noted. The best-known cases of ecstasy are those of religious ecstasy, where the object of contemplation and desire is a religious one, though this state is not exclusively connected with objects of this type. Examples of hallucinatory religious ecstasy are to be found in the sacred books of many religions, in the records of lives of saints and mystics, and in the accounts of primitive peoples.

Gazing steadily at a shining surface—a metal mirror, oiled finger-nails, a blot of ink, a crystal—induces hallucination. The 'scryer,' or seer, perceives pictures of distant objects and events. This has been known to mankind in various parts of the world for many centuries. The antiquity of the practice as a method of divination is indicated by the fact that *Aeschylus* attributes its discovery to Prometheus. Analogous to 'crystal vision' are the practices of inducing auditory hallucinations by holding a shell to the ear or by striking gently the rim of a bell. This is also used as a method of divination. The voices heard are oracular.

Hallucinations accompany somatic disorder or bodily disease. The delirium of fever is a familiar instance, and hallucination is associated with the state of collapse preceding death. The hallucinations accompanying acute alcoholic poisoning, already referred to, might also be brought into this category. An interesting type of this class is the 'visceral' hallucination noted by Head.¹ This observer states that patients suffering from visceral disease are liable to hallucinations of a peculiar kind, either visual, auditory, or olfactory. The visual hallucination, which is more characteristic, takes the form of a vague, shrouded, white, black, or grey human figure often incomplete. The auditory hallucinations are of sounds, such as tapping, scratching, and rumbling.

Coming between this type and the type connected with mental disease are the hallucinations of the nervous diseases such as hysteria (q.v.) and epilepsy. They are markedly present in the state known as 'the great hysteria,' at least in the third and fourth of the four phases indicated by Charcot.² In the aura preceding the epileptic attack and in the post-epileptic condition, hallucinations are frequent. They are very often of a distressing character.

In many forms of mental disease or insanity (q.v.), hallucination is a notable feature, more particularly in those cases where the mind falls into a state of mistiness or dreaminess; when there is a 'bedouing of the intellect.' Hallucination, according to Mendel,³ is often associated with dementia, but seldom with acute dementia. Paranoia, it is well known, is strongly hallucinatory. Pursuing and insulting voices and figures are seen by the victim of this painful malady. The hallucinations of insanity may be divided into those which are *sporadic or independent*, and those which are *relatively permanent*. The first, as the term indicates, are not in any known relation to the general morbid condition; the second are obviously related to, and are symptomatic of, this morbid state. Of the two the latter are regarded by psychiatrists as less serious, since they may be attacked through the disease, and may diminish or disappear with the amelioration of the general state of the patient.

3. *Causation*.—The central question for the theory of hallucination is this: What are the special subjective conditions under which a state of consciousness arises which bears the character of a sense-perception although the normal conditions are absent? The answers to this question take the shape of a general psycho-physiological formula. All such answers are conditioned by assumptions regarding the identity or non-identity of the ideational and sensory centres in the brain; and the theory of hallucination will not be in a wholly satisfactory state until the strife of hypotheses on this point is ended.

A prominent and obvious type of theory is that which is termed *convergent*. In the principal form of this view, which has been supported by Taine, Tamberini, Ferrier, Hoffmann, Grisinger, Krafft-Ebing, and many others, the hallucinatory state begins in the ideational centres. In an unusual state of excitability of an ideational centre the excitement overflows into a sensory centre. The excitement of the sensory centre is eccentrically projected, and a hallucination results. On this view the ideational and sensory centres are regarded as distinct and separate. Apart from this, which is called in question, there are various objections to the view as an explanatory hypothesis. It is pointed out that it overlooks the fact that an image,

¹ *Brain*, XLIV. (1921) 280 ff.

² *Le Progrès médical*, LVII, no. 2, p. 38.

³ *Art. in Brit. Med. Association*, XLVI. (1920) and XLVII. (1920).

no matter how intense, remains distinct in quality from the weakest sensation. Again, the relative infrequency of voluntary hallucinations would be difficult to account for on this hypothesis.

Against this we have the view that hallucination is a phenomenon of dissociation. This view, which assumes the identity of ideational and sensory centres, assigns the difference between ideation and sense-perception to a difference of degree of excitement of the same cells. A centre not excited by external stimulation may act as though it were, if it is brought otherwise to a high degree of excitement. Under certain conditions, such, e.g., as fatigue, the action of a drug, or of disease, this may be brought about by the isolation or 'splitting off' of particular centres through the obstruction of the association paths between them and other centres. There is an inflow of energy but no outflow; there is, therefore, an accumulation in the centre which cannot in the normal way be drained off to other centres; a high state of tension is produced, and, finally, there is an explosion such as would be produced by a stimulation coming from the periphery. The chief authorities for this view—which, though not without its difficulties, is, on the whole, the best suggestion forthcoming—are W. James, Kandinsky, Parikh, and Münsterberg.

4. *Influence.*—The influence of the hallucinatory experience upon the life and beliefs of man in the early forms of civilisation is amply attested. The distinction on which the term 'hallucination' is based implies an articulated concept of reality which is beyond the reach of the savage. Lang¹ quotes evidence for the awareness among the Australian tribes of the distinction between kinds of this experience, namely between dreams and 'waking' hallucinations, but that is another matter. The world of the savage will, therefore, contain objects, the source often of fear, which would be judged by a person of a more developed type of mind to be 'unreal,' or at least not objects in the normal or accepted sense. Tylor and others, with some show of probability, assign to the experience in dreams and waking hallucinations the prevalent belief in the savage mind of the actuality of spirits. Their world is peopled by such objects, for which, from their standpoint, they have as good and as direct evidence as for the objects of sense. In the dream state it is assumed that the spectacle of strange or remote objects and events thus furnished can occur only through the detachment of the soul from the body; the soul thus separated and projected during sleep is the witness of these things. An Australian tribe mentioned by Howitt, quoted by Lang,² holds that it is injudicious to fall asleep while out hunting, since the *warup* (wraith) of the sleeping man may be detached by the magic of his enemies. Waking hallucinations will reinforce this belief, since in these instances the wraith of other persons whose bodies are at a distance will appear to the subject.

In those cases where there is the figure of an individual known to be dead or afterwards ascertained to have been dead at the time of the appearance, there will be ground for the belief in the continued existence of the spirit after death. This basic idea of the separability of the soul makes easy such conceptions as that of demoniacal possession. This state is brought to an end by the capture of the strayed soul and its return to its proper dwelling by the medicine-man.

The growth of a special class of medicine-men, wizards, or priests in savage communities is clearly connected with hallucinatory experiences. Among some tribes the individual who is known as the subject of what are now termed 'waking hallucinations' is set apart as a wizard. This separation

and distinction are, of course, further confirmed when the selected individual is able, as Stoll fully shows he is, by the influence of his status, his personality, and his ritual, to induce by suggestion hallucinations in other individuals, or groups of individuals, i.e. when they witness portents and strange events through his influence.

Myth or legend, again, is associated with hallucination. It is not possible to establish as a generalization the suggestion that these legends originate in hallucinations; the same legend is found among very diverse and widely scattered peoples. It is, however, a hypothesis which is worth consideration when dealing with the origin of legends. What is clear is that myth is supported and nourished by hallucination.

ALEXANDER MAIR.

HAMADRYADS (Teutonic).¹—The various stages of religious development among the Teutonic peoples are exhibited in their rites and myths connected with trees. The ancient belief in a power residing in trees—a power that might be transferred to other creatures and to the earth itself—may still be traced in a wide variety of popular customs. Thus, in early summer—on May-day or at Pentecost—the May-bough is carried from the forest to the village by the young people, in the hope that it will endow them with fresh vital energy; at the end of harvest, the harvest-tree is erected upon the last waggon-load of corn, in order that the spirit of vegetation may pass into next year's crop; in spring, cattle, felds, young girls, and newly-wedded couples—the latter also on their marriage-day—are stroked with fresh twigs of sprouting trees, or with branches of the so-called 'rod of life.' From the belief in the power dwelling in trees sprang also the worship of the *Irmennot*—a huge tree-trunk standing erect under the open sky—among the Saxons (Mannhardt, *Baumkultus*, p. 308 ff.), the worship of the ever-green trees that stood before the temple of the gods in Old Upsala (Adam of Bremen, *Hist. eccl. Hammab.* iv. 28, schol. 134), the Norse myth of Yggdrasil, the world-ash, and the Eddic myth which tells that *Ask* and *Embla*, the ash and the ivy (*Voluspá*, 17-18), were the first men.

Then at an early period imagination proceeded to associate trees, and to people forests with demonic beings. These assume for the most part a female, but sometimes a male, form. Popular fancy ran riot among them, enwrapping them in myths of the most varied kinds, and even to-day they are met with in their primitive freshness among all the Teutonic peoples. In O.H.G. they appear as *alrato*, in A.S. as *ældwif*, in M.H.G. as *Altemuor*, *Alterdina*, or *valdiminne*. In the popular belief of the present day they are known as wood- or moss-maidens, forest-nymphs, wild-folk, *Faenggen* (Tyrol), blessed maidens, *Norpen* (Graubünden), *Ellapige*, *Skogemyr* (Dan. 'fairy-maidens,' 'wood-nymphs'), *Skogerd*, *Skogefru* (Swed. 'forest-woman'), and by many other names; when they assume a male form, they are known

¹ For the beliefs of other peoples on the same subject, see THOMAS AND PHILLIPS.

¹ Op. cit. p. 22.

² *Ib.* p. 112.

as 'wild men,' 'wood-mannikins,' or *Skegmen* (Swed. 'forest-men'). They live in the woods—either underground or in trees, especially hollow ones—and are often encountered there by human beings. In outward appearance they usually resemble old women; their bodies are hairy, and covered with moss; they have, in common with field spirits, the characteristic feature of long, pendulous breasts. Their faces are old and wrinkled; and sometimes their backs are concave, like the hollowed-out trunk of a tree. Here and there, however, and especially in the Tyrol, they are found as graceful figures with beautiful flowing hair. As males, their form approximates rather to that of the giants; they are abnormally large and strong; they have bristly hair, and are armed with tree-trunks. Occasionally they are endowed with the protean nature, and may avail themselves thereof to appear as animals.

Their attitude towards human beings is sometimes friendly, sometimes hostile. Their appearance presages a fruitful year. They put the hunter on the track of his quarry, and accordingly he seeks to win their favour. But they often fascinate the traveller with their trilling songs and their laughter, willing him from the right way, and leading him astray. They occasionally unite in marriage with human beings, or engage to serve them, and in such cases bring good luck to the house so long as they stay in it. As denizens of the forest they possess a knowledge of medicinal plants, and make use of them to give health and strength to their favourites; thus, in the Balder saga, the food from which Balder drew his great strength was guarded by *virgines silvestres* (Saxo Gram. iii. 17). They make special appeal to human beings for succour when they are pursued by the Wild Hunter. At such times violent whirlwinds arise, shaking the trees and breaking the branches far down. If the hamadryad is not rescued, but falls into the hands of the Wild Hunter, he lays her crosswise upon his steed. If she is delivered from his power by a human being, she rewards the latter with foliage which turns to gold. Dwarf-myths have also been grafted upon the hamadryads. The latter, like the dwarfs, sometimes substitute their own offspring for human children.

It is very doubtful whether these tree- and forest-spirits were also objects of worship, i.e. whether the milk that was poured out, and the berries that were laid down, at the roots of trees were intended for them. It is much more likely that these gifts were offered to the souls of the departed, which were supposed to survive in trees. In point of fact, trees were regarded by all the Teutons as the abodes, not only of demonic spirits, but also of souls, and as such were treated with the utmost veneration—a practice constantly inveighed against in the penitential discourses and ordinances, as well as in the legal codes, of the early Christian period. We find it said in numerous legends that the souls of the departed pass into trees, or continue to live in the trees that grow upon graves. The extent to which a materialistic conception prevailed here is shown by the widely diffused belief that trees bleed when their bark is injured. Such ideas explain the severe penalties inflicted upon those who committed offences against trees. The act of peeling off the bark was specially forbidden, as the souls were supposed to dwell just beneath it. One found guilty of the offence, according to the *Waisümer* (i.e. abstracts of special usages forming precedents in ancient German law), had his body cut open, and his intestines wound about the tree in such a way as to cover the injured part (J. Grimm, *Deutsche Rechtsaltertümer*, Leipzig, 1860, II. 30). The spirits who lived under the bark could both impart disease and take it

away. Hence sick persons were drawn through a hollow trunk, or else the malady was driven into the tree—i.e. a hole was made in the latter, and some of the invalid's hair or pieces of his clothing inserted into it, the cavity being then closed up again. Departed souls frequently take the form of a bird (owl, pigeon, owl) sitting upon the tree within which they have their abode. It was also believed that the soul of the family-ancestor had passed into the tree growing in or before the homestead, and this tree accordingly became associated with the tutelary spirit of the family, i.e. the domestic spirit. According to Norwegian belief, the *fygja* (on which see *EE* iv. 633), the protective spirit of the individual, had its home in a tree. In Sweden, even at the present day, an elm or lime-tree growing in front of the homestead is often regarded as the *värdräd* ('ward-tree'), the abode of the domestic spirit, and from this tree not a leaf must be plucked, or the smallest splinter cut. Pregnant women resorted to it, and hoped by embracing it to secure an easy delivery. As the dwelling place of the guardian spirit it was known also as the *betrad* ('abode-tree'). Sacrifices and prayers were offered beside such trees with a view to propitiating the tutelary spirits, and warding off evil from man and beast.

The origin of the tutelary spirit—the fact that it was at first the soul of an ancestor—was gradually forgotten, and its place taken by another soul-like being, the guardian spirit of the house, the Norwegian *tomtegubbe* (cf. 'Robin Goodfellow'), the German *Haushobold* (cf. 'brownie'), who lives either in the trunk of the tree or in the root beneath, and who guards the dwelling-house against injury by fire. If a tree which thus harbours a domestic spirit is hewn down, prosperity deserts the house, and the person who did the deed is taken ill. Some of the old tales represent the tutelary or domestic spirit as dying with the tree; according to others, it remains in the fallen trunk, comes into the house along with the latter, and continues to reside in the rafters made from it; and, if the required offerings (food and milk) are given to it, it continues to guard the house as before. To this class of tree-spirits—tutelary demons evolved from soul-like entities—belongs also the *Klausefermann* (see *DEMONS AND SPIRITS* (Text), vol. iv. p. 633 f.) of the Baltic and North Sea coasts. He is a tree-spirit who has been brought into the ship in the mast. Here he continues to reside, helping the sailors in their work, and protecting the vessel. But, should the ship be destined to go down, he deserts it. He, too, receives gifts of food and milk.

HAMITES AND EAST AFRICA.—The classification of the eastern Hamitic peoples is a matter of much controversy. There is a large body of tribes concerning whom, except on some trifling points, there is complete agreement between the various sciences and scientists; outside this sphere there is a want of harmony between anthropology and philology, and between the various philological schools. The common stock may be said to consist of two main groups: the Egyptian Bejae (although notable philologists incline to connect Egyptian rather with the Semitic languages), and the southern or Ethiopic group (Agas, Sidama, Low Cushite [including Galla, Somali, and 'Afar-Baho]). With these anthropology connects other peoples or import-

ant groups of peoples, as the Nuba, the Funj, the Maaei, and the Wabuma, of whom some at least speak languages undoubtedly non-Hamitic. One school of philology, of which the most illustrious representative is Reinisch, limits the true eastern Hamites to the peoples of the two great groups just named, but connects with them two other peoples dwelling between the one group and the other, viz. the Baria and the Kunama, who, although they do not speak a purely Hamitic tongue, employ languages—called by this school proto-Cushite—which seem to approach the Hamitic type, and represent, as it were, a link of connexion between the Hamitic and Nilotic tongues. Another school, of which the most recent and active champion is Meinhof, places the Baria and the Kunama among the peoples speaking the so-called Sudanese, and consequently non-Hamitic, languages; on the other hand, this school includes among the Hamites the Bari dwelling on the White Nile, and the Maaei of British East Africa and of German East Africa. It is easy to understand why here, as elsewhere, even for historical reasons, anthropology and philology are not in agreement. Further, while we recognize the importance of the doubts raised concerning the character of the Kunama tongue and the importance of the analogies of the Maaei language with the Hamitic tongue, this is not the place to discuss the differences between the philological schools. The following notes refer especially to those peoples whose Hamitic character is generally admitted, with brief references to the two proto-Cushite peoples.

1. The Bejas represent one of the greatest ethnical factors along the middle course of the Nile. According to some anthropologists, they were among the principal elements which went to form the ancient Egyptian people. Many of their tribes and parts of tribes are doubtless concealed under the unidentified names of the conquests of the Pharaohs to the south of Egypt. Their primitive seats appear to have been the desert regions of eastern Nubia. Towards the beginning of the common era they seem to have undergone a powerful movement of expansion or of migration, determined, it may be, by the influx of the Nuba and of other populations of the south-west into the regions of the kingdom of Meroë, of whose inhabitants they must have formed a conspicuous part. This movement drove towards the Egyptian frontier some fractions of tribes, such as the Blammyas, who were the subjects of fantastic stories of terror on account of their ferocious incursions; on the other hand, other tribes moved towards Abyssinia. The kings of Aksum were often occupied by the incursions of the Bejas or by expeditions against the Bejas, so much so that among their other titles they assumed that of 'kings of the Bejas.' In course of time the Bejas seem to have gained the upper hand, at least for a time, in the regions of northern Abyssinia. It is certain that among the peoples of the Abyssinian highlands we find some speaking the Tigris tongue and observing the customs of the other Abyssinians, and who boast a Beja origin, as the Tedrer in Akkale-Guzay, and the Dekk Itam of Sora. There was much rivalry between the Beja element and the Abyssinian stock in the valley of the Barka, in Eritrean Sahel, and on the mountains traversed by the river Anseba in the last part of its course; sometimes the one, sometimes the other, ethnic factor prevailed. Thus there were formed mixed populations, although fractions of races are to be met with who are purely Beja and speak a Beja dialect, as far as the foot of the mountains of Abyssinia proper, such as the ad-Sala dwelling near the outflow of the river

Barka from the mountains of Liban on the plain below.

Meanwhile in the northern regions the Arabs, who had succeeded the Byzantines in their rule over Egypt, must often have come into contact with the restless nomads of the south and their forays. Numerous military expeditions were the consequence, and also numerous treaties, the most ancient of which does not seem to have been very favourable to the Arabs, whose governor Ubaid Allah ibn Biyab as-Salali undertook to furnish the Bejas with three hundred young camels, provided they would respect the borders of Egypt and the lives and goods of the Musalmans. As a matter of fact, it was possible to guarantee the safety of Egypt only when several Arab tribes went and established themselves in Nubia, thus paralyzing the warlike inclinations of the local elements, or when these tribes began to pass over to Islamism. In the 8th and 9th centuries the Bejas formed a sort of independent principality, whose ruler, resident in al-Hajr in the southern part of their territory, acted in the name of all the tribes of his race dwelling between Egypt and Abyssinia. From Arab sources we learn the name of one of these, who already in the year 216 A.H. (A.D. 831) seems purely Islamic—Qanān 'Abd al-'Asī.

In the days of the historian 'Abd-Allah ibn Ahmad ben Sulaim al-Uswāni, who in the 10th cent. wrote a history of Nubia, this union of tribes had ceased, and the tribes had autonomous heads. Among these the ruler of the Balaw, whose seat was at Snakin, deserves mention. The Balaw principality lasted until the end of the 17th cent., when a family of Ja'aliyin, favoured by the Funj, seized the command of the country. Nevertheless the Balaw have continued to constitute a kind of aristocracy down to the present day.

A long time before the historian 'Abd-Allah al-Uswāni, a great internal revolution had taken place among the Bejas. The place of the Sanafej tribe in the hegemony of the race had been taken by the Hadarab tribe, to whom ancient Arab writers assign as their territory the Beja country from the Egyptian border as far as Alaky, Adhab, and beyond. It is worthy of note that even to-day the Abyssinians call both the language and the tribe of the Bejas *Hadarab*.

Even in ancient times the Bejas must have crossed the Nile, settling nuclei of populations on the left of the river. Among the most important of those derived from them are the Beni Kahil or Kawahla, who, however, in their various inter-crossings have ended by adopting the language and customs of the Sudanese Arabs, although they do not consider themselves to be Arabs. Their principal groups are on the Rahad and the Dinder, but some are also found on the Athara, on the Blue Nile, and at al-Atehan on the White Nile. Important portions passed into Kordofan, where for a long time they remained mingled with the Kababish. In fact, the Atawia sections of the Kababish, the Waylia sections of the Hamar, and the Tawaimat sections of the Aulad Bika Jawāma's still belong to them; a Kawahla colony has even settled at Werna in the mountains of southern Kordofan.

The principal divisions of the Bejas now are: (1) the Alhabsh, between the Nile and the Red Sea to the south of Wadi Hamamat up to the tropic; (2) the Shihari, to the south of the last towards the territory of Snakin; (3) the Hadendawa, between Snakin and Kamele; (4) the Hawaga, in the territory of Kamele; (5) the Beni Amer, who consist of members of the Beja mixed with others of Abyssinian origin, in the valley of the Barka.

The Bejas have a language of their own, which was formerly studied by Munzinger, and afterwards more perfectly by Alakvi and Reinisch.

The Bejae were always essentially nomads and a pastoral people. A few of them devoted themselves to agriculture; many were camel-drivers. They never had any high degree of civilization, although the *Kitab al Fihrist* ascribes a special alphabet to them—perhaps a confusion with that of the Ethiopians or of the distant Berbers. In regard to religion, according to Arab authors, paganism seems to have been dominant for a long time among the tribes farthest removed from Egypt. Mac'idi asserts that in his day they still venerated an idol. The tribes nearer to Egypt came under its religious influence. The Blunmyes, who had adopted the ancient Egyptian divinity, were among the most obstinate and latest supporters of them. Later, both from the north and from the kingdom of Aksum, Christianity found its way into their midst. Al-Hamadani reports the word employed by the Bejae, or at least by a part of them, to designate 'God,' and this appears to have been a corruption of the *aga'ashir* of the Abyssinian Christians. But, setting aside the Bejae populations which are assimilated with the Abyssinians of the Eritrean highlands, Christianity has disappeared from among them. Islam, whether from the northern frontier of Egypt or from Adhah and Suakin, is now their only religion.

A. The Agas, whom scientists call 'High Cushite' or simply 'Cushite,' represent the most ancient populations of Abyssinia in the narrowest meaning of the word. Originally they inhabited the highlands which to-day form Tigra, Beghemder, Demben, Gojam, Agamoder, Damot, and Amhara. Later on they fell under the influence of the Semites, who came from southern Arabia; and this influence became stronger when the kings of Aksum were compelled to take action, no longer, as in the first centuries of the common era, to the north of the Abyssinian mountains, but in the wild countries to the south of their capital. The modern Abyssinian is the result of crossings between the Semites of southern Arabia and the local Hamitic peoples, among whom the Agas had the chief place. In these inter-crossings the Semitic language at length prevailed, while from an ethical and anthropological point of view the Hamitic element obtained the victory. In short, there took place in Abyssinia something analogous to what happened in Egypt after the Moslem conquest, where the Arabic language extinguished the Coptic, though the *fellah* of our days preserves the same type as the inhabitant of Egypt in the days of the Pharaohs.

The Agas still remain more or less pure in various districts of Abyssinia. In those regions they have preserved the use of their own dialects, which they employ in familiar intercourse, while in conversing with strangers they use the dominant Semitic tongue of the country, viz. the Tigra, or the Tigrina, or the Amharic.

The Agas dialects or languages may be divided into four groups: (1) the central group, represented by the Khamar, spoken in Lasta (Shoa, Dag, etc.) and the Qemata, spoken in some districts of southern Tigra (Aragbulla, Bora, Selam); (2) the northern group, spoken by small tribes called Bogos or Billa, who dwell in the territory of Keren, near the river Anzaba (Eritrea); (3) the western group, represented by the Gura, which, spoken in the district of the same name to the west of Lake Tana, was afterwards, owing to religious reasons, diffused throughout Demben; by the Khamar, spoken by a special population scattered in the villages of the Cheiga, of the Arusheba, of the Jandigara, of the Wagura, and of the Qemta Wagura, as far as Wabul and the north-west frontiers of Abyssinia proper; and, as it seems, by at least another dialect also, spoken in the Polesin villages of Demben and Wagura; (4) the south-western group, constituted by the Awya dialect, which is spoken in Agamoder, and by the dialect of Damot, which exists in the province of the same name. From a more general point of view, the Agas languages can be divided into two great categories in regard to both grammar and vocabulary: to the first might be assigned the central, northern, and western groups; to the second there would only remain the south-western group. It is worthy of note that two special dialect-

notions of the Agas seem to agree with this great division: those of the centre call themselves Kham (whence the adjective Khamar and Khamar), and there are traces of this name among those of the north and west; those of the south-west call themselves Awa, Awat. The Agas languages are known principally through the publications of Reinisch and Omsl Benda.

The Agas appear in written documents of the first centuries of the Christian era, whether under the name Agas or under that of Kham; some have even thought of connecting with them the *gama* *Agas*, which, according to Agatharshiden, was spoken by the Troglodytes of Ethiopia. Thanks to the power of Aksum, they were able to extend their territory to the highlands of Eritrea. Cosmas Indicopleustes, in the 6th cent., speaks of a prince of the Agas, who appears to have been a vassal of the king of Aksum, and who aided the caravans which went to the gold countries. In the 10th cent., Abyssinia was devastated by the invasion of a queen who came from the south. On that occasion many of the Agas fled from the centre of Abyssinia and from southern Tigra, in order to find a way of escape to the north of the river Mareb. The Billa seem to have been the last representatives of this migration. In the 13th cent. the royal power passed to an Agas family called the Zagus; this family was originally from the district of Bagrassa (Lasta), and had its capital in Baha, whose famous monolithic churches are, as a matter of fact, ascribed by Abyssinian tradition to a king Zagus. Several of these kings, as Lalibala and Ne'akratos La'ah, figure among the saints of the Abyssinian Church. Towards the year 1380 the Zagus dynasty was overthrown by another dynasty of 'unified' origin, which had its capital in Amhara. This is the so-called Solomonide dynasty, because it claims as its founder Menelik, the son of the queen of Sheba and king Solomon; and the present kings of Abyssinia affirm that they too belong to this dynasty. This change of dynasty gave rise to a new movement of Agas peoples towards the north; the Adkema Melch of Sera and the Zagus of Libas are the chief representatives of this fresh migration, and in course of time they adopted the Tigrina language. The Solomonides extended their conquests over the Agas of the west and south-west, who up till then had remained independent; at the beginning of the 14th cent. Damot was conquered; about a century after, Wagura was firmly occupied; in the 16th cent. Demben was definitely taken possession of; and in the 17th cent. Agamoder was annexed. Suakin, a formidable mountain region, offered a fierce resistance; but the Agas element ended by being almost entirely destroyed.

Little is known of the ancient Agas religion. Their chief god was the sky (Deban or Jar). Under him were many genii—some malignant, like the *asr*, and some beneficent. The latter dwell in springs, trees, and mountain-tops, and were there venerated. A special worship was rendered to certain genii of the springs, as, for instance, to that of the source of the Blue Nile. Homage was paid to certain animals, especially the serpent, from which omens were sought. For defence against evil spirits and to obtain the assistance of good spirits, the intervention was permitted of special individuals in whom were recognized exceptional faculties and powers. The priesthood was hereditary from father to son. Life continued after death, and food was offered to the dead.

To-day, Agas paganism is no longer professed, and the Agas are either Christians, Jews, or Khamar. Of the Agas Christians it is not necessary to speak; but it seems certain that many usages of the Christians of Abyssinia, and even the style of their subterranean churches,

have been inherited from the ancient pre-Christian religion. The Jews of Abyssinia are Agas by race, and are called Falashas. Their origin is very uncertain. At first it was held that they were connected with colonies of Jews of southern Arabia, whom the kings of Aksum were supposed to have forcibly transported into Africa after the conquest of Yemen (6th cent. A.D.), and to have settled in exile on the mountains of Semén. Now the hypothesis seems to be preferred that Judaism came into Abyssinia by land from Egypt. The Falashas do not know Hebrew, and they have not the Targum; they have adopted the Bible of the Christians of Ethiopia, and also their alphabet, their literary language, and almost all their books. But, although without originality, they have shown an indomitable attachment to their religion. Cf. ABYSSINIA, AGAGS.

3. The peoples conventionally called Sidama represent a great mixture of differing ethnic elements; and this explains the immense variety of classification met with among travellers, according to the prevalence of this or that physical characteristic. It may be, however, that a better knowledge of the anthropological elements and of the languages of these populations will bring about a modification of the classification which is at present accepted by scientists.

The territory of the so-called Sidama seems originally to have embraced the southern part of Abyssinia, properly so called (at least the western provinces of Sheba), and to have extended southwards to within a short distance of the great equatorial lakes; to the east it extended towards the Wabi; on the west it occupied the high valleys of the rivers Sobat and Dillawa and of the other affluents of the White Nile; to the north-west it crossed the Blue Nile (which separated it for a considerable part of its course from Gojam and Damot), and reached as far as the west of Agame. The very position of this country shows that it must have been a battle-ground between the Hamites of the north and east and the Sudanese of the west—battles of which, for the most part, we know nothing. The Abyssinians—Semites or "semitized"—early established themselves in the regions to the north, and absorbed the local tribes; the Gurguts, who speak very corrupt Semitic dialects, seem to be descendants of a north Abyssinian military colony, which had been placed to guard the southern confines of the kingdom, and which in the course of centuries had become amalgamated with the peoples of the country. Thence the Abyssinians endeavoured to extend their territory still further south by conquests and raids; but the forming of Sidama States, whose chief sought a defence in Islamism, kept them back, or at least hindered the populations of the valley of the river Omo from being absorbed. Towards the middle of the 16th cent. the Galla tribes, dwelling to the east of the so-called Sidama, began their migrations and invasions, which were, for Ethiopia, more violent, and had more lasting consequences, than the barbarian invasions of Europe. All the eastern part, all the north and north-west of the Sidama territory, became Galla territory; to the Sidama little more remained than the valley of the Omo.

To-day, so far as is known, the Sidama may be divided, philologically speaking, into four principal groups: (1) Kaffa as Gonga; (2) Hadia and Tumbura; (3) Dawaro and Wabane or Wabshin; and (4) Zanjara, Vangara, or Yemara. The Kaffa has been studied by Reinisch and, without any critical aid, by Chetani and Weber, as regards the other Sidama, we have only the important, or not as yet scientifically examined, materials of Bohn, Chetani, Gumbel, Reinisch, etc.

The Abyssinian conquests of the 16th cent. introduced Christianity among the Kaffa; and thence faith in the Messiah seems to have penetrated even

among the Shire, negroid tribes to the south-west of the Kaffa. But the long isolation of those regions from Abyssinia caused great alteration in the adopted religion. Some results have been achieved by Catholic missions during the last fifty years. The recent Abyssinian conquest is destined to revive the condition of the Coptic Church there, unless Islamism gains the upper hand. Islamism had appeared among the Sidama of the Hadia in the 14th cent., but for centuries it made no progress; it has, however, been making rapid advances during the last fifty years. The old paganism is losing ground. Two types of paganism appear to be recognisable among the Sidama. It is not at present possible to say if the second represents a derivation from the first. The first type is met with among the Kaffa and the Ometi (Conte, Calaha, Kalla, Sala, Uba, Gofa, Mallo). The supreme deity is Hecco, called also Dece or Deoteba. Hecco is invisible, but is incarnate in his priests and in the king of the Kaffa; those who are incarnate in Hecco become Hecco themselves. Among the Kaffa, the priests belong to the aristocratic class of the Gonga, whence also is derived the royal family. There are twelve high priests among the Kaffa, and over all one high priest residing formerly in Addie near the village of Gollo, now in Caba. This high priest consecrates the newly elected king, and receives annual tribute also from the Ometi, or inhabitants of the valley of the Omo, who are not politically dependent on the Kaffa. Worship is paid in a temple in a wood. The priest, falling into a kind of trance, announces to the faithful the will of the god. The priest is naturally also the sorcerer who cures sicknesses, delivers from the effects of the evil eye, etc. Under Hecco there are tutelary genii of different places, who live in springs, rivers, crossroads, and great trees. The priests may not eat the flesh of the ox. All, however, regard as prohibited, because unclean, the flesh of the horse, ass, mule, wild bear, hippopotamus, and monkey; men abstain from eating cabbages, and women from eating fowls. Their beliefs about the other world seem to have been largely influenced by Christianity; but at the same time it is still possible to discern in their various rites and ceremonies the remains of primitive beliefs—e.g. that death is succeeded by a life like the present. Thus, when a king died, his servants brought him his customary food every day for a year; it is also said (but this is not certain) that at the time of his burial a slave was killed, in order that he might continue to serve his sovereign. Among the Zanjara, religion had a specially ferocious and brutal character. The supreme god seems to be the sun; further, the Zanjara alone among all the peoples of Ethiopia have (or had) an idol of iron rudely formed, which, they say, fell from heaven. They venerate numerous genii in the mountains, rivers, and rocks. The king was supposed to be an incarnation of the supreme solar divinity, and was the chief of the priests and sorcerers of his realm. It was his duty to deal the first blow to the human victims who, at the beginning of ten out of the twelve months of the year, were immolated on the summit of Mount Bor-Gudda; these victims were chosen from twenty-two families of the country. Other human sacrifices were offered on other occasions. Out of every ten strangers who crossed the frontiers of the kingdom, one had to be sacrificed to the divinity. Naturally, the Abyssinian conquest, which took place in the year 1897, put an end to these practices.

According to Reinisch, the chief divisions of the Sidama, based on their languages and on their political groupings before the Abyssinian conquest, are the following (1) Kaffa, (2) the ancient kingdom of Goro on the south and east slopes of the mountains of May-Gudo; (3) Zanjara; (4) Kalla, Dawaro, or

of numerous publications. The most important are those of Reinisch; there may also be mentioned those of E. de Larnage, Guyton de Mornay, Schlieker, Jahn, etc.

(c) The Galla seem to have dwelt in ancient times to the S.E. of the river Wabi. Unknown reasons caused their formidable invasions of the Sidama countries and of Abyssinia in the middle of the 18th century. They were at that time hardmen; they were ignorant of the use of metals, so much so, that, according to tradition, they made use of the horns of cattle for swords; they did not possess the horse, although in the course of time they became the best horsemen of Ethiopia. Having scattered or subjugated all the Sidama people of the north-east and north, they succeeded in pushing themselves into the western districts, and even settled between the higher courses of the Baro and the Didama. They also planted themselves in Abyssinia proper, not only in the southern districts of the Shoa, but also to the north of the river Jimma as far as Lake Hayk and the frontiers of the provinces of Angot. Enrolled as praetorian guards by the kings of Abyssinia, they founded military colonies here and there, of which that of Metaba in Gojama is important. Thanks to the beauty and fruitfulness of their women, in the 18th cent. they attained the highest political influence in the kingdom. One of their women practically governed the State towards the middle of that century, and sons of their women ascended the throne. To a less degree the Galla also spread towards the south; their extreme limits are met with at a distance of a few days' journey from Lake Rudolf, and the influence of their speech may be traced in the language of the Pokomo, south of the equator and to the north-west of Lamu. By reason of all these movements from place to place, and through the inevitable crossings with the populations already existing in the lands newly occupied, the Galla ethnical type was profoundly altered. While, on the one hand, some of their tribes do not differ in appearance from the true Abyssinians, others, on the contrary, have all, or almost all, the characteristics of negroid populations.

The changes in their social and family habits are equally profound. Thus, formerly they had no tribal heads, but nominated a kind of leader called *tuhi*, who remained at his post seven years. Later on, wars and contact with peoples living under a monarchy brought about the development of the principle of monarchy, or at least placed that of a republic on more solid foundations. About the second half of the 18th and the beginning of the 19th cent. there grew up in the regions to the south-west of the Shoa (Ghara, Jimma, etc.) little Galla monarchies, having characteristics of their own.

The Galla call themselves by the national name *Ilmorra*, or 'sons of Orma', whence the name *Ormo* or *Oroma*, under which they are also known. Their chief division is into *Banaituma* and *Boraa*.

The most important Banaituma tribes are the *Karaya*, *Wello*, *Obo*, *Morwa*, *Warakid*, *Itu*, *Akasho*, and *Warantika*; the most important of the Boraa are the *Motaba*, *Moono*, *Obo*, *Gadru*, *Liban*, *Itu*, *Sedde*, *Golan*, *Tuloma*, *Badatba*, *Linnu*, *Laga*, etc. From a geographical point of view we may mention the Boraa, who occupy a vast extent of territory, the southern part of the Galla country, between the region of Lake Stephanie and the river Juba, the Arusi to the north of the preceding between the Somali of Ogaden and the Sidama; the *Ab* to the south of Harar; the *Itu*, *Itu-Chorcher*, *Oboero*, *Motaba*, and *Wara-Belle*, between the Shoa and the Harar; the *Abitaba*, the *Gombitaba*, and the *Golan* to the west of Ankober; the *Motaba* and the *Motaba* to the west of Entoto; the *Botaba*, the *Kaka*, the *Itu*, the *Soddo* along the upper course of the Hawash; the *Moono* near the extreme northern curve of Ghibbi, to the north of the Enarya; the *Juli* between the Hawash and the Lake Zway; the *Linnu* in the Enarya; the *Jimma* *Abba Jihar* to the south of the Linnu; the *Ghara* to the west of the last, the *Motaba* on the western slopes of the Obaba mountains, the *Itu* *Moono* and the *Guma* between the high valleys of the Baro and the Didama; the *Jimma* *Ilma*, between the

Didama and the Moono; other *Jimma* peoples to the north of the Moono; the *Ondra* near the extreme southern curve of the Blue Nile, the *Walla*, to the heart of Abyssinia, between the river Jimma and the upper course of the river Fashila, the *Yaju*, near the Angot. The Galla tongue is known through the investigations of Prastorin and from the materials collected by Reinisch, Marnja, Cecchi, and others.

The Somali, the 'Afar, and the Saho have been converted to Islamism, although not a few pagan practices corrupt the purity of their Muslim faith. Part of the Galla have passed over to Christianity; but Islam is making rapid progress among them. Several tribes still remain pagan. Their supreme divinity is *Waa*, who dwells in the sky above the clouds. Under him are good spirits (*ajana*) and evil spirits (*jiani*, *aur*); the latter are 44 in number. The spirits possess some of the powers of the omnipotent, which they are credited with employing. A number of these genii have special names and functions; e.g., *Atata*, a female spirit, presides over the multiplication of men and animals, and is in a certain sense the genius of fecundity. As a rule, the spirits are incorporeal, but at times they assume forms more or less strange; for example—at least among the Galla of Challa, Ghara, etc.—an evil spirit is believed in, having the body of a cock, with four horns on its head, and with a baleful look which causes the death in a few days of him who has been gazed upon. They have no idols. Every tribe, every family, every house, and every man has a tutelary genius. Genii dwell in rivers, great trees, ruins, and certain caverns, and are there venerated. Some species of serpents and of birds are likewise objects of veneration. The Galla do not practice human sacrifice. Divination by means of the peritonaeum of immolated victims is very common—a usage which among Ethiopian populations seems to be of purely Galla origin. They have many superstitions, several of which are common to other Ethiopian peoples, as, for example, that of *buda*, a malignant man who transforms himself by night into a hyena, exercises the power of the evil eye, etc. There are numerous classes of priests, diviners, and sorcerers. The Galla believe in life after death; but it is a vague belief, reflecting Christian and Muslim ideas. Further, their religion, if it has succeeded in causing Shoa Christians to adopt its belief in its gods, or house-protecting genii, has, on the other hand, largely accepted beliefs, rites, and beings who are objects of veneration in other religions. This it has done in regard to Islamism and Christianity; from the latter it has even adopted some saints, the Virgin Mary, and a few churches—e.g. that of Zequala. In the same way, it has taken from the Sidama religion the genius *datsda*, etc.

5. The *Baria* seem to be the last remains of a people at one time widely diffused but now on the road to extinction. If the hypotheses of the present writer are well founded, this people came from the highlands of Eritrea, and perhaps from the maritime region of the Red Sea, as far as the Nile over against Merod. Their territory was more and more narrowed by the spread of other populations, as the Beja, Nuba, etc. Reduced to a few thousands, they are to-day collected in the by no means hospitable region to the south-west of the Bara, which is traversed by the torrent Mogareh, dividing them into two groups. That to the west of the torrent is called *Mogareh*, that to the east *Baghir*. They, however, call themselves *Nard*. Their customs have a strongly democratic character. Their language, which has been studied by Reinisch, seems, even in its grammatical forms, to have undergone Semitic influence, while their vocabulary is still tolerably pure. Pagans, like the Kunama, until half a century ago, they are now all Muslims.

ing on of hands, etc. (cf. Gn 48¹⁴).¹ In divination the Greeks regarded the right as the lucky hand, but the Romans mainly thought the left to be so. But with them the east was the favourable side, and, always facing south in taking omens, they had the east on the left hand.² They did, however, frequently regard ill as unlucky, as is obvious from the secondary meanings of *sinister* and *dexter*.³ The preference for the right hand is perhaps connected with the apparent course of the sun from east to west, and the consequent idea that a sun-wise course, keeping the object always on the right hand, is of good omen and the opposite is evil.⁴

It still remains to be discovered why among all races, savage and civilized, the right hand is generally used. Left-handedness occurs sporadically (2-3% in the German army), and some people are ambidextrous. Some impulses run from right to left, or from each side alternately. There is no obvious physiological and psychological reason for the preference, and in fact most young children use the left hand until trained to use the right.⁵

Since the hand signifies power, gods and heroes are frequently represented with several arms. This is most common in Hindu mythology and religious art. It is also found among the ancient Greeks, and, though the Greeks were too artistic to make much use of what is a deformity, traces of it exist on Greek coin. A Laconian Apollo has four hands. Brahma had a hundred arms.⁶ Goryon six hands. Teutonic gods do not share this deformity, but it is often attributed to giants and heroes.⁷ The deformity of six fingers on each hand is probably also regarded as a symbol of strength (cf. 2 S 11³⁷). Conversely, one-handed gods are one-handed—Eyr in Norse mythology, Hecate in Greek.

The line of the power of the hand is perhaps also shown in various myths of birth from the hand, etc. Prometheus was called Epromēdeia, Prome meaning from the hand of Vesp, and from the arms of the primal man Prome the Rājays were formed.⁸ Human hands as well as feet and heads are stuck up in folds in Lhotia Rags, H. E. India, to ensure a good crop,⁹ and also in Laos.¹⁰ In the Lupercales, women offer wheat to become fruitful received from the palm of their hands from the Lupercal,¹¹ and in Quiché and Aztec myth or Hecate's spitting into a woman's hand comes conception.¹²

In the speech of all hands, metaphors sometimes drawn from the gestures accompanying the sentence then described are in common use. 'Open-handedness' signifies generosity (cf. Dt 16:11); 'narrow shoulders' signifies narrow-mindedness, selfishness. To take one's life in one's hand is suggested by the carrying of something precious through danger; it is of common occurrence in the Bible (Jg 10:10, 1 S 17:32, cf. Ps 110:5).

a. The sacredness of the hand in itself or for particular purposes is seen in various ways. The ancient Hindu sacred books point out that each part (finger) of the hand is sacred; e.g., the root of the thumb is sacred to Brahma, that of the little finger to Kṛṣṇa (or to Prajapati), the tips of the fingers to the gods, and the part between the thumb and the index to the Pitrī; and directions are given regarding the ritual dipping of water from the hand.¹³ In modern Hinduism the various parts of the hand are sacred to different forms of Viṣṇu, and in the Kṛṣṇa-nyāsa ceremony homage is offered to the thumb, fingers, palms, and back

of hands. The parts of the body sacred to other gods are touched with the sacred fingers—an act gratifying to the deities.¹⁴

The Teutons had similar ideas, for the space between the thumb and forefinger was called *Wundenpounce*, while the thumb was sacred.¹⁵ The index finger was used by the Romans and other peoples as that by which the gods and people were saluted with a kiss or otherwise; hence, perhaps, it was called *salutaria digitus*.¹⁶ The touching of a fetish with the forefinger by a chief is found among some African tribes.¹⁷ Jews touch the *m'ridah* with the forefinger on entering the house or leaving it. In the ritual of the Church various rites are performed with the thumb—e.g. anointing and signing with the Cross in baptism. In later Jewish belief each of the fingers of God's right hand has a special function.¹⁸ For the universal use of the hand, especially the right hand, in ordeals of water or fire, see ORDEALS.

The custom of wearing jewels on the hand (e.g. in rings), though now mainly decorative, probably arose out of magical reasons. The jewels were amulets by which the hand would be protected. Occasionally, amulets are bound about the hand or wrist.¹⁹ For similar reasons, or in order to sanctify the hands of certain persons, they are sometimes anointed. This ceremony is found in early Gallican ordinals—bishops, priests, and sometimes deacons having their hands thus consecrated; and this is still continued in the Roman Catholic Church.²⁰ Where tattooing is practised, the hands are sometimes tattooed; and this, while it may have some other purpose, doubtless was once regarded as a magical protective.

Tattooing the hands with special marks is practised by the Bedouins²¹ and by modern Egyptian women, both Mohammedan and Christian, the latter using the cross symbol.²² These marks have a religious significance among the Arabs.²³ This is an old female custom—marking the hand or sign of a god on the hand, either as a token of being his or as a protective (cf. Is 44:5, Rev 12:18, cf. also Hagg, 2:1). Among the Zulu, part of the ceremony of initiation into the Zulu consists in touching the hands with certain marks and anointing them with fat.²⁴ The Zulu touch the hands five times with pieces of the first-fruits of the maize at the year seasons.²⁵

It is perhaps this idea of the sacredness of the hand which has made kissing the hand of a person a token of respect, as, e.g., among the Arabs and other Orientals, Tongans, and in modern European custom.²⁶ Kissing the hands of images of the gods was an act of worship, and kissing one's own hand to a person or to a divinity has doubtless the same significance of respect or worship (see § 6 (a), (b)).²⁷

Hand-like marks on rocks, walls, etc., are often regarded as the impression of the hand of a giant, the devil, or some other mythical being. Thunderbolts are called *Handstehen* in Germany; and many plants, because of the form of their leaves, flowers, roots, etc., are called 'God's hand,' 'Mary's hand,' 'devil's hand,' and the like.²⁸

3. Laying on of hands.—As the hand is the principal organ of touch, contact with it is often regarded as an important means of transmitting the qualities or powers inherent in the person who

touches another, just as the mere lifting up of the hand over a person in blessing causes a rapport, even without actual contact. The well-known emotional or psychic states often produced by touch doubtless suggested the value of this more ritual use.

Conversely, it is through the hand that contact with sacred objects is often effected. The ancient Arabs on entering or leaving the house kissed the domestic god with the hand,¹ just as Jews touch the *avodah* with the finger. Similarly sacred incense, etc., were stroked with the hand, sometimes previously dipped in blood or oil (cf. the primitive meaning of 'anoint,' *ḥšm*, via. 'to smear with the hand'). Suppliants touch or stroke the beard or garment of a superior, and at the procession of the *Ḥajj* the crowd goes forward to touch it with their hands.²

The hand is usually laid upon the head, because it is the noblest part of man, and because, as a possible spirit entry, power of a spiritual or magical kind would pass into it from the hand (see HEAD). Some examples from the lower culture may be given first. In Melanesia, where men are believed to possess more or less *mana*, one who possesses much of it will sometimes lay his hand on a boy's head to transmit some of it to him.³ In Samoa the priest laid his hand on and stroked the painful part of a patient's body, and recovery was supposed to follow.⁴ Touching for the cure of sickness is also used by the Dayaks.⁵ At the election of a king in Uganda the prince who is touched by the hand of the 'Keeper of the Princess' at once becomes king.⁶

Turning now to the higher races: among the Hindus, at the initiation of a Brahman, his union with his teacher is identified with a marriage, and is symbolized by the teacher's hand being placed on the boy's shoulder.⁷ In Babylonia, healing or exorcising was effected by laying the hand on the head of the sick man.⁸ In Egypt the blessing of the gods was supposed to be conveyed to a newly crowned king by their laying their hands on him, thus conferring the gift of a long life and a glorious reign. This is often depicted on the monuments.⁹ What was probably a usual practice in healing is also reflected in the myth of Isis, who laid her hands on a dead child and uttered spells, so that he lived.¹⁰ Teutonic legend and myth speak of the gods hallowing and blessing by laying on of hands.¹¹ Among the Arabs a holy person conveys a blessing by the touch of his hand, and healing certain sicknesses is also performed in the same way by the shaykh.¹² In Tibet the Grand Lama at the ceremony of reception imparts his powers to people of high rank by laying his hands on their heads; inferior laymen have a cloth interposed between his hand and their heads; the lower classes are touched by a tassel which he holds in his hand.¹³

Among the Hebrews the custom of laying on of hands had various purposes. In the case of the scapegoat the hands of the priest were laid on it in order to transfer to it the guilt of sin (Lv 16²¹). The same rite was used with other sacrificial victims, and here the intention probably was to identify the offender with the victim by physical contact (Ex 29^{10, 19}, Lv 1⁴ 3¹ 4⁴ 8², Nu 3³). A similar custom belonged to the Egyptians.¹⁴ The same idea of identifying is seen in the laying on of

the hands of the congregation upon the Levites (Nu 8¹⁰). It is also the act accompanying words of blessing (Gn 48¹⁴), and it is used to transmit an office or to ordain. Moses thus ordains Joshua and puts some of his honour upon him (Nu 27^{18, 23}), and he is full of the spirit of wisdom because of this rite (Dt 34⁹). This rite of ordination (*ḥṣṣṣṣṣṣ*) was also used at the appointment of members of the Sanhedrin, but was discontinued, perhaps because it had become a Christian usage.¹⁵ Laying on of hands for the purpose of healing was probably also in use, as Mk 5²³ 7³¹ ('lay thy hands on her'), they beseech him to lay his hand upon him') and Ac 9¹⁷ (Ananias lays his hands on the blind Saul) suggest. The waving of the prophet's hands over the afflicted place was expected by Naaman (2 K 5¹¹). The practice was used by Christ (Mk 3³ Lk 4⁴⁰) and the Apostles and others (Ac 9¹⁷ 13³, cf. Mk 16¹⁸) in healing.

The expression 'All their hand' in reference to consecration to the priesthood (Ex 28³⁵) has received various interpretations, but it probably is metaphorical, signifying installation to office (cf. Jg 17⁶, and a similar Assyrian phrase, *ḥad madda*, 'to fill the hand,' 'to install into office').

Used by Christ in benediction (Mk 16⁷; cf. Lk 24⁴⁰ 'lifted up his hands, and blessed them'), the laying on of hands for purposes of blessing has always been continued in the Christian Church, though the hands are often merely uplifted, as in benediction of a number of persons (§ 6 (c)). But for two other important rites the laying on of hands is used—Confirmation and Ordination. In Ac 8^{14, 19}, after baptism and prayer for the reception of the Holy Spirit, the Apostles lay their hands upon the baptized, who then receive the Holy Ghost—a spiritual unction—and also speak with tongues and prophecy. This, the rite of Confirmation, is probably the 'laying on of hands' referred to in He 6². It became a necessary part of Christian initiation; but, being connected with anointing, its place tended to be taken by the latter in some Churches (on this see CONFIRMATION). In the Churches of the Anglican Communion the laying on of hands is retained, and there is no anointing. Here also, as in the Roman Catholic Church, the bishop administers Confirmation. In the Eastern Churches it is often delegated to a priest, the oil being consecrated by the bishop. In the early Roman baptismal ritual the exorcism which preceded the ceremony was accompanied by laying on of hands by the exorcist and then by the priest on successive days.¹⁶

The special grace (*χρησμα*) in ordination was also conferred by laying on of hands (Ac 6⁶ (the seven deacons), 1 Ti 4¹⁴ (the *ὑποδιακονή* assist), 2 Ti 1⁶). Similarly St. Paul and St. Barnabas are 'separated' to their office by laying on of hands (Ac 13³). This practice became, therefore, a necessary part of the rite in all branches of the Church. At the consecration of bishops, bishops alone may lay on their hands, who must be not fewer than three in number—a rule dating from at least the 4th cent.—save where the Pope consecrates, though consecration by one bishop has occasionally been allowed. At the ordination of priests, the bishop lays on his hands, with the priests present. According to the *Syr. Didac.* iv, a priest lays on hands, but does not ordain (*ὑποθερεῖ, ὁ ὑποθερεῖ*). The bishop alone performs the rite of ordaining deacons. The imposition constitutes the matter of the sacrament of Ordination, but since the 9th cent. the Roman Church has added the *traditio instrumentorum*.¹⁷ Laying on of hands is also used in benedictions, visitation of the sick, absolution,

and, in earlier times and in the Eastern Church still, at the anointment in baptism.

4. The hand in healing rites.—Some of the instances in the preceding section have shown that the touch or stroke of the hand is an important factor in the healing of disease. Laying on the hand, touching, stroking, rubbing, and massage are all used in savage and barbaric medicine (see DISEASE AND MEDICINE). The power of the hand is wide-spread in European folk-belief, but it is only certain persons who are thus gifted—e.g. a seventh son or the seventh son of a seventh son. But—doubtless as a result of the power ascribed to medicine-men and priests, or to chiefs and kings, who often had powerful magic—monarchs or petty sovereigns, even within recent times, have been thought to possess healing in the touch of their hand (see FAITH-HEALING, KING'S EVIL).

5. The hand in magic.—(a) The hand, as the chief member of the body used in magical rites, is of great importance. It is that with which powerful amulets or wonder-working objects are held. Thus a Bab. spell runs:

'The circle of life is in my hand,
The tamarisk, the powerful weapon of Ass,
In my hand I hold,
The date-palm, mighty in decision,
In my hand I hold.'

By the touch of a sorcerer or witch, even by pointing the hand or finger, much harm can be done through contact real or imaginary, as, conversely, the touch or pointing of one who wishes well or who is lucky works good. 'After me may a lucky finger be pointed,' are words occurring in another Bab. spell.¹ Hence certain gestures of the hand or fingers are all-important in magic, whether for good or evil purposes, and perhaps this is reflected in his story of Moses' uplifted hands at the battle with Amalek (Ex 17¹¹). The wave or the lifting up of the magician's hand can effect wonders. The uttering of spells is accompanied by various twistings of the fingers.² Clasping the hands may retard or stop some action; unclasping them causes it to be resumed.³ Or, again, articles with which magical rites are performed or divination is exercised must be held only by certain fingers. But it is mainly as a protective against the evil eye that the hand (or certain gestures made by it) is all-important. Of these the most common is the *mano cornuta*, in which the index and little fingers are extended to imitate horns, the others being bent over and clasped by the thumb. The hand is usually pointed towards the person who is feared. This gesture is both ancient and wide-spread in its use. It is represented in early Christian art as a gesture of the hand symbolizing the Deity.⁴ This figure thus combines the power of the hand with the magical virtues attributed to horns (q.v.). The hand clenched, with the thumb pointing downwards between the first and second fingers, the *mano in fero*, is another common gesture against the evil eye, as also of contempt or insult. It is not improbably a phallic gesture, the phallus being a powerful amulet against the evil eye. (See EVIL EYE.)

(b) A hand, usually with fingers extended, is often found on houses, temples, and buildings of all kinds, especially on or above the door, to avert the evil eye or other witchcraft, or to prevent the entrance of malicious beings. It is painted, or the impression of a hand dipped in blood is made on the surface. The range of this custom is very wide; it is found in ancient Babylon, Phoenicia,

Carthage, Egypt, Japan, and India, and is practised in the East by Jews and Muslims, while it is also found in Italy (see DOOR, vol. iv. p. 850² and *sup.* there).¹ The ancient Hebrews set up memorials apparently bearing the name 'hand' (1 S 15¹¹, 1 S 60¹ RVm). Probably they bore the impress of a hand, as did Phoenician votive stelae, dedicated to Tanith and Baal-Hammon, and the purpose of the hand may have been apotropaic. The hand also occurs on some article of dress. Thus it is figured on the robe of a Mandae chief,² and a red hand was also borne by dancers at the sacred dances among the Dakotas, Winnebagoes, etc.³

For the same reason hand-shaped amulets, representing a variety of gestures, or holding some other protective, or covered with symbols, are in wide use against the power of the evil eye. They were probably worn in pre-historic times, and they are known to have been used by the Phoenicians, Greeks, Etruscans, and Romans, and in ancient Crete, as they are now in India, Austria, Italy, Spain, Portugal, etc.⁴

(c) The hands of the dead have also great importance in magic. There was a well-known custom of cutting off the hands, or right hand, or fingers of slain enemies and bringing them home as witnesses of the numbers slain or as trophies.⁵ This was done by the Egyptians,⁶ the Hebrews (2 S 4¹¹, 2 Mac 15¹⁰), and the Teutons,⁷ and was extremely common among the American Indians.⁸ The right hands of living prisoners⁹ or their thumbs (Jg 1²¹) were also cut off, the object being to spoil their prowess for ever. In the case of maiming the dead there may have been a similar idea of maiming their ghosts, since, where mutilation is a punishment, it is sometimes dreaded for its effects in the Other-world. At the same time, as a result of the well-known belief that the part influences the whole, or that any part of the human body gives the possessor of it power over the spirit, the mutilation may also have served this purpose, as in the case of cutting off the head (see HEAD). This would account for the fact that the American Indians held a dance round the trophies, and it is suggested by the fact that the Khonds hung up hands of enemies on trees in the villages.¹⁰ But it is also seen more explicitly in the custom of wearing the hands or fingers as medicine among the American Indians.¹¹ The same practice might be used in the case of any dead person, especially a relative or friend, for some specific purpose, the power of the dead still acting through the relic. Thus in West Africa a common component of the fetish-bag is a human hand; or finger nails or clippings are carefully preserved in memory of dead relatives, and are thought to be very efficacious.¹² The preservation of fingers and nails as relics is found in New Caledonia and other parts of Melanesia.¹³ In Mexico a common amulet favoured by warriors was the middle finger of the left hand of a woman dying in child-birth. (Such women had the same

future abode as warriors.¹ The dead hand as a healing charm is also referred to by Pliny.²

Muhammadan women in Egypt wore the dried finger of a Jew or Christian as a cure for ague.³ In European folk-custom similar usages are found. In Italy three joints of the ring-finger of an assassin are reduced to powder, mixed with a liquid, and sprinkled on the road between a lover's house and his sweetheart's, in order to bring back her affections.⁴ In Ireland the hand of a dead man stolen from a churchyard gives the thief power to abstain better from his neighbours as long as he keeps it in his house.⁵ The hand of an unbaptized infant disinterred in the name of the devil is also a powerful charm.⁶ The left hand of a dead man dipped in the milk-pail causes the production of very rich cream. Both in Ireland and in Cornwall there was a belief that the touch of a dead hand healed certain maladies.⁷ In Germany the possession of the hand or thumb of a thief was believed to give its owner great magic power. A hanged man's finger hung in the beer-cask caused the beer to sell fast.⁸ Witches were also commonly believed to make their magic salve or powder from the fingers of disinterred children.⁹ These modern survivals are probably based on the earlier animistic beliefs regarding the relics of the dead referred to above. An interesting aspect of them is found in the so-called 'Hand of Glory,' or *Diebskerm*. In the Middle Ages the dried finger or thumb of a newly-born child, anointed with grease and ignited, was believed to make a thief invisible, and to cause a profound sleep to fall upon all in the house which he entered. The mere laying of such a finger on a table caused them to continue in sleep while the thief went on with his nefarious work. In the 17th cent. thieves sometimes murdered pregnant women in order to obtain the unborn child's finger. The hand or finger of a dead unbaptized child had a like efficacy.¹⁰ A similar superstition regarding the use of the left hand and arm of a woman who had died in her first childbed obtained in Mexico.¹¹ The dried and pickled hand of a dead man, especially of a criminal, anointed with nageant and ignited, or a dead hand in which a candle made of human fat was placed, had similar magical powers; but, if any one remained awake in the house, the thumb could not be ignited.¹² On this superstition a number of folk-tales have been founded.¹³ It should be observed, however, that other objects have the same properties and are so used among other peoples.¹⁴

Where the dead are eaten for magical purposes, their hands are supposed to strengthen those of the eater (Dayak¹⁵; *Ambellans*¹⁶), and in New Caledonia they were at one time reserved for the priests.¹⁷ Among the *Mengwemas*, an Amazon tribe, the palms of the hands are a special delicacy.¹⁸

(d) Magical omens are often drawn from the hands, especially from their itching. In the West Highlands, if the right hand itches, money will be re-

ceived; if the left, money will be given away. An itching right palm means blessing from a stranger, while an itching in the left hand signifies that one will receive a gift of money.¹ In Germany and Norway it was thought that, if the right hand itched, you would part with money; if the left, you would receive it.² In Cairo it is thought that, if the right hand itches, luck will follow; but, if the left hand, ill-luck.³ Similarly the negroes of Jamaica believe that, if the right hand itches, you will get money; if the left, you will spend it.⁴ Other omens may be illustrated by the following examples:

It is a Jewish belief that any one who, on the night of Rosh Hashanah, is trying to read his fortune from his shadow, does not see his right hand, will lose a cow during the year. If he does not see his left hand, he will lose a daughter. If his finger, or finger, is a child has his hands, it is a sign of future wealth.⁵ In Norway, if a man jumps on the hand, the person will be caught by a good friend.⁶ Omens are also universally drawn from the appearance of various animals in the right hand or on the left—the former being usually lucky, the latter unlucky.⁷

(e) One form of 'skrying,' or crystal-gazing, is to gaze into ink poured into the open palm* (see art. CRYSTAL-GAZING, in vol. iv. p. 285). The so-called science of chiromancy or palmistry, the reading of the past or future from the lines of the hands, has always found many credulous believers both in ancient and in modern times.

6. Gestures.—(a) As a means of communication or of emphasizing speech, gestures of the hand as well as the use of fingers or hands in betokening numbers have been universally employed; but perhaps nowhere has 'sign language' been more cultivated than among the American Indian tribes. Chiromancy was extensively used by both Greeks and Romans, and it is much practised in modern Italy.¹ Many gestures, whether actually used or represented in art, are universally understood—hand or finger to mouth = silence; wringing the hands = grief; the clenched fist = anger; the hand to the cheek or leaning the face on the hand = sadness or grief.² Hence it is natural that, where speech is directed to magical or religious purposes, in spell or prayer, it is usually accompanied by gestures, some of which tend to become conventional. Pointing with the finger is often held to be of magical efficacy, the power streaming, as it were, from operator to victim. This gesture is found among savages, medieval witches, and in later Tactism.³ Hence it is indecorous to point with the finger towards, e.g., the heavenly bodies or other worshipful objects, or at friends or superiors.⁴ Other magical uses of the hand have already been referred to.

(b) In prayer or adoration no gesture is more common than the lifting up of the hands, which are usually open. It is the gesture of appeal, a kind of acted prayer. In Tonga, people cut off a finger-joint to propitiate the gods, and, holding up their hands, confess that they have done wrong.⁵ The people of the Congo, in speaking to a superior, stretch out their hands towards him, the attitude being precisely that of prayer.⁶ This was also the usual attitude of prayer in Egypt, represented so often on the monuments, and referred to in a text which says: 'The hands of man and gods are lifted on high seeking for thee, even as those of a child [are stretched out] after his mother.'⁷ Ostris is also

referred to as 'god of the lifted hand.'¹ A similar attitude was used in Babylonia and Assyria, and one collection of prayers bears the name of 'Prayers for the lifting up of the hand.'² Both Greeks and Romans used this gesture in prayer (*submissere manus, manus ad caelum tollere*), the latter also first raising the hand to the mouth (kissing the hand) and making a complete turn to the right. The hands were turned down or touched or beat the earth in praying to gods of the under world.³ The most usual Hebrew attitude in prayer, repeatedly referred to in the OT, was that of lifting up or spreading forth the hands towards the holy place or towards heaven (e.g. Ps 28¹ 134¹, Is 1¹, 1 K 8²²). This attitude also became usual among Christians from the earliest times—arms raised and hands extended (cf. 1 Ti 2⁸ 'lifting up holy hands'; 'stretch forth your hands to God'⁴). The arms were sometimes stretched in the form of a cross, to represent the Passion.⁵ Origen says that the lifting up of the hands symbolised the lifting up of the heart to God.⁶ The attitude is frequently represented in early Christian art (cf. the figures of the Oranti in the Catacombs).⁷ Holding out the hands horizontally is also a Buddhist attitude in prayer.⁸ Muhammadans, while using several positions and gestures of the hands in prayer, begin by raising the open hands on each side of the face, the tips of the thumbs touching the lobes of the ears; later gestures are to place the right or the left hand in front of the body, to hold the hands open before the body and to look at the palms, then to draw them over the face, and, at the conclusion of the prayer, to extend the hands in supplication.⁹

Many other gestures are used in prayer. In Mexico the worshipper stood touching the ground with the right hand, which was then carried to the mouth; in Peru he opened his hand and threw kisses to the sun.¹⁰ In Egypt the hand was sometimes put to the breast, or over the mouth, or both hands were brought to the level of the knees as the worshipper bowed.¹¹ Beating the breast was and is a sign of great contrition (Lk 18¹³ 23⁴²), and the OT also refers to bowing to the earth and placing the head between the knees (1 K 18²⁶). Kneeling and bowing with hands spread out on the ground or on the knees is also a Muhammadan gesture,¹² and the custom of folding the hands is common among Christians, and is also used as a devotional attitude among Buddhists.¹³

(c) In individual benedictions the gesture is that of the laying on of hands (Gn 48¹⁴, Mt 19¹³), but in more general benedictions it is that of the raised and open hand or hands, as if to project the blessing forward upon the person or object blessed. Already in the OT this gesture is found (Lv 9⁴), and we find our Lord raising His hands (Lk 24³⁰). The later Jewish method was to join the extended fore and middle fingers and the fourth and little fingers, the thumb remaining apart. The hands were then held up with tips of the thumbs and forefingers touching. The 'lattice' of Co 3² was interpreted of this position and division of the fingers.¹⁴

Both lifting and laying on of hands were and still are used in the Christian Church for individual and general benedictions, but in the latter the position of the fingers has been regarded as of some importance, and a symbolic interpretation has been given to it, while the blessing is always bestowed with the right hand. From comparatively early times in the Eastern Church the gesture has been that of the extended hand with the thumb joined or crossing the third finger, the other fingers open, or the second and fourth slightly bent. Among the mystic interpretations given, one is that the first and second fingers form the initial and final letters of *Ihsoi*, and the thumb crossed on the third finger and the bent fourth finger form the initial and final letters of *Xpois*.¹⁵ The Western form of benediction is, for a deacon or a priest, the extended hand; for bishops, the thumb and first and second fingers raised, the others resting on the palm. This was at an earlier period the form used by priests also. The three upraised fingers signify the Trinity, the two closed fingers the two natures of Christ. These positions of the hand are met with in early Christian art, and occasionally others are depicted—thumb and first finger or first and second fingers or four fingers raised. The sign of the cross is made in all such benedictions. The Western gesture is the form taken by some pre-Christian amulets against the evil eye, and it is also one of commanding attention.¹⁶ In Buddhism the hand upraised, open, with fingers pointing upwards, signifies blessing.¹⁷

The position of the fingers in signing oneself or any object with the sign of the cross is important and is mystically interpreted—five fingers outstretched signify the five wounds, three the Trinity, etc. At the Eucharist the cross is symbolised by the elevation of the celebrant's hands.¹⁸

(d) In taking an oath the position of the hand is of importance. It is placed upon some sacred object, the idea probably being that the power of the object will do harm to the person if he breaks the oath. This custom is found in Samos (hand on sacred cup or stone),¹⁹ among the Hebrews (hand on generative organs, though here the oath partakes of a covenant (Gn 24², cf. 47²)), among modern Jews (hand on roll of Torah or on page with the Decalogue), and among Muhammadans (hand on Qur'an).²⁰ Again, the hand is raised, as if calling the gods or God to witness the oath—a custom found among the Greeks,²¹ Tentons,²² Hebrews (Gn 14²², Du 12¹⁷; cf. Rev 10⁶); hence 'to lift the hand' signifies 'to take an oath' (Ex 6⁸, Ps 108², etc.), modern Jews, and generally in Christian usage, as in judicial oath-taking in Scotland. Shaking hands is sometimes used to confirm an oath or covenant, or as witness of a pledge (cf. 2 K 10¹⁶, Est 17¹, Pr 6¹). To avoid the necessity of keeping an oath and to escape the consequences, certain gestures of the left hand or of the oath-taking right hand are used in folk-custom.²³

(e) The gestures or position of the hands in representations of divinities are often of importance, and reflect those already referred to. Or they hold various sacred objects, symbols, and the like. This is especially noticeable in early and later Christian representative or symbolic art, where our Lord or another Person of the Trinity holds His hand in the attitude and gesture of benediction. In Northern Buddhist art there are many recognised positions of the hands given to representations of Buddha and Buddhistic saints, each with its appropriate name, e.g. the 'meditative posture'—one hand resting on the other, palms upwards; the

'best perfection'—the index finger and thumb of each hand joined and held towards the breast; 'turning the wheel of the law'—the right index finger turning down the fingers of the left hand; that of the necromantic pointing finger, etc.¹

7. **Hand-shaking.**—This is a general mode of salutation even among such low savages as the *Australians*,² now more, now less, ceremonious,³ and an obvious expression of sympathy by means of contact. But it has also been a very common method of clinching a bargain, expressing a covenant,⁴ and the like, each of the two persons thus giving himself over into the possession of the other by contact, and so having a hold over him. This custom was prevalent among the Romans, Greeks, Hebrews, and most other peoples of antiquity, as it is with most modern races. The hand is struck into that of the other person, hence the phrase 'striking a bargain'; and in some popular usages, if this hand-shaking does not take place after a bargain, the bargain is null. The hand-shaking is even more effective when each spits into his hand before 'striking,' or when, as among the Iberians, Goths, and in the Highlands, the ball of the thumb is moistened and the parties press thumbs.⁵ Hence, also, clasping the hands is one of the most important parts of the ritual of marriage, not only among Christian races, as set forth in the Church ritual, but also among many savage and barbaric folk, and is already found in the *Rigveda* (x. 85. 26). The ceremony is at once a pledge and a symbol of the union which will later be consummated.⁶ In various religious or magical ceremonies, in which several persons are engaged, they sometimes join hands, probably by way of giving expression to the solidarity of the rite.⁷

8. **Washing of hands.**—(a) The obvious effect of water in removing dirt from the body, as well as the universal ideas regarding the sacredness of water or its being the seat of a spirit or divinity, suggested that other kinds of uncleanness—that of a tabu state, of guilt, and the like—might also be removed by washing. And, as the hands were the main parts of the body by which uncleanness through contact arose, or were a possible entry to the body for demons (as in the Hindu belief regarding *blāṭ*), their ceremonial washing has everywhere had great importance. Indeed, with many peoples all washing of hands is more or less ceremonial.

Contact of the hands with any thing or person unclean or dangerous produces a tabu state, and no food must be touched with the hands while it lasts, because the uncleanness or contagion would pass over to the food, and so into the body. This is common in the lower cultures, e.g. in Polynesia, and it is illustrated by a Yoruba story of a man who went to *Shade* to see his dead mother and would have touched her had she not forbidden him, saying that, if he did, the road to the upper world would be closed to him.⁸

Among the Greeks the danger of unwashed hands is illustrated by the story of *Astoria*, who, having approached the altar of *Zeus* with unclean hands, was struck dead; while no one could go beyond the *εὐφροσύνη* until he had washed his hands.⁹ The Romans had a similar belief, and no one with hands stained with crime would touch sacred things. They must be washed first in a living stream.¹⁰ The Jewish belief that to touch eye, nose, ear, etc.,

with unwashed hands was highly dangerous (these being the openings by which a demon might enter) also illustrates this.

In Babylon, washing the hands, besides the rest of the body in pure spring water is specially mentioned as a symbolic ceremony for ridding one of the power of evil spirits.¹¹

(b) Ceremonial washing of hands takes place before religious or magical acts. It is frequently used before prayer, and this is best illustrated from Muhammadan usage. The Muslim must wash his hands before prayer or before touching the *Qur'ān*: 'When ye prepare yourselves for prayer, wash your faces and hands up to the elbows' (v. 8, lvi. 78). This washing is done three times—first the right, then the left hand and arm. When washing the right hand, he says these words: 'O my God, on the day of judgment, place the book of my actions in my right hand, and examine my account with favour'; and, while washing the left: 'Place not at the resurrection the book of my actions in my left hand.'¹² The Jews are also careful to wash their hands before prayer, the custom being deduced by the Rabbis from various passages in the OT, where there is no direct reference to the custom. The Hindu usage at the *Brāhmaṇa-Yajña* service may be referred to, though here there is rather an offering of water to the *Pitṛs*, that they may be refreshed and their hands washed. Water is taken in the right hand and poured over the straightened fingers, and at a later stage it is offered so as to pour over the side of the palm between the root of the thumb and forefinger, the 'father's space' (*Pitṛvīrthas*), and again so as to pour over the opposite side of the palm.¹³

(c) Washing of the hands before sacrifice is also a very wide-spread practice. In Egypt the ritual washing of the priests before offering sacrifices included the whole body, though stress was laid upon the hands. Hence the name of the priests—*ḥm*, 'the washed,' or *ḥm tōtūi*, 'the clean of both hands.' In heaven the gods washed their hands in the laver before the door in heaven; and this act was performed on their images.¹⁴ Similar customs prevailed in Babylonia, where the *ḥm* must wash and be ritually pure before approaching the gods. Here also this was reflected back upon the gods, who, as well as worshippers, must cleanse their hands before taking part in the sacrificial banquet.¹⁵

In Greek and Roman sacrificial ritual the purity of the hands by washing in lustral water was insisted on, and a vase of water for this purpose stood at the entrance of the temple.¹⁶ Among the Hebrews the ritual law is quite explicit regarding the custom of washing hands before sacrificing (cf. Ex 30¹⁷ 40¹⁸). The ecclesiastical usage of ablution of hands in the Christian Church before or during the celebration of the Eucharist may also be referred to in this connexion. It is ordered in the early liturgies and has remained a constant custom since.¹⁹

(d) Before many rites of a magical kind the washing of hands is also customary. In Greece at the *Apodopne* the midwives had to wash their hands before running round the fire with the infant.²⁰ Before touching seeds at planting, women of the Lower Congo region must wash their hands lest the crop be destroyed.²¹ Among the Romans, at the

Lamoria, the paterfamilias had to wash his hands thrice in spring water as part of the ritual against the ghosts.¹ Among the Assyrians and Babylonians unwashed hands in magic rites were unlucky.² In modern folk-custom the practice has survived.³ A curious custom is that of washing the hands in the water of a river before crossing a ford. This is found among various savage tribes, and is already referred to by Hesiod.⁴ It may be regarded as a species of inoculation against the dangers of the river or the spirits dwelling in it.

(c) Washing the hands is also a recognized method of carrying away evil of all kinds. Thus in Assyria a spell runs: 'May evil be carried off with the washings of his hands!'⁵ Among the Hebrews and modern Jews the same idea is also found, and the hands must be washed after all 'unclean' bodily functions or after touching any one who is unclean, or to remove the contagion of death or murder (see, e.g., Lv 15¹¹, Dt 21⁶).⁶ Washing has also the effect of averting misfortune.⁷

Not only impure but sacred objects, i.e. objects which must be approached carefully, must be washed. Thus a Jewish belief is that the hands must be washed after touching the *Shema*—the sacredness or danger attaching to the hands being thus removed.⁸ See art. *BATH*, vol. II, p. 373A.

(f) Washing the hands, or clean hands, thus became a sign of innocence, meaning that one had thus washed off all possibility of guilt; and the custom gave rise to the metaphor of 'clean hands' as signifying innocence (cf. Ps 138 24, Mt 23²⁸). In Cornwall, washing the hands was used as a token of innocence with regard to any crime.⁹ Cf. the common phrase used with regard to responsibility towards another person, 'I wash my hands of you'; or the metaphor about a person's hands not being clean, as meaning his dishonesty, etc.

A curious superstition in Scotland, England, and Ireland was that a child's right arm and hand should be kept unchristened, so that it might strike a more deadly blow; or unwashed immediately after birth, so that its touch might not be washed away.¹⁰

g. Veiling the hands.—Probably because of possible danger from unclean hands they are sometimes veiled in the performance of ritual or as a token of respect. During the Roman sacrifices to Pides in the Capitol the flammens' hands were wrapped, up to the fingers, in white.¹¹ A fillet was also worn on the right hand by the Eleusinian mystes.¹² As a mark of respect, hands were veiled before a superior. Traces of this are found in early Christian art. St. Peter receives his mission, or the keys, with his hands covered with the skirt of his cloak; and martyrs hold their crowns of glory on veiled hands. In the Roman Catholic Church, when Cardinals approach the Pope to do homage or receive the hat, their hands are veiled with part of their cape.¹³ Among Mohammedans it is usual to cover the hands in presence of a person of higher rank or when making a visit.¹⁴

h. Clapping the hands is a method of calling a servant in the East.¹⁵ Hence it also passes into a method of inviting a god or a spirit.¹⁶ It is also a method of salutation, especially among African tribes, or of expressing joy; or it may be used as a rhythmic accompaniment of song or music.¹⁷

Grimm also mentions it as a powerful charm in enchantments,¹ while it is often used as a means of scaring off demons by noise,² as it was to frighten away serpents in the sacred cavern at the *Thermophoria*.

LITERATURE.—There is no special work on the whole subject. See the works referred to throughout the article.

J. A. MACCULLOCH.

HANDICRAFT.—1. Definition.—The term 'handicraft' may be defined as the constructive adaptation by man to his needs of the material presented by the environment. It will thus include, on the one hand, the provision of implements, weapons, utensils, clothing, shelter, the preparation of food, and the like, but will exclude, on the other hand, activities such as those by which food and raw material are provided—gathering of fruits and roots, the processes of agriculture, hunting, fishing, etc.—as well as self-defence and war, and other activities in which, although manual dexterity and co-ordination of bodily powers are requisite, the result is either not material or, if it is, is not produced by a structural or formal modification. A simple adaptation, such as the use of stones as missiles by apes or by man, will not come within this definition, while it is doubtful whether the psychological processes which underlie the operation of nest-building, even in the higher apes, would justify the application of the term to this form of activity. The case of the orang which applied a piece of iron or other material as a lever and utilised strands of wire-netting, which it untwisted, as a saw to break out of captivity (*Times*, 4th Nov. 1912) may possibly be described as on the psychological threshold of handicraft.

2. Implements of stone, bone, and shell.—The earliest undoubted examples of the products of man's technical skill are the stone implements of the Pleistocene period. Whether the implements known as *colts* are actual specimens of man's early attempts to produce a tool to meet his requirements or are the results of natural forces is immaterial. It may be assumed that the earliest process of manufacture consisted of a rough chipping to increase the utility of a stone naturally suited in form to some particular purpose.

Implements as simple in form and showing in themselves as little signs of human workmanship as *colts* have been recorded among primitive races in modern times. The *Bori* Indians use stones which have undergone no process of preparation as hammers or as weapons in hand-to-hand fighting (W. J. McGee, 'The *Bori* Indians,' *IT* 1887, pt. 1, [1888] p. 92), while the *Andaman* Islanders use whetstones, chips, and *shells* which have been split by simple pressure after heating in the fire (R. B. Maas, 'On the Aboriginal Inhabitants of the *Andaman* Islands,' *JAI* xii. [1888] 200).

The implements of the river-drift gravels of Europe belong to a stage when man had already acquired considerable technical skill, while a marked increase in dexterity is shown in the smaller but more carefully formed, as well as more highly specialized, implements of the cave-dwellers. The favourable conditions of archaeological study in France and the employment of a detailed method of analysis and classification have made it possible to follow closely, in a series of known relations in time, this advance in skill, as well as in the process of specialization. The civilisation of the Stone Ages in Europe thus offers material of the greatest value in tracing the gradual development of man's technical ability.

The Palaeolithic Age has been divided into three stages—Lower, Middle, and Upper. In these stages the *Mesvinian*, *Strepyan*, *Cholleian*, and *Acheulean* implements, so called from characteristic sites in France, belong to the Lower Palaeolithic; *Moustarian* implements to the Middle; and *Aurignacian*, *Solutrian*, and *Magdalenian* to the Upper. Each group is still further subdivided by

French archaeologists. Through all the stages, from the simple flake of the Mousterian gravels to the highly elaborate examples of the flint worker's art in the leaf-shaped implements of Solutré, there is a steady progression in specialization and adaptation to a particular purpose. In the Strepian stage the forms include coarsely flaked scrapers, knives, and the *boucher*, a pointed implement which has been described as 'not unlike in size and form two hands opposed palm to palm.' This implement—a natural form, a nodule of flint which has been worked, but not essentially modified—is still more characteristic of the Chellean stage, which also includes scrapers and a dagger form. In these implements the flaking was apparently produced by oblique blows with a pebble. The Chellean industry is of world-wide distribution, occurring in the river gravels of France, England, and Belgium, in Italy, Spain, and Portugal, and throughout Africa, Arabia, Palestine, in the valleys of the Tigris and Euphrates, in India, and in some parts of Canada and the United States. In the Acheulean stage—a direct development of the Chellean—the chipping of the flint becomes finer, and the implements, especially the *boucher*, show a better edge. In the Mousterian age there is an increase in the variety of implements employed, as well as a marked improvement in the methods of workmanship. The *boucher* disappears, but its place is taken by the Levallois flake, a large implement with a rounded point, dressed on one side and then struck from the nodule with a single blow. Side-scrapers, and scrapers, notched scrapers, and awls are characteristic of this period, in which man began to make use of caves for dwelling-places. In the Aurignacian stage of the Upper Palaeolithic period, the improvement in the working of flint continued. New types of implements were made, including curved pointed flakes with secondary chippings, serrated scrapers and graver tools to meet the requirements of artistic development, which now found expression in ivory and bone carvings and engravings. The distinguishing feature of implements of this period is the secondary flaking known as the Aurignacian retouch. At this time a new material was introduced; awls of bone and ivory, and other implements, such as spear-heads and rods of ivory, appear. The working of flint reached the highest stage of development in the Solutrian age. Primitive arrow heads of the earliest phase were succeeded by the implements known as willow-leaf and laurel-leaf points—flat and very thin implements with remarkably delicate secondary flakings of great regularity, probably produced, not by blows as in the earlier types, but by pressure.

The Australian aborigines produced extremely delicately flaked spear-heads, latterly made of bottle glass, by means of pressure, the implement used being a gong-shaped tool made of a bone from the hind leg of a sheep (H. Bolkow, 'On the Method employed by the Natives of N.W. Australia in the Manufacture of Flint Spear-heads,' *Nat. Hist.* [1905] 65). The Fijians and the Eskimos also produced fine flaking by pressure with a bone. The Apaches, after breaking a boulder by means of a pebble set in a withy handle, brought the implement into shape with a sperm-whale tooth: Turquemada describes the making of obsidian knives by pressure with wood, the flakes being split off a block held between the feet (see J. Evans, *Ancient Stone Implements of Great Britain*, p. 88).

The Magdalenian period witnesses a decline in skill in flint-working. The implements become less elaborate, and are often lacking in finish. This is due largely to the employment of bone and horn, which, being easier to work, allow greater diversity of form and consequently a wider application in use. The simple spear-point develops into the harpoon with one barb, and later with two or more; arrow-heads and spear-heads show great variety in basal form, to permit of different methods of attachment to the shaft. Spear-throwers of bone or ivory are used, as well as the

bâton de commandement, an implement conjectured, on Eskimo analogy, to be an arrow-straightener. Bone pins, needles, and bodkins found in large numbers suggest an increased elaboration in dress. The culture of this period is frequently compared with that of the Eskimos, especially in view of the use of bone implements by the latter for both hunting and domestic purposes.

In the Neolithic Age in Europe, the great variety in the forms of implements and the purposes for which they were employed bear witness to a profound change in the mode of life by which this period of human development is broadly distinguished from that which preceded it. Although the rude stone implements of the kitchen middens of Denmark and elsewhere argue a civilisation and a technical skill certainly below that of the cave-dweller in the later Palaeolithic period, a knowledge of agriculture, the domestication of animals, weaving, and the use of clay vessels, for which evidence appears at a comparatively early stage in Neolithic civilisation, demonstrate that a rapid multiplication of human needs was accompanied by a parallel increase in effective means to satisfy them. The characteristic industry of the period—the making of implements and weapons of stone—in essentials remains unaltered; progress is marked mainly by a greater variety in form and by specialisation. An important development in technique, however,—the process of grinding and polishing—permitted the use of stones other than flint and chert.

In the earlier stages of the Palaeolithic period, it is not possible always to classify any given implement as a weapon or tool. The same uncertainty exists in the case of the neoliths. Some of the rough axe-like tools may be either unfinished weapons or implements possibly for agricultural purposes. Nor does the lack of finish argue an early origin. The meule and hammer-stones which were used to shape the great blocks of stone at Stonehenge were of the roughest description, although this monument was erected at the beginning of the Bronze Age. Arrow-heads and spear-heads admit of no doubt as to their purpose. In the case of the former, the method of attachment can be followed, as it develops, from the form with a square butt, through the barbed form fitting into a notch, to the fully developed tang which was fastened to the shaft. The stone celt or axe, perhaps the most characteristic of all stone implements of the period, can also be followed through a sequence of forms, from the coarsely chipped and roughly shaped implement to the well-balanced weapon, carefully ground all over and brought to an edge, which exhibits the highest point of development in this branch of Neolithic technique.

The usual method of hafting the celt was not by fastening it to a handle with osseous or other form of string, as is done by most modern primitive races among whom stone implements are, or recently have been, in use, but by fixing the celt in a transverse hole in the handle. The tendency to split the handle was ingeniously overcome by the people of the Swiss Lake Villages, who fitted into the handle a socket of horn which took the force of the blow. At a later stage, perforated axe-heads appear, into the hole of which the handle was fitted. In Great Britain this implement may be referred to the Bronze Age. The hole was bored by a cylindrical drill, or in some cases by a hollow tube, possibly of olive wood.

The greater skill in technique and the multiplication in form and use of stone implements which took place in the Neolithic Age are only one phase of a general advance in culture. But in the case of these implements the limits of development were fixed by the nature of the material; and neither among modern primitive races nor in prehistoric times was the technique of the Scandinavian daggers or the translucent blades of the Egyptian knives surpassed.

The Australians, like many other primitive races, when first encountered by Europeans, were in the Stone Age. The uses to which they put their implements and weapons and the methods of manufacture they employed, serve to throw light on the general character of the culture of pre-historic Europe, as well as on special points where the purpose of a particular implement is not clearly deducible from its form and character.

One of their most useful implements, principally as a tool, rarely as a weapon, was the *adze*, which was the product of a long process of chipping with a lump of quartz and pecking with a rounded pebble, and then of grinding upon the *cardoe* mill, the means used for grinding sand. It was mounted in a twisted withy, either as an axe or as an adze, and fixed in position with periwinkle-grove roots. As an axe it was used for notching trees for climbing, cutting upon trees, notching the *opuntia* or taking honey, taking off sheets of bark from trees, shaping wood for *chibula*, and the like. As an adze it hollowed out wooden vessels. A knife cut in a haft was used as a pick; fragments of stone set in a handle of gum made a saw; stone hammers were made of unflaked pebbles set in a handle; *pendans* were employed for breaking hard woods; stone drills were sometimes, though rarely, employed; and all kinds of flukes were used as *acropora*. The last-named implements were sometimes made of teeth, which also furnished knives and drills. The Australian native made a considerable use of shells. They were employed in cutting hair or bark, for making *adams*, in construction, in working the *opuntia* skin, and as drills, a kind of spoke-shave of shell was used for slicing *scots* or any other tree which had to be cut thin. Shells were also used to make fish hooks.

Their implements of bone included awls made from the leg-bone of the kangaroo, a *stethic* or needle used by the women to pierce skins or the edges of the bark which they sewed into canoes, and for piercing the septum of the nose for the reception of ornaments (H. W. Thomas, *Natives of Australia*, London, 1900, p. 49 ff.).

Adams of both shell and stone were used in Melanesia, the area of distribution being well-defined in each case. Stone was used in the Solomon Islands (except Rennell and Ballona) and the New Hebrides. Shell was used by the Santa Cruz people, Torres Islanders, and Banks Islanders. For cutting threads, shaving, and fine carving, obsidian, chert, and shark's teeth were used (Codrington, *The Melanesians*, Oxford, 1901, p. 313 ff.).

3. **Metal-working.**—The introduction of a new material on the discovery of metals (probably in Asia Minor, or in Egypt, whence their use spread to the Mediterranean and the rest of Europe) was necessary to render possible further development in this department of human activities. It has been assumed that the use of metals was first discovered by the accidental inclusion of copper ore among the stones used to build up the primitive hearth. While this theory, on the ground of its strong probability, holds the field, it is generally conceded that, in localities where circumstances were favourable, the Bronze Age was preceded by a Chalcolithic Age in which native copper was employed very much in the same way as stone, and adapted to use by being hammered into the shape required. The Indians of Lake Superior, where native copper abounded, and possibly the early inhabitants of the Mediterranean area, passed through such a stage of development. That a Copper Age generally preceded the Bronze Age proper is a matter upon which it is more difficult to obtain conclusive evidence. Not only would copper implements be melted down for use in making bronze, but, in most regions where copper is found, it is not sufficiently pure to produce anything but a bronze without a special process. In Ireland, and again in the Mediterranean area, implements occur which are sufficiently pure to warrant their being called copper.

Apart from the link afforded by the Chalcolithic period where it occurs, the connexion between the civilisation of the Neolithic and early Bronze Ages is sufficiently apparent in the form of the implements themselves, especially of the *celt*. The early metal *celt*, notwithstanding the greater refinement and economy made possible by the

qualities of the material, is practically identical in form with the stone *celt*. The development from the flat *celt*, based upon the stone form, can be followed in all its stages—through the flanged and stopped forms, in which the flanges were made to fit over the curved handle, to the socketed form into which the handle fitted, and to which it was fastened by a string passed through the ring of the *celt*. The same essential identity in form can be traced in knives, spear-heads, daggers, and other implements in which stone was superseded by bronze. By the end of the Bronze Age, the art of working metal had attained a comparatively high degree of excellence; gold and, more rarely, silver were employed for ornament, and the adaptability of bronze for purposes other than those of implements and weapons had been discovered. It is probable that iron was first worked in the region south-east of the Euxine. In Europe it was possibly in the first instance disseminated from the Balkan peninsula, as a costly, almost a precious, metal to be used sparingly, later as the staple material for a wide variety of articles. When its use became general, the art of metal-working in Europe, especially as shown in the bronze mirrors, articles and ornaments for personal use, horse trappings, etc., frequently enriched with beautiful combinations of coloured enamel, began to pass from the stage when it could be classed as a primitive industry and to take its place as an element in a higher plane of culture. In Africa the Iron Age probably began at a very early date, owing to the abundance of the raw material, but the metal is still produced among the natives by smelting in a primitive form of low blast furnace, such as must have been in use in pre-historic Europe, of which the product is practically a wrought iron. This primitive form of furnace, consisting of a shaft or trough of clay with holes for the introduction of the blast, is still found in India, Borneo, Japan, and, in Europe, in Catalonia and Finland.

Over the larger part of Africa the production of iron is of great importance. It is worked in the Upper Nile valley among the Nuer and the Ja (the Ja being noted smiths), among the Shilluk, the Suri, and the Mursi, and the negro tribes of West Africa, where the *smiths* and *smiths*, which show great diversity of form, are sometimes remarkable as examples of native workmanship. The Mursi and the Ja (Mursi) tribes have been noted from time immemorial as workers of iron; the Ja, however, do not appear to have practised the art to any great degree. In the Shilluk Highlands at one time every village had its *smithing house* and in the who made axes, spears, needles, arrow heads, bracelets, anklets, hoes, two-edged and one-edged knives, and the like (A. Werner, *Natives of British Central Africa*, London, 1900, p. 201 ff.).

Before leaving the subject of metallurgy, reference should be made to the famous bronze castings of Benin. Owing, though of an inferior quality, are still made in this district, the *core* process being employed. Wax is modelled on a clay core and covered with a *clay* mould; when the mould is hard, the wax is melted and drained through a hole, and molten metal poured in (H. Balfour, 'Modern Bronze-casting in West Africa,' *JRAI* xl (1910) 228 ff.). The Malays use this method in making house vessels of copper and white metal (W. Beaumont, 'Notes on Malay Metal-work,' *JAI* xxi (1901) 146 ff.).

4. **Basketry.**—Basketry and the making of pottery are, psychologically considered, the two most important arts in early primitive handicraft, as they both involve a distinct creative act, not merely an adaptation, as in the case of the early stages of making a stone implement. Basket-work, including in the term plait-work and matting, fulfils many functions in primitive culture; it furnishes, next to the skins of animals, one of the most primitive forms of clothing, as, for instance, the plaited mats worn in the Caroline Islands; it provides the sails of the Polynesian and Melanesian canoes; it is used to form a shelter against wind and rain, as in the interlaced boughs of the temporary hut of the Australian hunter, and the wattle and daub huts used in the lake-villages of Glastonbury, and it provides vessels for the collection, storage, and cooking of food, as well as mats,

cushions, and other furniture of the house. In Somaliland and Abyssinia, where the pottery is of poor quality, baskets are used as milk-vessels. Basket-work, whether as a receptacle or as a wrapping, was largely used for mortuary purposes by the Indians of N. America and the ancient Peruvians. Bodies wrapped in matting of alfalfa grass stems have been found in excavations in Nubia (D. E. Derry, 'The Red Coloration on Ancient Bones from Nubia,' *Rep. Brit. Assoc., Dundee, London, 1912*, p. 618). A simple variety of basket of the plaited type is that common in the Pacific, which consists simply of a palm leaf split down the middle, the midrib being coiled round to make the rim. The pinnules are then plaited together to make the body of the basket. The inhabitants of the Swiss lake-dwellings in the Neolithic and Bronze Ages were expert in the making of baskets—checked, twined, and coiled. Specimens of coiled basketry have been found on the pre-historic site of el-Amrah, south of Abydos—so far the oldest to be discovered. Baskets of the same type are still found up the Nile.

In America basketry was of especial importance (cf. *ART (American)*, vol. i, p. 327 f.).

While the vegetable kingdom supplied the Indians with the greater part of the material for making their baskets, they also drew upon the animal kingdom; snow, skins of the smaller mammals, feathers, and split porcupine quills were employed. The texture of the basket-bottom and hollow baskets, in which water was heated by throwing in hot stones, was almost sufficiently close in many instances to enable them to hold water, but gum or clay was used to give a waterproof lining. Among the Havanapai Indians of the Southwestern stock baskets were rendered fireproof for cooking purposes by a lining of clay. One form of basket-work, made of narrow strips of wood, split of hardwood, and twined, was used as armour on the Pacific coast of America, from the Tlingit coast as far south as the Hupa Indians of California. Captain Smith speaks of the Mamaw-makes of Ocmawake Bay as using similar armour. Whisk shields are used in many parts of Asia.

5. Pottery.—The art of the potter follows close upon that of the basket-maker in the development of culture. That precedence must be given to the latter in order of time, in most regions of the world, must be conceded from the fact that the earliest pottery forms follow closely those of basket-work, and in some regions the use of clay vessels for purposes of storing liquids or for cooking utensils would appear to have grown out of the devices employed for rendering basket-work more suitable for these purposes. A simple form of cooking-vessel in use among the Havanapai in a flat tray of basket-work, on which seeds, crickets, or pieces of meat were roasted by hot coals. The charring of the basket-work led to the employment of a clay lining. This was turned by the heat into a flat plate, which was, in its turn, used as a brazier. The origin of the parching pot of the Zulus is indicated by the native name, which means a roasting tray of twigs. By the obvious process of raising the edges of the tray, whether of basket-work or clay, it becomes a bowl. It has been held that pottery generally was moulded in basketry in the eastern United States. It has also been suggested that the method of building up a pot by means of a clay coil is based upon the technique of coiled basket-work. It is possible, however, that in some cases the moulded forms of basket-work on early fragments of pottery both in America and elsewhere may be due to the use of this material to produce ornament by impression, or it may be derived in some cases from the common practice, which occurs, for instance, in the Andaman Islands, of covering the pottery with basket-work. The style of ornament of the pre-historic pottery of Europe, and especially the banded form, suggests a derivation from, or at least the strong influence of, a basket-work prototype, the appearance of regularity in the structure of which has been preserved by the con-

servative primitive mind by a corresponding regularity in ornament. Before the introduction of the potter's wheel, for which the earliest evidence has been found in de Morgan's excavations in Mesopotamia, and which appears in the Mediterranean in the Middle Minoan period of Crete, symmetry in form is usually obtained by moulding the pot on a base or in a shallow tray, which is frequently made of basket-work, as among the American Indians, in pre-dynastic Egypt, and in the Mediterranean in the Neolithic and early Bronze Ages. The Nicobar women, who are noted for their skill in making pottery, employ a board on which is a ring of coco-nut leaves sewn together. In some cases the base of another pot was used, as in New Caledonia. In Papua, for the early stage of pot-manufacture, a gourd was used as a mould. The base was slowly turned as the pot was built up. The Kabyle women use her foot for this purpose, while squatting on the ground. The use of a slip in primitive pottery is not uncommon before the introduction of glasswork. The Pueblos used a slip, usually white, made of carefully prepared clay, and it occurs in certain classes of pottery in the Mediterranean area. Ornament is usually effected by impression, for which the fingers, pieces of wood or basket-work, or stamps may be used, or by incision (the method commonly employed in the geometric designs of the European pottery of the late Neolithic and Bronze Ages in northern Europe and in the Mediterranean; where a slip is employed, the incision sometimes goes down to the fabric). Pigments may also be used. In Tunisia, in the hand-made fabrics the pigment is smeared on with the fingers. Most elaborate and artistic examples of painted ware are to be found in the Mediterranean Kamara pottery, while, in a more primitive type, the Pueblo painted pottery shows some highly effective designs, the ornament being derived and adapted from the motives of textile prototypes.

Pottery might be hardened simply by placing it in the sun to dry, but various methods of firing were more commonly employed. The Choctaw of the Mississippi in the middle of the 18th cent. are said to have fired their pots by simply placing them in the middle of a fire and covering them with charcoal. The defects of this method, which produced a discoloration of the pottery, were utilized in the South-Western States to produce a black ware, the embers being raked off and fresh fuel added to the fire. A method more nearly approaching the use of a primitive kiln is found in the Nicobars, where the pots are placed mouth down over ashes, firewood, coco-nut shells, etc., and firewood is piled against a wheel-like object which rests on the upturned pot. See, further, *ART (American)*, vol. i, p. 328 f.

6. Weaving.—Weaving is technically closely allied to basketry, especially the woven variety, the essential operation in each case being the intertwining of two sets of strands of material. Weaving is, however, differentiated from its technical relative by the employment of machinery—the loom—and still further by the character of the product, which is essentially flat. The primitive loom consists of a cross-bar fixed on poles, which are usually, but not always, upright; or laid across convenient boughs of a tree. The warp, long strands of the material to be woven, is fixed upon the cross-bar, upon which the cloth is wound as the work progresses. The women of Bakah in Palestine use a loom of the redest type, consisting merely of a stout stick at either end of the warp, which is stretched on the ground. The threads are passed through with the hand and pressed back with a wooden comb. The Ibans, who alone of the pagan tribes of Borneo attain any great

degree of proficiency in weaving, as the majority of these tribes use bark-cloth, employ a simple form of horizontal loom, on which the ends of the warp are fastened to a light cane. They are kept taut by a string which is fastened to the cane and passed round the body of the weaver as she sits on the ground (Hose-McDougall, *Pagan Tribes of Borneo*, London, 1912, i. 225). More usually the warp is kept in position by stone or clay weights.

The large number of stone weights and of spindle whorls found in Britain and other parts of Europe with remains of Neolithic or Bronze Age date shows the importance of the industry and the extent to which it was practised in pre-historic times. The place of the weights may be taken by a lower cross-beam. When this is used, the weaving usually proceeds from the bottom, and the cloth as it is made is rolled on the lower beam. The weft is passed between the threads of the warp by means of a shuttle. In a still more highly developed form of loom, a bar fastened below the upper cross-beam to the threads of the warp is used to raise or depress alternate threads, the shuttle being thrown or passed through the aperture thus made. A stick is used to push up the weft and secure the proper consistency of the fabric.

In the simple form of weaving, the weft is passed over and under the threads of the warp alternately, but variety in the pattern may be introduced by varying the number of threads over or under which the weft is passed. Further variation may be introduced by the use of different coloured threads. In the manufacture of the silk moving at Silwan in Persia the pattern is produced by binding a number of threads, which are then dyed. After drying, the binding, which has preserved the original colour of the material, is removed (L. Wray, *Notes on Dyeing and Weaving as practised at Silwan in Persia*, *J. A. I.* [1907] 150-155). The same method is followed by the Ilkhs in Borneo (Hose-McDougall, l. cit.).

Considerable skill in weaving was attained by the ancient tribes of both Mexico and Peru, while among the modern tribes of America, Pueblos and others, weaving formed one of the important industries (see *ART* [American], vol. i. p. 527).

The Navaho, who with the Apaches were an intrusion into the Pueblo country, apparently had not practised weaving before the conquest, and their earliest attempts at the industry are said to have been made with threads unravelled from Spanish cloth. No specialized form of spindle was used, the weft being fastened to any conveniently shaped piece of wood. The loom is not found in Polynesia or Melanesia except at Santa Cruz. A primitive form of loom was used by the Maoris to spin flax.

7. String, thread, etc.—Forms of thread were made from the fibres of the bark of such trees as the cotton-wood, the willow, the linden, and the cedar. Hemp was used in the United States and Canada, being treated by maceration to remove the rough fibres. Further south, in Central and South America, cotton was picked from the seed. Among other materials employed was the fur of animals, such as goats and rabbits; the latter was used with cotton in Mexico, where cotton was also used in conjunction with feathers. Maney fibre was another material frequently employed.

Various devices were employed for the twisting process. A primitive method is to roll the material on the thigh with the flat of the hand. The Eskimos and the Zulus employed two pieces of wood, bone, or ivory, one revolving on the other, the fibre being attached to the revolving part. Raw-hide rope and stout twine among the Eskimos are made with a fly-wheel arrangement. In Palestine at Bekeah a primitive form of spinning is recorded, in which goat's hair was spun by fastening the strands to a stone which was turned until they were sufficiently twisted, when the yarn was wound on the stone and the process repeated. In Polynesia sautit was braided from coco-nut fibre. In the most primitive form of thread- or string-making the material was usually held in the left hand without a distaff, while the operator spun with the right hand; before the introduction of the spindle, the material was either twisted by hand, usually on the thigh, as in New Britain and Samoa, or with the assistance of the whorl. In

Australia hair twine was spun with a spindle, but vegetable twine was twisted on the thigh (Thomas, p. 55 f.). The use of the primitive spindle of the Navaho, without a hook at the top, has already been described (§ 6). There is considerable variation in the manner in which the distaff is used among primitive peoples. The Hopis twirl the distaff on the leg with the flat of the hand; the Peruvians and ancient Egyptians threw it in the air.

8. Cloth other than textile, and preparation of skins.—Weaving, owing to climatic and material conditions, was the method of cloth making practised by the peoples from whose culture modern civilization has developed. There are, however, two other industries whereby man has provided himself with clothing, which in primitive culture are of almost equal importance. These are the preparation of bark-cloth and of skins.

The use of bark-cloth, which is obtained by beating out the bark of certain trees, for clothing is of wide distribution. It is found in Mexico, in Central America, in S. America as far as the tropic of Capricorn, throughout equatorial Africa, and throughout the Southern Isles, where, speaking generally, the loom is not in use. In the Australasian area it is stamped with patterns, while the Andean tribes decorate the substance which they make from this cloth with shells, seeds, and feathers. The bark-cloth of Hawaii was extremely thin and delicate—an almost lace-like fabric. Tapa-cloth is manufactured by beating the bark on the smooth top of a hard log with a variety of hand clubs or hammers having cross-crow faces, with the substance of water or some mucilaginous fluid. Practically the process is one of felting. Polynesia produced better tapa-cloth than any other region in the world.

The use of skins for clothing is naturally of greater importance in high latitudes; but, owing to the many uses to which dressed hide may be put, skill in its preparation is by no means confined to the cold regions of the world. The skin of an animal—usually a goat, with its natural shape preserved—is a primitive, and in warmer climates at the present day still a common, receptacle for carrying water or other liquid. The Australians used the skin of the opossum for this purpose. Among other uses to which skin or leather was put was the making of skin boats by the Eskimos, of shields, bags, and *perforates*, or meal-bags, by the North American Indians, while the skin of the buffalo or bison furnished the material for the wigwam or tipi as well as the well-known buffalo robe. In Patagonia the tents were made of the skin of the guanaco. Hides are used for the walls of huts among the pastoral tribes of the Upper Nile.

The skins of the thinner-skinned animals and of birds were used chiefly for ornament, but the Eskimo women made close-fitting under-coats of bird-skins, sewn together with sinew, with the feathers next the person; the skins were prepared by chewing. The skins of the smaller mammals—squirrels, foxes, and the like—were simply dried before use. A slightly more elaborate process was used for the hides of larger mammals, such as the moose, seal, elk, ox, or bear, which were to be worn with the fur adhering to the skin. The inside skin or dermis was removed with special tools, a piece of walrus ivory or an antler being used to remove the fat, and a stone being used to plane down the skin to an equal thickness. The shape of certain classes of Palaeolithic flint implements justifies the assumption that they were scrapers used for the same purpose. The American Indian women used three tools—a stone knife to cut away the flesh, a hoe-shaped scraper to cut away the skin, and a hoe- or chisel-like tool with serrated edge to roughen up the inner side of the skin and render it flexible. The skins were dried on frames, and sometimes treated with a solution made from the brains of the animal.

A third process employed by the Indians, but not found among the Eskimos, is the preparation of a material analogous to buckskin or chamois

leather, which involves the removal of the hair after gradual putrefaction by heating, the dressing of the skin with a preparation of brains, and a careful manipulation and softening of the skin while drying. The Athapascan Indians were especially adept in the employment of this process.

In utilizing the skins in the making of garments, both Eskimos and Indians displayed great skill. The difficulty experienced by the furrier in cutting the skin without damaging the hair was cleverly overcome, the implement used being the woman's knife, a short or flint-blade, crescent-shaped on the outer edge. Among the garments made by the Eskimos may be mentioned the shoes with soles of raw hide and uppers of dressed skin, the hooded upper and the under coat, breeches, deer-skin stockings, and outer boots reaching above the knee, for the men, and for the women two frocks, two pairs of deer-skin boots, of which the upper is worn with the hair outside and is shod with soles of seal-skin. Much care is shown in cutting, to secure that pretty far and fringes of hair should show as an ornament at the wrists, shoulders, and borders, sometimes varied with inserted material. Tacitus (*Germania* 17) records that the German women ornamented their skin dress in much the same manner. The buckskin garments of the North American Indians, and especially the Algonquians, were ornamented with fringes, wampum beads, and paint. Among the Mandans the deer-skin tunic was strung with scalp-locks, beads, and ermine, and the deer-skin leggings were ornamented with porcupine quills and fringed with scalps.

g. Wood-working.—Our knowledge of the stage of culture attained by the peoples of the Stone Age in Europe—even of the Neolithic period—outside certain well-defined limits, is largely based upon analogies afforded by modern primitive peoples who are, or were at the time they were first described, themselves in the Stone Age. It is only in a few instances, where circumstances were peculiarly favourable, that any relic has survived which was composed of any material less durable than stone, ivory, bone, or pottery. No evidence has survived of the skill in the use of wood possessed by Palaeolithic man; but the now extinct Tasmanians attained a considerable degree of dexterity in working this material with stone implements identical in character with some of the earlier forms of palaeoliths.

The Tasmanians, who habitually went naked, except in winter, when kangaroo skins were sometimes worn, had as their only shelter a rude screen made by fixing strips of bark to wooden stakes; their weapons both for the chase and for war were made of wood, the spear was a product of much skill and care, the shaft, if not perfectly straight, being heated by fire, and then straightened by the aid of the teeth; it was then wrapped in a point, and, after the bark had been removed with a stone scraper, it was hardened in the fire. The notched stone scrapers of Palaeolithic and Neolithic times suggest the use of similar weapons.

The Australians, whose culture has been compared with that of the Palaeolithic Neolithic period, show a decided advance on the Tasmanians; their spears are frequently provided with barbs, and the head is a separate piece of hard wood or stone; they do not possess the bow, but use a throwing stick for hurling the spear; their best-known weapon is the boomerang, returning and non-returning, the former being a striking example of mechanical and technical skill. Their stone axes, adzes, and knives were provided with wooden handles. They used two kinds of wooden shields, one to ward off spears and one to ward off the blow of clubs. Bone was used for awls and gouges. The Bushmen also possessed a Stone Age culture of a primitive type comparable with the Palaeolithic culture of Europe. They used the bow, their arrows were made of reeds unadorned, lashed with sinew, and tipped with a splinter of an ostrich or giraffe leg-bone which had been shaped with a flint spear-head. This bone was sharpened to form the head, or a separate shaft of quartz or other hard stone was used.

Where the pottery is poor, as in Abyssinia and amongst the pastoral tribes of E. Africa, or non-existent, as in Malakka and Polynesia, wood or bone is usually employed for vessels for carrying liquids. In S.E. Asia the internodes of the bamboo are used as water-vessels; in Malakka and Polynesia gourd or bamboo or wooden vessels are used as a substitute for pottery.

10. House-building.—The most primitive form of artificial shelter is the screen of boughs resting against stakes, such as is used by the Tasmanians and the screen of interlaced boughs used by the Australian hunter as a temporary shelter for the night, already mentioned. The Neolithic pit-dwellings of Britain were holes in the ground, with a central pole to which a roof of boughs stretched from the edge of the pit. Californian tribes lived in dwellings made on the same plan. The Bushmen's hut consisted of a few boughs brought together and covered with mats of reed sewn together at the edges. In the Egyptian Sudan, Abyssinia, and Somaliland, the hut is circular and made of hide or mats; among the more settled peoples, of branches or clay. The hut of the Bantus is a durable structure, usually circular, and conical or beehive-shaped. In Uganda, substantial huts are made by fastening screens of reeds, carefully sewn together, to a circle of posts, the whole being thatched with reeds. In the case of the king's house the walls are built by peasants, but the roof is built by professional thatchers. Among the forest peoples of Africa, the house is a rectangular structure built of poles with a thatched roof with a pitch. The rectangular houses with mud walls, a composite structure, is found among the Wa-Nyanwesi and a few other related tribes of E. Africa. The habitations of the Indians of America exhibit all stages of development—from the simplest form of windbreak used by the Hopis for temporary purposes, through the tipi of hide and the adobe building, to the massive stone architecture of ancient Mexico and Peru. Where manufactured wood was used, considerable skill and ingenuity in its preparation were displayed. The Iroquois used posts covered with bark for the three kinds of houses they inhabited, including the long-house, which was sometimes as much as a hundred feet long, and was divided internally into compartments. On the N.W. coast of America, cedar slabs were employed in house-building. These were split out of the centre of wide trees and fastened upright in a frame about ten feet high, on which rested split bark or boards laid on rafters, supported in the middle by long beams running the length of the house, and themselves supported on four posts with totemic emblems. The Iroquois long house finds a parallel in the communal house of New Guinea and the club-houses of Melanesia (which are not, however, divided into compartments, though each family group or, in the latter case, individual, has a separate hearth), and the houses of the Kenyahs, Kayans, and Ibanes of Borneo. The Kayan and Kenyah houses are divided into compartments—one for each family. Considerable architectural skill is required in their construction; some of them are four hundred yards long; they are raised on piles, and a verandah runs down the whole of one side. Probably the best-known examples of pile-dwellings are those of the Swiss Lakes, of the Neolithic and Bronze Ages, and the pile-dwellings of New Guinea, erected on platforms built out into the water. Pile-dwellings also occur in Africa—in the Nile Valley among the Nuer, on Lake Nyassa, among the Ba Kena, and on the West coast—and in various parts of North and South America.

The construction of the house in Japan is a matter of considerable skill. It is sometimes thirty feet in diameter, and is supported in the middle by three or four posts. The sides are composed of a number of small poles four or five feet apart; the rafters are sized from bread fruit or other trees, the gaps between being filled with small reeds, ingeniously joined until the requisite length is attained. The rafters at the end of the house are circular, the siding and pining of these being considered the supreme test of a workman's ability. The thatch is made from the leaves of the sugar-cane turned over small reeds.

Before leaving the subject of building, the Pueblo stone dwellings of the U.S. United States may be mentioned. They

consisted of a number of rooms built adjoining or on top of one another. One or two single-room houses are first built, and then additions are made from time to time horizontally and vertically step-fashion, the lower series projecting before the upper, all the pile grows to a height of three or four stories. The entrance of the lowest story is not from the ground, but from the roof, through a hatchway, while the upper houses or rooms are entered from the roofs of the lower. The walls are of stone laid in adobe mortar, beams of small tree-trunks forming the back of the roof.

11. Rafts, canoes, boats.—Among the most primitive means of conveyance by water is the raft made of a bundle of reeds or papyrus (used on the Nile), or made of the leaf-stalks of the ambatch-tree (Lake Nyman). Similar rafts are used in parts of Melanesia. The Tasmanians were not acquainted with either boats or canoes, but used as a substitute a kind of half-float, half-boat, made of the bark of various kinds of trees, but usually some species of eucalyptus made up into three cigar-like rolls. It was about nine feet in length and three feet broad in the middle, tapering to each end (H. Ling Roth, *Aborigines of Tasmania*, London, 1890, p. 154 ff.). The bales of the Seri Indians (California) closely resembled the Tasmanian raft, but was of greater dimensions, sometimes as much as thirty feet in length, and was made of reeds (W. J. McGee, *JF RBEW*, pt. i. p. 215 ff.). In Australia, where navigation was but little known, the means of conveyance were of the frailest description. The simplest form of raft used was a single log paddled by the legs of a man sitting astride; a stage only slightly more advanced was the raft of several logs. A raft-like canoe of bark, resembling the Tasmanian raft, is recorded from Adelaide River. The commonest form of canoe was a sheet of bark, carefully removed from the tree and shaped over the fire, with the ends sewn together and caulked with mud. The usual length was ten or twelve feet. The canoe of sewn bark was also in use—two, three, seven, or even more pieces of bark being used. The gunwale was strengthened by a mangrove pole, and the body kept distended by cross pieces and ribs. The dug-out canoe, which in most parts of the world is a characteristic form of the primitive boat, was also found in North Queensland, and at Port Kemington an outrigger was employed. At Cape York the double canoe was used, in length some fifty feet, and propelled with both paddles and sails. While the outrigger canoe is clearly an introduction from New Guinea, it has also been suggested that the sewn bark-canoe may be of Melanesian origin (Thomas, 63 ff.). The commonest form of canoe in the Melanesian area is the dug-out with the single outrigger. In Fiji, New Caledonia, and New Guinea, large double canoes propelled by sails were also found. In parts of the Solomon Isles finely made plank-built canoes occur. What seems to be a stage in the development of the plank-built canoe occurs in Borneo, where the freeboard of a Kayan dug-out is increased by planks along the gunwale (Hose-McDougall, I. 301). The Polynesians, who were born navigators, carried the art of canoe-making to a high degree of excellence, especially in Hawaii and in New Zealand. In Tahiti, where there were regular war-fleets, the canoes were both single and double, with an elevated prow and stern, the stern-post being sometimes as much as eighteen feet high, and ornamented with the carved figures of the gods. The elaborately carved prow- and stern-posts are characteristic throughout this region.

The Tahitian war-canoe was capable of carrying fifty fighting men. The Tahitian sailing canoe was a dug-out with a gunwale sewn on with reeds. The large double canoes were built up from the hull, the planks being carefully adzed and then polished with coral and oiled together. Religious ceremonies were performed when the hull was laid down and when the canoe was launched. In Hawaii a special deity presided over the building of canoes. In New Zealand, canoes thirty or thirty-five feet long were built of large planks cut from

the solid tree and lashed together. The figure-heads and stern-posts were painted as well as elaborately carved. Sails of reeds were used, but not outriggers.

In the Melanesian canoes various shades of canoe were hung up at the stern to secure calm seas and prosperous voyages. The important canoes had names, and rejoicings followed their completion. A human life was required for their inauguration. In the Eastern Solomon Islands, if no life was taken on the first voyage, arrangements were made with a neighbouring chief that a victim should be forthcoming. Further west, captives were kept with a view to taking their heads when the canoe was finished (Osbington, 1902).

12. Specialisation.—An important factor in the development of an industry is the tendency towards specialisation. This tendency appears at an early stage in human culture, mainly in three forms: specialisation of locality, specialisation of sex, and specialisation of workers as a class.

The localisation of an industry may arise from a variety of causes, but usually is to be attributed to a plentiful or peculiarly well-adapted supply of material in a given locality. In the Palaeolithic period in Europe flint implements were imported to the Channel Islands, for instance, probably from the adjacent French mainland, owing to local scarcity of suitable material. The large number of Neolithic implements of marked characteristics found at Pressigny in France, where the flint is specially suitable for making flakes of large size, suggests a localised industry, while both at Chisbury and Grime's Graves in England, where flint was mined, it is evident that there was a factory, from which partially manufactured implements were probably exported to localities which possessed either no local flint supplies or supplies of an inferior quality. Spinnings near Mons, and Caddington and Stoke Newington in England, may be mentioned among a number of sites where the character of the finds has suggested that they are the workshops of the craftsmen of the Stone Age.

In the Bronze Age, the distribution of material had a much less marked effect in promoting local efficiency in manufacture. In the earlier stages, it is true, favourable circumstances, e.g. an easily accessible supply of native copper, such as occurred in Egypt, Cyprus, and Western Asia, would determine the relative date of its utilisation, and give these localities an advantage in experience. But the rapid advances in the civilisation of southern Europe and the improvement in transport led to the exploitation of copper- and tin-producing localities, such as Cornwall and Spain, and the transport of the ores from these districts to the place of manufacture. The same course of development occurred in the Iron Age, where favourable circumstances for a time produced an early localised iron culture, of which evidence is found at Hallstatt.

Modern primitive races also afford examples of localised industries. The Nicobar Islands, for instance, are noted for their manufacture of clay pots. In Melanesia, canoe building was often the special work of certain towns because suitable timber was found near; other towns were celebrated for their fish-traps; the Samoans were famous for their mats (Brown, *Melanesians and Polynesians*, London, 1910, pp. 300 f., 304).

Owing to various causes—natural, economic, and religious—an early form of specialisation in industry has been determined on sexual lines: i.e. certain spheres of activity have been customarily assigned to each sex. To man has fallen the provision of animal food, the care of cattle, the fashioning of weapons and most implements from stone and metal. Women, on the other hand, have been responsible for most of the useful arts in their early stages. The making of baskets, pottery, spinning, weaving, the preparation of skins, the making of clothes from cloth and skin, and the preparation of food, including the grind-

ing of corn, are among woman's duties, while agriculture was and still is among primitive races largely or exclusively woman's work, especially in Africa. On that continent, however, spinning, weaving, sewing, and the making of clothes not infrequently are the duty of the man (see E. Torday, 'The Bushongo of the Congo Free State,' *Rep. Brit. Assoc., Sheffield*, London, 1910, p. 725; and A. Werner, 195). Among the Indians of N. America, the provision of shelter, whether in the form of the skin tipi or the adobe buildings of the South-West, falls to the woman. In Borneo, among the pagan tribes, while the men build the houses, the women assist in providing and bringing up the material.

In the case of most of the useful arts, it may be said that in the early stages they fall within the province of woman, and pass to man only when the machinery, even in such rudimentary form as the potter's wheel, is introduced. In Tunisia, in the country, the pottery, which is hand-made, is manufactured by women; in the towns, where wheel-made pottery is in use, it is made by men (Bertholon-Myres, 'Note on the Modern Pot Fabrics of Tunisia,' *Mos., iii.* [1903] 86).

In the third form of specialization—that of manufacture by a family, clan, or caste—religious and social influences predominate. Although no system of industrial organization so highly developed throughout as that of India is found among primitive races, something of an analogous character on a smaller scale is not uncommon. It is found in Polynesia, where the making of canoes was confined to a particular family. In Tikopia and Tonga, canoe-making was hereditary in certain families. In Tahiti the building of double canoes was confined to a privileged class attached to the household of the king; in Hawaii, to members of the royal family. In N. America, in many tribes only a particular class was allowed to make stone implements (Schoffeleers, *Indian Tribes*, Philad. 1853-57, iii. 81). In Tibet, occupations are hereditary. Among the Maori, to whom, as a tribe living by raiding, weapons were of supreme importance, but who held manual labour to be degrading, the smith's work was done by a servile tribe, the Egunono.

A curious result followed from the practice of specialization in making canoes. In the Torres Islands the canoe-makers died out, with the consequence that the people were reduced to using catamarans of bamboo (Cordrigton, 1885). It has been suggested that the present absence of pottery in Polynesia and in Melanesia, except in New Caledonia and Espiritu Santo, and to the north of those islands in Sheridania, Bougainville, and Buka, and again after an interval in New Guinea, and to the west in Fiji, is due to the dying-out of the people or caste who made the pottery of which remains have been found in Malakote and Peseuot, Lapore Island, and Ambrym (W. H. R. Rivers, 'The Disappearance of Useful Arts,' in *Philistylis* [Edmond Westermarck, *Helsingfors*, 1911, pp. 103-105]). The art of making stone adzes disappeared in Woodlark Island in like manner, through the dying out of skilled craftsmen (Hettigmann-Strom, 'Anthropological Investigations in British New Guinea,' *Geog. Journ.*, 1900, p. 267).

An interesting example of primitive industrial organization existed in Samoa, where the trades of boat- and house-building, tatting, etc., though not strictly hereditary, were carried on for generations by certain families, who thus acquired prestige. The trade was, however, open to any man who cared to attach himself to any craftsman until he had acquired sufficient skill to begin work on his own account. Each particular trade had its presiding god, and was governed by well-known regulations. The times of payment at different stages of the work were prescribed. In the case of building a house, a mat was presented to the master-builder, and its acceptance signified agreement to do the work. The members of the family for whom the house was being built did the unskilled labour, such as

falling trees, carting them from the bush, and the like. They also had to supply the carpenters' food, and those absented themselves from work if it was insufficient or of inferior quality. As the house progressed, payment was made for certain definite portions of the work, the principal payment being made when the two sides and one of the rounded ends were finished. It was considered a great honour to be lavish in payment. If the builders were dissatisfied with the payment, they left the work unfinished, and no other builder would complete it. If any one did, he was visited with severe punishment at the hands of other members of the craft. The regulations in trades other than building were practically the same (G. Brown, p. 205 ff.).

HANDS, LAYING ON.—See HAND.

HANGING.—See CRIMES AND PUNISHMENTS.

HANIFA.—See LAW (Muhammedan).

HAOMA.—1. Derivation of the word.—The word *haoma* (Skr. *soma*, Pahl. and Pers. *hom*) comes from an old Aryan root *ha* = Skr. *sa*, 'to pound,' 'to squeeze.' *Hāvana*, the utensil in which the twigs of the *haoma* plant are pounded, *Adona*, the god, or the part of the day when this plant is pounded, and *hāwandana*, the priest who pounds it, come from the same root.

2. *Haoma* in the Avesta.—In the Avesta we meet with four *Haomas*:—(1) *Haoma*, whom for convenience's sake we may call *Haoma* the prophet. Chs. 9, 10, and 11 of the *Yasna* speak of him as well as of the plant *haoma* discovered by him. Further allusions are found in *Ys.* lvii. (19 and 20) and *Yashts* x. 88-90 and *Asht* xvii. 8.—(2) *Haoma*, the plant; see esp. chs. 9, 10, and 11 of the *Yasna*. (3) *Haoma*, who may be called *Haoma* the hero (*Ys.* xi. 7; *Ys.* ix. 17, 37, 38).—(4) *Haoma Khvaranangha* (*Ys.* xiii. 116). In the *Fravardin Yasht* we have a long list of the departed worthies of ancient Iran who had rendered some service to the community. The group in which *Haoma Khvaranangha* is mentioned seems to be a list of the names of some of the immediate successors of Zoroaster. It appears, therefore, that this *Haoma Khvaranangha*, whose *fravash* is invoked, was a great man of Iran, who had done some good deeds that commemorated his name.

These four different *Haomas* have one or more special names in the Avesta. *Haoma* the prophet is called *Haoma Dhrusha*. The plant *haoma* is spoken of as *haoma adri* (e.g. *Ys.* ix. 17, 38, 39). *Haoma* the hero is known as *Haoma Frishmi* (as repeatedly in the *Yashts*). The fourth *Haoma*, as we have said above, is named *Haoma Khvaranangha*.

Haoma the prophet is called *Frishmi* as well as *Dhrusha*. The *Haoma Frishmi* of the *Asht* and *Asht Yashts* is quite different from the *Haoma Frishmi* of the *Yasna* and of *Yashts* x. and xi. The reason why these two *Haomas*, who lived at different times—one in the time of the Pundhish dynasty, and the other in that of the Kishashan—are called *Frishmi* seems to be that they both belonged to the same family stock.

Just as *Haoma* the prophet had, besides his special designation of *Dhrusha*, that of *Frishmi*, so *haoma* the plant had, besides the special appellation of *adri*, also that of *dhrusha* and *Frishmi* (*Ys.* x. 51, ult. 5). It was called *adri*, on account of its yellow or gold-like colour. The other appellations were due to the fact of its being discovered by *Haoma Dhrusha*, who was also known as *Haoma Frishmi*.

3. *Haoma* the prophet.—It appears from the Avesta that there lived in ancient Iran a pious man named *Haoma*. He belonged to the early

times of the Peshdadian dynasty, before the time of Vitranghant (*Vitranghant* of the Vedas), the father of Yima (*Yama* of the Vedas). He was a very learned man (*vaidhyas-paiti*),¹ versed in the old religious literature. He had passed a good deal of his time in divine meditation on the Hukairya peak of the lonely mountains of the Elburz.² Before Zoroaster, he was the first man or prophet to proclaim to the world the Madaeyanian religion.³ As Zoroaster had his own religious compositions, so had Haoma.⁴ He had his Gāthas⁵ (*madhōs* of *Asoma gāthās*), and had as an opponent one Kərəšān.⁶

It was this Haoma who gave his name to the plant, which he seems to have discovered, and to the Haoma ceremony, which he is said to have introduced. According to Yasht 2.1, he was the first man who produced the juice in a mortar (*Adhoma*) on the Elburz mountain. It appears that, while absorbed in deep divine meditation in his retreat in the mountains, he discovered this plant growing on the heights, and found it to be nutritious, health-giving, and invigorating. He introduced it to the world as such; but, in order to make it doubly efficacious, he instituted a form of ritual, designed to absorb the mind of the people in holy and religious thoughts. A plant, in itself health giving and vigorous, when partaken of under a partial inspiration of divine thoughts, was likely to be beneficial to the mind as well as to the body.

4. The Haoma plant.—*Haoma* is a medicinal plant which grows in Persia and in Afghanistan. It is a species of *Ephedra* (Nat. Ord. *Gastaceae*).

(1) The Avestan description of the plant.—Mountains and mountain-valleys are mentioned as places where the plant grows luxuriantly. In some passages, Mount Elburz (called in the Avesta *Hare Beresmin*) is specially mentioned as its habitat. But it must be borne in mind that the name Elburz not only denoted the present Mount Elburz, a peak of the Caucasus, but was applied to the whole range of mountains extending from the Hindu Kush in the East to the Caucasus in the West. The *Haoma* is described as a plant with branches and sprigs,⁷ as possessing medicinal properties, and as golden-coloured.⁸

(2) The properties of *Haoma*.—The religious or spiritual properties attributed to the *Haoma* plant are described in a rich poetical style, and in a tone overflowing with heartfelt admiration and praise. *Haoma*, prepared and drunk in a state of pious, spiritual inspiration, is believed to give wisdom, courage, success, health, increase, and greatness.⁹ In such a state the devotee becomes as powerful as an independent monarch, and is able to withstand many dangers coming from ill-disposed persons.¹⁰ Heaven, health, long life, power to contend against evils, victory against enemies, and fore-warnings against coming dangers from thieves, murderers, and plunderers are the six gifts bestowed by *Haoma* when adequately praised and prepared.¹¹ *Haoma* is specially sought for by young maidens in search of good husbands, by married women desirous of being mothers, and by students striving after knowledge.¹² It affords special protection against the jealous, the evil-minded, and the spiteful.¹³ It is a check upon the influence of women of loose char-

acter, who change their affections as frequently as the wind changes the direction of the clouds.¹⁴ For all these reasons, *Haoma* is called *madha-paiti*, *vis-paiti*, *madu-paiti*, *draughu-paiti*, i.e. 'Lord of the house, the village, the district, and the country.'¹⁵

(3) Qualifications required of the man who would drink *Haoma* with advantage.—These are: good thoughts, good words, good deeds, obedience to God, and righteousness.¹⁶ On the other hand, *Haoma* curses those who are sinful and evil-disposed. 'I, *Haoma*, who am holy and keeper away of death, am not a protector of the sinful.'¹⁷ 'May thou be childless, and may evil be spoken of thee!'¹⁸

5. Antiquity of the *Haoma* ceremony.—It appears from the Avesta that the *Haoma* ceremony was in existence as early as the time of the Peshdadian dynasty. It is as old as the time when the ancestors of the Parsis and the Hindus, and even of the ancient Romans, dwelt together. It seems to have been always accompanied by the Barsom (*s.c.*) ceremony, as it is even at the present day. Now, it appears that the ancient *Asomans*, who were the Roman fire-priests, and many of whose practices resembled those of the *Ashtvans*, or Iranian fire-priests, used twigs of a particular tree, whenever they went before the sacred fire. This practice resembles that of the Parsi priests, who also use twigs of a particular tree when performing the *Yasna* ceremony before the fire. The twigs are now replaced to a certain extent by metallic wires.

6. The plant used after purification.—We said above that the twigs of the plant are brought from Persia. They are not used directly in the ceremony. On being taken to a temple, or *dar-i-mash*, they are washed and purified, and then laid aside for a period of at least thirteen months. A qualified priest takes a quantity of these twigs, and washes and purifies them with water, reciting the formulae of *Kāshagōthra Akurāt Māddō*, *Asōm Vohu*, etc., which means: 'Pleased be Ahura Mazda. Piety is the best good and happiness. Happiness to him who is pious for the best piety.' After being thus purified with water, the twigs are kept in a metallic box, similarly washed and purified, for at least thirteen months and thirteen days before being used in the ceremony. When so prepared and purified, they can be used several years afterwards. This ceremony has no direct connexion with the *Yasna* ceremony.

The Vendidad (vi. 42, 43) enjoins the purification of these *Haoma* twigs which have come into actual contact with filth and impurities, but prevent curstness, which is designed to make curstness doubly sure, demands the purification of all *Haoma* twigs intended for use in religious ceremonies. Again, the Vendidad requires the twigs to be laid aside for one year, but prevent curstness a period of thirteen months and thirteen days.

7. Description of the *Haoma* ceremony.—This falls under four heads: (1) the preliminary preparations; (2) the ceremony of purifying or consecrating the *Haoma* twigs; (3) the ceremony of preparing and straining the *Haoma* juice; (4) the ceremony of drinking the *Haoma* juice.

(1) Preliminary preparations.—Two priests take part at this stage, as in the whole of the *Yasna* ceremony. One of them with the *Asōm* (i.e. ritual for qualification), either small or great, duly observed, first prepares the *aiyōdānghama* (strips of date-palm), the *urvōdā* (twigs of a pomegranate tree), and the *fidm* (fresh goat's milk). All the *Asōm* (the necessary sacred utensils) are emptied, washed, and put into the *Asōm* (the large water vessel on the stone slab supplied for it). The fire is kindled in the vase, and the *Asōm* (fragrant wood) and *Asōm* (frankincense) are placed on the adjoining stone. Two water-pots—one small and the other

large—are placed on the *āstā*, or stone slab for the *āst*. The cup containing the *avayadāgham* and the *avardm* is placed on a small stone by the side of the stone slab on which the priest sits. The *āstā* twigs are also ready by his side in a cup. The officiating priest (*astā*) now takes his seat on his stone slab, which is covered with a carpet. He makes *pō* (ceremonially pure) the smaller of the two water-pots, and with the water of that pot makes the *hundi* containing all the utensils *pō*. He then prepares the *astāra* water and ties the *āstāra* wire. Having done all this, he next proceeds to make the *āstāra* twigs *pō*.

(2) *The ritual of purifying the āstāra twigs.*—The priest takes a few pieces or twigs of the *āstāra* plant out of a cup, and, holding them between the fingers of his right hand, washes them thrice with the *pō* water. While doing so, he recites the *āstāra* formula three times. He then commences the *āstā* and the *āstāra* of *āstāra* *āstāra*, wherein he says that he does this for the homage, glory, pleasure, and praise of *āstāra*, the giver of the strength of purity. Then, reciting the *āstāra* four times, he dips both his hands, together with the twigs, in the *hundi* on his right hand. He dips them four times into the water—thrice in the direction pointing from his position to the opposite side (i.e. from north to south), and once in the opposite direction. Having thus made the twigs *pō*, he finishes the *āstā*, and dips the purified twigs in the *astāra* water. Then, drawing the *āstāra* before him, he inverts it and places on it three pieces of the consecrated *āstāra* twig; the rest are placed over the foot of the *astāra* ('mountain'; two crescent-like stands). He next places a piece of the *avardm* beside the *āstāra* twigs.

(3) *The ceremony of preparing and straining the āstāra juice.*—The priest begins by saying: 'I invoke all the belongings (i.e. the requisites for the performance of the ceremony) of the *āstāra*, for the sake of *āstāra* *āstāra*.' Then he enumerates some of the important requisites which lie before him on the stone slab. While reciting their names, he looks at them. The requisites which he enumerates are: *āstāra*, *āstāra* (i.e. the *āstāra*, or sacred bread, which is spoken of as *āstāra* *āstāra*, 'appropriate or sacred food'), the consecrated water (*astāra*), the twigs (*āstāra*), some product of the cow such as fresh milk (*āstāra* or *āstāra* *āstāra*), a twig of the pomegranate tree (*āstāra* *āstāra* *āstāra*), pure good water (*āstāra* *āstāra*), mortar for pounding the *āstāra* (*āstāra*), fragrant wood (*āstāra*) and frankincense (*āstāra* or *āstāra*), and fire (*āstāra*). The prayer, in which he invokes or enumerates the requisites, and, while reciting their names, looks at each of them as they lie before him on the stone slab, forms a part of the 24th chapter of the *Yama*. He recites that chapter from section 1 to section 12, omitting therefrom, in sections 1 and 2, the words, *āstāra* *āstāra* *āstāra* (*āstāra* *āstāra* 'this juice, or fresh milk, held up with righteousness'), because, at the time when he recites this prayer, the *āstāra* is not yet placed on the stone slab. Sections 3 to 12 of this 24th chapter are the same as sections 4 to 7 of the fourth chapter.

The *āstāra* ceremony may be performed either in the *āstāra* or in the *āstāra* *āstāra*, i.e. during the morning or the midnight hours. So, after reciting the first 12 sections of the 24th chapter, the priest recites the 13th section if he prepares the *āstāra* juice in the *āstāra* *āstāra*, or the 17th section, if he prepares it in the *āstāra* *āstāra*. Having thus recited the *āstāra* of the particular *āstāra* during which the ceremony is performed, he recites the *āstāra* formula of the particular day of the month and the particular month of the year on which he performs the ceremony. Then he proceeds

to recite the prayers contained in the 4th chapter of the *Yama* from section 17 to 26 up to the word *āstāra*, omitting the portions which refer to *āstāra* *āstāra* and *āstāra* *āstāra* (in sections 22 and 23). Next he recites the prayers contained in the 25th chapter of the *Yama*, from section 1 to 3, omitting the references to *āstāra* *āstāra* (fresh milk) in section 1. On reciting the words *āstāra* *āstāra* (ch. xxv. sect. 1 of Spiegel), the priest holds between the thumb and the forefinger of his left hand the twigs of the *āstāra* and pomegranate plants which were on the foot of the inverted *āstāra* and, lifting the latter with his right hand, knocks it thrice in its inverted position on the stone slab, and places it in its proper position. Then, reciting the words *āstāra* *āstāra*, etc. (ib. sect. 2, Spiegel), and taking the *āstāra* twigs into his right hand from his left hand, he places them in the *āstāra*, or mortar. Next, reciting the words *āstāra* *āstāra*, etc. (ib. sect. 4), he similarly places the *āstāra*, or pomegranate twigs, in the mortar. Reciting the words *āstāra* *āstāra*, etc. (ib. sects. 5 to 11, Spiegel), he pours into the mortar, with his right hand, a few drops of the *astāra* water which lies before him. He now invokes the *Pravasi*, or Guardian Spirit, of Zoroaster by reciting *Yama* xxvi. 11 (Spiegel). Then, reciting the words *āstāra* *āstāra* (ib. 36) and the *āstāra* *āstāra* prayer, he takes out of the *hundi* the *āstāra* *āstāra* (i.e. the plate with holes which serves as a strainer) and places it on the *āstāra* cup at the foot of the *astāra*. Reciting *āstāra* *āstāra* *āstāra* *āstāra*, etc., he removes the *āstāra*, or pestle, from the *hundi*, passing it round in a circle within the vessel, touching its rim from within. The circle begins from the north and passes in the direction of west, south, and east. Then, reciting the words *āstāra* *āstāra*, etc. (Ye. xvii. 1, Spiegel), he lets the lower end of the pestle, and, while reciting the words *āstāra* *āstāra*, etc. (ib. sect. 1), the upper end of the pestle, touch the stone slab. As he recites the words *āstāra*, etc. (ib. sect. 3, Spiegel), which signify that the *āstāra*, or evil influences, may be beaten or struck, he strikes the metallic mortar with the pestle, making sonorous sounds. At first he strikes it from without, i.e. strikes the pestle on the outer rim of the mortar. The sonorous blows are given in the order of east, south, west, north. When striking on the north side, he gives three more strokes. Then both the priests say, *āstāra* *āstāra*, etc., in *āstāra*, i.e. 'May the Evil Spirit be broken! May 100,000 curses be on *āstāra*!' The priest then recites *Pravasi* *āstāra* *āstāra* (Ye. xvii. 3-7, Spiegel). Next he recites four *Yama* *āstāra* *āstāra*. While reciting the first three, he pounds the *āstāra* and the *avardm* twigs in the mortar; and, while reciting the fourth, he strikes the *āstāra* on the outside with the pestle. In like manner he recites *āstāra* *āstāra* (ib. 8, Spiegel; or Ye. xxiv. 16) four times, to the accompaniment of a similar pounding during the first three recitals and a striking of the *āstāra* during the fourth. This is followed by a recital of *āstāra* *āstāra* (ib. 9, Spiegel; or Ye. 1) with like pounding and striking. Next comes the recital of three *āstāra* *āstāra*, during which the priest pours a little of the *astāra* water into the mortar three times. Then, while reciting the words *āstāra* *āstāra* *āstāra* (Ye. xvii. 10, Spiegel), he gives a little push to the pestle which is within the mortar, and causes it to turn a circle in the direction of north, west, south, east.¹ While reciting the words *āstāra*, *āstāra*, *āstāra*, *āstāra*, which

¹ This part of the ritual is a relic of the old position, when, after being pounded, the *āstāra* twigs were regularly rubbed in the mortar with the pestle to extract the juice further—a process now known as *āstāra*.

form the last part of this passage, he takes up the twigs of the *haoma* and the *urvarūm* from the mortar between his thumb and fingers; and, holding the pestle also, he touches or brings these in contact with the *barosm*, the plate of *padm*, the *haoma* cup at the foot of the *mid-rui*, and the stone slab. At the last word *anghen* he places the twigs and the pestle in the mortar again. He then recites four *Yatāś add vairyōs*, during the recital of the first three of which he pounds the twigs. He strikes the *haoma* during the recital of the fourth. During each of the first three recitals and poundings, he pours a little of the *another* water into the mortar with his left hand at the recital of the words *atāh, asāh, and āchāh*. At the end of each *Yatāś add vairyō*, he pours the *haoma* juice so pounded over the pestle, which is held with the left hand over the strainer. From the strainer the juice passes into the *haoma* cup below. The recital of the fourth *Yatāś add vairyō* is accompanied by the striking of the mortar. At the end of this, the whole of the *haoma* juice is passed into the cup, as described above. If any particles of the twigs still remain unpounded, they are removed from the mortar and placed in the strainer, where they are rubbed with the hand to make all the extract pass into the cup below. During this process of rubbing, the priest recites thrice *ṣṣṣṣṣṣ*, etc. (xvii. 11, Spiegel, or xxiii. 11). The strainer is then washed and placed over the mortar. The particles of the twigs still left unpounded or undissolved are removed and placed in an adjoining clean corner. The pestle is washed and placed in the *bandi*.

The next ceremonial process is that of straining the *haoma* juice again with the help of the *varas* *ni viti*, i.e. the ring entwined with the hair of the sacred bull. The *varas* is put over the strainer (*ṣṣṣṣṣṣ ṣṣṣṣṣṣ*, 'perforated plate'). The priest holds the cup containing the *another* water in his left hand, and places his right hand over the knotty part of the *varas* in the strainer. He recites *ṣṣṣṣṣṣ* *unfretted*, etc. (Ya. xxiii. 12-14), at the same time pouring the *another* water over the *varas*, and rubbing the knots of the *varas*. He recites two *Asmā vāhā*, the second of which is in *ṣṣṣṣ*. He then holds the strainer with the *varas* in his right hand, and the cup containing the *haoma* juice in his left hand; and, repeating *Ṣṣṣṣṣṣ*, *āhāhā*, *ṣṣṣṣṣṣ* thrice, pours the *haoma* juice into the strainer, which is held in different positions over the *banda*, or stone slab, as the different words of the triad are repeated. While reciting the word *Ṣṣṣṣṣṣ* each time, he holds the strainer over the right hand of the stone slab, so that the *haoma* juice falls over it through the strainer. On each recital of the word *Ṣṣṣṣṣṣ*, the *haoma* juice is similarly dropped into the cup of the *another* water, which has just been emptied into the mortar through the strainer, and the *varas* with it. At each recital of the word *Ṣṣṣṣṣṣ*, the *haoma* water is allowed to drop into the mortar. The *haoma* juice-cup is now put back in its proper place on the stone slab, and the strainer with the *varas* is placed over it. Then all the juice in the mortar—a mixture of the *another* water and the *haoma* juice, or, more properly speaking, the juice of the *haoma* and the *urvarūm* twigs—is poured into the strainer, through which it passes into the *haoma* cup below. After its contents have been thus emptied, the mortar is once more put in its proper place. The milk-plate (*padm* *no* *śākhā*) is placed at the foot of the *mid-rui*. The priest also sets the other cups and plates in their proper places. He deposits in their proper place some of the spare twigs of the *haoma* and the *urvarūm* which are at the foot of the *mid-rui*. He places some of these in a spare cup and lets fall over them

a few drops of the *haoma* juice prepared and collected in the cup, as described above.

It is at this stage that the other priest who is to join him in the recital of the *Yasna*, and who is now to act as the *asota*, enters the *yanasna-gāh*. Reciting an *Asmā vāhā* and a certain number of *Yatāś add vairyōs*, the number of which depends on the particular kind of *Yasna* to be performed, he goes before the *shirds* of fire and purifies or consecrates the fire. The priest who has performed the ceremony of straining the *haoma* now takes the *another* wire of the *barosm* in his left hand, and the *varas* ring in his right hand, and finishes the *ṣṣṣṣ* of the *varas* which he had commenced some time before. To do this he recites two *Yatāś add vairyōs* and the *Yasna-gāh* with the *hāhānūman* of the *Fravashis* of Zoroaster. He next dips the *varas* ring in the *another* water cup and places it in its own cup. He then rises from his seat, and, taking the *haoma* cup which contains the juice prepared and strained, as above, places it in an adjoining niche of the wall. He brings the *padm* and pours it into its plate (*padm* *no* *śākhā*). In a plate on the stone slab he now places the *barosm*, or sacred bread, which was up till now in another vessel in the *yanasna-gāh*. He then recites an *Asmā vāhā* and *āhāhā vāhāhā*, etc., finishes the *ṣṣṣṣ*, and performs the *hāhāhā*.

This closes the ceremony of preparing the *haoma* juice, more properly spoken of as the ceremony of straining the *haoma* (*Ṣṣṣṣṣṣ*). With its completion terminates the *paragad*, i.e. the first or the preliminary preparatory ceremony of the *Yasna*. The second priest, who has now entered the *yanasna-gāh* and who is to recite the whole of the *Yasna*, mounts the stone slab or platform which serves as a seat. As he does so, he recites two *Yatāś add vairyōs*. While uttering the word *āhāhānūman* of one *yatāś* he places his right foot over it, and, while reciting the same word of the second, his left foot.

The *Dādistan-i Dīnā* (xiv. 30-32) tries to explain part of the symbolism of the ceremony for preparing and straining the *haoma* juice. For example, the *haoma* twigs are pounded during the recital of four *Asmā vāhā*. These four poundings symbolize the coming of Zoroaster and his three future apostles. 'The pure *haoma*, which is equated out by four applications of holy water (*ṣṣṣṣ*) with religious formulae, is noted even as a similitude of the understanding and birth of the four apostles bringing the good religion, who are to be the *hāhānūman* Zoroaster and they who are to be *Ṣṣṣṣṣṣ*, *Ṣṣṣṣṣṣ*, and *Ṣṣṣṣṣṣ*.' The striking of the *moṣṣṣṣṣ* *haoma* while pounding and straining the *haoma* reminds one of the triad of thought, word, and deed on which the ethics of Zoroastrianism rests. The *Dādistan* says on this point: 'The metal mortar (*haoma*) which is struck during the reciting of the *haoma*, and its sound is equated along with the words of the *Yasna*, which becomes a reminder of the thoughts, words, and deeds on the coming of these four apostles into the world.'¹

The three ceremonial processes of pouring the *another* water into the *haoma* mortar for the preparation of the juice are symbolical of the three processes of the formation of rain in Nature, viz. (1) evaporation, (2) formation of clouds, and (3) condensation as rain.²

The juice, prepared as above, by pounding the *haoma* twigs together with the *urvarūm* in the *another* water, is called *para-haoma*.

(4) *The ceremony of drinking the haoma*.—The last ceremony in connexion with *haoma* is that of drinking it. We saw above that its preparation and straining formed a part of *paragad*, i.e. the ceremony preparatory to the performance of the *Yasna*. The ceremony of drinking it forms a part of the *Yasna* itself. It begins with the recital of the 9th chapter, and finishes with the recital of the 11th. In these three chapters the priest sings the praises of *haoma*. The *asota* describes in a highly poetical strain the good qualities of the *haoma* juice which lies before him. On his finishing the description and the praises of *haoma*, at the 9th section of the 11th chapter, his colleague, the *reṣāpi*

¹ *SSS* xvii. 170.

² *Id.*

³ *Id.* 170 f.

or *Shveta-sheti*, makes his hand *pda*, and, coming to the *saota*, lifts the cup containing the *Asoma* juice from the stone slab, carries it round the sacred fire in the vase on the slab opposite, at the same time taking the *asam* *bui* (sandalwood and frankincense) from their stone slabs, and placing them on the fire. He then comes back to the *saota*, and, holding the cup over the *barsam-dsa*, says to the *saota*: 'May the *asoma* juice be of twofold, threefold . . . ninefold efficacy to you.' Next he hands the juice-cup to the *saota*, who, holding it in his hand, looks into it, again addresses a few words of praise, and prays that the drinking of it may bring spiritual happiness to him. Finally, he holds up his *padma*, or cloth veil, to his mouth and drinks the *Asoma*. He does not drink the whole quantity at once, but in three draughts. In the interval between each of the three draughts the *vidhva* recites an *Asom* *vaid*.

During the recital of the *Yama*, the *Asoma* juice is prepared and strained twice. As described above, at first it is prepared and strained by one priest in the preparatory *parayana* ceremony. It is drunk by another priest during the recital of the 11th chapter of the *Yama*. Then the priest who drank it prepares it a second time during the recital of the three chapters of the *Yama* from the 25th to the 27th. The process of pounding the *Asoma* twigs and striking the mortar continues during the recital of the 32nd, 33rd, and 34th chapters, with which the second preparation terminates. Though the ceremony proper commences for the second time during the recital of the 25th chapter, it may be said to begin with the 22nd chapter, because all the requisites of the ceremony are enumerated and invoked at its commencement. These two preparations and poundings are spoken of in the *Avesta* (*Ya. x. 2*) as *fratarem aduonem* and *uparom aduonem*, i.e. the first and the second squeezing of the *Asoma*.

JIVANJI JAMHEDJI MODI.

HAPPINESS.—This term belongs to the ethical rather than to the psychological sphere, though referring to a condition of mental life. In ethics its use has been almost universal, yet in such varying senses that the substitution for it of its more definite equivalents is much to be desired. A formal and a material meaning may be distinguished, the latter subject to a threefold division.

1. **Formal meaning.**—The practical human good, the ultimate end of action. In this sense 'happiness' is a mere abstract term for the desirable in life, implying nothing as to its concrete constituents.

Thus Zeller: 'This conception is in itself a purely formal one, admitting of any desired material interpretation' (*Vertebrate*, 1895-96, II, 328). Also Sorley: 'To say that the ethical end is happiness, is to use Locke's terminology, "a trifling proposition": for in so doing we merely give it a name' (*Studies of Metaphysics*, 1906, p. 71).

Aristotle (*Nic. Ethics*, I.) assumes that all men agree in calling the good 'happiness,' but differ widely as to what constitutes it. This was true for the ancient world, and for some modern thinkers of the Greek type, but is no longer universally the case. Happiness has come to include various specific concrete meanings which are particular and debatable interpretations of the good, and not merely equivalent names for it, though the latter is sometimes claimed by Hedonists for their own interpretation (J. S. Mill, *Utilitarianism*, ch. iv.). Kant and his successors, especially, deny the possibility of happiness being either the only or the supreme good, though it is an element in the complete good. This formal use of the term

should therefore be abandoned in favour of the more abstract term 'good' or 'ultimate end of action.'

2. **Material meaning.**—(a) *Pleasure, or the absence of pain.*—This is the meaning which has been given to the term by Utilitarians since Gay, and which has been advocated by Sidgwick (*Methods of Ethics*, p. 190) as the only legitimate and unambiguous interpretation. Pleasure is to be taken in this definition in its psychological sense, as pleasurable feeling, not as pleasant object. J. S. Mill, by his assertion of qualitative differences in pleasure, and hence in happiness, forms an exception to the Utilitarian tradition, using the term 'happiness' in its second (material) meaning as the pleasure of an objectively higher order of activity (*Utilitarianism*, ch. ii.). Kant's usage agrees with that of the orthodox Utilitarians, although he puts an opposite ethical value upon the idea (*Works*, ed. Rosenkranz, 1838-40).

'The notion of happiness . . . is only a general name for the subjective determining principles' (viii. 187). 'A rational being's consciousness of the pleasantness of life interruptedly accompanying his whole existence is happiness' (ib. 189).

This happiness, as merely the feeling accompanying the satisfaction of desires, is qualitatively alike, irrespective of the nature of the objects causing the satisfaction. As such, it furnishes no objective and necessary law for conduct, but is only a name for the satisfaction of any and every desire.

(b) *The feeling accompanying the systematic activity of the whole self, the feeling of self-activity or self-realisation.*—In this sense, 'happiness' is distinguished from 'pleasure,' which is limited to the feeling accompanying partial or limited activities.

'It is the term of feeling which accompanies the harmonious adjustment of the various elements in our lives within an ideal unity' (J. S. Macintosh, *Men of Ethics*, 1900, bk. II, ch. v. § 14). 'Happiness is not the sum or aggregate of pleasures, it is their harmony or system—or rather, the feeling of this harmony' (J. B. South, *Ethical Principles*, p. 308). 'Pleasure is transitory and relative, enduring only while some special activity endures, and having reference only to that activity. Happiness is permanent and universal. . . . Happiness is the feeling of the whole self, as opposed to the feeling of some one aspect of self' (J. Dewey, *Psychology*, 1897, p. 123). Mill's conception of happiness as consisting in the pleasure of the exercise of the perfectly human or higher faculties belongs to the same category.

This distinction between happiness and pleasure has been criticised by Kant (viii. 180) and others, on the ground that it is based upon the nature of the objects causing the feeling rather than upon the nature of the feeling itself, and, therefore, that happiness does not differ qualitatively from pleasure, inasmuch as it allows no end of action other than that of pleasure. As Ladd puts it (*Philosophy of Conduct*, p. 479):

'Ethics can divide pleasures into higher and lower, noble and ignoble, or difference [sic] pleasures from happiness or even from blessedness, only by introducing into the psychological conception of pleasure-pain something from the outside. That something is a standard of moral values.'

While this criticism is valid psychologically against the attempt to distinguish qualities in pleasure, and is also valid ethically against the attempt to make happiness, as a distinct kind of feeling, the moral end, it does not necessarily invalidate this use of the term in the authors criticised. Although the pleasure of partial and that of systematic activity may be alike in kind, it may still be convenient to use the term 'happiness' to denote the latter, even though its moral significance be derived wholly from the character of the activities which condition it. Happiness would thus denote the affective side of the virtuous life. So Spinoza: 'Happiness is not the reward of virtue, but virtue itself' (*Ethics*, bk. v. prop. 42). This use of the term, however, while justifiable, is too susceptible of misinterpretation to be retained.

(a) *Welfare, the right condition of activity, the harmonious life itself.*—'The good of man (or happiness) is an activity of the soul in accordance with excellence, or, if there are more excellences than one, in accordance with the best and most perfect excellence' (Aristotle, *Nic. Ethics*, i. ch. vi.). The emphasis here is upon the complete life rather than upon any one aspect of it, such as pleasure. The doing perfectly what one is fitted to do constitutes happiness, which will be accompanied by pleasure though not constituted by it. This use of the term is becoming infrequent, save as the translation of Aristotle's *eudaimonia*, and even here the term 'welfare' (g.c.) is being recognized as more appropriate.

3. The moral significance ascribed to happiness furnishes a principle for the classification of ethical systems. Kant's division is the basis for most modern classifications. (a) *autonomous* (end as self-given); (b) *heteronomous* (end as given from without), subdivided into (1) *empirical*, including all systems which make happiness the end, and (2) *rational*, including all which make perfection the end. Happiness and perfection thus constitute the two material ends as opposed to a formal conception which places the good in the bare form of will rather than in any end to be attained by it. The idea of happiness as an end carries with it all the ambiguity of its definition, and systems which propose this end receive different names accordingly.

(i.) 'Hedonism' (g.c.) is the term applied to systems which propose happiness in the first sense as the end. It may be *universalistic* or *egoistic*. (ii.) 'Hedonism' should also be the term applied to systems in which the second meaning of happiness is taken as the end, since a kind of pleasure is still pleasure. Such systems, however, are few. J. S. Mill is representative in that professedly, at least, he takes a special kind of feeling as the end. Those who use the term 'happiness' in this sense are usually careful not to assert it as the ultimate end, but to make it only an aspect or concomitant of the end (MacKenzie, *ibid.*). (iii.) 'Eudemonism' (g.c.) is a name adopted by some who posit happiness in the sense of welfare as the end. 'Complete Eudemonism is the doctrine that the Good is found in the complete rationalization of desire' (J. Roth, *op. cit.* 233). 'Self-realization' states the same position from a more Hegelian point of view. 'Energism' is Paulsen's title for his revived Greek position. In this third use of the term it includes, rather than excludes, perfection as an end. It is equivalent to the complete enjoyment of perfection as well as perfection itself. It is the bloom of perfection. It is only in its first two meanings that happiness excludes perfection as an end. Zeller (*op. cit.* 210) defines the term as the equivalent of 'Hedonism'; so also Wundt (*Ethics*, 1897-1901, ii. ch. iv.).

 NORMAN WILDE.

HAPPINESS (Buddhist).—The word *sukha* in Buddhism covers, in extension, both the relatively static state which we name happiness or felicity, and the conscious moments of such a state, to which our psychology refers as pleasurable or pleasant feeling. There are other terms of happy import, but none so broadly comprehensive. *Sukha*

is applied alike to physical health, material well-being, and spiritual beatitude. Etymologically the word has no connexion with hap, happening, or look. Grammarians assume that the second syllable, *-kha*, is a substantival affix to *su*, 'well' (= Greek *eu*). The word would then be equivalent to the original meaning of our 'well'.

In Buddhist psychological analysis, feeling, or emotional sentiment (*vedanā*), is resolved into three phases: *sukha*, *dukkha* (pain), and *adukkhamasukha* (neutral feeling). The last of these, to which modern psychology in the main ascribes a mere zero point between positive degrees of the first and second phases, is in Buddhism ranked as an equally distinguishable constituent of consciousness (*Mayāhama*, i. 208; *Saṃyutta*, iv. 235 f.). We do, indeed, meet with a layman who pronounces a twofold division of feeling more orthodox (*May.* i. 50; *Sutt.*, *loc. cit.*). But the Buddha, when appealed to, explained that he divided feeling variously, according to the aspect under which he was treating of it in his teaching (cf. his method in another connexion, *May.* iii. 82). When, e.g., he distinguished feeling under two heads, he was treating of conscious feeling and spiritual emotion, to both of which the term *sukha* was applicable.

We may pause, before considering the teaching attributed to the Buddha on *sukha*, to note the way in which, in one of the canonical dialogues, the psychological analysis of feeling is applied to ethical training. The teacher is the noted ascetic, the Brahmin, who undertakes all she has said. She first gives the orthodox division (as stated above), and then adds a disjunctive definition of each kind. She is then asked: 'In happy feeling, what is happy, what is unhappy? In unhappy feeling, what is unhappy, what is happy? In neutral feeling, what is happy, what is unhappy?' She replies: 'In happy feeling, the object (object) is happy, change is unhappy; the inverse for unhappy feeling is unhappy feeling;—an answer that reveals the weakness of the threefold division as an analysis of bare feeling. She is then asked: 'What is our latest loss (samsāra) when experiencing each of these three modes?' The answer is: passion (or lust, *rāga*), aversion (or resentment, *paṭigha*), and ignorance (*avijjā*) respectively. But, she adds, when questioned further, not all feeling, of any of the three kinds, is thus tainted. Finally, she goes on, it is these three forms of bias that we have severally to eliminate from the three modes of feeling. This may be accomplished by the practice of *jhāna* (see *Devāna*). In the first stage, conscious desire and unwholesome or wrong ideas are banished, the intellect being engaged with happy and about a certain external object. In the second and third stages, through the strong yearning to obtain the blissful serenity of the mind (*arāma*), all excitement and opposed feeling melt away. And in the fourth stage, where all positive feeling takes into indifference and perfect clarity of mind is attained, ignorance is banished. She is finally asked: 'What is comparable to happy feeling, to painful, to neutral feeling?' She replies: '(1) Happy and painful feeling are mutually comparable. (2) Neutral feeling is comparable with ignorance. (3) Ignorance again is comparable with knowledge. (4) Knowledge with spiritual emancipation, and this again with *Nibbāna*. *Nibbāna* alone is incomparable, as being not painful. Hence Buddhisthism assumes that the comparison (*paṭibhāga*, cf. *Atthakā*, ii. 187) in (1) and (2) is of opposites, but in (3), because of the vagueness of neutral feeling, and again in (4), the comparison is of similities.'

Bearing this archaic but authoritative analysis in mind, we may proceed to consider the explanation which the Buddha is said to have given concerning his treatment of feeling under a twofold aspect of pleasure or happy emotion. The dissenting layman, mentioned above, had alleged that 'neutral feeling' was identical with happiness, namely, with happiness of a loftier kind. Warning his two interlocutors that discords might arise, if the mere framework of his various discourses on feeling—two heads, three, five, six, eighteen—was taken as essential, Gotama briefly stated the sources and kinds of conscious pleasure and desire. 'The pleasure and happiness arising from these five senses we call happiness of worldly desire' (*kāmasukha*; see *DESIRES* [Buddhist]). He then proceeded to soothe and elevate his two dispirited by affirmations of the loftier joys arising in con-

¹ Henmann, in his tr. of the Sutta, has mistaken the meaning of *paṭibhāga*.

nation with the practice of *jāna*. The brief discourse has been set down by the compilers with the rhythmic program and iteration of the Suttanta refrains, suitable for oral teaching. He commences with this refrain:

'With him who should say: "This is the supreme happiness and pleasure (or joy, *somanassa* = mental happiness) that I have experienced," I do not agree. And why? Thus such happiness there is another happiness sweeter and more excellent. And what is that?'

In successive replies it is pointed out that the stages of *jāna*, four of *rūpajāna*, five of *arūpajāna*, are each of them a sweeter and loftier happiness than *hīmanasaka* and each preceding mode of *sukha*. The last stage of *arūpajāna* was the attainment of ecstasy or trance, described in the usual formula, elsewhere amplified, as 'the cessation of perception and sensation.' Nevertheless, of this also 'happiness sweeter and more excellent' is predicated. Then, to defend the position and to withdraw the original line of dissent, Gotama concluded:

'Other teachers may say: "The Samana Gotama predicates happiness of the trance-stage: what and how is that?"—Thus are they to be answered. "Friend, the Exalted One does not predicate happiness only where there is happy (pleasurable) feeling; he also predicates happiness wherever and whenever happiness is found to exist."

These observations, referring his hearers, as always, to the spirit rather than to the letter, were the Buddha's method of teaching that the word *sukha* could represent concrete states of being, activities, ideas, memories associated with happy consciousness and genuine 'well-being,' no less than the pleasurable feeling discerned by analysis. He might have extended his final remark to most of the preceding stages of *jāna*; for whereas, in the first three stages, the happy feeling, accompanied in the first two by that most of pursuit known as *pīti*, is the prevailing factor, the fourth *jāna* is explicitly defined as a state wherein all positive feeling, joyous or melancholy, is merged in neutral feeling, so that the consciousness is one of complete equanimity and clarity of mind.

A unique compound may have been added—*upakkāma*—conveying in *Agguttara*, iv 412, as the conscious state which was to come when the fourth *jāna* was attained, and which one, therefore, only be taken to mean the happy feeling of, or belonging to, or accompanying equanimity.

Sukha was, moreover, the predominating nature of oriental existence, so far at least as the six realms of *devas* in the *Kāmaloka* extended. To re-birth in these heavens the moral average layman aspired, believing that he would there enjoy pleasures of a sensuous sort, but interior, more numerous, and less fleeting than those of earth (cf. Rhys Davids, *Dialogues of the Buddha*, ii. 283 ff., 342 ff., 386). Nor would he, as *deva* or *devaputta* (son of the gods), be incapable of loftier emotions and satisfactions to which the term *sukha* might equally apply; witness the behaviour, in many Buddhist legends told in *Niddā* and *Jātaka*, of the continents of Sakka, god of a *Kāma*-realm, and of those of the many *devas* who flocked to earth to hear the Buddha and his saints preach, or to commune with and admonish here and there a saint in *spe*.

Sukha, then, we repeat, is of very wide import, covering all three: pleasure, pleasurable feeling, and happiness; and it is equally applicable to the lowest and loftiest kinds of experience so designated. We have also seen that the neutral feeling accompanying vague intellection merges into positively happy feeling when the vagueness passes; and, again, that absorbed reverie and *ārambha* contemplation, if rightly induced and persisted in, lead to emotionless quasi-static states which can also be described as *sukha*, because they are a means whereby the saintly life is nourished and advanced.

In the next place, the natural desire of mankind

to attain happiness and avoid pain and sorrow is fully recognized, believed in, justified, and exploited by Buddhism. As a system of ethical philosophy, it may be classed as frankly eudaimonistic or hedonist, i.e. neither egoistically nor altruistically so, but of the kind termed by H. Sidgwick 'Universalistic Hedonism.' It recognizes in happiness an ultimate to which every human aspiration is in the last resort reducible. Accepting the current proverbs of the day, it sees in happiness the crowning result of mundane wisdom (*Phaṇḍita*, 208). Happy re-birth, as a *deva* or as a fortunate human being, is the legitimate quest urged on the laity and the simpler-minded, less saintly *bhikkhū* (*Dīgha*, iii. 181, 185, 191 f.; *Agg.* i. 88, ii. 192, iii. 76 ff.). Meritorious acts are justified as happiness-bringing (*sukkhavādā*) for self and others, and the latter is the ultimate test of the worth of a practical doctrine (*Agg.* i. 180 f.; tr. in *Buddhist Review*, April 1911). Again, it is only the quest of the highest good that gives adequate opportunity for ending sorrow (*Agg.* iii. 245; *Agg.* i. 349). The mission of a Buddha is frequently declared to have as its object not only, in negative terms, the revealing of how ill (*dukkha*) may be overcome, but also, in positive terms, the attainment of the good, or well, and the happiness (*āharaṇa sukka*) of all beings. In the wrestling and toil of mind for the enlightenment (*bodhi*) whereby he could qualify for that high mission, Gotama admits that the quest of *sukha* was the ground wave that bore him along (*Agg.* i. 346 f.), and in the midst of his self-devoted career he claims that this quest is won for good and all:

'Ay, young sir, I verily am of them who are happy, even though you see me exposed in this hut to the chilly nights of winter. Your well-housed citizens, happy after his kind, say, the king himself with all his pleasures, is not so happily at ease as I. They may be content with torments through greedy desire, enmity, or ill-will. But one who has cut off at the root all these sources of suffering dwells at ease, for he has won peace' (*Agg.* i. 186-8, *Agg.* i. 38 f.).

A fortiori, happiness is commended not only for the babes in religion, but also for earnest disciples as a reasonable and sufficient aim of the religious life (e.g. *Agg.* i. 160 f.). And, adopting as a name for their summum bonum a word which would seem to have been applied to the peaceful cool organic consciousness of physical well-being (cf. 75th Sutta), the Buddhists qualified Nibbāna as supreme happiness (*paramasukha*):

'These things to know of as they really are:
This is Nibbāna, crown of happiness' (*Sammasamādhī*, 308).

The happiness thus commended and extolled for and by saints and those qualifying for sainthood was, of course, neither the *hīmanasaka* referred to under *vedanā*, or feeling on occasion of sense, nor the *sukha* associated with ideas of the same. The attitude enjoined with regard to such feeling was very uncompromising:

'Pleasant (*sukha*) feeling, *āhāraṇa*, is to be considered as (equivalent to) pain (or ill); painful feeling is to be considered as a javelin; neutral feeling is to be considered as the important. A brother by whom these are thus considered is an *Ārya* of supreme vision, he hath cut through craving, he hath rolled back his bonds, through supreme grasp of vein essence he hath put on and to success' (*Jīti-vuttika*, 230; *Sutt.* iv 307).

Coming next to ideal emotion, or the three modes of feeling when associated with ideas (*somanassa*, *domanassa*, *upekkhā*), we find the admission that, for spiritual health, these three modes of feeling are not at all condemned as such, but are preferable when unaccompanied by such thought as is engaged upon sense-experiences (*viśakha-vichāra*). (Such is the implication of the phrase translated 'pre-occupation and travail of mind' in Rhys Davids, *Dialogues*, ii. 312 f., the terms *viśakha*, *vichāra* being essentially terms of sense-cognition, and used only in the first stage of *jāna*, when the mind is not yet abstracted from such cognition.)

Finally, the most general affirmations as to that happiness which the candidate for sainthood and the saint or arhat may legitimately aspire to and feel may best be sought in the body of testimony ascribed to such men and women. For them, as for all the earnestly religious, holiness meant a radical alteration of values. The forms of *kāmarūpika*, which had once excited and pleased, were become senseless and pestilential, terrible, or merely devoid of all attractive power. The Christian saint's 'I do count them but dung' (Ph 3^d) has many a prototype in the poems of the Buddhist *āraṇya* and *āraṇya* (cf. *Sutta-Nipāta*, 50-61, 703). The quest (*pīṭi*) of pursuit and advance, the relaxation, ease, exultation, and peace of vantage-points and mastery won (*sukha*, *somaṇassa*), are now transferred to and associated with the religio-philosophical ideal of arhatship and *Nibbāna*, the spiritual supramundane *somaṇassa* (*ananda*) of oneself and all beings. Into this new objective of happiness, the prospect of celestial joys did not enter.

'The very heavens delight them not; how then should earth that's merely earthly please?'
(*Therag.* 307; *Dhamma*, 187).

'... I want no heaven of gods—
Heaven's pain, heaven's pining have I turned away.'
(*Therag.* 303).

But the happiness actually attained is claimed as very positive and not as 'neutral feeling':

'Not even the world's wadded clouds can yield such charm (rasm) as comes to him who with a heart intent and calm rightly beholds the Form.'
(*Therag.* 308; cf. *Dhamma*, 36, 303).

'This never-ageing, never-dying Path—
No sorrow comes here, no enmities,
Nor is there any crowd; none faint or fall,
Nor fear, nor death, nor ought that doth torment.'
(*Therag.* 313).

'How have they prospered all my highest aims...
The holy love and liberty, my quest.
I what was well to do have done, and what
is truly delectable, therein
Was my delight; and thus through happiness
Has happiness been sought after and won (sukhaṃ anandaṃ)
(*Therag.* 30, 33; cf. 311, 324, 310 ff.).

That the 'seeking' or pursuit of the goal was itself happy as contrasted with the ascetic practices of many Indian religionists was claimed by Buddhists from the first (*Maj.* I, 33 f.). 'This happiness by happy ways is won,' exclaims another saint, once a *paṇḍita* (*Therag.* 220). This was naturally the experience of those who were unhampered by a sensual or sluggish temperament, e.g. the younger brother of the chief disciple Śāriputta:

'The will to learn brought forth learning growth;
Learning makes insight grow, and by insight
We know the Good; known Good brings bliss along.'
(*Therag.* 141).

With many others the training and the transference involved great toil and travail of spirit. The poems quoted from above often reveal this, and the later *Mūlinda*, while it calls *Nibbāna* 'entirely happy' (*abanta-sukkaṇṇa*), speaks of the quest as 'alloyed with pain' (II, 181 ff.).

In connexion with the use attributed to the Buddha of the term 'entire (or absolute) happiness,' two remarks may be added in conclusion. Consulted by Mahāli the Licchavi about the anti-cautionist doctrine of a rival teacher, Gotama affirmed causation. There was a cause, and a sufficient cause, for the wickedness, as for the regeneration, of the world. Were cause-experiences, he went on, productive of absolute happiness, no one would ever be converted from it to perer ideā. Were it absolutely painful, no one would be engrossed by it, as are the majority. It was the mixture of pleasure and pain in human life that constituted at once the hindrance to, and the guarantee of, spiritual progress (*Sukh.* III, 88 ff.; cf. II, 172 ff.).

But, when pressed by Udayin the Jain to describe what he considered to be the sphere of absolute happiness and the way thereto, the Buddha first repeats the current belief that practice in the fourfold *āśrama* may bring about re-birth among *devas* in entirely pleasurable conditions. He then repudiates such aspirations for his Rule, and enumerates the attainments in self-mastery and intuitive vision won by the arhat as far loftier and more excellent than such a hedonistic ideal (*Maj.* II, 70). The moral of this, confirmed by the general context of the *Nibbāna*, seems to be that he also held the ethical view that happiness may best be secured when not it, but its cause, is aimed at.

HUBBING's *Psychology*, Eng. tr., London, 1920, p. 207. On Utilitarian Hedonism and happiness as end, cf. H. SIDGWICK's *Methods of Ethics*, London, 1901.

C. A. F. KINGS DAVID.

HAPPINESS (Greek and Roman). — I. **GENERAL.**—2. Greek teleology: happiness attends fulfilment of function. — *teleiōsis*, when critically appraised, could not mean to the Greeks 'a happy temperament,' to which a genius was propitious. This might be very well, but it was not of knowledge (as Socrates and Plato would say) or of faith (as St. Paul). The term was applied to well being judged from outside by a certain agreed standard of perfection. The Greeks, however serious their practical doubts, never showed any hesitation, save in the Atomic School, in accepting teleology: everything was made for some end and found its satisfaction in fulfilling its function, in realizing its idea or its motion; only in so far as it did this was it real, good, and therefore happy. Man was contrasted, as a single type, with the rest of creatures; never (oddly enough) with other and different members of his own species; his *differentia* lay in reason, implying self-consciousness and self-criticism, above all, recognition of a law—and that a universal one, beyond the private and the particular. Thus, the only state deserving the title 'happy' in the truest sense was that of the philosopher, who alone used *formative* or *speculative* reason aright, and so fulfilled the end for which he was made. It is clear that, like Kant's categorical imperative, this vague axiom can give no special guidance for individual cases, no help to men of different character, aim, and station. In the end, then, Greek ethics set up in the various schools an ideal of life singularly alike, a purely typical excellence which was bound to end in a negation rather than in any positive content. Except the early Cynic model, which soon passed out of favour, there is little to choose, in essential detail, between the 'sage' of Plato and Aristotle and that of the Stoic and Epicurean schools; indeed, the Cyrenaic model, significantly enough, tended later to approach this common standard. Happiness, then, in every Greek system of religion or philosophy, is singleness of aim, uprightness of heart, and the undisturbed peace of one who rests in ultimate truth, and has hold of reality. It is always set in contrast with the aims of the worldly-wise, cumbered with much serving or the pursuit of many ends. Not within the limits of our period do the modern features appear, which direct human activity towards the conquest and enjoyment of the world, and complexity of life; or towards social service, 'the love of mankind,' 'the greatest happiness of the greatest number,' multi-form legislation to secure better conditions for the poor.

2. Examples of happiness: impulse and convention.—Happiness, then, as above described, lay in

reason (as private judgment, which mirrored an external order and laid hold of objective truth), not in impulse or custom. The body and conventional society were the two great enemies of wisdom and, therefore, of happiness. The ascetic and anti-civil tendency of Hellenic morals is now well-established, in spite of some feeble protests. The dualism between the soul's true welfare and all earthly concerns begins in Pythagoras and Heraclitus, and only increases in intensity down to Aristotle and the later Stoics. The conventional order, *vócos*, the State, was never really the true home of the sage who desired to be perfect and therefore happy. Happiness lay 'in understanding and accepting the world-order,' not in average honesty or public life in a small city. It was, then, directly dependent upon knowledge, as wide as that postulated by Plato in his 'Idea of Good.' Upon this Epicurus, the anti-teleologist, insists as strongly as the rest; his last advice was 'to remember the *dogmata*,' which explained the physical world by science. The Atomic theory, which put accident above providence, had existed from early times as a heresy defying the orthodox belief in a rational world-order. But, if the axioms of Democritus and Epicurus sound startlingly unlike the rest, there is substantive agreement in actual life and in their portrait of the wise and happy man; he, too, 'understood and accepted' the world-order, by taking his proper place in it; and, it need scarcely be said, even this accidental system assumed a half-personal look. Nature was even deified in Lucretius (q.v.), to the loss of all logic and consistency, and to the gain of that moral union and earnestness without which ethical theory is dry bones.

3. Happiness in knowledge of Nature or the world-order (*εὐδαιμονία κατὰ λόγον*).—Happiness therefore lay merely in living according to Nature, in finding the wider law which was higher and more impious than the customs of a city, or the edict of a tyrant. Except some sophist, perhaps, in empty theory, or Aristippus for a short time, none believed that the individual could stand alone, or be safe in following impulse and running counter to convention. There has never been much disagreement in the whole of history on the virtues, on what makes a 'gentleman,' and the like; the indecency of the Cynic was reprobated by all, and Epicurus soon turned aside from pleasures to find a unique satisfaction in the simple life, in a temper permanently cheerful. But the sanction demanded was from the Universe itself, not from any local or partial authority; the happy wise man was the cosmopolitan. And here we meet two questions: Does Nature, after all, recognize the goodness and respect the happiness of the 'sage'? And, if not, is the consciousness of duty done and right defended at the cost of life sufficient for happiness? It is clear that these doubts were at the root of the movement which gave a welcome to Christianity, turned the self-poised independence of the Stoic into pious resignation to the Heavenly will, and brought back in countless forms the cult of various tutelary beings.

4. Virtue to be self-sufficient or found in union with God.—When the Porch became a practical guide instead of an academic paradox, men like Posidonius and Panætius had to come to terms with average men; like Aristotle and the Peripatetics, they postulated for happiness not bare virtue but a moderate equipment of external goods. Where Zeus had shut the door on everything but the 'good will,' they let in the (uncertain) elements (Diog. Laert. vii. 65) of health, competence, and strength. So Adam Smith admits as constituents of happiness health, a good conscience,

and freedom from debt; Lucian makes equally merry over those who demand a good deal from the world and fortune and those who pretend to despise any such alliances and to deem virtue self-sufficient. With the collapse of the city-State system, the correspondence between merit and receipt was disputed and explicitly denied. The Stoics, professing to 'rationalize' the world-order (see Busell, *The School of Plato*, 1898, *Marcus Aurelius*, 1900), ended in pronouncing it unknowable and incommensurable with man's specific ideals of right and wrong. They still adhered to the axiom that the *Logos* spoke in everything; the cruelty of lion and tyrant was quite in place, like death or disease; but there was no real interrelation between these several units, each displaying its nature. The sage could help feeling dissatisfied only by stealing his heart with a few maxims to be kept ready against doubt. Nature, whether as the actual system around us or as its ideal perfection conceived by the thinker, made no allowance for the virtues of the good; the world lay in the 'Evil One,' as St. John said (1 Jn 5th), or, as Seneca preferred to say, under Fortune. *Flights from the world*, instead of the Platonic attempts to embody the ideas in the actual, became the text. The self-sufficiency of virtue was an article of faith, because it was the last and only certain possession of the wise man (*ὅτι καὶ ἀνέφερον*), and he could not stoop to make terms with an alien and immoral power. Hence pious resignation and religious prayerfulness and ecstasy, or self-love, became the distinguishing marks of the School which ended all free development of the classical mind. It was a quite legitimate evolution: it is needless to suppose a conscious borrowing from Eastern sources; and there is nothing explicit in the final form which was not implicit in the earliest utterances of Greek wisdom. Every school prepossessed with the belief that the soul is prior to and alien from the body rejected any sort of external aid. The modern aim, to improve by better environment and early physical and mental training, would have been abhorrent. The old self-reliance was gone, and only in surrender to a divine order or to a tutelary god, as with Apuleius, were safety and happiness to be found.

II. DETAILS.—1. All Greek philosophy sought the permanent in the fleeting and changeable; and, in human life emerging into self-consciousness and purposive intent, called the end *eudaimonia*, from which pure subjective feeling and impulse was ruled out as self-defeating. All schools were agreed (as soon as the question was once posed) that (a) well-being is the aim of all effort and all inquiry; and (b) wisdom, or knowledge of the good, can alone give security and guidance; that (c) 'none can sin against the light' or his own good if he knows it; that (d) ethical conduct, already personal and un-social, is a pure matter of insight; and that (e) to know good is to follow it, and to attain it is the highest happiness or satisfaction known to man.

2. It is noteworthy that no Greek school placed the ideal of perfection (and, therefore, of happiness) in active social service; the end was always self-realization, and everything was regarded from the individual's standpoint, though the subject was conceived objectively; the very frequency of classical protest that 'man is a social being' bears witness to their profound doubts on the subject.

3. Side by side with a purely rational, non-transcendental belief in virtue as self-poised independence and consistency, went from the first a vein of mysticism which issued, as we saw, in the pietism and resignation of the Roman age. Man, to be truly himself, must 'live the life of the gods,' however conceived—from the crude demology of Empedocles and perhaps of Heraclitus to the Aris-

totellian text *ἐπὶ τῷ ἑαυτοῦ ἀποκρίσει* and the curious paradox *καὶ ἑαυτοῦ*, while *καὶ* is at the same time God Himself.

4. Roman 'virtue' was very early conscious that reflection was dangerous to the ethics of custom, the traditions of a proud ruling class, inured to hardship and State-service, with no keen desire to distinguish private from public life. The Senate expelled the philosophers, as they expelled the Bacchanals—both symptoms of unruly or sceptical subjectivity. They had all Hegel's distrust of the man who sets up his ideal of perfection (*Moralität*) against the slow-growing fabric of social convention (*Sittlichkeit*). Both in religion and in ethics they were content to follow their fathers. How subversive reflection might prove is seen in Cicero. Where he is perhaps most original and sincere, he is still, of course, under heavy debt to his Greek master; but he speaks with conviction in the *Somnium Scipionis*, when he makes politics and State-service not an end in itself but a means to future blessedness—a hard but divinely appointed condition and discipline, work in the vineyard in the burden and heat of the day. When Rome was overrun by rich men and cosmopolitans, when tribal and ancestral sanctions broke down, no guide for conduct was left except private sectarian religion, and, in practical matters, obedience to law issued by an autocrat.

III. SUMMARY.—We may sum up the doctrine and practice of the ancient Greeks thus: happiness or well-being as the avowed object of our human activity is *dupfold*—higher and lower, positive and negative. Man is the 'instrument of a Divine reason'; but, owing to the complex and accidental character of his body, he is hindered in the pursuit of goodness and truth. The first stage is, therefore, to order the passions. Plato saw happiness to consist in a harmony between the three parts of the soul (reason, spirit, and appetite); Aristotle was equally clear that moral virtue (or human excellence) involves a control of those desires, of that which all thinkers and teachers have called 'our lower nature.' Above this negative victory over the disorderly elements in our self, which gave a certain domestic peace, was a far higher realm of trust happiness. Every one is familiar with Plato's portraits of the soul, freed from earth and senses and communing in heaven with eternal forms. Aristotle only gave definite shape and object to this ideal yearning. However far he diverged from Platonic supernaturalism, he never swerved from the doctrine of highest happiness in contemplation alone. He passed from the doctetic and mystical stage of his Eudæmonia (quoting Silenus' maxims, 'Best of all not to be born,' and calling death 'going home'), from the devout theological attitude of the *Eudæmonia Ethica*, to a cooler tone in his praise of *θεωρία*, and of a god who is the last term in science rather than in religion; to a far more sympathetic attitude to the actual world of men and things. But, though he changed the highest ideal from devotion to inquiry, he always placed happiness in intellect, saw in social life a *δυστυχία*. In his admiration for virtue, as excellence won by endeavour, he was quite as sincere as Kant in his reverence for Duty: witness his poem, 'Ἀρετὴν πολέμοιο καὶ πόλεος ἀρετὴν | ὁρῶμεν ἀλλὰ καὶ πόλεος'; but, as with an absolutist like Bradley, this dualism and striving denoted an imperfect sphere, and had to be transcended by that which alone gave freedom—science. He believed the best to be within the grasp of a few only whom Fortune had equipped with competence, health, and leisure. In his Platonizing Protreptic, he calls worldly goods (strength, beauty, and honours) mere emblems or shadow-pictures (*εἰκαστικά*); and compares the soul in the body to a living prisoner yoked with a corpse. How far

he transcended the ascetic dualism of principles is known to every reader of the *de Anima*. Quite clear is the negative (or cathartic) character of moral as distinct from intellectual 'virtue'; it prepares the way for the chief good, but is not to be identified with it. Aristotle reverences Eudæmonia, *ὁ δὲ μέγας καὶ ὁ μικρὸς ἀρετῶν ἀντικείμενος ἀπαιτεῖται*; *ἐκείνῳ* καὶ *ἡμῶν* καὶ *πολλοῦ καὶ ὀλίγου* | *ἐκείνῳ* καὶ *ἡμῶν* καὶ *πολλοῦ καὶ ὀλίγου* | *ἐκείνῳ* καὶ *ἡμῶν* καὶ *πολλοῦ καὶ ὀλίγου*. In his earlier and more devout phase, this happiness was a divine gift or recompense; later, the sage became independent and worked out his own salvation; only afterwards did the precarious tenure and uncertain title come to light, throwing a man back on his own inner resources and reviving the old Platonic asceticism. Peripateticism was throughout a compromise with the worldly and social spirit. Aristotle was quite sincere, for instance, in holding that human good is specific and attainable in this life by an activity of the soul, not needing a comprehensive knowledge of the universal good which is in Plato supernatural. But how imperfect and provisional is his portrait of the natural man, and with what anxiety he speaks of the highest life of God and of man! For the average man in the world neither Aristotle nor his school gave any real guidance in the management of conduct or the pursuit of happiness. When Theophrastus stoutly defended the value of external good (leisure, security, and affluence), he was speaking on behalf of a privileged aristocracy, the elite of wisdom.

The weakness, then, of ethical appeal in the Greek world was due to (1) the small number who could reach the ideal; (2) the ascetic and transcendental character of the happiness promised to them; (3) the increasing sense of the instability of fortune, the submerged props on which rested that joy which should be man's surest and most unchanging possession; (4) the confusion of moral and intellectual good (to the detriment of the former), and the permanent entanglement of right action with 'knowledge of the good.' Impulse and custom still regulated the life of ordinary man. Philosophers taught no striking novelties in ethics, and merely laid stress on a negative goodness, aloof and remote, which could have no public influence. The lower happiness was allowed by Plato in the *Republic* to those who implicitly obeyed authority; it was clear that they were outside the pale of truly reasonable beings, of those who thought for themselves. This (socialist) belief, that happiness for the mass can come by regimentation from above, prevented the spread of private judgment or any sense of responsibility. The Hellenic conception of happiness gave way, therefore, before the new religious personal faith of which Christianity was the chief, but by no means the only, symptom; and it was the belief in 'regimentation' that helped to arm the Roman Emperor with such ample powers.

HARDENING.—See PREDESTINATION, and cf. the artt. ELECTION, FREE WILL, LIBERTARIANISM AND NECESSITARIANISM.

HARDWAR.—An ancient historical town, and one of the most famous places of pilgrimage in N. India; situated on the right bank of the Ganges, close to the point at which the river debouches into the plains through a gorge of the Siwalik or sub-Himalayan range; lat. 28° 30' N.; long. 76° 10' E. It is claimed as a sacred site by the

followers of the two great Hindu sects, the followers of Śiva giving the name as *Haridvāra* ('gate of Hara,' or Śiva, the destroyer), those of Viṣṇu calling it *Haridvāra*, after Hari, 'the tawny one,' a title of Viṣṇu Kṛpā. The place was also at one time known as *Kapila*, after the saint Kapila Muni, the scene of whose devotions and austerities at the Śaiva shrine of Kapileśvara, 'Lord of Kapila,' is shown at Kapilāsthana in the hills adjoining Haridvār (Atkinson, *Himalayan Gazetteer*, Allahabad, 1884, ii. 308). Hsien Tsiang, the greatest of the Chinese Buddhist pilgrims (A.D. 639-645), visited a place called Mo-yu-lo, or Mayūra, which Cunningham identifies with the neighbouring village of Māyāpur, which now forms part of the sacred town. But the distances from fixed points do not agree, and this identification, like others made by the same archaeologist, which necessitate a revision of the Chinese text, must be accepted with caution (S. Julien, *Flourens Tsiang*, Paris, 1881, ii. 330; Boal, *Si-yu-ki*, London, 1900, i. 197 f.; Cunningham, *Arch. Rep.* ii. [1871] 231). Hsien Tsiang calls the Ganges at this point *mañdhārā*, 'very propitious'; and even in his time vast numbers of pilgrims used to bathe in the sacred stream. It seems also to have been the scene of a cult of Buddha, because, among the broken sculptures at the Nārāyaṇaśāla or Nārāyaṇaśāli temple, Cunningham identifies one small figure of Buddha the ascetic, surrounded by smaller images of ascetic attendants. Doubtless this is only one survival above ground of many images of the Master. Hsien Tsiang speaks also of a neighbouring site, known as Gaṅgādvāra, 'gate of the Ganges'; and here undoubtedly a cult of the river-goddess prevailed from a very early period.

'There is mention,' says Cunningham (*loc. cit.*), 'of Haridvāra, which, indeed, would seem to have risen on the dream of Mayāpur. Both Abū Rihān and Rashid-ud-dīn mention only Gaṅgādvāra [Eliot, *Hist. of India*, London, 1887-77, i. 26]. Kaḍḍa also in his *Maḥābhārata* says nothing of Haridvāra, although he mentions Kankhal; but, as his contemporary, Amaraśiṅga, gives Viṣṇupāṇḍi as one of the synonyms of the Ganges, it is certain that the legend of its rise from Viṣṇu's foot is as old as the 5th century. I later, however, that the temple of the Viṣṇupāṇḍi has been crushed down to the time of Abū Rihān. The first allusion to it of which I am aware is by Shari-ud-dīn, the historian of Timūr, who says that the Ganges issues from the hills by the gate of Coompa, which I take to be the same as Kāṭ-pāṇḍi, or "the hill of the foot" of Viṣṇu.'

At any rate, the place was well known in the time of Akbar, because Abū Ṭ-Ṭāṭ speaks of 'Māyā, known as Haridvāra' on the Ganges. It is held sacred for 18 *has* in length (about 97 miles). Large numbers of pilgrims assemble on the 10th of Chaitra (March-April) (*Asiatick*, tr. Blochmann and Jarrett, Calcutta, 1873-84, iii. 280).

Both Śaiva and Vaiṣṇava sectaries are thus agreed upon the sanctity of this place. In fact, as is generally the case in India, the most famous sacred places are those whose sanctity dates from a period antecedent to the rise of the present religions. Haridvār, as the place where the great river issues from the hills, was naturally regarded as sacred from the very earliest times, and thus became a fitting abode of the deities who in succession acquired the devotion of the people. The first was the river-goddess; then Buddha; then the Hindu gods of the later period. Besides this, in the *Maḥābhārata* we have a hint that a serpent-cult prevailed. Arjuna, one of the Pāṇḍava princes, is said to have come here to bathe, and met Ulāpi, daughter of the Nāga king, who besought him to marry her (*Maḥābh.* i. 214). Both Śaivas and Vaiṣṇavas rest their belief in the holiness of the place on rival legends describing the birth of the river. The former allege that the river springs from Kailāsa, the paradise of Śiva; the latter, that it falls from the toe of Viṣṇu—in support of

which they point to the impression of the footprints of the god, the *Harī Ad charaṇa*, or *Harī Ad pāṇḍi*, which they display to pilgrims. The *Vaṣṇu Purāṇa* tells of the holiness of the place as follows:

'The effluents of any man who bathes in this river are immediately expiated, and unprecedented virtues are engendered. Its waters, offered by sons to their ancestors, in faith, for three years, yield to the latter rarely attainable gratification. Men of the twice-born orders who offer sacrifices in this river to the lord of sacrifices, Parameśvara (Viṣṇu-Kṛpā) obtain whatever they desire, either here or in heaven. Saints who are purified from all evil by bathing in its waters, and whose minds are intent on *Ekāgrā* ("the long-haired one," Viṣṇu-Kṛpā), acquire thereby final liberation. This sacred stream, heard of, desired, seen, touched, bathed in, or hymned, day by day, sacrifices all beings; and those who, even at a distance of a hundred leagues, exclaim, "Gaṅgā! Gaṅgā!" attain for the sin committed during three previous lives. The place whence this river proceeds, for the purification of the three worlds, is the third division of the celestial region, the east of Viṣṇu' (tr. Wilson, London, 1880-77, ii. 271 f.).

A remarkable legend, told in connexion with Kankhal, a town close to Haridvār, has been interpreted to represent a conflict between the rival cults of Viṣṇu and Śiva, in which first the former, but finally the latter, acquired the ascendancy. The story as told in the *Purāṇas* (Wilson, *Viṣṇu Purāṇa*, i. 120 f.; Dowson, *Classical Dict. of Hindu Mythology*, London, 1879, p. 76 f.) relates that Dakṣa made a great sacrifice here, and invited all the gods except Śiva. But his consort, Sati or Umā, jealous for the honour of her lord, induced him to create a monster, Virabhadra, who was ordered to mar the sacrifice. Accompanied by the terrible goddess Rudrakālī and her train, Virabhadra attacked the assembled gods, with the result that Yama, god of death, had his staff broken, and Sarasvatī, goddess of learning, and the Mātṛī, or mother-goddesses, had their noses cut off. Yajña, lord of sacrifice, was decapitated, and he now forms the constellation Mrigāśira, the antelope's head. A variant of the tale makes Sati in her wrath destroy herself on the scene of sacrifice by leaping into the sacrificial fire. An ancient temple, dedicated to Śiva as *Dakṣa-deva*, 'Lord of Dakṣa,' marks the scene of the tragedy.

Haridvār, from its vicinity to Delhi, naturally attracted the attention of the Muhammadans; and Timūr, in his *Memoirs* (Eliot, *Hist. of India*, iii. 488 f.), describes a terrible massacre of Hindus in the neighbourhood. In the course of this and later raids the ancient temples were probably destroyed. The present town and the ruins of Māyāpur, to the sanctity of which it seems to have succeeded, lie on the right bank of the river, which is here divided into several channels. One of these, which now possesses the greatest sanctity, flows past the town, and from it the Ganges Canal is supplied. The Brāhmanas at the time of its construction declared that the waters of the holy river would never enter the canal or serve the utilitarian purposes of irrigation. The prediction was not fulfilled, and the benefits resulting from the project have induced the Brāhmanas to accept the inevitable.

Cunningham supposes that he has identified the remains of the older sacred town, *Māyāpur*, 'city of illusion'; and this site contains three old temples. That of Māyā Devī he believes to date from the 10th or 11th cent. A.D. The principal image is a three-headed and four-handed deity, which is probably Durgā. Close by is a nude male image which probably belongs to the Jain sect. In Haridvār itself all the temples are modern, and none of them displays any architectural beauty. The chief shrine is the Gaṅgādvāra, or 'gate of the Ganges,' near the present sacred bathing-place. This temple is small, and the idol, dressed in tawdry robes, is surrounded by a number of attendant images of other gods. The

original stone marked with the footprints of Viṣṇu is said to have disappeared under water some time ago; but a substitute has been provided.

The bathing steps have been the scene of more than one tragedy. In 1819, in the early days of British rule, before the method of regulating these enormous gatherings of pilgrims had been discovered, the rush of bathers was so great that no fewer than 430 lives were lost. These dangers have now been removed by widening the steps and regulating the numbers which enter the sacred pool. The chief risk at these crowded fairs is an outbreak of infectious disease. In 1892 a sudden epidemic of cholera made it necessary to disperse the pilgrims before the end of the fair. This led to much local agitation, and an inquiry was held, the result of which was that the charges made against the officials were found to be without foundation. The pilgrim priests (*pandita*) are an ignorant, extortionate class. It was only a selfish regard for their own interests that led to this agitation, and at a later period they were active opponents of the plague regulations enforced by the Government. The chief fair occurs when the sun enters Aries. Every twelfth year, when Jupiter is in the sign Aquarius, the Kumbh Mela (*Sk. Kumbla, Aquarius*), a specially large fair, takes place. Hardwicke estimated the attendance in 1798 at 2½ millions; Raper in 1808 at 2 millions. In more recent years the attendance has diminished, chiefly because railway facilities allow of pilgrimage throughout the year, and local devotees are able to visit other and more distant holy places. The fair has sometimes been the scene of conflicts between rival bodies of ascetics. In 1760 a fierce battle occurred between the Bairagi or Vaiṣṇava ascetics and the Goṣāṇi, or followers of Śiva, in which the former were defeated, with a loss, it is said, of some 1800 lives. After the close of the Hardwar fair some pilgrims make their way by the difficult route to the Himalayan shrines of Kedarnāth and Badarināth (q.v.).

LEWISMAN.—The above account is largely based on personal observation. The report by Cunningham (*Arch. Rep.* ii. [1871] 391 f.) is valuable, and has been to some extent corroborated by A. Führer in his *Reconnaissance Antiquities and Inscriptions*, Allahabad, 1891, p. 161. Early accounts are those of T. Bacon, *First Impressions . . . in Hindostan*, London, 1694, ii. 191 f.; T. Sclater, *Excursions in India*, do. 1853, i. 133 f., 150 f. Some of the temples and images are illustrated in W. Crooke, *PBS*, London, 1894.

HARIM, HARIM.—See WOMAN (Muslim).

HARISCHANDIS.—The Harischandis are a sect of Indian Vaiṣṇava ascetics. Their name is derived from that of an ancient king entitled Harischandra, who is said to have lived in the *Treta Yuga*, or Silver Age. Many legends are recorded concerning him. In the *Atareya Brāhmaṇas* (vii. 13-18) it is told how he purchased Sunahsepa to be offered in vicarious sacrifice instead of his own son.¹ This is the oldest reference to him. In later literature he is best known for his piety and his sufferings. He was a sort of Indian Job, who passed through innumerable and undeserved woes, and had to sell even his wife and child in order to pay the dues of the rapacious saint Viśvāmitra. He finally sank to be the servant of a Dama, his duties being to collect the clothes that covered the corpses at the Benares place of cremation, and to deliver them to his master. At the climax of his sufferings in this degrading occupation, he had to steal the clothes from the corpse of his own son, which was brought thither for cremation by his mother, Harischandra's long-parted wife. The parents resolved to end their sorrows by dying on the son's funeral pyre. The

¹ Cf. Max Müller, *Hist. of Anc. Soc. Literature*, London, 1898, p. 498 f.

gods then intervened. His Dama master, who was really the god Dharma, or Virtue, taking human form on purpose to test Harischandra's sense of duty, expressed himself satisfied. Harischandra and his wife were translated to heaven, and his son was re-animated and restored to his kingdom, where he reigned in his father's stead. The whole story is told with much pathos in the seventh and following chapters of the *Mārkaṇḍeya Purāṇa*,¹ and is a favourite subject of modern vernacular literature.

The Harischandis are nearly all of very low caste, mostly Dama. They claim to practise the tenets handed down to them from Harischandra's Dama master, who was taught piety by his servant in the intervals of his employment. They worship Viṣṇu as the Creator of the universe; and, if they have any other definite doctrines, they are those of the *Bhakti-mārga* (see *EEF* ii. 539 f.).

HARMONY SOCIETY.—See COMMUNISTIC SOCIETIES, vol. iii. p. 780 f.

HARPIES.—Rarely does a mythological figure express so unmistakably its nature by its name. The Harpies are *Ἀπέρυαι*, 'Snatchers,' creatures of rapine, and rapidity. On a black-figured vase in the Berlin Museum (Cat. 1693, *Arch. Zeitung*, 1892, pl. 9) two Harpies are figured, and against them their name in the dual, *Ἀπέρυαι*, 'the two Snatchers' (see fig. 1). From this vase we are certain that in the 6th cent. B.C. the Greeks conceived of the Harpy as a winged daemon of human female form. The vase is of special interest because, though the two winged figures are inscribed as 'Harpies,' the scene of which they form part is the slaying of Medusa. This shows that Harpies were apt to be confused with another type of monster, the Gorgon. The Gorgon is always differentiated from the Harpy by the mask-like face with snakes and protruding tongue (see GORGON), but the Gorgon is sometimes figured in Greek art as performing the functions of a Harpy, i.e. snatching away human beings.

The function of the Harpies as Snatchers comes out clearly in Homer (*Od.* xx. 77 f.):

*ἔδραον δὲ τὰς ἀνέρας Ἀπέρυαι ἀνελκόμεναι,
καὶ τὴν ἑσπερίαν ἑστέρην ἀνελκόμεναι.*

Penelope is telling the old Lycian story of how the daughters of Pandareos waited in their father's hall while Aphrodite planned for them in Olympus a goodly marriage; but they never came to marriageable age, for

¹ Sometimes the Snatchers snatched away the milk, and gave them o'er

To the hateful ones, the Brinyes, to serve them evermore.

The Harpies here are little more than ministers of untimely death; they are only half-way towards impersonation; and to give them a capital letter is really to crystallise their personality prematurely. It must always be remembered that to the Greek, even when the Harpies became fully personified, their name carried its adjectival sense of 'snatchers' in a way lost to us.

To Homer, in the passage cited, they are death-demons near akin to the Erinyes, the angry ghosts. But here, as so often, Homer has moved somewhat away from primitive conceptions, of which, however, in this very passage he betrays a haunting remembrance. The Snatchers were originally not death-demons but simply winds. Penelope, just before the passage cited, prays in her desolation that the 'storm' (*θύελλα*) may 'snatch her away'

¹ F. Pargiter's tr., p. 212. The story also occurs in the *Pandya Purāṇa*.

(ἀναιδέα), just as the 'storm-winds' (θόελλαι) snatched away the daughters of Pandareos:

οἱ δ' ἐνὶ Πάρκῃσι κείναις ἀναιδέα θόελλαι. (Od. xx. 60).

Clearly the Harpies are equated with the storm-winds. It is only incidentally as Snatchers that they perform the functions of death-demons.

cylix (fig. 2) in the Würzburg Museum (Inv. 354). Phineus, to the right, reclines at his banquet, attended by the women of his family, one of whom holds a large flower in token of plenty and fertility. The Harpies, the sirocco-snatchers, have been at their work fouling the feast, but for the last time

FIG. 1. Painting on Berlin vase.

As winds the Harpies have a double function: they not only snatch away to destruction; they give life. Homer (*Il.* xvi. 150) tells us that a Harpy, Podarge ('Swift-foot'), was the mother of the horses of Achilles by Zephyros the West Wind. Both parents are winds; but, as was natural in a mare-breeding country, the Harpy was conceived of not as a woman, but as the creature who was swiftness embodied—a fleet horse. The notion that winds could impregnate was wide-spread in antiquity. Vergil (*Georg.* iii. 274 f.) says of mares: '... mæpe sine ullis conjugis vento gravidæ, mirabile dictu.' The winds are breaths and souls (πνεύματα); and, when breezes are spoken of as 'life-begetting' (ζωογόνες) and 'soul-rearing' (ψυχροτρόφοι), this was not to the ancients a mere metaphor. Winds, says the author of the *Geoponica* (ix. 3), 'give life not only to plants but to all things.'

It depends, however, on what quarter of the world one lives in which wind will be beneficent

they are chased away seawards by the two sons of Boreas the clean North Wind, Zetes ('Life Blower') and Kalais ('Fair Prosperity'). North Winds (beneficent) and South Winds (maleficent) have alike four great curved wings. The sea towards which the North Winds are blowing—the topography is Thracian—is clearly indicated by dolphins. No one who has felt the blight of a sirocco will fail to understand the pestilential wind-demons.

Unquestionably in the nature and function of the Harpy the maleficent element prevailed. For this reason 'Harpy-tomb' is probably a misnomer for the famous monument in the British Museum. The bird-demons figured on it are too gentle in nature. At the same time it must be remembered that the monument comes from Lycia, the home of the myth of the daughters of Pandareos and the 'Snatchers.'

LITERATURE.—Roemer, s.o. 'Harpyia'; Cecil Smith, 'Harpies in Greek Art,' in *JHS* xiii. (1922-23) 108 (esp. for the vase)

FIG. 2. Würzburg cylix.

and which maleficent. The principal myth in which the Harpies are concerned was a Thracian one—that of the feast of Phineus; and here the Harpies clearly stand for pestilential winds which come from the South—in a word, for the sirocco, which blights man, beast, and vegetation. The feast of Phineus is clearly depicted on the famous

question of the 'Harpy-tomb' and for the interpretation of the Cyrene cup with supposed figures of Harpies); J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, pp. 176-225 (on the almost inextricable confusion between Keres, Gorgons, Harpies, and Sirens, and for the various art-monuments). Among the modern Greeks some functions of the Harpies, but not their name, are exercised by the Nereids (q.v.); but, as the Nereids perform all the functions of Nymphs in general, to discuss them here would only cause confusion.

For Herodotus as active in whitewash, see J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion*, Cambridge, 1910, p. 165.

HARRANIANS.—The Harranians were a Syrian religious community named after their headquarters, Harrān (the Haran of the OT, and Carrhae of the classical geographers). The first mention of them as a sect seems to be in the *Chronicle of Dionysius of Tell-Mahré* (ed. Chabot, Paris, 1893, p. 80), composed about A.D. 840; he confuses them with the Manichaeans, and records an occurrence of the year 764 in which they were concerned. Owing to the fame acquired by various professional men and writers belonging to this community, they attracted the attention of Muslim authors, who composed numerous monographs about them and their tenets. Some of these are preserved, at any rate in part, in the *Fihrist*, or Bibliography, of Ibn al-Nadīm, composed A.H. 377 (A.D. 987); and accounts of them are given in the *Murāj al-Dhakhāb* of Mas'ūdī, composed A.H. 332 (A.D. 943), and in his later work, the *Tanbih*, composed A.H. 345 (A.D. 956). Much is also heard about them in the 6th cent. of Islām, especially in the treatise on Sects by Shahrastānī († A.H. 548 [A.D. 1153]) and the 'Guide of the Perplexed' of Moses Maimonides († A.H. 601 [A.D. 1204]). The community seems to have disappeared during the devastation of Mesopotamia by the Mongols in the 7th cent. of Islām.

Islamic writers usually call them Sabians (*Ṣābi'ān*)—a name which occurs in the Qur'ān, where those who bear it are treated with some respect; and, according to some of the Muslim authorities, the Harranians adopted it in A.H. 218 (A.D. 833), in order to obtain recognition as a tolerated cult. The name itself, it is thought, really belonged to quite a different community, viz. the Mandaeans. This account of the appellation, which was first enunciated by Chwolsohn in his monumental treatise on the *Sandier* (St. Petersburg, 1856), has ordinarily been accepted; but it is not free from difficulty, for Tabari († A.H. 310 [A.D. 923]), in his Commentary on the Qur'ān (i. 943, Cairo, 1321), after Yūsuf b. 'Abd al-'Ala († 304 [877]) after Abdallah b. Wahb († 197 [812]) after Usmān b. Zaid († 153 [770]), locates the *Ṣābi'ān* in the Jazīrah of Manṣūr, which, though somewhat vague, is a correct location of Harrān, but would not suit the Mandaeans. If these authorities are correctly given, the connexion between Harrān and the *Ṣābi'ān* must have been three-quarters of a century earlier than the date given in the *Fihrist*; and the earliest geographer Iṣṭakhri (c. A.H. 300 [A.D. 912]) mentions Harrān as the city of the *Ṣābi'ān* (p. 76, ed. de Goeje, 1870), without any suspicion that the connexion was less than a century old. 'There,' he says, 'are their seventeen secretaries (*sadana*).' Neither of these authorities was accessible to Chwolsohn. Further, it would appear from good traditions that the followers of Muḥammad were known by their enemies, and even to some extent among themselves, as *Ṣābi'ān*, and this seems to bear some relation to the title which Muḥammad connects with Abraham, *Ḥanīf*, and which he gave his own community. For Christian writers frequently speak of the Harranians as pagans, *Ḥanāf*, and Abraham is connected with the city of Harrān in A.C. 7th rather more decidedly than in the narrative of Genesis. The controversial but decidedly learned writer, Ibn Ḥazm († 456 [1063]), in his *Faṣl wa-Mad* (Cairo, 1817, I. 36), has no hesitation in identifying the Harranians with the *Ṣābi'ān* of the Qur'ān, and supposes that Abraham was sent to convert them, and that during his time they took the name *Ḥanīf*. According to him, they believe,

like the Mandaeans, in two eternal elements; they honour the seven planets and the twelve constellations, and paint them in their temples; they offer sacrifices and incense; but they have five prayers similar to the Muslim ceremony, they fast in Ramaḍān, turn to the Ka'ba in prayer, and regard the same meats as unlawful as are so regarded by the Muslims; their religion was then identical with that afterwards restored by Muḥammad, except that they had introduced the worship of the stars and of idols, which Abraham endeavoured ineffectively to abolish.

Although this account has many inaccuracies of detail, it is confirmed in some important matters by the others; and it seems to solve one of the puzzles of Islamic history, viz. the adoption by Muḥammad of the name *Ḥanīf*, while he himself was called *ṣābi'* by his contemporaries. But this would imply that the latter name was used either by or for this community in his time, whence we should suppose that the story adopted by Chwolsohn was a fiction invented by its enemies—a supposition which is by no means unlikely. The origin of the appellation *Ṣābi'ān* is obscure. Tabari in his history (i. 178) derives it from one *Ṣābi'*, a son of Methuselah, but in his Commentary (i. 943), like the lexicographers, he supposes it to come from a verb *ṣāba'a*, 'he changed his religion,' which appears to be an inference from the application of the name to Muḥammad and his followers. A rather better etymology seems to be that put into the mouth of a *Ṣābi'ān* by Shahrastānī (p. 203), from *ṣāda*, 'to desire,' since that verb is also found in Syriac, and would have an exact analogue in the name *maṣūdān*, 'aspirants after the knowledge of God,' which is taken by Ṣāfi novices, and has even been used as the title of a sect.

The accounts of the Harranian system preserved by the Muslims purport to come either from members of the sect with whom the authors came in contact, or from Arabic translations of their sacred books. One of the latter was made by order of a *qādī* of Harrān, and, according to the author of the *Fihrist*, was widely read; of another, called the 'Book of the Five Mysteries,' he had some across a mutilated copy. A Harranian calendar was composed by Abū Sa'īd Wahb b. Ibrāhīm, the Christian contemporary of Ibn al-Nadīm, who gives it in *extenso*; and another is embodied by al-Bīrūnī in his *Chronology of ancient Nations* (A.H. 300 [A.D. 900], tr. Sachau, London, 1879, pp. 314–330). The *Fihrist* also embodies a list of Harranian gods, and some other matter of an analogous kind. A magical treatise called *Qaḥṣat al-Ḥakīm*, of about A.H. 440 (A.D. 1048), also contains what is ostensibly a lengthy extract from a *Ṣābi'ān* book. Finally, Shahrastānī reproduces a lengthy dialogue between the *Ṣābi'ān* and the *Ḥanīf*.

From a comparison of these documents, Chwolsohn inferred that the Harranians were, as the Christians called them, pagans, i.e. a community who had retained a mixture of Babylonian and Hellenistic religion, over which there had been superimposed a coating of Neo-Platonic philosophy (chiefly among the educated), while certain features had also been adopted from one of the monotheistic cults, possibly through the influence of the surrounding Muslims. This view perhaps harmonizes the evidence before us as well as it is possible to harmonize it; yet the Muslim authors seem to call attention with justice to certain features which *Ṣābi'ān* shares with Islām, especially three daily prayers measured by inclinations and prostrations, which imply that they were a real sect, i.e. followers of a system founded by some person or persons, rather than that their worship was a survival modified by unconscious syncretism. The 'prophets'

whom they professed to follow were Hermes and Agathodæmon, whom they identified in Shahrastāni's time with Seth and Idris (Enoch); these names appear to belong to the Hermetic period of Hellenic religion (G. Murray, *Four Stages in Greek Religion*, 1912, p. 95).

Of the documents mentioned above, the most authentic appears to be the list of gods, which, however, is so seriously corrupted or mistranslated that little can be made of it; in another account the Harranians are said to sacrifice to the gods of the seven week-days, whose names are partly Babylonian, partly Greek. To these the sacrificial calendar adds 'demons, jinn, spirits, the god of the jinn, the lord of the hour, the god who makes arrows fly; the god Tawris (or Tammuz), who was slain by his master, who then ground his bones in a mill, and scattered them to the winds; Haman the prince, father of the gods, the prince of the jinn, the greatest god, the god North, the lord of fortune,' etc. The account of their sacrifices contains much that is incredible; the sacrificial animals were, according to it, in many cases burned alive; and on one day they would sacrifice a child, whose flesh was thoroughly boiled and made into cakes, which were then eaten by a certain class of the worshippers. On a particular day they prayed for the destruction of the Mosque of Harrān, the Christian Church, and the Women's Market; to be followed by the restoration of their kingdom. It seems clear that the calendar is the work of an enemy of the sect. The story, however, of the human sacrifice appears to have been brought up as frequently as the modern accusation of the same kind against the Jews. Dionysius (*loc. cit.*) asserts that they annually entrapped a victim, whom, after keeping for a year, they decapitated with a view to dividing by his head; and this story is separately told in the *Fihrist*, where, in lieu of decapitation, they are said to have boiled the body so long that the head came off. The victim, according to this account, was a person who displayed 'mercurial' qualities, which are explained in the *Chahar al-Hakim*. In the story of Dionysius, one of their victims succeeded in escaping and invoking the Muslim authorities, who severely fined the delinquents; we may, however, be sure that the practices described in this calendar would never have been tolerated by the Muslim rulers. Al-Birānī's calendar agrees in some respects with that of the *Fihrist*, but contains many more names. The chief accounts agree in making the Harranians pray towards the north, and fast for thirty days, distributed between December, February, and March. They had a law of purity resembling in several respects that of the Jews, and they had a table of unlawful meats, wrongly identified by Ibn Hazzam with that of the Qur'an, since they tabooed the camel.

Most of the accounts make star-worship a chief characteristic of the Sabi'an system, and in the magical treatise published by Dozy they are credited with an elaborate astrological theology. As, however, the author gives reasons why no Sabi'an can ever divulge the mysteries of his faith, the authenticity of this document is self-condemned. The 'Book of the Five Mysteries,' from which extracts are reproduced by the author of the *Fihrist*, appears to be a service-book, in which there are verses and responses repeated by the *hakim* (priest) and a congregation of youths, apparently identified with the *bugaddi* (an uncertain word, which may be Persian). The matter of this service-book is so poor that the author of the *Fihrist* suggests that the translator was either a bad scholar or translated too literally.

Ma'adī and Shahrastāni treat the Sabi'ans as philosophers rather than as pagans; besides temples

to the planets, which, according to Ma'adī, were in a variety of geometrical figures, they had temples of the First Cause and the Reason, of the Chain, Matter, and the Soul. In Ma'adī's time only one temple remained—that of *aydāy šed*, 'the great goddess,' which, however, the Muslims supposed to be dedicated to Abraham's father, called in the Qur'an *Isma*. The knocker of the door bore an inscription in Syriac characters which Ma'adī was told meant 'Whoso knows himself is religious,' supposed to come from Plato. He also tells of a ceremony of initiation undergone by the Sabi'an youths in the vaults of this temple, similar to one described in the magical treatise. Shahrastāni's 'Debate' makes the Sabi'ans defend by metaphysical arguments their practice of approaching the First Cause indirectly by sacrifices and prayers to the intermediaries, who are the powers attached to the celestial spheres.

Many works by Sabi'an authors are still extant, but they appear to throw no light upon their tenets. Their most famous man of science was Thābit b. Qurrah (A.H. 211-288 [A.D. 826-900]), who translated various Greek scientific works into Syriac and Arabic. Equally distinguished as a secretary of state was Ibrāhīm b. Hīlāl (313-384 [925-994]), many of whose letters and poems are preserved. We learn from his biography (Yāqūt, *Dict. of Learned Men*, ed. Margoliouth, 1910, I. 394-395) that the family profession was medicine, as was the case with other Sabi'ans of note. Ibrāhīm was famous for his accurate acquaintances with the Qur'an—a qualification indispensable in his vocation. The private letters of this personage do not appear to differ in their religious expressions from those of professed monotheists.

Until some discovery is made of genuine works belonging to the sect, their origin and tenets must remain obscure. A certain amount of voracity is attested for the Muslim accounts by the number of Syriac words which they contain; and it is noticeable that some Muslims call them 'Chaldeans' and others 'Chaldeans' (see Fakhr al-dīn Rāzi, † 606 [1209]), which perhaps was a title that they assumed. The polemic put in the Qur'an (vi. 74-82) into the mouth of Abraham, who endeavours to convert his father from the worship of idols, and himself repudiates the worship of the heavenly bodies, bears a curious likeness to that which Shahrastāni ascribes to the 'Hanifi' in their reply to the Harranian Sabi'ans.

LEMMEREN.—Besides Chwolson's work mentioned above, there is text and tr. of the extract from *Chahar al-Hakim* by Dozy and de Goeje, in the *Actes du cinquième Congrès des Orientalistes*, Leyden, 1889, II. 285 ff.

D. B. MARGOLIOUTH.

HARTMANN.—See PREHISTORIC.

HARVEST.—The ceremonies and observances of primitive races before, during, or after harvest belong to a group of customs which have gathered round the critical seasons of the year. The exact date at which such celebrations or ritualistic observances are carried out varies according to the character of the community. Among tribes whose chief occupation is hunting, the opening of the hunting season will, as a rule, be found to be marked by a ceremony which has for its object to secure a plentiful supply of game and the success of the hunters. In agriculture, the most critical season to the primitive mind is the time of sowing. This period of the year is marked by magical rites and practices intended to ensure the growth and fertility of the crop. As the year goes on, various means are employed to influence the course of natural phenomena or avert the evil consequences of untoward conditions, such as an inadequate

rainfall. Harvest observances, though in their most obvious aspect in a civilised community they celebrate only the turn of the year and the fruition of the labours of the preceding months, depend, to the primitive mind, upon the same principles as the rites of the earlier stages; and consequently the harvest is not simply an occasion for rejoicing, but a time at which natural forces have still to be propitiated.

Taking harvest rites as a whole, the essential elements resolve themselves into three: (1) propitiatory rites; (2) observances to ensure fertility; (3) communion, and the offering of firstfruits, usually accompanied or followed closely by a feast, a period of license or rejoicing, which in the course of development tends to become simply a celebration of the end of the labours of the year. These elements do not necessarily all appear in all harvest practices, nor are they always clearly distinguishable. A rite may exhibit features which would justify its classification under more than one head.

1. Propitiatory and cognate rites antecedent to the harvest.—At a stage of belief which attributes a soul or spirit to objects both animate and inanimate, the act of destruction involved in plucking fruit or killing an animal for human consumption is one of peculiar danger. In both cases the spirits of the animal or vegetable world must be propitiated to avert the evil which would otherwise inevitably follow annihilation. In the case of corn, which impresses the mind merely by the regularity of its growth and the effect of space it gives, the feeling of danger is intensified by the fact of human interference with the course of Nature in cultural operations, as well as by the organized and prolonged effort required to secure the crop. This deduction from the general character of religious beliefs among primitive people is fully borne out by their practices at the opening of the harvest.

Among the ancient Egyptians, the reaper, after cutting the first few blades of corn, atoned for the impurity of his act by beating his breast and uttering the lament which the Greeks called *Moedon* (Hesiod. *ll.* 79). In Greece, just as the death of vegetation was bewailed in the *Linos* song, a song was sung over the corn-stalks (*lencas*), and in Babylonia the death of Tammuz (obviously, from the legend, a personification of the corn) was bewailed by the women. The feast of Demeter Chloë, which was held at Athens on the sixth of Thargelion, at about the time when the corn was ripe, was a solemn feast of purification and of mortification, and probably was originally the feast of atonement and propitiation before the gathering of the harvest (L. R. Farnell, *CGS*, Oxford, 1896, 169 ff. 16). The *Handi* women, when she goes with her daughters to pluck the first ears of domestic grain in her plantation, is actuated by the same motive: the plucking is a solemn function with a regular ritual, and the crop as a whole can be gathered only when the corn has been accepted by the spirits (A. C. Hells, *The Handi*, Oxford, 1910, p. 45).

Among the Thangut of Sincow, no work other than that of attending the crop is done from the time of the first plowing, or sowing period, which follows the sowing. Among the Mao group of the same district, a person having for four days to observe at the beginning of the harvest (F. C. Hudson, *The Hsiao P'ing of Sincow*, London, 1911, p. 167 ff.). Any action which might prove prejudicial to the crops is thus prevented. A ritual must be observed at the time of plucking the first fruit or seed, before the real harvest begins, to secure a plentiful crop and to avoid offence to the spirits (see art. *FAUCONNET*).

Another indication of the sacramental character of the crop is that the first sheaf is sometimes cut by some one specially designated. In Ceylon, among the Burghers, the first sheaf is cut by a *Korumbi*, a man belonging to a tribe whose members are looked upon as magicians. Among the Kurgs of Southern India, the man who has to cut the first blades of corn is chosen by an astrologer, and in the ceremony which follows he is not allowed to mix with other members of the tribe until the seed made from the grain of the blades he has cut has been eaten. In one part of Yorkshire, the first corn was cut by the vicar, and from this corn the bread for the communion was made.

(1) *The 'corn-spirit'.*—Customs connected with the gathering of the harvest and the threshing of the corn which are practised, or were practised until recently, among the European peasantry point to the survival of a belief in a spirit immanent in the corn, or closely connected with its fertility. The existence of this belief is affirmed by the epithets 'corn-mother,' 'pos-mother,' and 'rye-

mother,' according to the nature of the crops. In Lithuania it was believed that an old woman sat among the corn; both in Germany and in Poland, children were warned against entering the cornfields or treading down the corn because of the 'corn-mother.' The 'corn-mother' is sometimes identified with Death, and the children are warned against entering the cornfield because 'Death sits among the corn'; the last sheaf is sometimes known as 'the Dead One,' and in a children's game played in Transylvania Death is represented by a child dressed in maize leaves. At Ditzelsbühl in Bavaria, the corn-mother was said to punish the farmer for his sins by giving him a bad harvest.

The precise character of the beliefs is still more clearly indicated by customs followed at various stages of the work. The spirit is supposed to reside in the last sheaf of corn, the object of the reapers or threshers being to drive it away or catch it. In Hanover, the reapers beat the last corn with sticks until all the grain has fallen from the stalks, when the corn-spirit is said to have gone. A more common practice is to make the last blades of corn into a doll—the 'corn-mother.' At Dantsig, the doll is brought home in the last waggon. Frequently the doll is dressed in women's clothes, as in Holstein. When the 'corn-spirit' is conceived as an old woman, the doll is made by one of the elder women, but when the corn-spirit is thought to be young, a 'maiden,' the task usually falls to the lot of a young girl. This presents an analogy to the Mexican belief that the corn-spirit aged as the crops grew and approached maturity: victims of appropriate age were offered at different seasons, varying from young children at the first growth to old men sacrificed at harvest time.

At Bruck in Styria, the ideas of youth and age were combined. The doll was appropriately bound, usually by the eldest married woman under fifty-five in the village, but the finest ears of this sheaf were plucked out to make a wreath for the prettiest girl, who carried it to the farmer. The 'corn-mother' was either placed in the barn at once or carried on a pole behind the girl who took the wreath to the farmer, and then placed on a pile of wood to form the centre of the harvest supper and dance; it was afterwards hung up in the barn until the threshing was over. Sometimes the man who cut the last blades of corn from which the doll was made was wrapped up in the corn-mother and carried round the village by the other reapers. The wreath was dedicated in church on the following Sunday, and at Easter the grain was rubbed out by a seven year old girl and scattered among the young corn, while the straw was given to the cattle at Christmas to make them thrive.

The customs described present, on analysis, several elements which are closely akin to the animistic beliefs of more primitive races. Briefly, these elements may be stated to be: (a) the immanence of a spirit in the crop and especially in the last corn cut, to which material expression is frequently given by an emblem or figure, usually human; (b) the conception of maturity in the corn-spirit, accompanied, however, by a parallel conception of youth; (c) the idea of sympathetic connexion in the performers of certain rites, shown, for instance, by the age of the binder of the doll and the wearer of the wreath; (d) the sacramental character of the act of cutting the last blades of corn, the reaper being sometimes identified with the corn, sometimes treated as though guilty of a crime; (e) the vitality of the corn-spirit, as signified by the preservation of its material representation, which ensures fertility in the future when given in part to the cattle and in part mixed with the crop of the following year.

The ritual of Osiris and Isis in ancient Egypt and the myth on which it was based, as well as the epithets *Barley-mother*, *Telesphora*, *Koreopis*, applied in Greece to Gaia, and *Koreopis*, *Mythopis* ('goddess of the great loaf'), and *Σίσυ* ('the vardere'), to Demeter, whose name, it is suggested, means 'barley- or spelt mother' (Δε-Γῆ or Σπῆ), and the legends and ritual of worship of Gaia, Demeter, and Kore, seem to point to an earlier belief, in which these deities were identified with the corn in the same manner as the 'corn-spirit' of more primitive races—a phase in a general belief in a vegetation spirit out of which grew the worship of Adonis, Attis, and Dionysus, as well as of the deities more specifically connected with the corn (see *GB* II.; and *CGS* III. chs. 1-11).

(2) *Various forms in which the corn-spirit is conceived.*—

Among the Slavs, the last sheaf is known as the 'Wheat-mother', the 'Rye-mother', the 'Oats-mother', the 'Barley-mother', etc. At Westerbolm in Norway the last sheaf is made into the shape of a woman and dressed in ribbons and cloth. In the district of Tverre in Galicia, while known by the same name, it is made into the form of a woman. In Ansove in Prussia, the last sheaf is known as the 'Mother of the Wheat', etc., and is left standing in the field until the last wagon is about to go home. It is then made into a doll and dressed in clothes belonging to the farmer, a bunch is stuck in its breast, and it is set in the middle of the floor at the doors in the evening. At Osnabrück, the last sheaf is known as the 'Harvest Mother'. In Brevort, a very heavy sheaf, but not necessarily the last, is known as the 'Great Mother'. In East Prussia, the last sheaf is known as the 'Granny'. Its special character being shown, as it is cut independently of the main, not merely by a name being given to it, but also by a special manner of cutting the reaper using a little distance away and cut the ears by throwing their heads in it. In Pomerania, the same method of cutting is followed. At Althausen in Saxony, all the reapers stand before the last sheaf of ears and all cut together.

In some parts of England, the last sheaf was known as the 'Kare baby'. The name given to it in the North Riding of Yorkshire was the 'Maid sheaf' while in Kent it was known as the 'Ivy Girl'. In many places in Scotland it was known as the 'Maiden', and was usually dressed with ribbons. It was also known as the 'Caille' or 'Caille', i.e. the 'old woman', especially where it was cut after Midsummer. If cut before sunset, it was more usually known as the 'maiden', while, if cut after, it was called the 'witch'. Another name commonly used both in Scotland and in Germany is the 'Oats-bride' or 'Wheat-bride'. In Germany, an Oats-bride and 'Oats-bride' are sometimes fashioned with garlands of straw, these garlands are then placed from their heads by which they stand as here as a double field (Prussia, *GB* II. 197). In Illinois, the male and female puppets were conducted to the three barns with all the ceremony of a wedding procession.

This method of personification of the crop was not confined to the European primary. It is recorded of the ancient Peruvians that they took a portion of the most fruitful of the fields and put it in their granaries. This was dressed up in new garments and known as the mother of the maize (Acosta, *Tratado Moral* of the Indians (Bastrop 1891, p. 374). In the Punjab, a specially fine cotton plant is selected, which is known as the 'mother-cotton', and adorned with bangles and ribbons. The Mahaja, the Dajaja, and the Karna of Bharu, at harvest time, perform rites to ensure the yield of the rice, and thus ensure the fertility of the crops. Among the Dayaks, the chief priest goes through a performance with a bundle of charms in his hand, while making it the air he makes a rush of some levitical object and then, when he shakes his charms over a cloth, a few grains of rice fall into it which are carefully hidden up and placed on an altar specially prepared. Among the Minangkabau of Sumatra, during the festival of the rice, is represented by stalks known as the 'mother of the rice', grown from special grain, which has been placed and harvested with special ceremony, and cut only after the firstfruits have been made to a festival meal. The rice-mother is fetched home in a costly worked bag and under an umbrella by persons in gay attire, and placed in the barn. In the Malay Peninsula, the 'rice-mother' and her 'child' are represented by sheaves or bundles of ears in the harvest field (cf. W. H. Wood, *Malay Magic*, London, 1908, p. 115). The 'bride' and 'bridegroom' of Illinois find their parallel in Java, where the priest picks out a number of ears, ties them together, places them with incense, and adorns them with flowers. When the harvest is being carried in, they are placed with a little distance to the barn.

In these customs the last sheaf has appeared as a human being. It is not infrequently described as an animal.

In Germany, when the wind makes the ears wave, it is said to be a 'wolf in the corn'. The children are told that the 'eye-wolf' will eat them up. The wolf is also said to be in the last

sheaf. Near Osnabrück, the last sheaf was made up in the form of a wolf, and was kept in the barn until the whole crop had been thrashed. At Wunstorf, the wolf was driven out of the ears with the last strokes of the flail. Both in Austria and in Germany a coat was sometimes buried under the last sheaf, and the man who caught it could keep it. In Hungary and Poland, a live cat was sometimes buried in the ground, and its head stuck off with the earthen. In Galloway, the 'hare' was cut by the reaper throwing their backs. In Prussia, Sweden, Holland, and France, the reaper who cut the last sheaf was said to kill the hare, while near Elst the cat was the cat, or near Grunow the hen cat. At Griefing, hares were stuck in the sheaf to represent a harrowed field, while sometimes a live goat was brought on the first sheaf by the reaper, and killed by the farmer, as at Grunow. In the district of Rungia, the last sheaf was made up in the form of an ear of corn stuffed with tow and wrapped in corn ears. In Bohemia, a sheaf in human form was called the 'buffalo bull'. So also the name 'cow' is given to the last sheaf in Sweden and in Rotterdam. An ear is killed on the field in parts of Prussia, and on the thrashing floor the last strokes of the flail kill the bull. Among other animal forms taken by the last sheaf, or connected with harvest beliefs, may be mentioned the horse or mare, which appears at Stuttgart and in Thuringia, the quail, in Normandy, the fox, in Friesland, and the pig and sow, in Saxony, Upper Saxony, and other parts of Germany.

(3) *Connection between the last sheaf and the reaper.*—Reference has already been made to the custom whereby the last sheaf is bound or made into the form of a puppet by a woman of an age appropriate to the conception that it represents an old or young woman. By an extension of the custom, the person who performs the office is frequently known by the same name as the doll, or is specially identified with it.
